GUIDE TO THE FL12 MASAI FILE

[This file is concerned with the Masai (Maasai), a "Nilo-Hamitic" people living in Kenya and Tanzania and speaking a language belonging to the Sudanic linguistic stock. The file as a whole includes data on the Masai proper who are cattle pastoralists, and various groups of Kwafi (Wakwafi) who have become settled agriculturalists, as well as data on the related agricultural Samburu and Arusha. However, almost all of the material in the file is concerned with the pastoral Masai. The social organization of the Masai is quite complex, being based on divisions such as sections (il oshon), including the Purko, Loita, Moitanic, Uasin Gishu, Siria, Serenget and Salai; age grades (age classes); villages (consisting of a group of families), called bomas or manyattas; clans; and families. The Masai until the early part of the 20th century were the great warriors of East Africa and still are a very independent people.

There are 19 sources in the Masai file, all of them in English except for one translation from the German (18: Merker). The major sources in the file are 1: Hollis, 18: Merker and 19: Talbot. 1: Hollis, by a British colonial officer, contains an account of the Masai language and its grammar, and a large number of translations of Masai texts dealing with various aspects of their culture. 18: Merker, by an officer in the German "Protectorate Troops," is the basic source in the file, being a thorough ethnographic description of the Masai for the period 1895-1905. 19: Talbot, by a geographer, is an extended analysis of the ecology of western Masailand and the Masai's part in the system. Age-sets and socio-political system are discussed in a number of sources, among them being 2: Bernardi,

which is an analysis of the age-system from the literature; 4: Sandford, a history of the system and British efforts to sedentarize the Masai; 7: Hailey, a brief examination of the territorial reorganization by the tribe by the British government; 8: Whitehouse, which describes the formation of a new age-set; and 9: Fosbrooke, an administrative survey of the Masai social system. 15: Margetts and 16: Hamilton are brief descriptions of the e-unoto ceremony, a recurrent part of the age-set institution. 13: Huntingford is a general cultural summary of the Masai from the literature. Miscellaneous information on Masai culture is given in 5: Maguire (penal codes), 6: Thomson (an early travel account), 10: Elliott (Masai warrior's coiffeur), 11: Leakey (miscellaneous notes), 12: Storrs (miscellaneous notes), 14: Orr and Gilks (physique and health), and 3: Hollis (kin terms). 17: Jacobs is a bibliography of the literature to 1965. This is a generally good file, with a large amount of data on most aspects of the culture. A great deal of the material relates to the period 1890-1910 with scattered information for the periods before and after, except for 19: Talbot's work which dates from the late 1950's. The researcher should be aware of these time foci, and also of the problems of distinguishing between the various age-sets and sections. A number of marking decisions were made for the Masai file. Data on clans have been placed in Category 614; on the priest chief (laibon, ol oiboni), magicians and medicine men and rain makers all in Category 791; information on district chiefs has been placed in Category 634; on households in Category 596, on smiths (a distinct caste among the Masai) in Categories 326 and 564; on the il-oshon (ol-osho), which may be either a tribal unit or strictly political territorial group, in Category 634; information on the dynamics of political power in Category 561; for the moran (warrior) societies in Category 561, and for ceremonies that initiate the Masai youth into the status of both legal majority and adulthood in Category 561. The file was processed between 1964 and 1973.]

FL12 Masai FL12

PREFACE

THE Masai occupy a considerable part of the large plains which extend from about one degree north of the equator to six degrees south of it, situate in both British and German East Africa. Those living in British territory commonly call themselves Il-Maasae[1], whilst the 'German Masai' are to a large extent known as 'L-Oikop[2] or Il-Lumbwa[3]. In olden days the coast people termed them without discrimination Wa-Masái or Wa-Kwayi[4], names which have been perpetuated by Krapf and others. 101 [131]

Sir H. Johnston states[5], and probably correctly, that the Masai represent an early mixture between the Nilotic negro and the Hamite (Gala-Somali); and that this blend of peoples must have been isolated somewhere in the high mountains or plateaux which lie between the Nile and the Karamojo country. Certain it is that the Latuka, who are supposed to be descendants of the ancestral Masai, and who occupy this country, speak a language that is closely allied to the Masai tongue, and have many customs in common with the Masai. The accounts which have been published of the habits and 174 [144] [197] 114

[1] When spoken rapidly this word is sometimes pronounced Il-Mássae (for further particulars see also p. 29, note 4).

[2] 'L-Oikop is believed to signify the possessors of the land. It also means murder (see p. 27, note 3, and p. 311).

[3] Not to be confounded with the so-called Lumbwa (whose real name is Kip-sikisi), a tribe living near the Victoria Nyanza in British East Africa. These Lumbwa or Kip-sikisi are nearly related to the Nandi, and are believed to have migrated from north of Mount Elgon (Hobley, *Eastern Uganda*, p. 10). Lumbwa is a term of contempt, and signifies a pastoral people who have taken to agriculture.

[4] The meaning of Kwayi (or Kwapi) in Masai is countries or somewhere. Hildebrandt's suggestion (*Zeitschrift für Ethnologie*, 1878, p. 349) that Maasae is derived from the Masai word 'masaa, property, and that Kwayi is a corruption of kafi, the Swahili for paddle (given in allusion to their broad-bladed spears), is probably incorrect.

FL12 Masai FL12

INTRODUCTION

THE present work, by Mr. Hollis, Chief Secretary to the Administration of the East Africa Protectorate, treats of the language, traditions, and customs of the Masai, one of the most interesting and important tribes of those territories. I am not competent—and there must be few people in the world who are—to criticize by the light of independent knowledge the mass of material which he has brought together, and will merely attempt briefly to summarize the information about the race which we now possess. Mr. Hollis's previous contributions to anthropology, his opportunities for studying and daily conversing with the Masai, and his linguistic talents, which are well known to every one in East Africa, are a sufficient guarantee for the thoroughness and excellence of his work. 114

The Masai at present inhabit the inland districts of British and German East Africa from the equator to about 6° S. 101 13 Few of them are found north of the Line, except an isolated settlement just south of Lake Rudolf, and they seem to avoid both the sea and the great central lakes. Many smaller pieces of water, such as Lakes Naivasha and Nakuru, are found in their haunts, but they neither use boats nor catch [501] fish. They are divided at present into two sections, one of [226] which, called 'L-Oikop, is agricultural and settled, while the 101 other, or Masai proper, is entirely pastoral and nomadic. The difference between the two is evidently not ancient, for both speak practically the same language, and it is probable that [97] the agriculturalists of the present time are nomads who have settled down. On the other hand, tradition does not carry 173 the history of the tribe further back than a century at the 174 most[1], and it would be rash to assume that the nomad pastoral state is primitive or very ancient. It is quite probable that there was a large agricultural settlement on the Uasin-Gishu plateau from which the more adventurous warriors detached themselves.

In East Africa the Masai are clearly distinguished by their 101 language, customs, and appearance from the Bantu races 144 (although the latter often imitate them, and have received a certain proportion of Masai blood), and equally clearly

[1] The genealogy of the medicine men goes back about 200 years.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

101 144 related to the Suk-Turkana and Nandi-Lumbwa[1]. Somewhat more distantly allied to the same stock are the inhabitants of South Kavirondo or Ja-luo. These races again show clear resemblances to some of the peoples who inhabit the banks of the Southern Nile, such as the Acholi, Bari, Latuka, Dinka, and Shilluk. The whole group are sometimes classed together as Nilotic, and have many peculiarities in common. Their [197] languages show a considerable, though varying, degree of affinity; physically they are tall, thin men, with features [142] which are not markedly negroid, and are sometimes almost Caucasian: several remarkable customs, such as the nudity of [516] the male sex and the habit of resting standing on one leg, are found among them all. The closest connexion seems to be between the Acholi and the Ja-luo, and between the Masai, Latuka, and Bari. The Masai, Nandi, Lumbwa, Suk, and Turkana all possess in a more or less developed form a military organization which obliges all the male population, between the ages of about seventeen and thirty, to submit to a special discipline and constitute a warrior class. A similar organization does not seem to be recorded among the tribes who dwell along the Nile[2]. These latter are not a homogeneous group, so that the word Nilotic must be used with caution. The Madi, who occupy a large portion of the country between Lake Albert and Gondokoro and extend well to the east of the river, are linguistically different from their neighbours, and apparently represent an invasion from the west, though in customs they do not seem to differ markedly from the Bari.

174 197 A glance at the map will show that from the Rift Valley to the Nile there runs in a north-westerly direction a broad belt of non-Bantu languages, more or less allied to one another, Masai, Nandi, Suk, Turkana, Karamojo, Latuka, Bari, and Dinka. The Karamojo appear to be Bantus who have been forced to accept an alien form of speech. This distribution of languages seems clearly to suggest a south-eastward movement from the country between the north of Lake Rudolf and 174 the Nile. The hypothesis is rendered more probable by the fact that in East Africa as elsewhere the course of invasions has been mainly from the north to the south. This is certainly

[1] The name Lumbwa is confusing. It is really a term of opprobrium applied by the nomadic warriors to agriculturalists of their own or allied races (not, apparently, to Bantus). Hence the 'L-Oikop are often called Lumbwa Masai. But the name is popularly and officially applied to a tribe closely allied to the Nandi who live to the south of the Nyando valley.

[2] Baker perhaps alludes to something similar among the Latuka whose young men, he says, live for fighting only.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Naivasha province and 5,000 between Kikuyu and Kilima-Njaro. 161 175

The expansion of the tribe seems to have come to an end about the middle of the last century. About 1830 they reached their furthest recorded point in the south and were driven back by the Wagogo and Wahehe. The southward movements of the Gallas and Somalis kept them back on the north-east, though as late as the nineties they raided on the Tana river. It would appear that about 1850 the Turkana drove the most westerly branch of the Masai from the west to the south of Lake Rudolf, where they are now settled. Somewhere about the same period—at the time an old man can remember according to the native expression—the Masai dwelling on the Uasin-Gishu plateau attacked those of Naivasha, and after defeating them were in their turn thoroughly defeated by a combination of Naivasha and allies from Kilima-Njaro. The inhabitants of the Uasin-Gishu were scattered to the four winds: those who escaped their brethren were annihilated by the Nandi, and only a few fragmentary remnants survive in Kavirondo, Lumbwa, and the two villages called Great and Little Enjámusi at the south end of Lake Baringo. Another branch called 'L-Osigella or Segelli took refuge in the Nyando valley but were wiped out by the Nandi and Lumbwa. The Laikipia plateau, which is now uninhabited like the Uasin-Gishu, was not depopulated in 1889, when Peters crossed it and had many fights with the Masai. According to one story, the people of Laikipia raided some other Masai near Nairobi about 1890 and carried off their cattle. These cattle were suffering from rinderpest, and the result was that all the stock of the Laikipia took the disease and died. This was considered as a judgment on the Laikipia for raiding their brethren.

175 648 [361] [731]

At present the agricultural Masai are found chiefly near Lake Natron and south of Mount Meru in German territory. In our Protectorate they are represented only by a few scattered settlements, such as the people of Enjámusi, the Burkeneji, and perhaps the people of Samburu in the Rendile country. It would appear that the name Wakwavi, often applied to the agriculturalists, is merely a Swahili nickname borrowed from the Masai Kwavi or Kwapi, meaning places. The pastoral section classify themselves under five districts, with many subdivisions, namely Kaputiei (Kapite plains), En-aiposha (Naivasha), Kisongo (the district south and west of Kilima-Njaro), Uasin-Gishu, and 'L-Aikipyak. The two last districts, as mentioned, have ceased to exist, and those who

101 [361] 101 634

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

claim to belong to them live elsewhere. Merker gives as the principal divisions three provinces, Kisongo, Loita, and Olbruggo. This is perhaps not according to Masai traditions, but is not incorrect as a practical description of the present distribution of the tribe. The Loita and Olbruggo, also known as Elburgon and Purko, are both subdivisions of the Naivasha district, of whom the former acquired importance by refusing to accept the present Laibon, Lenana, and following instead his brother Sendeyo. Besides these districts, there are four clans representing genealogical not territorial divisions: Aiser, Meñgana, Mokesen, and Molelyan. The Aiser seem to enjoy a certain primacy. The medicine men all belong to this clan, which is specially connected with Mount Ngong (to the south of Kikuyu), also called Ol-doinyo loo-'l-Aiser, the mountain of the Aiser.

According to the social system of the pastoral Masai the male sex is divided into boys, warriors, and elders. The first stage continues until circumcision, which may be performed any time between thirteen and seventeen, or sometimes in the case of poor people not till twenty. Those who are circumcised about the same time (see p. 261 for details) are said to belong to the same age, and are known collectively by a distinctive name, such as 'the White Swords' or 'the Invincibles.' After circumcision the warriors plait their hair, but, except for a small skin hanging over the shoulders, and their arms and ornaments (which are described by Mr. Hollis), go absolutely naked. They subsist entirely on meat, milk, and blood, and in particular may not smoke or touch intoxicants. They do not live with the married people, but in separate kraals with the immature unmarried girls, with whom they are allowed to cohabit freely. Tradition[1] (see p. 117) ascribes this practice to the fear that if girls were kept away from the society of their own warriors, they would let themselves be seduced by the enemy; but the remedy has been worse than the danger it was to avert. The direct physical evil is considerable, and is partly responsible for the diminishing numbers of the race. Besides this, female morality after such a girlhood was naturally low, even when the Masai kept to themselves. Now that they have come into contact with civilization, prostitution and venereal disease have become deplorably frequent. About the age of twenty-seven or thirty, or nowadays when raiding is forbidden somewhat earlier, a warrior marries and settles down. If he

[1] It is said that among the Dinka, Bari, and Shilluk there are similar customs of free love.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

Singular.	Plural.	English.
Ol-oisoto	Il-oisotok	The nail, claw.
Ol-oidolōki	Il-oidolok	The elbow.
El-lenywa	Il-lenyok	The long hairs of the tail of a wildebeest or zebra, &c.; the fan made of these hairs.

Examples of other words:

Ol-oiñgōni	Il-oiñgok	The bull, the strong man.
Eng-aji	Ing-ajijik	The family, hut.
Em-beneiyo	Im-benek	The leaf.
Ol-ñganaiyoi	Il-ñganaiyok	The fruit.
Ol-ōwaru	Il-ōwarak	The beast of prey.
E-mōdioi	I-mōdiok	The cow's dung.
Eng-are	Ing-áriak	The water.
Ol-mwoilaa	Il-mwoilak	The beetle.

Class IV.

According to another rule which applies fairly regularly to a large class of substantives, the singular appears to be formed from the plural by adding *i* or *ni*[1]. Comprised in this group are the names of tribes, a few communities of people, most insects, some birds and small animals, and a number of words which were probably first known in their collective form. Examples of names of tribes: 193* 552

Plural.	Singular.	English.
Il-Ashumba	Ol-Ashumbai	The Swahili.
Il-Teñgwal	Ol-Teñgwali	The Nandi.
Il-Kēyu	Ol-Kēyuni	The Elgeyo.
Il-Uasin-gīshu	Ol-Uasin-gīshui	The Gwas Ngishu Masai.
Il-Kume	Ol-Kumei	The Turkana.
Il-Turkana	Ol-Turkanai	
Il-Kamasya	Ol-Kamasyai	The Kamasia.
Il-Kakesan	Ol-Kakesani	The Lumbwa[2].
Il-Lumbwa	Ol-Lumbwani	
Il-Oikop	Ol-Oikopani	The Lumbwa Masai[3].
Il-Lumbwa	Ol-Lumbwani	

[1] This construction is by no means peculiar to the Masai. In Persian, for instance, *i* is added to a word to mean one individual, e.g. zan, woman, zani, one particular woman; bacha, a child, bachai, one particular child; bar, time, bari, one time, once. [197]

[2] A tribe living near the Lake Victoria, whose real name is Kip-sikisi.

[3] The Lumbwa Masai, who call themselves 'l-Oikop, and who are often referred to by the Masai proper as 'l-Oogol-ala (the hard teeth), live in German East Africa extending as far south as Mpapua. Their language is almost identical with that of the Masai in British territory, the chief difference being the pronunciation of one or two letters, *k* being spoken like *gh*, *p* being pronounced *φ* or *w*, and the vowels being softened. There is also a tribe of people called 'l-Oikop (Leukop or Lukob) living at the south end of Lake Rudolf who apparently speak Masai. They were met by Teleki and Höhnel (*The Discovery of Lakes Rudolf and Stephanie*) and by Wellby (*'Twixt Sirdar and Menelik*). [101] [197]

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

Plural.	Singular.	English.
Il-ojoñga	Ol-ojoñgani	The fly.
Ing-ojoñga	Eng-ojoñgani	The mosquito.
I-samburumbur	O-samburumburi	The butterfly.
I-sarambalan	E-sarambalani	The bat, swallow, swift.

Examples of other words which belong to this class:

Il-airakuj	Ol-airakuji	The kidney.
Il-ala	Ol-alai	The tooth, tusk.
Ing-atambo	Eng-atamboi	The cloud.
Il-til	Ol-tili	The spark, stain.
In-gararai	En-gararai	The quill.
In-giporoi	En-giporoi	The scar.
In-guruoni	En-guruoni	The ash.
Il-keko	Ol-kekoi	The thorn, thorny place.
Il-kidoñgo	Ol-kidoñgoi	The tail.
Il-kilileñg	Ol-kilileñgi	The sheep's dung.
Il-kiyo	Ol-kiyoi	The tear.
Il-mao	Ol-maoi [1]	The twins.
Il-meneñga	Ol-meneñgani	The corpse, spirit.
I-mōsor	E-mōsori	The egg [2].
I-ñgok	E-ñgoki	The sin [3].
Il-ōkidoñgo	Ol-ōkidoñgoi	The mud.
Il-paek	Ol-paeki	The grain or cob of maize.
Il-pisya	Ol-pisyai	The chain.
I-seghera	O-segherai	The cowry.
I-seghenge	E-seghengei	The iron wire.
I-suut	E-suuti	The dust.
I-senya	O-senyai	The sand.
Il-tian	Ol-tiani	The bamboo.
Il-tuduta	Ol-tudutai	The boil, abscess.

Exceptions.

There are only a few exceptions to this rule. They are as follows:

Il-Maasae	Ol-Maasani	The Masai [4].
Il-Aisungun	Ol-Aisungui	The European [5].
Il-Musungu	Ol-Musungui	

[552]

[1] Ol-maoi means a child who has a twin brother or sister. [845]

[2] A large egg-shaped cask used for beer, &c., is Ol-mōsori, pl. Il-mōsorin. [415]

[3] An unlucky child, or a dwarf, is E-ñgoki, pl. I-ñgokin.

[4] The original name of the Masai is said to have been Il-Maa (sing. Ol-Mái), and one even now occasionally hears old people using this word, especially when relating stories of former times. According to tradition the present form dates from the introduction by the Swahili traders of a certain kind of bead called 'Sae or 'Saen (sing. O-Saeni). [101] [177]

[5] Europeans, or white people, were formerly called 'L-ōjuju, the hairy ones. This appellation was afterwards changed to 'L-Ailungun, a corruption of the Swahili word Mzungu, which in its turn gave way to the present forms. [186]

THE STORY OF THE DEMON WHO ATE PEOPLE, AND THE CHILD[2].

There was once upon a time a demon who was greatly dreaded by the inhabitants of the country in which he lived owing to his principal food being human beings.

[1] So that I can go and return him.

[2] A Taveta Tale. The people of Taveta are nearly allied to the Masai, [101]

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*539 On one occasion he devoured a large number of people and cattle—so many, in fact, that he thought he had exterminated the whole tribe. One woman, however, succeeded in hiding herself with her child in a pit, and after the demon had taken his departure she returned to the kraal and collected together all the food that had been left there.

The child was brought up in the pit, and when he was old enough to understand, his mother told him the story of the demon. For some time he did not venture away from the hiding-place, but after a while he made a bow and some arrows, and went for a walk. He shot a small bird, which he took back with him to the pit, and asked his mother if that was the demon. On being told that it was not, he went out again and shot another bird, and after that a Thomson's gazelle. He continued his search for a long time, and shot all kinds of things in the hope of killing the demon, but when he showed them to his mother, he found that he had not been successful.

The woman repeatedly urged her son not to leave the pit as they were the sole survivors of the tribe, but the boy was determined if possible to shoot the demon. One day he searched for a number of arrows and spears which he took to the top of a tree. He then climbed with his mother into the tree and lit a fire in the branches to attract the demon's attention. When the demon saw the smoke, he was greatly surprised, as he thought he had eaten all the inhabitants of the country. Having procured some axes, he went to the spot, and called out to the child and his mother to descend. As they refused to comply with his order, he commenced to cut down the tree. The boy shot him twice with his arrows, but the demon only thought he was being bitten by gadflies. As the arrows continued to hit him, however, he had to give up his intention of cutting down the tree, and shortly afterwards he lay down to die.

When he felt that his end was approaching, he said to the child: 'When I am dead, cut off my little finger, and your cattle will be restored to you. Then, cut off my thumb, and you will get back your people. After that cut open my face, and one man will come out.'

Having said this, he died, and the boy descended from the tree and

[101] [113] many of them being actually descended from that race. An account of their history and customs, by the author, was published in the *Journal of the African Society*, No. 1, October, 1901.

[P. 260]

PART IV

'OROT OO-'L-MAASAE
DIVISIONS OF THE MASAI PEOPLE

619 101 The Masai race is divided into two sections, the one entirely pastoral and the other partially agricultural. The pastoral Masai call themselves Il-Maasae, whilst their brethren are known as 'L-Oikop *or* Il-Lumbwa.

101 614 634 The Masai are further divided genealogically into clans and families, and geographically into districts and sub-districts, as shown in the following tables:

Clans.	Families[1].
'L-Aiser.	'N-Gidoñgi (the medicine-man's horns), Il-Ṭarkeneti (the counters?), Il-Lughumae, Il-partimaro.
Il-Meñgana.	'L-Aitayok, 'Siria (the designs?), Il-Marumae (the priers), Il-Makuperia (the flesh on the ribs).
Il-Mokesen.	Il-Mokesen-aate, Il-Ṭartalale (the long-sighted ones), Il-Tarōsero, Il-Kiporon (the scars?)[2], Il-Tanaṭ-ōwara (the lion-killers).
Il-Mōlelyan.	Il-Mōlelyan-aate, Il-Mamasita, Il-Ṭojos, Il-Kipuyōni, Il-Moshōno, Il-Masañgua, Il-Mokorere.

Whenever representatives of the four clans take part in a raid, it is usual to refer to the Aiser and Meñgana clans as 'L-oodo-kīshu (the blood-red cattle), and the Mokesen and Mōlelyan clans as 'L-oorook-kīshu (the black cattle).

101 634

Districts.	Sub-Districts.
Kaputiei *or* Kaptiei.	'L-oodo-kilani (the blood-red cloths), Matapato, Il-kik-oonyokyo (the red trees[3]), Il-dala-le-kutuk (the fast talkers).
En-aiposha (the lake).	Ṭurko, Kinōkop (the burning country?), Il-damat, 'L-oita.
Kisongo.	Moipo (the Pangani River), 'M-baashi (the valleys), 'K-oonyokyo (the red soils), Em-bughoi (name of a tree[4] and light yellow), Il-launyi (the mistakes),

[1] Some of these families are again divided into smaller sub-sections.

[191] [2] The members of the family called Il-Kiporon are said to be snake-charmers and rain-makers.

the Dorobo where the thin one was. 539*

The Dorobo replied that he did not know, but the elephant was aware that he had killed it and that he refused to admit his guilt.

During the night it rained heavily, and the Dorobo was able to take his cow to graze, and he watered it at the puddles of rain.

They remained there many days, and at length the elephant gave birth to a young one.

After a time all the puddles became dry except in one place.

Now the elephant used to go and eat grass, and when she had had enough to eat, she would return to drink at the puddle, lying down in the water and stirring it up so that when the Dorobo drove his cow to water he found it muddy.

One day the Dorobo made an arrow, and shot the elephant, and killed it.

The young elephant then went to another country. 'The Dorobo is bad,' it said, 'I will not stop with him any longer. He first of all killed the snake and now he has killed mother. I will go away and not live with him again.'

On its arrival at another country the young elephant met a Masai, who asked it where it came from.

The young elephant replied: 'I

[1] The Masai now call themselves il-Maasae (sing. ol-Maasani). The old name was il-Mae (sing. ol-Mái).

II - TRIBAL DIVISIONS AND OTHER SOCIAL ELEMENTS OF THE MASAI

101
619

The name Masai covers a group of related tribes in British East Africa. The linguistic classification of BRYAN (see Bibl.) distinguishes five Masai tribes:

1. *The Samburu*, north east of Lake Baringo, in the Rift Valley and Northern Frontier Provinces of Kenya. They are sometimes called Burkeneji, a derivative from *il-loo-lhoor-keneji*, the people of the white goats. They are pastoral. We know very little of their social organisation as they have never been studied on the field.

2. *The Njamusi or Njempe*. They live close to Lake Baringo, and are mainly agricultural. DUNDAS,[1] states that "they are survivors of a Samburu tribe called Il Digio". What we know of the Njamusi is practically limited to the fact that they eglat.

3. *The Kapiti or Kaputiei*. They live mainly in Kenya around Narok, Ngong and Kajiado. Some are found in Tanganyika. All are pastoral. HOLLIS' standard work on the Masai refers mainly to this tribe.

4. *The Kisongo*, found mainly in Tanganyika around Loliondo and Mondul. There are a few in Kenya. All are pastoral. The other standard work on the Masai by MEEKER describes, for the most part, the Kisongo.

5. *The Lumbwa*. The name means "farmers", and is correctly applied only to the agricultural Masai. It is wrongly used also for the Kipsigis. The Lumbwa are found mainly in Tanganyika near Lake Natron, Lake Manyara, and around Arusha and Mt. Meru. They are called by the other Masai *Il-Oikop*, a name of despisal.[2]

199

According to BRYAN and TUCKER, all these Masai tribes are linguistically distinguished by "very slight dialectal differences".

[1] DUNDAS, *The Wamenge and other Tribes of the Elgon district, British East Africa* in *J. R. A. I.*, 43, 1913, p. 80.

[2] There are other names which do not indicate any special tribe, such as Il-Arusha, applied to the Masai living in or around Arusha. They are called Wa-Arusha by the neighbouring Bantu. Meru is the name for the Masai living on the slopes of Mt. Meru. They should be distinguished from the A-Meru of Kenya, Central Province. Kwafi is the Swahili term for the Masai, but it is especially applied to the Lumbwa of Kilosa District in Tanganyika. We may add that the Kikuyu and the A-Meru speak of the Masai (Matkai, Matau, respectively) as Okabi.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

On the whole, these two authorities stress the linguistic unity of all the Masai. 197

The great majority of the Masai are pastoral, only very few tribes having taken to agriculture. The pastoral tribes follow a semi-nomadic way of life. "They move", writes Lord HAILEY,[1] "with their herds in order to avail themselves of the seasonal variations in water supplies, so that in effect they practise a system of rotational grazing". The same writer,[2] reports "a recent estimate" of Masai herds in Kenya which puts "the number of cattle at over 700,000, with 800,000 sheep and a large number of donkeys". For Tanganyika he gives no figure. The above estimates show clearly enough how the attitude of the Masai to cattle is a paramount feature of their life. To own cattle is a privilege obtained through initiation, and large herds are a sign of outstanding social status. Cattle are the main economic interest and investment for the Masai.[3] 233 [221] 181 233 554

The total population of all the Masai may be reckoned at about 122,792. The 1948 census of Kenya's population (see Bibl.) gives for the Samburu an estimate of 20,000, and the following figures: Njempe 3,423, the other Masai 67,201. In 1931 the Tanganyika Masai were reckoned as 32, 168. 162 [161]

* * *

Under the present political situation, the Masai are not administered as a single unit, for they are divided into two sections by the border of Tanganyika Territory and Kenya Colony. 631

In Tanganyika the Masai form one of the four districts of the Territory's Northern Province (the Masai District). In Kenya the main group inhabits the reserve adjoining Tanganyika Masai District, and constitutes the Extra Provincial District (Masai District) of the Colony. The other group (Samburu and Njamusi) is incorporated with the Rift Valley Province (Samburu and Baringo District), and partly with the Northern Frontier Province. The geographical separation of the Samburu from the other Masai is the reason why the Samburu were considered, and are still considered, as a non-Masai tribe. But, as BRYAN remarks, they are true Masai. The splitting of Massailand and the separation of the Masai were made 631 634 [101] 175

175 permanent by the present administrative arrangement, but were *not established by it. The land which divides the Samburu in the* north from the Kapiti in the south of Kenya, was once the home of the Laikipiak and the Uasin Gishu Masai. In those days, Masailand was a continuous strip of land stretching over the plains south of Mt. Kilimanjaro and Mt. Meru up to the shores of Lake Rudolph. At the end of 19th century a great cattle plague and, even more, civil wars (the Kapiti versus the Laikipiak and Uasin Gishu) wrought havoc among the latter, who were almost destroyed. The few remnants have been absorbed by other Masai tribes, especially the Kapiti and the Kisongo. The Laikipiak plains west of Nanyuki which in 1904 had first been set aside as a special reserve (the Northern Masai reserve), were subsequently declared open to European settlement, and by 1911 Agreement the Southern Masai Reserve was enlarged into what is now the Extra Provincial District of the Masai in Kenya Colony. [6]

[131] [235] [669]

* * *

631 A comparative analysis of the literature shows the existence of three graded territorial units, the major and the minor territorial sections, and the village. A character common to the first two sections is the absence of a clear limit or boundary. The sections are spoken of in terms of watering and grazing rights. The nomadic aspect of Masai life is chiefly responsible for this territorial vagueness. The absence of any centralised authority to check people and cattle's transhumance is another important cause of the vagueness of Masai territorial organisation.

634 The major territorial section is made up by the area in which the movements of a full tribe usually take place. The existence of

101 619

[6] SANDFORD, *An Administrative and Political History of the Masai Reserve*, London 1919, Appendix; *K. L. C. E.*, p. 188. One may note that the Uasin Gishu and the Laikipiak, together with the Siria and the Lumbwa were despised as inferior, for they were not considered as "pure Masai" by the other tribes who regarded themselves as descendants of Masainda. See FOSBROOKE, p. 7. This ill-feeling may explain in part, the fury with which the Kapiti fought against the Laikipiak and the Uasin Gishu.

[186]

In December 1950. I visited the Ndigirri Dorobo at Dol Dol on the Mukogodo Hills, some 50 miles north west of Nanyuki. They claim to have been dependent on the Laikipiak Masai, and they survived the slaughter thanks to their seclusion in the forests. Their present outlook seems to be entirely Masai. The names of their age-classes are consonant with those of the Masai.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

these sections is evidenced at a superficial level by the adoption of a common tribal name. But members of a major section are more closely bound by their social, ceremonial and military relationships based on their common age-system. FOSBROOKE, [7] who did not consider the major territorial section as a unit of Masai territorial organisation, tries to explain as follows the Kisongo major section: "the majority of the Masai in Tanganyika regard themselves as Kissongo, but Kissongo is a very difficult term to define, for it is neither a sub-tribe, nor yet, strictly speaking, a section. The nearest definition is probably "that group of sections which follows the Mondul laibon". [8] See: below *laibon's* relationship to Masai social organisation. The early fieldresearchers, MERKER and HOLLIS, recorded the major territorial sections which they calle 'Provinzen' and 'Districts', respectively. MERKER, [9] gave their number as three: Kisongo, Loita and Ol Bruggo. HOLLIS, [10] counted five: Kaputiei (Kapite plains) En aiposha (Naivasha), Kisongo (south and West Kilimanjaro), Uasin Gishu and 'L-Aikipiak. He noted that the last two had practically ceased to exist. The point is also confirmed by S. L. HINDE. [11] The term *en-gop*, pl. *in-gwapi*, which HOLLIS translates as "the land, the country", seems to apply to these major sections. Their number corresponds, at present, to the linguistic groups we have reported.

The minor territorial section has been made the subject of special analysis by FOSBROOKE. He defines it as "a territorial unit of the Masai, the members of which regard themselves as owners of the waters and grazing grounds, to the exlusion of other sections. Such a unit is called *ol osho*, pl. *il oishon*. Alone or in groups the sections function as units in war, in allegiance to a particular *laibon*, and in performance of certain tribal ceremonies; in general they possess a sense of solidarity which expresses itself in regarding members of other sections to a certain extent as strangers". [12]

The absence of definite geographical limits and the stress on water and grazing rights have been noted. The *laibon's*, or prophet,

[7] FOSBROOKE, *An Administrative Survey of the Masai Social System*, in *T. N. and R.*, 1948, p. 9.

[8] See below *laibon's* relationship to Masai social organisation.

634
79

position in connection with the nature of the major and minor territorial sections is questionable. FOSBROOKE has put into evidence the marginal significance of the *laibon* for Masai social organisation. He has also shown how wrong it is to ascribe to the prophet's institution a political function. The prophet can only obtain a personal political influence which is his, and not of his office. Now, to describe the *laibon's* institution as the point of allegiance of territorial sections' members is tantamount to making the prophet a central political authority which he is certainly not. The important point in the nature of the territorial sections is members' consciousness of their strength and sufficiency as to be entitled to keep tribal ceremonies of their own.[13] In studying the Laitayok minor section FOSBROOKE brings that home: "in some areas they (the Laitayok) have been absorbed by the section amongst whom they resided, and thus eventually they came to be regarded as a clan; in other areas they were sufficiently numerous to enable them to retain their own grazing grounds, and to justify their holding tribal ceremonies of their own". FOSBROOKE insists on the fortuitous origin of the territorial minor sections. The point becomes obvious if the nomadism of the Masai and the abselce of any centralised authority are kept in mind. People remain in a definite place only for as long as they find good grazing and water for their cattle, but they move as soon as these fail, thus breaking up their territorial allegiance.

[22]

634
101
619

The following is a tentative list of minor territorial sections deducted from the literature:

SAMBURU.	1. Pusigishu	4. L'Orogishu	7. Longeli
	2. Masola	5. Doiju	8. Nyabarei
	3. Lukumai	6. Mwesi	9. Loimusi

NJAMUSI. According to DUNDAS,[14] there are only two villages: Njemps Kubwa or Njemps Liabori – down stream; and Njemps Ndogo or Njemps Lekepir – up stream.

KAPITI.	1. Kaputiei or Kapiti	3. Ladokilarsi	6. Purko
		4. Kakonyuke	7. Loita
	2. Damat	5. Dalalakotok	8. Matapatu

[13] One should note here that tribal ceremonies are ceremonies connected with the institution of age-sets, a fact wich aleds light on the integrating power of the age-system. See BERNARDI, *The age-system of the Nilo-Hamitic Peoples*, in *Africa*, 22, 1952, pp. 316 ss.

[14] DUNDAS, *Notes on the Tribes inhabitating the Barino district*, in *J. R. A. I.*, 1910, p. 49.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

 634 101 619

KISONGO.	1. Kisongo	2. Sigirari	5. Salei or Saleh
	a. Kiteto	3. Laitokitok	6. Laitayok
	b. Moiba	4. Siria	
LUMBWA.	1. Nguruman	2. Serenget	3. Engaruka

The villages, *eng ang*, pl. *ing angite*, is the minimal territorial unit. Villages are distributed within the minor sections. JOHNSTON,[15] had already noted that "they generally range within certain districts". A village is the residence of one or more elders with his or their wives and cattle. A man after his marriage does not live in the same village as his father, unless the latter has become senile and unable to cater for himself. 621 [591] [888]

The internal structure of the village is based on the gatesystem. This consists in a proper arrangement of the house on the sides of the village's gates. The village consists of a large yard enclosed by a thorny fence with gates opening at opposite sides. The house are built on the right and left sides of each gate, every gate with its houses belonging to a single elder. The usual arrangement is as follows: the first house on the gate's right is the dwelling of the owner's first wife; the first house on the left side is that of his second wife; the second house on the right side is that of his third wife; and the same alternating order is followed if marries more wives. The central yard is reserved for cattle. The elder's cattle are allotted to each of his wives according to her rank in the house. Cattle in possession of one side of the gate cannot be inherited by the other side. When inheritance takes place it is with great care that one tries to avoid cattle interchange.[16] The gate system, observes FOSBROOKE,[17] is an ideal, and "a symmetrically arranged gate is seldom found in practice". When people move in search of better grassland, the village is not destroyed, but simply evacuated. During the owner's absence the houses may be occupied by other temporary tenants. At the reverse migration the owner comes back to his old village if this is not irreparably decayed, and it is agreed by custom that any foreigner who might have found shelter in the house must vacate the place to the original owner. 621 361 [428] [166]

Another type of Masai village should be mentioned here. It is 621

000

Peculiar policy necessary in dealing with the Masai.

648* 177

WITH a view to the better understanding of the steps which have already been taken and of the policy which has in the past been pursued in dealing with the Masai situated within the limits of the East Africa Protectorate, it appears desirable, in the first instance, to recapitulate concisely the facts which have at various times been recorded on the subject of their tribal characteristics and peculiar organization, attributes which have rendered it impracticable to carry out in their case the policies which have been adopted in dealing with the majority of other tribes in the Protectorate. These policies, established and maintained for the most part by the senior administrative officers in each Province, have undoubtedly not been uniform, but they have to a large extent achieved the result which is noticed in the majority of the native administered areas to-day, of developing the native inhabitants of the Province into useful agricultural labourers fit for residential work on European farms and available for duty on works of public utility, and they have also, by maintaining the system of self-government recognised by each tribe, produced within the reserves, a type of native so well under control that the demands of the military authorities, large though they were, for natives to serve as porters in German East Africa were met from these Provinces without disturbance of any kind, in spite of the fact that compulsion had to be resorted to and that the work was unpopular, and, furthermore, they have so developed the system of native administration that the majority of the porters so recruited were obtained by the native authorities themselves without the aid or intervention of the European administrative officers. The Masai were among the first tribes which came into contact with the administration but their conservatism has been so great, and their subservience to antiquated tribal custom and tradition has been so powerful that it has proved impossible as yet materially to alter and renovate their ideas.

[181]

Why this peculiar policy is necessary.

101

The Masai are a Nilotic people, closely allied to the Nandi and Lumbwa and to the Suk and Turkana. In common with those other four tribes, they possess a form of military organization which obliges all the male population between the ages of about seventeen and thirty to submit to a special discipline and to constitute a warrior class. It is, however, impracticable for the purpose of policy to compare the Masai with either the Suk or the Turkana, which tribes have only recently come into touch with the Administration, and a comparison with the Nandi and Lumbwa, Buret and Sotik, discloses a position markedly unfavourable to the Masai. Though none of these former tribes has definitely

648* 177

*648
179

discarded their old formations, adversities of various descriptions have introduced the necessity of undertaking manual labour in portions of each reserve and a succession of punitive expeditions or displays of force, the last of which occurred some ten years ago, has brought home to them a conception of the power of the Government, a realization which has tended towards a more progressive attitude owing to the diminution which it caused in their minds of the influence held by their medicine-men. No punitive expedition has ever been undertaken against the Masai, an omission which was very largely due to the authority and sagacity of Lenana, the chief medicine-man at the time when the European Government was first encountered, who survived long enough to keep his people in check until such a degree of administration had been effected as to render the despatch of a punitive expedition a measure that would only be resorted to in the last extremity. Further, the Masai now thoroughly realize how vulnerable they are if ever they come into armed conflict with the Government. Their enormous, immobile herds would immediately be lost and a sufficient degree of punishment could quickly be attained. For this reason, it is extremely improbable that they will, of their own initiative, so far forget what they consider to be their best interests as to cause a serious disturbance. The escape from punitive expeditions, however, has undoubtedly been a factor in the perpetuation in their original form of the Masai ideas and traditions.

101
184
578
628

The tribal formation of the Masai.

As will be seen in Chapter II., the Masai tribe originally consisted of both pastoral and agricultural sections, of which the latter was almost annihilated by the former and survives at present only in one or two scattered localities, mainly in areas reserved for other tribes. A small section of these agriculturalists, the Nguruman, is to be found at the north end of Lake Natron, but that is the only trace of them in the present Masai Reserve, and these people now show a tendency to assume the habits and customs of the pastoralists. The problem presented in the administration of the Masai is therefore almost exclusively concerned with the pastoral section. According to the social system of this section, the male sex is divided into boys, warriors and elders. The first stage continues until circumcision, which may be performed approximately between the ages of thirteen and seventeen. These boys are called "'L-Ayok." After circumcision, they become warriors, or "Muran," those who have been circumcised at about the same time being said to belong to the same age. The "Muran" remain on the fighting strength of the tribe for periods varying from seven to fourteen years, during which period they constitute a standing army. They are divided into Companies, or "Sirita," which live in separate villages, or "Manyattas," some of these containing as many as six or seven hundred fighting men. With few exceptions, the "Muran" of the present day perform no work of any kind. In days gone by, they were expected to carry out raids and preserve the armed prestige of the tribe, but the introduction of the "Pax Britannica" has deprived them of such employment, and they, having found no alternative occupation, are content to remain in idleness and to live in the state of free love with immature girls which tradition prescribed as the duty of the warrior in the days of tribal warfare.

561

Social system of the pastoral section.
"'L-Ayok."
"Muran."

The effect of the military organization.

This military organization of the Masai made them, in the past, a most effective body for destructive military operations, and explains not only the predominant position which they acquired in East Africa, but also the respect which they inspired and the extent to which their customs were imitated by other tribes. On the other hand, it probably also is the reason why they never founded any state or polity analogous to the Kingdoms of Uganda and Unyoro. The centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military comradeship and desirous only of military glory. Retirement from this band of warriors as a chief was honourable, but seems to have been regarded as a removal to an inferior sphere of activity. The chiefs arranged the details of the raids which the warriors wished to undertake, but their power of compelling them to do anything which they did not wish was very slight.*

Chapter II.

EARLY HISTORY OF THE MASAI.

Origin of the Masai—Pastoral and Agricultural sections—Settlements of 'L-Oikop—Sir Charles Eliot's theory—European influence—Wakwavi—Early history of the Masai—The Masai as a power—Masai raids—Rebmann's visits to Chagga—Dr. Krapf—Dr. Krapf's description—Discovery of the source of the Nile—Dr. Fischer's tour to Naivasha—Mr. Thomson's journey through Masailand—Count Teleki's expedition—Mr. Jackson's journey—Dr. Peters—Masai and modern firearms—Decline of Masai power—A Masai raid—Cattle plague—Small-pox—Relations between Masai and Wakamba—Machakos Station—Ngong—Dagoretti—Relations between Masai and Kikuyu—Mr. George Wilson—Sack of Dagoretti—Trading treaty—Fort Smith—Masai hostile—Meeting at Muthaiga—Uganda Railway survey—Debates in the House of Commons—Position of the Masai in 1895—Removal to Ngong—Protectorate over Uganda—East Africa Protectorate—Kedong Massacre—Mr. Andrew Dick—Lenana's first visit—Sir Arthur Hardinge's report—Sir Charles Eliot's report—Inclusion of Uganda Provinces in East Africa Protectorate—Uganda Railway—Sir Charles Eliot's report, April, 1903—The year 1903-1904—Conclusion.

173 Origin of the Masai.

Little is known of the early history of the Masai tribe, but it seems to be an established fact that the original home of this people was the country between the north of Lake Rudolf and the Nile, from which area the Masai are said to have moved in a south-easterly direction so long ago that tradition does not recall any incidents of the exodus, nor the reason therefor.

101 173 Pastoral and agricultural sections.

It seems, also, that there were two distinct sections of the Masai, distinct in point of habits of life and customs, though not of language or ancestry, between which sections continual war was waged, wars which now form the greater part of the traditional history of the tribe as it is known at the present day to its members. The sections are usually defined as the agricultural and pastoral sections, the former, known as 'L-Oikop, being more or less settled, while the latter was entirely nomadic, and never practised agriculture in any form. Masai tradition does not extend back for more than one hundred years, but the history of that century shows, to the exclusion of all other topics, a conflict between these two sections, which resulted in the practical annihilation of the 'L-Oikop, who have now ceased to exist, with the exception of small settlements found at Nguruman, to the north of Lake Natron, two villages, Great and Little Njempa, to the south of Lake Baringo, possibly the so-called Uasin Gishu Masai, now located near Eldama Ravine, and in Kavirondo country, and certain individual settlements of Masai among neighbouring tribes, where they have assimilated the customs and adopted the language of their protectors, and from whom it is now difficult to distinguish them.

[361]

Settlements of 'L-Oikop.

174 114 Sir Charles Eliot's theory.

The theory suggested by Sir Charles Eliot, is that the nomad pastoral state cannot be assumed to be primitive or very ancient, and that it is quite probable that there was a large agricultural settlement on the Uasin Gishu plateau, from which the more adventurous of the warriors detached themselves.

177 European influence.

It is this conflict which made the Masai name what it was and which has rendered so complex the question of the administration of the conquering pastoral section. The victors depended entirely on cattle for their means of subsistence, and were driven to raiding other tribes, in order to amass sufficient herds of cattle. The introduction of the European element, therefore, deprived the Masai of their one pursuit, and had the inevitable result of reducing the Masai from the first to a very low rank of economic importance among East African tribes.

[921]

101 Wakwavi.

The term Wakwavi (Wakuafi of Krapf) is frequently used by the early writers in reference to the Masai, but it appears that this term has, in fact, no connection with the agricultural section, being merely a Swahili nickname borrowed from the Masai Kwavi or Kwapi, meaning places.

"The expansion of the tribe," writes Sir Charles Eliot, "seems to have come to an end about the middle of last century. About 1830, they reached their furthest recorded point in the south, and were driven back by the Wagogo and Wahehe . . . . . About 1850, the Turkana drove the most westerly branch of the Masai from the west to the south of Lake Rudolf . . . . . Somewhere about the same period . . . . . the Masai dwelling on the Uasin Gishu plateau attacked those of Naivasha, and after defeating them were in their turn thoroughly defeated by a combination of Naivasha and allies from Kilima-Njaro. The inhabitants of the Uasin Gishu were scattered to the four winds: those who escaped their brethren were annihilated by the Nandi, and only a few fragmentary remnants survive in Kavirondo, Lumbwa, and the two villages called Great and Little Enjamusi, at the south end of Lake Baringo. Another branch called 'L-Osigella, or Segelli, took refuge in the Nyando valley, but were wiped out by the Nandi and Lumbwa."

Early history of the Masai.

175 648*

The same writer says:—"From at least 1850 to the early eighties, the pastoral Masai were a formidable power in East Africa. They successfully asserted themselves against the Arab slave-traders, took tribute from all who passed through their country, and treated other races, whether African or not, with the greatest arrogance." The record of Masai raids is much more complete as it affects the eastern part of their territory than on the west. This is readily understandable on account of the records having been made by Europeans, who obtained their information from the east coast, and not by wanderers from Uganda: but it also appears probable that the Masai found their expeditions eastwards to be more remunerative and less costly than any they might undertake on the west, for it has never been contended that the Nandi and Lumbwa, their western neighbours, were not at any time of their history a match, or more than a match, for the Masai. About 1859, the Masai raided Vanga; in August, 1865, they were in the Galla country near Mtanganyiko: and again, early in 1867, they were raiding on the Tana River, near Wachu: the Gallas would retreat to Ramo in times of war with the Masai as, that place being surrounded by water, it was considered immune from Masai attack. In August, 1876, the Masai were at Ribe, whence all natives fled to Mombasa, while six years later, they again raided the same locality, on this occasion visiting the Mission station, and killing two of the native converts. In 1883, they raided Saadani, on the coast opposite Zanzibar, whence they were repulsed with guns, and these exploits were followed by two raids on the Mission station of the United Methodist Free Churches Mission, at Golbanti, on the Tana River, in the first of which, in March, 1886, two native Christians were killed, and in the second, on May 3rd of the same year, the two resident missionaries, Mr. and Mrs. Houghton, shared the same fate. As late as 1889, the Masai raided within sight of Mombasa Island. The result of these constant raids was that all inhabitants were driven from the more exposed portions of the coast belt, that the Giriama were prevented from keeping large herds, and that Galla settlements on the southern Tana totally disappeared.

The Masai as a power.

Masai raids.

Probably the first European who made the acquaintance of the Masai, was Mr. Rebmann, the colleague of Dr. Krapf, who visited Chagga country on three occasions: and Dr. Krapf, who himself toured in Ukambani in 1848 and 1849, gives a description of "The Wakuafi and Masai Tribes" in his book "Travels, Researches, and Missionary Labours, &c.," published in 1860. The following extracts are taken from this description as giving the early impressions created by the tribe in the mind of this European traveller.

Rebmann's visits to Chagga. Dr. Krapf.

"The Wakuafi and Masai," writes Dr. Krapf, "who call themselves 'Orloikob,' or 'Loikob,' 'loigob,' . . . . . , that is, possessors of the land, ... , occupy large plains in the interior of Eastern Africa, which extend from about two degrees north of the Equator to about four degrees south of it. The names 'Wakuafi' and 'Masai' are given them by the tribes of the coast. . . . . Their manner of life is nomadic, and where they find water and grass, there they encamp often for months together. They live entirely on milk, butter, honey, and the meat of black cattle, goats and sheep, and on the game which they hunt down: having a great distaste for agriculture, believing that the nourishment

Chapter XI.

THE UASIN GISHU MASAI.

000

The Uasin Gishu Masai Reserve—The extension of the reserve—Statistics of the Uasin Gishu Masai—Further extension of the reserve—Discussions between Lembere and Wali Kondi—Uasin Gishu Masai Reserve boundaries.

*648
101
578

In 1860, the Uasin Gishu Masai inhabited the plateau named after them. They were defeated in battle by the other Masai, and were scattered to various parts of the country, some going to the ravine, others to Nandi, and others to Kavirondo. Those located in the ravine rendered considerable assistance to Government in the early days of administration, and acquired a certain amount of wealth.

*648

The Uasin Gishu Masai Reserve.

The attention of the Government was first called to the necessity of creating a reserve for the Uasin Gishu Masai by Mr. Foaker, District Commissioner at Eldama Ravine, in February, 1904, soon after Lord Delamere had been granted a lease of a large area in the neighbourhood. Mr. Foaker asked that 100,000 acres might be reserved for them, and that the salt licks on Lord Delamere's land might be included in the reserve. No attempt was made to form a native reserve, but Lord Delamere was informed by the Land Officer on February 22nd, 1904, that, as the Uasin Gishu Masai had rights over the salt licks on his land, they must be given uninterrupted access thereto at any time.

Further large grants of land were made to Europeans near the Ravine Station in 1904, and, on the arrival of a surveyor, in January, 1905, to survey other farms in the neighbourhood, Mr. Foaker pointed out that great injustice was being done to the Uasin Gishu Masai.

The Land Officer thereupon reserved the only land then available—some 18,000 acres—which was for the most part stony and barren and had consequently not been applied for by Europeans.

The extension of the Reserve.

After the Nandi Expedition in 1906 it was decided to move to the ravine those Uasin Gishu Masai who had gone to live with the Nandi. This was done, with the result that the reserve became very congested.

In October, 1906, Mr. Hobley wrote to the Commissioner of Lands asking that the area reserved for the Uasin Gishu Masai might be increased, as it was inadequate. He also asked that a right of way to the salt licks on Mr. Hotz's land and Captain Grogan's grazing farm should be reserved for them. In February, 1908, Colonel Montgomery, accompanied by Mr. Bagge, then Provincial Commissioner, Naivasha, proceeded to the ravine where he interviewed the Uasin Gishu Masai and visited their reserve. Colonel Montgomery was convinced that they had not enough land, and proposed the re-acquisition of some of the farms in the neighbourhood, a proposal which was agreed to by the Governor.

In 1909 and 1910 four farms on the Molo River, aggregating 21,972 acres, were re-acquired, and the Uasin Gishu Masai were informed that they might occupy those areas. A right of way from the Molo River to the salt lick on Mr. Hotz's farm was also reserved for them.

On February 6th, 1911, the Acting Governor interviewed the Uasin Gishu Masai Elders. The Masai complained that their reserve was still far too small for them and that they had not enough salt for their herds. They asked for permission to continue living on the unoccupied farms in the neighbourhood, paying rent in kind as heretofore to the various landlords who were, for the most part, absentees. They were informed that they must move into their reserve and that, if it was not large enough, they must sell their surplus stock. The Acting Governor agreed to their having a right of way to the salt lick on Captain Grogan's farm. The Masai were also informed that, in all probability, a cattle tax in lieu of hut tax would be imposed on pastoral tribes in the near future.

elephant is attacked at close quarters, the arrow part driven into the great brute, and being loosely fixed in the handle, it remains when the latter is withdrawn. Another arrow is then affixed, and the same operation performed. It is said that an elephant will live a very short time after being thus stabbed, and entire herds are killed without one escaping, so dexterous and daring are these hunters. The Andorobbo also use the ordinary bow and arrow, but only for the smaller game.

CHAPTER XI.

THROUGH KAVIRONDO TO VICTORIA NYANZA.

M 101 184

THE people (Wa-kwafi) of Njemps presented an interesting study to the observer as throwing light upon the origin of the various small tribes which people Africa. Unquestionably Masai in race, and only separated from that tribe through the loss of their cattle and the consequent necessity of breaking their cherished convictions by cultivating the soil, they had developed new ideas, manners, and customs in a comparatively short period.

M 142 184

They did not by any means supply an argument in favour of the vegetarians; for in personal appearance they had distinctly degenerated, and could not for a moment compete with their aristocratic carnivorous brethren of Lykipia. This was especially noticeable among the women, who had lost their slender, *genteel* shape and acquired the ill-proportioned, unwieldy contour of the negress. Perhaps an exception might be made in favour of the young women, many of whom were well-formed and characterized by most pleasing and interesting manners.

M 361

The colony consisted of two villages—Njemps of Guaso Tigirish, close to our camp, and Njemps of Guaso na Nyuki.

M 342 351

The houses were of the haycock order, with floors beneath the level of the ground, very small and badly built. They were surrounded by a double fence of thorns, which, however, are a greater source of danger than of protection, as in this dry climate they become like tinder, and consequently can be set on fire easily. If this were done at several points simultaneously, the inhabitants could easily be burned to death.

M 184

In a hazy sort of way they tried to keep up the distinction

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

as the Masai race shall exist," and to refrain from leasing or granting any land (except such land as may be required for mining or for any public purpose) "without the sanction of the paramount chief and the representatives of the Masai tribe." 631 648

As a people of Nilo-Hamitic origin, the Masai have an affinity to the Nandi, Kipsigis, Suk and Turkana of the Keyna Colony, but they have maintained more of their original custom and mode of life than the Nandi or the Kipsigis. A variety of circumstances have combined to produce this result, but it is undoubtedly due in large measure to the fact that the extent and quality of the lands occupied by them has allowed them, as a tribe, to escape the disturbance in their traditional life caused by the necessity of wage earning on the European farms and urban centres or of taking to agriculture. It is noteworthy that though parties of the Masai have on various occasions lent assistance to the Kenya Government in military or police operations against other tribes, they have never enlisted in any numbers in the armed forces maintained in the Colony, and they actively resisted the efforts made to secure their recruitment during the War of 1914-1918. 101 648

The social structure of the Masai has from the outset created an obstacle to the adoption of any system of native administration similar to that in force in other parts of the Colony. The military organization of the tribe was in earlier days maintained by a system which divided the male population into boys (L'Ayok), warriors (Moran) and elders. The first stage continued till circumcision, performed any time between thirteen and seventeen years of age. Those who were circumcised within a certain period, normally four years, formed an Age Group, and those circumcised during the succeeding period formed a second Age Group, these Groups being distinguished as the Right Hand and Left Hand Groups respectively. The circumcised youths became the warrior class, who were divided into Companies (sirit) living in separate villages (manyatta) often of a considerable size, and the larger manyattas had their own "Counsellors" (L'Aiganak) chosen from among the Moran. 561 701 [361]

The Moran had special privileges, such as that of cohabitation with unmarried girls, and were relieved of all tribal obligation save fighting and raiding. Even such forms of manual labour as were involved in a pastoral life were avoided by them. They remained on the fighting strength of the tribe or periods which originally varied from seven to twelve years, and then, after the celebration of the E-unoto ceremony, "drank milk" and passed into the stage of Elders. But, as Sir Charles Eliot observed in 1905, "the Elders' ideal of existence seemed to be ease, not unmixed with drunkenness."[1] Those who attained a position of wealth and importance might be elected as Chiefs, but the functions of a Chief were restricted to leadership in raiding or warfare. [836] [622]

There is another feature of importance in the social structure. The Masai are divided into Sections (Alosho) which probably had their origin as clan or kinship groups, but have no close correspondence with geographical divisions. There are 14 recognized Sections, of which the Purko is by far the largest and most wealthy. Each of these Sections has its own Age Grades, so that the period at which youths become Moran, or Moran became Elders at the E-unoto ceremony, do not coincide in the different Sections. Each Section used to have an informal Council of the Elders, but these had little direct control of affairs, particularly where the activities of the Moran were concerned, and the situation 634 [623]

[1] Introduction to The Masai, by A. C. Hollis, 1905. For the significance of the E-Unoto ceremony see page 69 of the Administrative and Political History of the Masai quoted above.

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

000 Mbugwe are Bantu. There is also a small group of Tindiga, leading virtually a bushman life in the Lake Eyasi basin, to whom reference was made in Section I.[1] There would appear to have been a movement both northward and southward on the part of the tribes, who were previously contained in a very small area by the Masai invasion of the early part of the century.

THE MASAI DISTRICT

131 161 The Masai District forms the southern portion of the large block of country in Tanganyika and Kenya, extending to no less than 21½ million acres in extent, occupied by the Masai tribe, whose numbers were given in the 1931 Census as 48,945 in Kenya and as 47,276 in the 1948 Census in Tanganyika. There will be found in the Chapter dealing with Kenya Colony further reference to the tribal characteristics of the Masai, and it will be sufficient to give here only those facts which bear in particular on the position they occupy in Tanganyika.[2]

174 The southern movement of this tribe from the neighbourhood of Lake Rudolf seems to have come to an end about the middle of last century, but its spearheads had in 1830 penetrated as far south as the Great Ruaha River and even to Uhehe in the Iringa District, whence they were driven back by the Gogo and Hehe. There were many isolated Masai raids after that time, but these were in the main carried out by Kenya Masai, whose incursions were directed towards the coastal areas on the east, and indeed took them on occasion as far as Mombasa. The Masai settled in Tanganyika do not seem to have attempted a further movement of any importance into the neighbouring areas of the Territory.

175 101 The Anglo-German Agreement of 1890 cut the Masai country into two parts, roughly equal in area, though the population remaining under the British jurisdiction was somewhat larger than that which fell under German rule. The result was to make an effective division between the Kenya and Tanganyika Masai, and though the two sections have retained a community of racial interest, this has not extended to the political field. Such political unity as the Masai people possessed had existed largely for war puposes, and in peace time political as apart from religious authority was dispersed among the headmen exercising control over the groups having a customary right of pasturage in particular localities. There was moreover lacking in the case of the Tanganyika Masai a motive which might have led them to identify themselves with the Kenya Masai, namely, the need for protecting their lands from alienation by Government for the benefit of Europeans. The troubles created in Kenya by the efforts of Europeans to secure possession of Masai lands[3] were not repeated in [648] Tanganyika, where the Masai have remained undisturbed in the occupation of the country they held at the period when European rule was established.

131 133 The present Masai District comprises, in the north, the Loliondo area, the dominant feature of which is the vast Serengeti plain, with the extinct volcanoes which mark its southern end. In the centre, south of the Rift Wall, the plateau [312] type of country is characterized by volcanic hill masses, which provide a number of permanent water sources. In the South lie extensive thorn scrub steppes, with a low and very variable rainfall.

311 101 173 Practically the whole of the area included in the District is used only for pastoral puposes. If tradition is correct in holding that the tribe was once

[1] See page 216.
[2] Page 168, Chapter II.

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

divided into two sections, the agricultural ('l-oikop) and the pastoral Masai, there now remains in Tanganyika little vestige of the former.[1] A few scattered plots are cultivated by Masai, but it is with the help of alien labour. For the rest, there a little cultivation by the small Sonjo Tribe (3,521 in the 1948 Census), a people living below the Rift Wall who have not been assimilated by the Masai. The only other tribe in the District, the Dorobo (believed to number about 1,500), who are known traditionally as the "hunting people," are possibly a survival of the original inhabitants, and have become practically a servile class to the Masai.

As a pastoral people the Masai are semi-nomadic in the sense that they move with their herds in order to avail themselves of the seasonal variations in water supplies, so that they in effect practise a system of rotational grazing. They are credited with the possession of three-quarters of a million cattle and large herds of sheep and goats, but the number of their stock is subject to large and rapid variation in times of drought, and moreover East Coast fever, rinderpest and other diseases take a heavy toll of them. In the late 'eighties a combination of drought and disease almost wiped out their cattle and greatly reduced the numbers of the people themselves. Though like many other African pastoral tribes they make a cult of their cattle, they show little interest in improving their quality, and in the past have been prepared to dispose of them only in so far as they might need cash for their Poll Tax or for the few articles of food required to satisfy a people whose ordinary diet is limited to milk, meat and blood. To some extent, this position was improved during the recent War, which provided a stimulus to production of beasts for sale.

From an economic point of view therefore the Masai present a difficult problem, since the contribution they make to the economy of the Territory does little to justify their occupation of so extensive an area as twelve million acres. From a social point of view they are also a problem, owing to their reluctance to avail themselves of facilities for education. And as will be further explained in the following pages, they present an equally difficult problem of native administration, for their social system is still reminiscent of a period when their chief concern was in fighting or raiding at the expense of their neighbours.

THE FORMATION OF THE SYSTEM OF NATIVE AUTHORITIES

As already indicated, the diverse social and economic conditions prevailing in different parts of the Province have been reflected in the variety of forms taken by the Native Authorities as now constituted. Before, however, proceeding to describe these in detail, it will be convenient to give here a statement which summarizes their chief features. See page 284.

THE MOSHI NATIVE AUTHORITIES

In the Moshi District the present formation of the Chagga Native Authorities is the result of a somewhat radical reorganization carried out in 1946. Up to that time the Chagga had been split up over nineteen chiefdoms, divided from each other not only physically by the deep ravines of the mountain side, but also politically by the obstinate clan feuds and jealousies of past days. These chiefdoms were all treated as of equal standing, though their jurisdiction varied from 11,500 taxpayers in the Machame chiefdom to 400 in the Mrao. They were united in a Council of Chagga Chiefs, which was conspicuous mainly

I'Sigirari

MASAI SOCIAL CUSTOMS.

By L. E. Whitehouse.

101 These notes have been prepared from information collected from the Masai who occupy the south-east corner of the Southern Reserve, between Kilimanjaro and the Chylulu Hills. They belong to a large [614] section of the tribe called I'Sigirari. This section unlike other Masai sections is divided into two sub-sections, the Ingidongi, to which all "medicine" men belong and the Il-Kisongo, the majority of whom live in Tanganyika Territory.

The Kisongo living in Kenya distinguish themselves from those of Tanganyika by assuming yet a third name "Il Oitokitok." This name is undoubtedly derived from that of a spring "Engoitokitok," meaning "bubbling water." It was in the vicinity of this spring that the Masai settled when first they inhabited that part of the country.

561 I propose to deal with certain customs and ceremonies connected with the founding of a new age group. For the benefit of those who may not be conversant with this form of tribal government, may I briefly explain that the Masai tribe is divided into age groups called *il poror* or *ol-aji*. All youths circumcised during a specified period of years are said to belong to the same warrior age and together they form one age-group. In some sections an age-group is formed of two distinct divisions, a senior and a junior, known as the right-hand circumcision and the left-hand circumcision. Later a group passes from the status of warriors to that of elders and thus make way for a new age-group to rise to warrior rank.

[881] Masai boys are circumcised usually between the ages of seventeen and twenty-five. The ceremonies which recommence about every seven years extend over a period of about five years. When the majority of the youths are circumcised and a warrior age-group of considerable number is assured, a movement is made to prevent any more boys from joining that group. Those responsible for the movement are the elders of the age-group next senior to the warriors at the time. These elders are to become sponsors and instructors to the members of a new age-group for the formation of which they make preparations.

They first send for a few of the bigger uncircumcised boys and explain that it is proposed to form a new age. In order to do this a ceremony called *endungori* must be held. The boys receive their [292] instructions and immediately don short cloaks made from black calf skins and anoint their heads with red earth that they may resemble warriors. They then set off in procession round the country on what

An Administrative Survey of the Masai Social System

By H. A. Fosbrooke

PREFACE.

The accompanying notes do not presume to give a balanced picture of the Masai social system. They were compiled in 1939 when the writer, after 4 years' service in the Masai District of Tanganyika was seconded to study the political system and to submit proposals on administrative reorganisation. These latter are omitted from the present publication, but the chapters on History, the Laibon, the Age Grade System, the Tribal Officials, and Clan and Family matters are presented in that order and in practically the same form as when originally submitted, and consequently refer to the position as it existed in 1939. This introduction and the conclusion are being written in 1948. 12

By reason of its origins this material has a heavy bias on the political side of the social organization; the purely social — birth, marriage and death customs — and the socio-economic — the cattle culture, land usage, etc. — leave a large field of interesting material for future study. It is hoped that one result of the publication of these notes will be to stimulate those at present serving in Masailand in whatever capacity, in both Kenya and Tanganyika, to take up these untouched branches of study in addition to correcting, bringing up-to-date and noting local divergences in this and other published material.

The Masai are known, by reputation or repute, to the majority of those into whose hands the present publication will fall. Here it will suffice to say that they are a race of semi-nomadic pastoralists, of Nilo-Hamitic stock, occupying a large area of country on both sides of the Kenya-Tanganyika border. The census due to take place this month will reveal their true numbers, and perhaps the editor of Notes and Records will be in a position to quote an accurate figure before this appears in print. But the whole tribe probably does not exceed 25,000 adult males or 100,000 persons in all.* It has been frequently pointed out by its critics that the tribe occupied more land and has played a more important part in history than is justified by its numbers, but the same remarks apply to many strong-charactered and virile races. 101 16

To illustrate this paper some of the numerous photographs which I took during my sojourn in Masailand are reproduced, though they have perhaps suffered through time and inadequate storage; in addition those interested will find that the works marked in the bibliography with an asterisk give an adequate pictorial representation of Masai life. And finally 400 feet of 16 mm. ciné film, kindly edited and 'duped' by the Colonial Film Unit, has been deposited with the Information Officer, Dar-es-Salaam, from whom it may be obtained on loan. Of particular interest are shots 126

* The Director of Statistics, E.A. High Commission, has kindly supplied the following preliminary estimate figures of the Census enumeration: Total number of Masai in the Masai districts of Kenya and Tanganyika — 187,[illegible], of which 54,[illegible] are males.—Ed.

PREFACE.

114 In the past very little detailed work on the social life of the Masai has been attempted,
115 since such investigations cannot well be made through interpreters, while few, if any, Europeans speak the Masai language sufficiently fluently to make such an investigation in that language.

Although I cannot claim any knowledge of the language of the Masai, I have been
[120] fortunate enough to become friendly with four Masai who speak Kikuyu fluently, and as I speak Kikuyu as well as I do English I was able to learn something from them about their customs.

These notes are of necessity brief and full of lacunæ, since I avoided asking direct
[124] leading questions, though tempted to do so, and also because they do not include information unless it was obtained from or corroborated by more than one informant.

The Masai from whom this information was obtained came from that part
[101] of the Masai Reserve which lies to the west of the Mau Escarpment, and I was not able to find out whether these customs prevailed among the whole of the Masai group.

My two principal informants were an old woman, past child-bearing, and her married son, aged about 30 (I have unfortunately lost the paper with their names).
[548] They were insistent that most of these customs have been slightly modified since
[128] government control has been set up, but I have, notwithstanding, written mainly in the present tense.

PART I.—CHILDHOOD.

849 *Birth.*—Among the Masai, birth takes place in the woman's own hut in her husband's village and she is attended by an old woman of her husband's family. Other women may be present, but no men. If a woman is having her first child she assumes a stooping position supported by other women, as the first child is considered more difficult to deliver; otherwise a woman giving birth to a child lies upon the bed. The acting midwife cuts the cord with a special instrument,[1] and both the woman and new-born child are washed with warm water. The placenta is carried out and thrown down in the cattle yard, but is not buried. As soon as the child is born its sex is ascertained in order that an animal may be bled to supply blood for the mother to drink. If the child is a boy the blood is obtained from a young bull, and if a girl, from a young heifer. (For method of procuring blood see Part IX.) From the day of
[846] birth onwards many sheep and goats are killed to supply meat and fat for the mother in order that the child may grow up strong, but these animals have no special significance, and are not sacrificial or for purification purposes.

553 *Naming Ceremony.*—Children are not named until they can run about, and unlike
[171] some other East African tribes, the child does not inherit any name from any PATERNAL RELATION.

[1] There is some mystery attaching to the instrument used, and I am not sure what it is.

FURTHER NOTES ON THE MASAI OF KENYA COLONY.

[With Plates XIII-XV.]

By D. Swann Fan.

Preface.

My excuse for writing the following is that in the capacity of District Officer, Kenya Colony, I have administered the Kenya Masai for periods aggregating rather more than three years between 1925 and 1930. Being able to speak the language fluently, and having observed their life and habits from day to day, I can supply a certain amount of information supplementary to the notes recently published in the *Journal* (pp. 185-200) by Mr. Leakey and the earlier work of Sir A. C. Hollis (*The Masai*, by A. C. Hollis, Clarendon Press, 1905). I have avoided repeating facts already recorded by these two authorities except where I can add to them or correct them.

In the following notes the first part consists mainly of additions to and comments on Mr. Leakey's article. Later on, I have dealt with other customs with which I am conversant. By the Masai I mean the people who comprise the territorial sections enumerated in the age-group table below. There are other tribes sometimes called Masai, *i.e.* the Uasin-Gishu, Arusha, Sambaru, Njampe and Ngurumen, of doubtful origin and divergent customs to which this article does not refer.

The Masai are a secretive people, suspicious of strangers, and unwilling for the most part to discuss with them their customs. But there live amongst them a number of natives of other tribes such as Kikuyu, who have been adopted by the Masai. Such folk are very ready to expatiate on Masai customs, but their testimony is often misleading because it is only half the truth.

Until recently I had no idea of setting down in writing the facts which I know about the tribe. I made myself acquainted with their language and customs simply because, without such knowledge, I should have been largely unable to appreciate their point of view or make decisions and give advice of value to them.

As there are many things still to learn about the Masai, I have omitted the sections on which my information is as yet insufficiently verified.

Childhood. *Games.*—Little girls sometimes play with dolls. These are made notably by their mothers of meal, which they drive. I have seen a little girl dressing her doll with a bit of cloth, giving it milk from a tiny gourd, cuddling it at her breast and rocking it to sleep, just as a European child might do. The Masai name for a doll is *Ilo-gwai e-ormaji*, which means child of meal. (See Hollis, p. 315.)

[64] The name of the main group 'Lorobo mongi' is very liable to be confused with that of the sub-clan 'Lorobo 'Kiabu because the former means "the blood-red bullocks and the latter the blood-red cattle."

It is further difficult, if not impossible, to know whether to treat some of the divisions as clans or sub-clans.

The two words used by the Masai are *Ol piloto* (the clan) and *Enkiakowi* (the sub-clan). But these words are not much help to the enquirer, because the Masai use each to some extent interchangeably.

Hollis, p. 280, speaks of a group of Masai called 'L-Okiep or Il-Lumbwa. I have been unable to discover these people. The tribe called Lumbwa, which lives to the west of the Masai area, is quite different in language and customs from the Masai, being similar to the Nandi.

[70] Some clans are associated with certain snakes as under :—

'L Aiser of Oosuma Orok (the black cobra ?), 'Loghoitoro of Amorai Kongai Orok (the thin black snake), Il Dorowro of Amorai Sero (the brown snake), Il Nobelio all snakes.

[97] *Adoption.*—The Masai like to adopt children, and even grown men, of other clans and other tribes, who may help them to herd their cattle. Of recent years they have also shown a tendency to adopt Kikuyu cultivators to plant maize for them in the more fertile areas Naivasi Naguro and Il Molili, west of the Rift valley. [56] An adopted person is called O-Ilaiga. Having been adopted he is regarded as being a member of the family and clan of his adoption and has nothing to do with his former clan. He may even marry a woman of the sub-clan of his natural father, provided that it is not also the sub-clan of his adoption. But he may not marry or have sexual intercourse with a woman of the sub-clan of his adoption. Accordingly, an adopted Kikuyu may call himself a Masai, and even though he may be unable to speak the Masai language he is not telling a lie according to Masai ideas.

When a man or boy is adopted as a herdsman he is treated by the head of the family as one of his own sons. He is given his herd of cattle and is helped to marry a wife. But if or when he elects to leave his adopted family he must go empty handed as he came, leaving behind him such cattle, wives and children as he may have acquired under adoption.

[158] An adopted man takes an inferior position socially to a well-born Masai. He would not in practice hold any important position in the tribe nor be able to marry a well born Masai woman.

[141] [122] *Inheritance. Arrangements of Wives' Huts.*—Before dealing with inheritance it is necessary to explain briefly the arrangement of huts in a village in order that the terms "right of the gate" and "left of the gate" may be understood.

THE SOUTHERN NILO-HAMITES[1]

INTRODUCTION

The Nilo-Hamitic peoples included in this volume form, in the main, two reasonably compact related groups: the Nandi, who live on the western edge of the Kenya highlands; and to the east of them, the Masai, whose land formerly stretched north and south for 400 miles along the Great Rift Valley. The Nandi-speaking tribes, homogeneous in culture, are derived from a common stock; and their culture has in turn a good deal in common with that of the Masai. Distributed through the highlands occupied by the Nandi and Masai are the scattered hordes[2] of Okiek, more commonly known as Dorobo or Wanderobo, the forest-dwelling hunters who preceded the present native inhabitants of Kenya Colony and northern Tanganyika Territory. The racial position of these Dorobo is uncertain: some people regard them (I believe erroneously) as early Nilo-Hamites; but since they have derived their present language and much of their culture from the Nandi, they are entitled to a place among the Nilo-Hamites.

The Tatog division of the Nandi group is separated from the rest of the Nandi-speakers, and lies close to the edge of the southern Masai; these people are included with the Nilo-Hamites on the score of language alone, since at present there seems to be no evidence of physical or cultural connection between them and the rest of the Nandi group. The languages, however, are unmistakably related, and therefore justify their inclusion here.

The third group, described as "unclassified," has been included because the peoples embraced by it live on the fringe of the Nilo-Hamites and would otherwise have been left out of the Ethnographic Survey altogether, since they cannot be fitted into any East African group under any existing scheme of classification. For these reasons it is considered that their appearance here is justifiable. The Iraqw and [illegible] means certain, nor has it yet been possible to classify their languages in spite of the availability of material, and for the present they must be left as "unclassified." The Hadzapi are "bushmen"—wild hunting people of the bush; and the Sandawe seem to be analogous to the Hottentots. These have a number of links with the Bushmen and Hottentots of South-West Africa; but they belong territorially to East Africa.

The majority of the Southern Nilo-Hamites are pastoralists practising (with the exception of the Pastoral Masai) a little agriculture, intensely conservative, devoted to their cattle, and regarding the rest of the world with contempt, a condition from which even now many of them are but slowly emerging. These characteristics help to explain such things as the absence of any extensive development of trade, and the lack of headway made among many of them by missionary efforts. In pre-European days they not only lay outside the slave trade, but largely controlled the ordinary coast trade to the highlands; hence Islam did not appear among them.

NOMENCLATURE

I. Nandi Group

There is no general term which is used by the people themselves to cover the main Nandi-speaking group, but (1) all Dorobo call themselves Okiek, sing. Okiet, though they have no horde-names of their own; (2) the term Tatog(a) is a group name covering eight tribes of which the Barabaig are the largest.

[1] For the relationship of the Southern Nilo-Hamites to the other Nilo-Hamitic Peoples, see *Ethnographic Survey*, East Central Africa, Part VI.

[2] The reasons for choosing this term "horde" are given in my paper "The social institutions of the Dorobo," *Anthropos*, 1931, XLVI, p. 2.

13:3huntingford E-4 (no date) 1953 FL.12 Masai FL.12
TATOGA FN26

group: Kipkoroek, Tindiret, Lokilani, Ravine, Western Mau, Eastern Mau; Central group: Dondole, Saleta, Kidoq, Digiti; Eastern group: Mt. Kenya, Kisima; Southern group: Mosiro. The western, central, and eastern groups are all in Kenya, the southern in Tanganyika Territory. 000

The Tatog division comprises:[1]

1. Barabaig: call themselves Barabaik, sing. Barabande; the sing. primary form is Barabau; the plur. primary Barabu has not yet been recorded. 2. Gisamajek. 3. Dorowajek. 4. Daroweajek. 5. Burudik. 6. Sionajek. 7. Rotagalenk. 8. Gidawedik. T 101

The Tatog (Tatoga) are called Tatura by their Iaraboro and Baata neighbours; this is said to be a corruption of Tatog. They are called Il-Magati, sing. Ol-Magatinin (= "the enemies") by the Masai, and this term has crept into some of the literature.

II. Masai Group

The Masai as a whole call themselves Il-Masai, sing. Ol-Masai.[2] There is some uncertainty as to the nomenclature and tribal divisions of the Masai. It is clear, however, that they are not a single tribe, but a group consisting of a number of pastoral units called il-oike, sing. ol-oikoi, or sub-tribes, which were associated in major units which may be called tribes and were the political units. These tribes and their sub-tribes may be provisionally set out as follows: M 101

Northern Masai:

1. Il-Aikipiak, sing. Ol-Aikipiani. Written also Laikipya, Laikipia, and even Lykipia.

2. Il-Wuasin-kishu, sing. Ol-Wuasin-kishui. Commonly written Uasin Gishu, and formerly Guas Ngishu from the mistaken idea that it meant "river (pasture) of cattle," whereas it means "striped cattle."

3. I-Sampur, sing. O-Sampuri, commonly written Sembur or Sembu, [illegible] of the white goats, [illegible] = people of the white goats).

Central or Rift Valley Masai: M [13]

4. Il-Kisongo, sing. Ol-Kisongoi, a grouping of three il-oike called Il-Purko, Il-Dumet, and Il-Kesh-o-epukia. Il-Purko has been Europeanized into Kisongo, and Kisongo into Kisongo.

5. Il-Kaputiei, sing. Ol-Kaputiei, a grouping of three il-oike called Il-Kaputiei, Il-ne-ko-kilani, and Il-kula-le-kutuk. The first is also written Kapiti, Kapiti; the second is the Dogland of the older travellers.

6. I-Loitai, a grouping of the I-Loitai and I-Siria, to which latter belong the laibons of the Il-Alari clan.

Southern Masai:

7. Il-Kiaukia, sing. Ol-Kiaukiai, generally written Kisongo, the Masai of Tanganyika Territory.

All these are Pastoral Masai; the first two are longer exist as separate tribal entities: the Il-Wuasin-kishu were broken up about 1883, and lost their tribes; though they have now been re-formed under their old names, this is due to the action of the British Administration. The Il-Aikipiak have also lost their land and their separate identity. M 115 [illegible]

The Agricultural Masai are known as I-Lumpen, sing. O-Lumpenai, commonly M 101

[1] Information from Mr. Gordon Wilson.

[2] Of and of in Masai names and words are the plural and singular article respectively (because, in; sing., on). The Wuasin Kishu pronunciation is Sussin.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12
Nandi FL13
Tatoga FN26

M 101

written Lumbwa; and as Il-Oikop, sing. Ol-Oikopani, written variously Loikop, Loikob, Eloigob, and even Leukop. The Kenya Masai call the pastoral Masai of Tanganyika, Kisonko, and the Agricultural Masai of Tanganyika they call Il-Arusa, the people known in Tanganyika as Arusa being a strongly Masaiized group of basically Pare (Bantu) origin. The name Il-Tiamus, sing. Ol-Tiamusi, written also Enjemusi, Njamusi, Njempu, etc., refers to the Agricultural Masai at the south end of Lake Baringo.

The name Wakwafi, Wakwavi applied by the Swahili to the Masai does not, it seems, really distinguish agricultural from pastoral, and the distinction made by Krapf in 1854 is more apparent than real. The word is derived from the Masai (in-)kwapi, pl. of *enkop*, "the countries," and from it come the names used of the Masai as a whole by (*a*) the Bantu, e.g., Kikuyu, Kamba, *A-Kabi;* (*b*) the Nandi group: Dorobo, *Ipkwapek;* Kony, *Ipkopek;* Keyo, *Kipkopek;* Nandi, *Ipwapek*.

III. Unclassified Peoples

1. Hadzapi: call themselves Hadzapi, sing. Hadza. They are called WaTindega by the Isanzu, and WaKindiga and Kangeju by others.
2. Sandawe: call themselves Sandawe, sing. Sandawe's.
3. Iraqw: call themselves Iraqwa, sing. Iraqwta. Other forms used by Europeans are Irak, Irakw, Erakh. They are also called WaMbulu, which is thought to be derived from the Swahili mbulu, "a person who says meaningless things because of madness or weak intellect"; and the district is known as Mbulu.
4. Gorowa: call themselves Gorowa. Also known as Goroa, and sometimes as Fiome, Fiomi, Bilai Mbulu, Cobbi (Umbugwe).
5. Alawa: call themselves Alawa; also known as Wasi.
6. Burungi: call themselves Burungi.

GROUPING

M T 138

Most of the Southern Nilo-Hamites live in the highlands of Kenya Colony; the southern Masai (Kisonko) and Tatoga are found in the northern part of Tanganyika Territory.

N 131 133

The Nandi group (Group I) is found in two concentrations: (i) to the north-east of Lake Victoria; (ii) south of Lake Eyasi.* The Dorobo are scattered over the forested parts of the highland area. The *Nandi* division of the group is mainly west of the Rift Valley on all sides of the Uasin Gishu plateau, at the north-west corner of which is Mount Elgon, on whose lower slopes live the Kony and Pok in Kenya, and the Sapei and Sapei in Uganda. East of Elgon, and at the north-east corner of the plateau, are the Sok, living partly in the hill country north-east of Kitale, and partly in the low country further east. South of the Sok, on the western edge of the Rift Valley, and along the east side of the plateau are the Marakwet, Endo, and Keyo; east of the Keyo are the Tukon or Kamasya. The Keyo country is a long, narrow strip consisting of high grassland and forest along the top of the escarpment, the precipitous slope of the escarpment itself, and the valley of the Kerio lying some 4,000 ft. below the summit of the escarpment. The south end of the Keyo country adjoins the hill country of the Mos, in the forests of which live a number of Dorobo bands, those labelled Kipkurenek, Tindiret, Rovias, Lokhlaai, West Mos, and East Mos. From the Mos the southern Nandi escarpment runs eastwards towards Kavirondo Gulf, almost coincidding with the equator, and above this escarpment the Nandi country stretches northwards, with the small tribe of Terik adjoining it on the south-west. South of the escarpment is the Kipsigis country. The Nandi-speaking peoples thus enclose the open grassland where the

N 101

* There is in addition a number of scattered pockets of Tatoga between Lake Eyasi and Lake Victoria.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12
Nandi FL13
Tatoga FN26

Il-Wuasin-kishu Masai (Uasin Gishu) lived till they were broken up about 1850. The Nandi tribes are surrounded by other Nilo-Hamites (Karamojoq, Turkana, Masai) on the north, east, and south, and by the Bantu Kavirondo (AbaLuhya) and Nilotic Kavirondo (Luo) on the west. N 101

Immediately to the east of the Nandi group lies the territory of the Masai (Group II), in and on both sides of the Rift Valley, stretching from Samburu in the north to about 6° south in Tanganyika Territory. In the north are the Sambur (Samburu) and, formerly, the Il-Aikipiak (Laikipia) east of the Rift Valley, with the old Uasin Gishu country enclosed by the Nandi west of the Rift. To the south of the Il-Aikipiak are the central Masai, comprising the Il-Kinopop extending right across the Rift Valley, the Loitai and Siria west of the Rift Valley, and the Il-Kaputie. These are the Kenya Masai. The country of the Tanganyika Masai, consisting of the Il-Kisonko and Il-Arusa, lies between Loigorien on the west and Kilimanjaro on the east, narrowing as it goes southwards. There are settlements (*in-kurmas* = farms) of the agricultural Masai from Lake Natron southwards. The Masai are bounded on the north and north-west by tribes of the Nandi group and by the Turkana; on the north-east by the scattered Randile and Borana; on the east by the Kikuyu and Kamba, Caga, Pare, and Shambaa (all Bantu tribes); on the south by the Bantu Kaguru and Nguru; and on the west by the Iraqw, Burungi, Shashi, Kurya, Gusii, Kipsikis, and Nandi, and by a short stretch of Bantu Kavirondo between Nandi and Elgon: the Nandi and Bantu Kavirondo were the neighbours of the Il-Wuasin-kishu who now no longer live here. M 131 101 M 36

Scattered over the highlands are the Dorobo hordes (the *Dorobo division* of the Nandi group) which are found in four main concentrations: (i) Western, in the Mau forests (West Mau, West Mau, Davina, Lokhini, Tindiret, and Kipkurosh hordes); (ii) Central or Rift Valley (Dundule, Saleta, Kidoq, and Digiri hordes); (iii) Eastern (hordes on the slopes of Mount Kenya and Kisima); and (iv) Southern, consisting of the Mosiro of the Talamai hills east of Kibaya in Tanganyika Territory. The Dorobo hordes are thus in contact with Nandi, Tuken, Keyo, Kipsikis, Masai, and Kikuyu; in spite of this, their language is in all cases a dialect of Nandi, though in some places where they are losing their identity (as in the case of the Kidoq) their Nandi speech is being forgotten and is in process of being replaced by Kikuyu. DDD

The *Tatog division* of the Nandi group is separated from the nearest Nandi-speakers (the Kipsikis) by 200 miles of Masai territory. The Barabaig (Barabaik), the only tribe of this division of which we have any detailed knowledge, occupy the country in the triangle formed by Mount Hanang and Lakes Basutu and Balangida south of Lake Eyasi. They live in an enclave surrounded by Nilo-Hamites (Masai) and Bantu (Kaguru, Gogo, Nyamwesi, and Sukuma); in this enclave live also the Bantu tribes Isanzu, Nyiramba, and Nyaturu; the Bush people Hadzapi; the Sandawe; and the unclassified though supposedly Hamitic Gorowa and Iraqw. T 101 131

The Hadzapi, Sandawe, Iraqw, and Gorowa are grouped together here as "unclassified" (Group III) in order to bring them into the Survey, for they cannot otherwise be easily fitted in, having no known relationship or specific cultural affinities with any other East African peoples. DDD

All the Southern Nilo-Hamites are pastoralists, though most of them except the pastoral Masai practise a certain amount of agriculture. The Nandi group are mainly people who live in hilly country, though they are not mountaineers, and their land must be such that cattle can be kept. The Masai on the other hand are plainsmen and accustomed to open country. While the Nandi tribes lived and fought in all kinds of country, not minding bush so long as it was not too thick for cattle, though they avoided forest, the Masai were at a disadvantage once they got out of the open country. The Tatoga are also (it would appear) plainsmen. The Dorobo are forest-loving hunters, till recently dwelling inside the forests; they have shown a tendency to become pastoralists with some agriculture. The Hadzapi are "Bushmen," inhabitants of bush country, and like the South African Bushmen have shown no sign of changing their way of life. The Sandawe are hunters who have T M N 101 DDD

Agricultural Masai

439 whose warlike qualities appeal to the Masai. Honey, honey-wine, and ivory are got from the Dorobo. Ivory was used in the old days for trading with the Swahili caravans for cloth, beads, wire, and so forth. Trade outside Masailand is conducted [126] mostly by the women, for by mutual arrangement they were allowed to pass unharmed from tribe to tribe even during the progress of a war.

Hunting

224 Though the Masai do not hunt habitually, and despise those who do, they used occasionally to kill wild animals—elephants for their tusks, buffalo and eland for the meat and hides, ostriches for their feathers, and lion and leopard to protect their cattle.

Labour

461 Although deprived of their only real occupation, fighting, the Masai have not yet as a people accepted any substitute for it, being, as Sandford noted, "too proud to work," i.e., for wages. A small number have accepted employment as herdsmen on farms, and some have done good service in the Police and K.A.R., though even in a military capacity most of them are still unwilling to submit to a form of discipline that is not their own. Though a few have taken to cultivation, the majority have not yet consented to stoop to what they consider labour unworthy of a Masai.

Sources: Thomson, 1885; Hollis, 1905; Johnston, 1902; Merker, 1910; Sandford, 1919; Fosbrooke, 1948, and personal communication.

THE AGRICULTURAL MASAI

101 175 [178] The agricultural Masai, the Il-Lumpua (Lumbwa) and Il-Oikop of former days, are people of Masai stock who, having lost their cattle through disease or defeat, were forced to take up agriculture in order to survive, and by so doing earned the lasting contempt of the pastoral Masai. It is in most cases uncertain how long the various groups of Il-Oikop have been agriculturalists; some of the southern Masai, for example, were defeated by the Gogo early in the 19th century and took to agriculture. Fischer in 1882 reported groups of "Wakuavi," as he called them, living on the southern edge of the Mau; at Ndaseriani (Ndare serian), 15 miles south-west of Narosura; in the region known as Nguruman (*in-kurman*, "the farms") for about 30 miles north of Lake Natron; at the southern foot of Mt. Meru; and at Kahe.[8] Von Höhnel adds Ndasekera, 20 miles north-west of Lake Natron.[9] Another group is named by Thomson and von Höhnel[10] at Taveta; while the map in Hollis's *The Masai* shows them as extending for about 100 miles south-south-east of Lake Manyara. The best known, however, are the northern group called Il-Tiamus or En-jemusi (Njemps) near Lake Baringo, concerning whom we have (such as it is) the fullest information.

184 22 With the exception of the Taveta group, the agricultural Masai in general resemble the pastoral Masai in appearance, dress, and general culture, and though they cultivate the ground, still have the acquisition of cattle as their chief ambition. Those of Taveta have mingled with the Taveta,[11] and have become the most successful cultivators among the Masai; the rest of the agricultural Masai in the days of Thomson and Teleki grew mainly eleusine and millet, while the Il-Tiamus grew also pumpkins, and tried unsuccessfully to grow maize. Most of the agricultural Masai supplemented their diet by hunting, bee-keeping, and, where possible, by fishing.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12
Agricultural Masai

In 1932 the Il-Tiamus numbered about 2,250 (3,423 according to the 1948 Census), and though they are of Masai stock, being descended from a Sambur section called Il-Doigio, they have admitted a variety of refugees including Kamasya, and become rather mixed. According to von Höhnel they had originally four villages at the south end of Lake Baringo, but two were deserted on account of Masai and Suk raids, and some of the inhabitants, having lost all their cattle, took refuge on Kokua Island in Lake Baringo. They are expert swimmers and possess canoes, though von Höhnel saw none in 1887. Their dwellings are round huts with rather high-pitched and somewhat convex thatched roofs, and walls of posts and sticks. These are crowded into two permanent villages known as " Njemps Kubwa " and " Njemps Ndogo " in the Tigrish valley a few miles south of Lake Baringo; the closely packed huts almost touch each other, and the mud-walled granaries are surrounded by strong palisades.

In general the Il-Tiamus keep as close as they can to the dress and customs of the pastoral Masai; they have circumcision and *eunoto* and other ceremonies, and practise the " free-love " system of the pastoralists, though without the *manyatas*. Today they have some 180,000 acres of poor land, most of it unfit for cultivation; but they have acquired, since the establishment of British rule, some 12,000 or more head of cattle, and 30,000 goats and sheep, thus achieving in part the ambition of all Il-Oikop to become cattle people again. In the time of Thomson and Teleki, however, Njemps was an important station on the caravan route, and von Höhnel noted that they had a large extent of cultivated land. This was divided into blocks (he says of three to four miles square) which were intersected by irrigation channels bringing water from dams across the river Tigrish. This system was still working in Dundas's time, who says that the opening of the main ditch was performed with the sacrifice of a sheep at the mouth of the ditch.[12] Besides agriculture, the Il-Tiamus fished and hunted, using the bow, and spears of Suk and Turkana types.

It is possible that the fishing group called Il-Molo who live on the east shore of Lake Rudolf is to be classed as Il-Oikop.[13] They subsist on a diet of fish alone which, when Teleki and von Höhnel saw them in 1888, had produced no ill-effects; but it seems now to have resulted in considerable physical degeneration, and in the appearance of rickets in all members of the group. There seems to be a good deal of Gelaba blood in them.

The Il-Arusa round Mount Meru are a large tribe of agricultural Masai, originally of Bantu stock, but now accepted by the pastoral Masai as worthy of recognition as a group which can pay and receive cattle for compensation in cases of homicide. The Baraguyu in Southern Masailand are also to be classed as agricultural Masai.[14]

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE

Social Organization

Life Cycle

From birth to circumcision a male is a boy, *ol-ayioni*. At circumcision[15] he enters an age-set and becomes a warrior, *ol-murrani*, " one who is circumcised," and may associate with unmarried girls. At the *ol-gesher* ceremony he becomes an elder, *ol-moruo*. Warriors may marry when they become senior warriors. After the *ol-gesher* the newly made elders attend to their family concerns, and get wives

[12] K. R. Dundas, *JRAI*, XL, pp. 49–55.

[13] W. S. Dyson and V. E. Fuchs, " The Elmolo," *JRAI*, 1937, LXVII, p. 327; von Höhnel, II, pp. 138–40.

[14] The people known as WaMeru in northern Tanganyika are not Masai, but people of Bantu stock who have imitated them.

[15] There is some uncertainty as to the age at which boys are circumcised. Hollis gives the limits as 13–17 years; Fosbrooke gives the lower limit as 16 or 17.

M 10 233 (ii) *The Masai.*

The Masai are a pastoral tribe whose sole occupation is the tending of large herds of cattle, sheep and goats. It has been estimated that they have about 25 head of cattle, and twice as many sheep and goats, per head of the population.

M 262 261 [263] The staple articles of diet are meat, milk, and blood. The blood is drawn from the living animal by puncture of the jugular vein with an arrow. Various roots and barks are used to make infusions which are used either with boiled meat or with milk. The men, while in the "moran," or warrior class, subsist practically entirely on these articles of diet. The rest of the population, in addition to these four items, which form the main part of their food, eat also some bananas, beans, millet, arrowroot, maize, sugar and honey, as M [177] these are available. The use of maize, which was introduced only a few years ago, is increasing.

For the greater part of the year there is no scarcity of meat, blood and milk, but in periods of severe drought, when, in spite of the large herds, the milk supply is inadequate, the consumption of these vegetable foods is increased, and even the "moran" may be compelled to supplement their meat and milk diet.

M [484] Berries are eaten by the warriors when on safari, *i.e.*, on hunting or fighting expeditions. It appears also to be customary to send the [843] pregnant women into the bush to eat berries. The berries would [146] make an insignificant contribution to the main constituents of the diet, but it is probable that they are of considerable importance as an antiscorbutic addition.

M [184] One section of the tribe, the Loitokitok, have adopted a frankly mixed diet. It is of interest that pica among the Masai is confined to this section, who use edible earths from various sources with their vegetable foods.

(*b*) Chemical Composition of Native Foodstuffs, Edible Earths, and Mineral Waters.

Ka M K 146 The results of the chemical analysis of 153 samples of substances used in the dietary of the two tribes are given in Appendix I. Certain points of interest are discussed below.

(i) *Foodstuffs.*

In the following table a comparison is made between the analyses of the chief Kenya foodstuffs and analyses of similar products grown in other regions, probably in Europe or America, as quoted by Sherman (1926). All the figures are given as grams per 100 grams dry matter.

BIBLIOGRAPHY OF THE MASAI

113 This bibliography is a revision of a mimeographed copy which I compiled several years ago and which has been circulated privately on 101 request. Continued interest has now prompted me to revise and publish it here. It deals mainly with the Pastoral or "Rift Valley" Masai of both Kenya and Tanzania. But it also includes many important references to other Maa-speaking peoples--such as the Samburu and Njemps (Tiamus) of Kenya and the Arusha and Baraguyu of Tanzania--who are referred to variously in the early literature as the Wakwavi, Wahumba, or Iloikop or simply as the Agricultural Masai.

113 Although by no means exhaustive, the bibliography is designed to include all the major works dealing with the history, language, and traditional social, political, and economic life of the Pastoral Masai. Other important items, not included here, may be found in the following: (1) Colonial Office Files, Public Record Office, London; (2) Secretariat Archives, Nairobi, Mombasa, and Dar es Salaam; and (3) Regional and Area Administrative Office Files, Kenya and Tanzania.

Titles in this bibliography are arranged alphabetically according to author or organization. The following abbreviations are used:

JAS	Journal of the African Society
JEAUNHS	Journal of East Africa and Uganda Natural History Society
JRAI	Journal of the Royal Anthropological Institute
JRGS	Journal of the Royal Geographical Society
MS NAD	Manuscript in former Department of Native Affairs, Secretariat Building, Nairobi

[For Masai traditions of contact with non-Masai peoples during the "primeval age of the Masai" migrations, along with a brief cultural sketch of each group, see category 116, pp. 385-400.]

/6 cont./

174 original homeland, which is to be sought in the northern part of the Arabian Peninsula. Only at the equator did the march to the south stop. Here the Masai found not only steppe regions such as they required for their herds, but also tribes of people such as they needed, as victims of their war expeditions, for their own survival.

000 The agriculturalist finds his sustenance in the soil; the one who carries on agriculture and stock raising finds in the former an adequate livelihood, even during periods that are unfavorable for stock raising, and he can, through the more stable trade relations that he owes to his sedentariness, acquire the new breeding animals that are needed to prevent too extensive an inbreeding of the livestock. On the other hand, a culture-poor nomadic people that lives solely and only from the livestock is in a much more unfavorable position. Merely to protect the herds from degeneration, a constant supply of breeding animals on a large scale is an urgent necessity. Moreover, because of the rinderpest, periodically appearing and in Africa, unfortunately, almost never dying out, and other epidemics, ruin very often threatens the stockbreeder, if in such cases he has no opportunity to replace his losses as quickly as possible and to obtain vegetable food in the meantime. Steppe peoples are aggressive, and for culture-poor peoples in
[101] general might always comes before right. There now live in the mountain lands lying on the borders of the steppes, and in the ones enclosed by them, Negro tribes who, in relation to the Masai, held together by firm organization and a high degree of tribal arrogance, and exceedingly mobile, are very immobile, for one thing, but then also are bound together within their own tribes only by a greater or lesser degree of herdlike obedience. They
[439] are accustomed to seeing, even in their sedentary neighbors, their born enemies; they live constantly at war among themselves, even in a small space, since often each village is independent, and thus must have been desirable neighbors for the Masai, from whom the latter could at any time obtain both vegetables and, what was of special value, livestock.

/7 cont./

000 against the former. The El kuafi recognized the chief (ol oiboni)
174 of the Masai as also their own and seem for a long time to have
184 been on the best of terms with them. Then -- so the tradition
669 tells -- a girl named Matangó, from the family of the ol oiboni
619 Sitonik -- she is usually designated as his sister, more rarely as
726 his aunt -- took a fancy to a member of a legation of El kuafi
[173] warriors sent to Sitonik and went away with her lover. When she bore him a son, the El kuafi proclaimed him their ol oiboni and at the same time refused to obey Sitonik. With this the wars began between Masai and El kuafi. They lasted -- so it seems -- the entire first half of the nineteenth century and occurred sporadically even in the second half of it. One of the decisive battles was at Kisongo, a six-hour march west of Meruberg /Mt. Meru/, where later on the chiefs of the Masai took up their permanent /8/ residence. The ones driven away went into the rugged forests of
[466] Meruberg, where they lived for a long time in constant strife with the Masai, until the chief Mbatyan completely subjugated them and forced them into compulsory service. Other battles took place near Ngurumán, north of Lake Natron; the rest of those conquered still live there, mixed with Wasegedju from nearby Sonjo. The
[361] remnants of the ones defeated in the Serengeti steppe are still to be found in Taveta, Kahe, Aruscha-tschini. The first battles between Masai and El kuafi probably took place in the vicinity of Kenia /Mt. Kenya/, and led to making the latter sedentary.

One of the last great clashes was in the steppe area Sogonoi; the ones conquered fled to Ngujuka and then farther to Useguha and Mañga, where they founded a settlement under the chief 'Lemá.

174 The Masai took a few individuals from among the defeated
184 into their community. The rest split up. One -- larger -- part
619 became sedentary and formed some colonies in the vicinity of
[361] foreign tribes or merged with other tribes. Another -- smaller --
[721] part at first made a living for a time from hunting, until it
[231] succeeded, by means of raids against sedentary peoples, in coming into the possession of livestock again. Today they again live
[101] wholly as before and are distinguished from the Masai only by

M 174 184 619 [101] [361] /8 cont./
the name El muli. Those who became sedentary, however, are designated by the Masai as El lumbua and also as El kuafi -- probably because they constitute the main part of the old El kuafi. The caravan people, accordingly, call them Wakuafi, while they make no distinction between El muli and Masai and even impose on the former the name of the latter.

M [144] In contrast to the El muli, who have remained pure, the El lumbua of all the settlements are more or less strongly mixed. In places the degree of mixture is so great that at first glance one scarcely recognizes the somatic features characteristic of the Masai people; in places, however, it is also still so slight that any mixture at all can only be determined by thorough investigation.

D 174 M 174 184 A last group,[1] finally, became hunters, the El asiti. This is the second branch of the Wanderóbo; the third and most recent, the El gasurek, arose from the Masai themselves, in that those impoverished by livestock epidemics were forced to a new means of subsistence.

M 634 635 [648] Even up to 17 years ago the Masai were the lords of the vast steppes in German and British East Africa, when the European occupation brought about a change. The entire land inhabited by them is divided into three provinces. The Kisoñgo Province embraces those steppe regions that lie south of the line, extending east-west, connecting the peaks of Kilimandscharo and Meru. North of this lies the province of Loita, and still farther north, embracing the region of Lake Naiwascha, the province of Ol bruggo. In earlier times a part of Loita called Es serenget seems /9/ to have temporarily formed a province by itself. Each province (ol oscho 'bo = a province) is divided into districts (eñ gob = the land), and these again into areas. Most of their names are proper names that can not be translated; others are chosen from local peculiarities, for example, springs, brooks, hills, mountains, trees, etc. The inhabitants often name themselves after the individual provinces or districts and then speak of Kisoñgo-Masai, Loita-Masai, Serenget- or even Kiteto-, Moibo-, Sogonoi-Masai, etc. Earlier travelers often mistakenly took this designation for tribal names. Similarly, the word ol oikob has been misinterpreted,

M [101]

M 192 101

1. [The reference is to the last group of the original Kwafi--Analyst]

M /9 cont./
192 in that it was taken as a tribal name, and people spoke of ol oikob-
101 Masai and ol oikob-Wakuafi. El oikob (sing. ol oikobani) means killers, rough, brutal persons, and is an invective with which the Wandoróbo, Wakuafi, and the Masai blacksmiths (el konono) designate their oppressors, the Masai. Fischer mistakenly translates the word as "owners of the land": this, however, would be called: ol opén l eñ gob.

M The Wakuafi live in their colonies as more or less peaceful,
619 sedentary cultivators. Wherever they found peaceful neighbors after
184 their defeats, they too became calm. On the other hand, where
181 they remained in close contact with the Masai and were exposed to their constant raids, the old bellicosity remained in them. An example of this is the population of Meruberg /Mt. Meru/ in the Great Aruscha /Arusha/ and Meru areas. In spite of a very con-
M [144] siderable mixture with Wadschagga from nearby Kilimandscharo, they have completely kept their original character traits. Their imperiousness, rapacity, and cunning equal that of the Masai: in
M [648] courage, on the other hand, they even surpass them. Their numerous attacks on the camps of Europeans and trade caravans reveal them as brigands. The relationship between Wakuafi and Masai
M is in general not bad. The latter regard the former as fellow tribes-
829 men, even though as inferior ones, because they work the soil
619 and own only a little livestock. They are foes one minute and
[241] friends the next! And both must always reconcile themselves to
[231] each other, for the Masai cannot do without them as suppliers of
[438] vegetable foods, after the rinderpest at the end of the eighties
[731] again raged so destructively among their herds.

D While among the Wakuafi one can still clearly recognize
105 their one-time power and greatness, this is no longer the case at all among the Aaá. Most of them, just like the El asiti, timidly and concealed in the bush of the steppes, live in miserable little grass and leaf huts which can be reached only by hidden paths. Their food consists of game, which they kill with poisoned arrows and poisoned javelins, honey, agricultural products which they obtain in barter, various wild berries, roots, and herbs. Where they dwell in the vicinity of the Masai, they live in a certain

D 105 /9 cont./ dependency on them. A caravan traveling across the steppes certainly does not remain hidden from the Wandorôbo roaming about everywhere. /10/ Their betrayal soon causes it to fall victim to the spoils-hungry Masai. Through their poverty and the contemptible endeavor to make up for the lack of slaughter animals through the killing of game, the Wandorôbo, to be sure, stand especially low in the estimation of the Masai, yet the latter do not deny the connection with their old fellow tribesmen to the extent that they do not grant individual Wandorôbo, as well as El lumbus and El muli, admission into their community.

M [829] [177]

M 101 184 177 In recent times those Masai who, after the loss of their livestock, have become detached from the larger community and live in small kraals in relative poverty, still generally reckon themselves as belonging to the El dorobbo, without, however, counting themselves within one of the three branches -- Asá, El aiti, El gasurek. Often they live together with a few Wakuafi, sometimes one also finds one or several Wandorobo families among them. Their property consists of a few cows and donkeys, a couple of goats and sheep. Since they cannot subsist on these, they also cultivate maize, batatas, etc. here and there and devote themselves to hunting with bow and arrow.

M 648 The influence that the Masai people exerted and still exert on the settled peoples who live on the borders of the steppes dominated by them for centuries is very great. Just as formerly it was the Wandorôbo, now it is the Wakuafi and Masai to whose influence the surrounding peoples must submit. What qualified the Masai for this lordly position is their relatively high cultural level; what made possible their reaching this position, their strict organization and their war-mindedness. This is not the place to analyse why the culture of the Masai is a higher one than that of individual Negroes surrounding them. It should only be pointed out that among almost all of these, in contrast to the former,

M [181]

000

• [101]

1. The Masai give this name to the inhabitants of the Umbugwe area on the southern end of Lake Manjara.

during an attempted livestock raid.

861 The child is probably never beaten before it is at least two years old. But even at an older age beatings are very rare and then never cruel. Boxing the ears or blows on the head are generally forbidden because they might injure the health. If correction is necessary, [292] the mother -- and, to be sure, only she -- strikes the child rather lightly on the training surface with the belt that she wears after each confinement.

855 As soon as the children are weaned, they are left to themselves the whole day and, appear in the maternal hut only for eating, drinking, and sleeping. They develop rapidly, are lively, bright, and often quite pretty, if their faces are not marred by running eyes. The latter is very common, for the countless flies in the kraals prefer to settle on the nostrils and eyes of the children. It is only natural that they quickly lose their childish innocence, if one pictures the 857 life that surrounds them. There is a time, however, when they still 524 enjoy naiveté and amuse themselves with childish games. Little girls like to play with dolls or also "cooking." A foot-long fruit of the Kigelia aethiopica, similar to a liver sausage in appearance, is the doll. Sometimes it is carried on the back, sometimes held at the breast, then anointed with water or earth, in place of fat, or, with the assumption that it is crying, rocked in the arms or on the back. For cooking, they make themselves small clay pots out of the clay of the termite hills, place them on three small stones, and fill them with grass and leaves, which are supposed to represent their favorite foods. They also imitate the grinding of flour by rubbing sand between two stones. With the fruits of the Solanum campylacanthum they play at catch in twos or by turns, whereby the one who drops the "ball" must let the other drink a couple of swallows of milk out of his gourd bottle. Boys and girls also play "husband and wife"

/117 cont./

186 unbelievers, every trick, every deception is permitted against them.
[101] In particular other names exist for distinctions. For the tribes racially related to them these names are derived from their places of residence, in connection with which it is to be noted that for these the Masai have their own nomenclature. For Europeans he uses the I sinâgo derived or transformed from the Kisuahili. Finally, he calls the Negroes ol mâkar (sing. ol makarinde), which is to be translated appropriately with "the savages" and corresponds to the word Washenzi with which coast the people designate the Negroes of the interior.

181 The first impression which the Masai, in comparison with the Negroes, makes on the European is definitely very much to his advantage. The handsome, tall figures are charming in themselves from the first and often make haughtiness and insolence appear as pride and candor, which stand in pleasant contrast to the hypocritically fawning, groveling submission of the Negroes.

829 A certain distinction is really not to be denied the Masai. In this respect he stand high above the average Negro. It is significant that for him only the thrusting weapon -- spear and sword -- is regarded as worthy of a Nego. He has a profound contempt for the Nego bands shooting with poisoned arrows treacherously from the bush, whereas he judges this situation more leniently in connection with the Tsunga in the process of sharp decline, who are able to muster only very meager fighting forces. He therefore also condones the use of guns, at least in part, by the divisions, numerically weak, of the Pensersaure Tsunga. It seems to him justified against the poisoned arrows, but he does not by any means regard it as noble and decent compared with his thrusting weapons. Thus, a small Masai youth, who was in my service for several years as a boy, often reproached me in the aforesaid way.

/[illegible]/ Third Part

I.

The Wandoûbo of the three branches of the Masai people.

The customs of the Wakuafi are in general identical with those of the Masai, and where a slight difference appears in one or another of their colonies, it is to be traced back solely to the influence of the neighboring sedentary Bagu tribes. Such deviations are therefore not peculiar to the Masai people as a whole, and a discussion of them would go beyond the compass of the present study. On the other hand, it is necessary to go into more detail on the customs and practice of the Wandoûbo belonging to the Masai people, who, in their social relations, have maintained themselves quite without foreign influence (1).

1. With the exception of such by the Taraga, a tribe anthropologically very close to the Masai people.

and to present the differences down by a comparison with the customs of the Masai, as well as to substantiate the correspondence to the main points.

We have seen that members of all three branches of the Masai people fall under this name (2).

2. In what follows nothing will be said about the Wandoûbo not belonging to the Masai people, who are men, mixed with Taraga and Masai, as remnants of an extinct hamite people -- who embraced the sun cult.

The And sons from the oldest epoch, the El sati from the middle one, and the El gamonk from the most recent one (3).

3. The other designations with which the Wandoûbo of the individual districts were formerly have geographical meaning.

Figure 1. Mountains. The Western Rift of the Rift Valley Divides Western Mountains from Eastern Mountains.

INTRODUCTION

Within the past century the grassland ecosystems of Africa have been as much altered as those of the rest of the world. The assemblages of plains wildlife of which Roosevelt (1910) wrote in such wonder have now almost disappeared. One area, however, has remained largely unaffected by "progress."

The Serengeti-Mara region covers some 30,000 square miles of open or wooded plains land, rolling hills and flat plateaus, lying across the Kenya-Tanganyika border just east of Lake Victoria. Most of the region lies in Western Masailand, and much of the part outside the Masai land unit is in Tanganyika's Serengeti National Park.

Topographically Western Masailand is well protected. The Great Rift Valley forms the eastern boundary of this region, and on the south the Rift plus the Ngorongoro Highlands provide a barrier; the north is protected by the Mau Escarpment, and on the west the Nyiro Escarpment and Lake Victoria form a discontinuous but effective boundary (Fig. 1).

The Masai tribe has provided the other major protection. Before the White Man arrived -- but only just

10/ before -- the Masai tribe occupied what is now Western Masailand by conquering and evicting the previous residents (Grant, 1957). The Masai were a fierce and warlike people. Once they had taken over that country no one seriously disputed it with them. [176]

175 648 In the early 1900's through the Government of Kenya the Masai made a treaty directly with the Queen of England. This involved re-settling a segment of the Kenya Masai, but the long term effect was to put the Kenya Masai in a privileged position relative to the other tribes -- who did not have such a treaty -- and to give them a degree of autonomy virtually unknown in other parts of Kenya. Because of their remote location and the nature of the Tanganyika Administration, the Masai in the Tanganyika portion of Western Masailand also maintained a large degree of autonomy. Aided by these circumstances, the extremely conservative western Masai have kept largely to themselves, and to an extraordinary degree the modern world has gone on around them, instead of over them and through their country. [177] [178]

121 *122 *(114) My first visit to the Serengeti-Mara Region was in 1956. I had been assigned to carry out a brief ecological reconnaissance of the Serengeti National Park under the sponsorship of the Wildlife Management Institute and the American Committee for International Wild Life Protection (Talbot, 1956).

PRESENTATION AND DEFINITIONS

128 An ecologist/geologist is difficult to organize the presentation, since all the component parts are interrelated. The problem is to find a starting point. This difficulty is emphasized in a study as broad as this one. The form that has been adopted is as follows:

1. To provide a general description of the area and its significance to this type of study.

2. To describe, in turn, the various component parts of the ecosystem, treating each component separately but defining its relationships with the other components.

3. To bring the components together with a discussion of the nature of the ecosystem and its historical implications.

Methods used in the field collection of data are mostly described where appropriate in the text. The basic methods that apply to the entire study, however, do not belong in any one section, and these are described in the chapter on Compilation of Data.

129 Kenyatta is the name commonly used in East Africa to denote the Masai administrative land unit, which includes about 10,000 square miles in Kenya and over 25,000 square miles in Tanganyika. The term

136 137

*133 Rawlins that to the west of the top of the western escarpment of the Rift.

*133 The boundaries of Eastern Rawlins, as the term is used here, are ecological and not political (Fig. 1). In Kenya, the Masai land unit includes much of the southern face of the Mau escarpment, a forested massif rising 4,000 to 5,000 feet above the Masai plains. Ecologically, much of the higher Mau forest area does not belong in the present discussion and it is not included. The same is true of part of the Ngorongoro Highlands in Tanganyika, and some of the administrative Masailand in Kenya above the Rift Escarpment.

*133 Included within Eastern Rawlins is the Serengeti National Park in Tanganyika and the western environs (Fig.2). Politically this area is not at present in the Masai land unit, but from the standpoints of physiography and ecology it is homogeneous with the adjoining Masai land unit.

*133 The Serengeti-Mara Plains region refers to northwestern parts of Eastern Masailand. Although neither a plain, nor a plateau in the strictest geographical sense (Tandall, Glendinning and Buchanan, 1961), this area is relatively flat and takes its name from the

Figure 5. Physical Map of Eastern Australia.

Serengeti Plain of Tanganyika and the Mara Plains of Kenya. The region includes these areas, plus the homologous habitat between and around them, and covers around 12,000 square miles.

The study area included the plains region and its surroundings in order to define the boundaries of the ecological unit. The total area studied covered roughly 20,000 square miles.

I have used the term grassland in a very broad sense. Within the climatic and edaphic ranges of grass (which includes much of the world), virtually all areas are grasslands or potential grasslands. Grasses and associated forbs provide the larger part both of the food for the wild and domestic grassland animals, and of the fuel for the fires. By manipulation of fire, grazing, and other factors the grass composition and vegetation physiognomy of a given area may be altered considerably; but within that area the maximum biological productivity appears to be achieved by a given combination of grasses. This combination represents a response to the various factors in the ecosystem, and it is constant in a given area, while varying from area to area, as do various factors in the ecosystem. Tussock Islands is the dominant grass of some grassland ecosystems in

*137 is now open grassland in the Serengeti Plain. The region of Olduvai, Lake Ugarya, the various groups of kopjes, and the Ol Donjo Gol Mountains (in the east between the Serengeti and Selai Plains) were all well wooded from present evidence and Masai occupancy. The numerous watercourses in the open plains also must have had at least an open woodland within them. There are still stumps and occasional trees in all these areas. In 1956 there were open lines of trees in watercourses in the eastern Serengeti Plain where by 1960 all were gone.

*137 *104 To the north the Masai occupied the Loita Plateau and the Loita Plain. The plateau and the hills to the north were called by the Masai Osebego lo Loita or Osebego lo Lolitai (German East Africa, Ikoma A 4) which means rain forest of the Loita, just as the Ngorongoro Highlands were known as Osebego lo Datas, rain forest of *137 the Datas (Grant, 1957). Relics of broad leaf forest still exist on the plateau and hills, along with what is left of a cedar forest. Much of the Loita Plain was probably open grassland, but the cedar forest extended far out into it in the north and open or closed woodland existed in many parts.

*134 *137 The area to the west, including the Mara Plains and Tanganyika south to the Serengeti Plain was not infested

*137 *[136] by tsetse fly -- so must have been relatively open.

* [101] [231] *[232] 1850-1890: This appears to have been a period of increased burning, expansion of the Masai into the lands north of the Serengeti up to the Mara Plains, and increasing numbers of livestock. The open grasslands reached their greatest extent during this period, and the area between the Serengeti Plain and the Mara became open grassland with riverine forest and scattered thickets, much like the present southern Mara Plains (Fig. 79a).

*134 *137 [101] The Masai apparently extended their grazing and particularly burning far up into the Mau Escarpment. Spectacular erosion can be seen over much of the Mau Escarpment north and east of the Loita Plain. Virtually no top soil can be seen over hundreds of square miles at the lower elevations, and where some does remain it may be 10 to 14 feet above the present ground level, on top of a pedestal of earth held against erosion by the roots of a few surviving cedar trees. Trees growing in the bottom of these erosion scars in 1960 were dated as being 50 to 80 years old which would put the period of recovery in the late 1800's at or after the disasters of the Masai. During the period of dry years culminating in 1961 the Masai extended their [101]

#134 #137 burning and grazing far up into the same area of the forest, and the torrential rains that followed the dry period in 1961 created new erosion scars of as great magnitude as those of the earlier period.

#13 #233 [731] At the peak of the power of the Masai in the 1880's they had very large numbers of livestock. Their peak of intensity of livestock grazing, and probably overgrazing, came at the onset of the droughts which culminated in the famine of 1890. Conditions may have been much the same as in 1961. The effect of grazing animals on the vegetation, as well as the impact of fires where there was fuel, probably reached a peak about 1890. It is probable that a brush invasion through overgrazing was already starting in some of the open grassland.

[101] 1890-1918: The result of the combination of disasters that struck the Masai in the 1890's was that they largely vacated the Serengeti Plain and the country to the north all the way to the Loita Plain. There was a period of about 15 years of very much reduced grazing by domestic livestock and apparently reduced grass burning, and for part of this period there was probably almost no regular grazing or burning. This was

*13 A233 a period of increase in woody growth. The area was still burned on occasion by the Wanderobo. In 1906 when Jaeger visited it the boundaries of the open Serengeti Plain were wider than now, and the country to the north was still largely open. As the bush increased the tsetse flies moved in from the infested areas south and west. Figure 27A shows the spread of the fly during this period.

[See p. 19A.--Analyst]

[(a)] 1918-1962: After the first world war the Masai were allowed and encouraged to re-occupy Western Masailand. Burning and grazing were continued, but grazing was limited by the tsetse fly which continued to spread north. The effect of the frequent burning was apparently to stabilize the invading woody growth in the areas occupied by tsetse fly. From the 1920's to the present the general aspect of the bush country between the Mara and the Serengeti Plain has little changed. Examination of it shows clearly the stages that preceded the present stage.

137B Figure 28 is a general view south into the bush country of northern Tanganyika adjacent to the Mara Plains. During the Masai occupation prior to 1920 the burning and grazing restricted woody vegetation to riverine forests and scattered thickets, with occasional areas of open woodland. Then Whistling Thorn and other

FL12 Masai FL12

791 Ore too-'l-oibonok pôkin Ol-Ōnana ol-kitok lenye. Ninye egel il-Maasae pôkin, nějo ol-aitoriani lenye.

Of all the medicine-men Lenana is the greatest. All Masai acknowledge him as their lord and pay tribute to him.

791 173 Něji Ol-Ōnana en-gerai e-'M-Batyany, o 'M-Batyany en-gerai e-Supeet, o Supeet en-gerai e-Sitonik, o Sitonik en-gerai e-Kipepete, o-Kipepete en-gerai e-Parinyombe, o Parinyombe en-gerai e-Kidoñgoi, o Kidoñgoi en-gerai e-'Sigiriaishi.

It is said that Lenana is the son of Mbatian, who was the son of Supeet, who was the son of Sitonik, who was the son of Kipepete, who was the son of Parinyombe, who was the son of Kidongoi, who was the son of E-Sigiriaishi, the son of Ol-le-Mweiya.

791 773 614 Ore en-giterunoto oo-'l-oibonok něji enotōki Ol-le-Mweiya eton te-'n-geper o-'l-doinyo loo-'l-Aiser ōtadōuo te-'ng-aï. Netum il-Aiser, nějo en-gerai amu oti naleñg, nerik añg, nenyoriki ol-oiboni, neiyamisho, neïu 'n-gera.

The story of the origin of the medicine-men is said to be as follows: Ol-le-Mweiya came down from heaven and was found by the Aiser clan sitting on the top of their mountain[1]. He was such a small person that he was first of all believed to be a child. He was taken by the Aiser clan to their kraal, where it was discovered that he was a medicine-man. He married and had issue.

Ore etaa en-něä, nějōki 'n-gera enyena: 'Emindur te-'nne.' Ti-araki naa nēja pe melam il-Aiser illo-doinyo.

When he was dying he said to his children: 'Do not move from this spot.' On account of this the Aiser clan do not go far from their mountain.

791 787 Ore too-'l-oibonok pôkin li-opa 'M-Batyany ol-kitok.

Now, of all the medicine-men who lived in olden days Mbatian was the greatest.

Něji opa eton eitu epwōnu 'l-Aisungun kunna-kwapi, etiaka 'l-tuñganak: 'Epwōnu akenya 'l-tuñganak ooibor kullo-oahon.'

It is said that formerly, before Europeans ever came to these countries, he prophesied that white people would arrive.

Ore sii inna-kata eton eitu

Again, before he died he told

[1] Commonly known to Europeans as Ngong or Donyo Lamuyu. The Masai have three names for this mountain—Eng-oñgu e-'m-bagasi (the eye or source of the Athi River), Ol-doinyo loo-'l-Aiser, and Ol-doinyo lo-'l-le-Mweiya.

19.	Angata Puai	Lower Mara, East Bank.
20.	Angata Naado	Lower Siyabei River.
21.	Uaso Kedong	Kedong Valley, below farms.
22.	Kandie	Athi River.
23.	Ol Jorobor	A stream at the South end of Mt. Enapuraaha, Matapatu Country.
24.	Metiganju	Metiganju River, in the Ol Oitokitok Country.

Plot holders permitted to sell cattle for cash in the Masai Reserve.

648*
439
366

In view of the fact that cattle were being commandeered from the Masai and bought for cash, the question of the advisability of permitting the Masai to purchase stock with cash so obtained was brought forward by Mr. Hemsted in February, 1916. He represented that new blood would be beneficial and that the small numbers of cattle so purchased would not materially affect the situation and therefore he recommended that established traders be permitted to bring cattle to their stores for sale to the Masai for cash. The Governor approved this measure but considered that it would be a good thing if it could be arranged that the opportunities given to the Masai for purchase should be limited to higher grade cattle to the exclusion of native stock. The Rule under the Outlying Districts Ordinance, dated the 4th of February, 1913 (*vide* p. 91), was therefore cancelled by Rule in the "Official Gazette" of the 1st of March, 1916.

Itinerant trading. Mr. Hemsted's views.

In October, 1916, Mr. Hemsted submitted a comprehensive memorandum on the policy which should be pursued in regard to itinerant trade in the Masai Reserve. He deprecated any policy of throwing open the reserve to unrestricted itinerant trading. A large business had been built up by the better class of merchant at the trading centres, by which the requirements of the Masai had been greatly augmented and had to a very considerable extent been met. Itinerant trading would force these men to adopt similar methods and would lead to the discontinuation of trade centres. The Masai would be content if articles were brought to their doors and would never visit the centres, thus losing touch with outside influences and with the benefits accruing from competition between merchants. The question also affected the labour market, as thousands of Kikuyu would prefer making a livelihood by barter with the Masai to working for wages. The system of trading centres had proved both beneficial and acceptable to the Masai who appreciated the cheaper rate at which they could obtain goods, while they had found from experience that the system of itinerant trading led to many cases of theft or alleged theft.

The result of the establishment of trading centres and of the exclusion of the itinerant trader had been the establishment of shops by more than one hundred and twenty merchants in the Narok and Mara districts alone and the Masai had asked for eight more centres in these districts. Trade had been almost at a standstill in the Ngong districts, where there were only three trade centres, but the opening of

No modification made, February, 1917.

The question of the advisability of once more allowing free entry of cattle into the reserve was discussed in Executive Council, on the 20th of February, 1917, when it was decided that no interference with, or modification of, the existing arrangements was desirable.

Mr. Hemsted's suggestions for gazetting townships.

In October, 1917, Mr. Hemsted made proposals with a view to the regulation of trade in the reserve, and to the granting of facilities to persons, other than the licensed plot-holders. He suggested that all trade centres be declared townships, with markets declared therein and rules applied, and he proposed that no trading should be permitted except at the gazetted trade centres. He contended that the bringing of the Masai into touch with outside influences, the benefits of competition, the encouragement induced to place trade on a cash basis, and the assistance which would thereby be given to the native labour supply, were advantages which might be claimed for this system, while it would also be more practicable to enforce the veterinary regulations. The Masai, as well as all traders, except some Somalis, were in favour of confining trade to the trade centres. No fees would be charged to persons buying in the centres for cash only, but a schedule of fees for licences and of market fees was suggested.

The question was considered in Executive Council, of the 12th of January, 1918, when the consensus of opinion was that matters should remain as they were. The Officer-in-Charge, who was present during the discussion, did not wish to press his recommendations.

Further trading centres gazetted.

Five additional trading centres were opened by notice in the "Official Gazette," of January 30th, 1918. The notice read as follows:—

"The Government of the East Africa Protectorate, with the consent of the Paramount Chief, and the representatives of the Masai tribe, is prepared to grant occupation rights within the outlying district known as the Masai Reserve, in centres, the names, situations and areas whereof are specified in the Schedule annexed hereto, on the terms and conditions following:—

"(The conditions are the same as those previously specified.)

1. Kajiado	Within one mile North of Kajiado Railway Station, on the Magadi Railway.
2. Naibi	Within one mile North of Naibi Station, on the Magadi Railway.
3. Namanga	On Namanga water course on Kajiado-Longido road.
4. Ngong	On Ngong water course in the Ongonga to Ngong.
5. Ngurumen	At the North-West foot of Ol Doinyo Shombole, on the East Bank of the Guaso Ripro River, shortly before it enters Lake Natron.

NOTE.—The approximate extent of each of the above trading centres is "160 acres within a circle with a beacon as centre."

698*
579

As it proved impossible to discover the identity of the offenders in these cases, the probability of the guilt of the Muran of the Purko and Loita divisions, enhanced by their refusal to render assistance in locating the criminals, was considered sufficient to warrant the imposition of a fine under the Collective Punishments Ordinance, 1909, and the Secretary of State approved the collection of a fine of one hundred head of cattle on each village of the two sections. There were, in all, one Loita and four Purko villages,* and after the payment of compensatory blood money to the relatives of the deceased, it was decided to devote the remainder of the fine collected to the undertaking of works for the improvement of the reserve.

[628]

The imposition of this fine served largely as an object lesson to the Masai indicating that raids must cease. A military patrol then operating in the Sotik and Masai country and in the Chepalungu Forest was detained in the area with a view to ensuring the collection of the fine. Some slight trouble was caused by the younger Muran, but the full number of cattle was obtained by the end of February, 1913, and about one hundred head were disposed of as blood money. This is the first occasion on which a fine under the Collective Punishments Ordinance was imposed on the Masai.

Raid into German territory, December, 1913. [124]

9. In December, 1912, a raid was made into German territory by some Masai, in the course of which 62 head of cattle and three donkeys belonging to a German planter named Koenig were stolen and an Arab and two Wanyamwezi were killed. Very little evidence in connection with the matter was adduced by the German Authorities, and it was not until February, 1914, that any witnesses were forthcoming who *could identify the stolen stock*. The *Masai chiefs and elders* took no steps to discover the identity of the perpetrators of the raid, and there was no direct evidence to connect any individuals with the offences committed. Fines were therefore inflicted in May, 1914, to the extent of 150 head of cattle on the Salei division; 50 head of cattle on the L'Otayok Muran; 50 head of cattle on the Kisarani "Sirit" of the Purko Muran.

Herr Koenig was to be awarded the sum of Rs. 2,500 as compensation from the proceeds of the sale of the cattle, but the outbreak of hostilities prevented this payment and the money so reserved was devoted to the reimbursement of certain Masai for loss incurred at the hands of German natives, *vide* Incident No. 21. The balance of the fine was utilised in the demarcation of the reserve and in the irrigation of Narok Station.

Murders near Ramaruti, January, 1913.

10. Two porters belonging to a shooting party were murdered on the Gilgil-Ramaruti road about four miles from Ramaruti on the 1st of January, 1913, by Muran from the extended Southern Reserve who had returned to Laikipia to assist their relatives with the movement of cattle. The murderers in this case were captured and convicted, but, in order to prevent further similar outrages, steps were taken to restrict the movement of Masai from the Southern Reserve.

Iron bolts on Magadi Railway, January, 1913.

11. Complaints made by the Railway Magistrate, Magadi Railway, that on five occasions iron bolts and similar heavy pieces of metal had been placed on the rails led to suspicion falling on the neighbouring Masai who were thought to have wished to flatten the bolts for spear heads and knife blades. One slight accident was caused, and as the practice continued, two Masai villages near the Railway were removed.

Murder of Lumbwa and Kavirondo, January, 1913.

12. About January, 1913, two murders were committed on different dates but in the same locality. The victims were a Lumbwa and a Kavirondo respectively who were returning to their homes by a track passing through a portion of the Masai Reserve. About this time, considerable ill-feeling and mutual suspicion existed between the Masai and Lumbwa tribes, more especially among the Muran, and the Masai are known to have been responsible for the murders of some six Lumbwa between August and December, 1912. (*Vide* Incident No. 8).

No great hostility existed between the Kavirondo and the Masai, but the desire of the Muran of the latter tribe to blood their spears is so keen that they would have no scruples on that account.

* Loita village called Kimwani. Purko villages called Ilpiroi, Kimwani, 2 Kotiko and 2 Ilpolpoi.

[103]

/60 cont./

551 Third names for girls: Eng or = the sweeper, from a-or, to sweep: Leraij, Ol ginje, Ndebil, after like-named trees: Leschau, from eschau or ehau = to rain through into the house: En goitoi = the way: Batate = the one who fell down (a-batat = to fall; a-dabatate = I have fallen): Mboi, after a similar sounding call with which one calls back the goats and sheep that have strayed from the herd in the pasture: Karau = the thick-boned one.

• [103] Names that women received after their marriage are: Eng arus' ai, that is, the wife who comes from the Arusa area, as the Masai call the Grow-Aruscha /Great Arusha/ area at Meruberg /Mt. Meru/, where many Masai found refuge in the famine. En gischoro, after a former great warrior named Ol gischoro: similarly formed En gischon from Ol gischon.

VII.

000 Circumcision of the boys. -- Point in time. -- The circumcision years, festivities at the end of them. -- Day of circumcision. -- Operation. -- Feast. -- Behavior of the circumcised until the healing of the wound. -- Circumcision of the girls. -- Point in time. -- Operation. -- Behavior of the circumcised until the healing of the wound.

881 According to the belief of the Masai, circumcision was introduced
[885] by a command of God. After circumcision boys and girls are regarded as adults. The former are supposed to be circumcised as soon as they are strong enough for participation in a war expedition, that is, at the age of 12 to 16. Sometimes it is somewhat earlier, if the boy is particularly well developed, somewhat later if the father, lacking any other labor force, cannot spare him in the tending of the small livestock. Circumcision takes place later for poor sons of poor people
[422] or for propertyless orphans. Namely, for the meat feasts held by the circumcised youths each one in turn has to provide a head of cattle: he must therefore either own it himself or have a father who will give
[464] it to him. If he lacks both, the boy first tries to acquire a small stock of cattle by tending herds for the well-to-do, and until then he remains uncircumcised. Such boys are called el ouchó ñ gischu. This word means "herdsman," but signifies that it is a matter of someone who tends the livestock of other people for pay, like the Biblical word "hireling."

FL12 Masai FL12

[P. 1]

PART I

EN-GUTUK OO-'L-MAASAE

MASAI GRAMMAR

ALPHABET AND PRONUNCIATION.

Vowels.

194
104

A represents the English *a* in father.
E " " *e* in fete.
E " " *e* in benefit.
Ä " " *e* in dare, but longer and more open.
I " " *i* in bit.
Ï " " *i* in revise.
O " " *o* in not.
Ö " " *o* in note.
Ô " " *ow* in pow.
U " " *u* in bull.
Ü " " *u* in flute.
Ë " " *u* in but, *o* in tongue.
Ëi " " *i* in ice, *ai* in aisle.

Ëo is a diphthong similar to *oi*, but formed by a union of the vowels *o* and *u*.

Ëu represents the English *ow* in how.
Oi " " *oi* in oil.

Ëi. These two letters are usually pronounced separately, but they are sometimes slurred over and are scarcely distinguishable from *ai* in sight or *ay* in day.

Whenever *oi* or *oi* are not pronounced as diphthongs, the *i* is marked by a diaeresis, thus, *oï*[1].

Vowels are only doubled when there is a distinct repetition of a single sound. Sometimes, however, sounds which when spoken slowly must be indicated by a double vowel, are contracted into a long single vowel when spoken quickly.

[1] Examples of *oi*, *oï*, and *ëo*:—*Ëpoi*, the horse; *ongoï*, the girl; *ongoëo*, the other.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

194
104

CONSONANTS.

B, d, k as in English.

G is hard, as in the English word go.

H is used as an aspirate only in a few interjections.

Gh is a *g* followed by an *h* as in log-hut, and resembles the *gh* in Sanskrit. It is not pronounced like the Arabic *ghain*.

J nearly resembles the English *j*, though it is sometimes pronounced like *dy*.

Ch as in church. It, however, is sometimes exchangeable with *j* or *dy*: e.g. ol-chani, the tree, may also be pronounced ol-jani or ol-dyani.

Sh, l, m, n as in English.

Ny has two separate sounds, the one hard as in the English word finger, the other as in singer. The latter sound is written *Ng*.

Ny. This sound is similar to *ni* in the English word minion, or *ñ* in Spanish.

P is more explosive than in English.

R is always well pronounced or rolled on the tongue. The Northern Masai sometimes pronounce this sound like a burring *r*.

S, t, w as in English.

Y. In a few words there appears to be a trace of a *w* which is only partially pronounced even when talking slowly: e.g. ôte, come.

Zw represents the sound of *wh* in the Scotch *why* or *whaudum*.

B, p, v, and *y* are pronounced in a lazy way by just opening the lips.

Y is a consonant, as in yard.

CHANGES OF LETTERS, AND REMARKS.

The Masai of Naivasha and Naivasha sometimes use *o* for *u*. Thus:

Ang-uro (for ang-uri), the water.

Before *i*, *ai* changes to an accentuated single *a*. Example:

A-ing-i (for *ai-ing-i*), I am washed.

A and *o* are occasionally interchangeable. One hears, for instance:

Ka-ai-yudu or *ko-ai-yudu*, the lake.
Ahgaia or *ohgaia*, the plain.
Aga or *oga*, formerly.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

CHANGES OF LETTERS

E and *i* when spoken rapidly often sound as if they were the same letter. It is in consequence sometimes difficult to distinguish between such words as e-gol, to choose, and egil, to break.

E is changed to *i* when followed by *a*. Examples:

Ol-*ê*gwîjan, the knees;	Ol-*ê*gwîjin, the knees.
E-ara, to fear;	e-*i*-ara-a, I feared.

The Northern Masai frequently change *i* to *e* when the *i* is joined by a consonant to *a*. Examples:

Ailîsa or *ailîsea*, I was able.
Ailîpa or *ailîpe*, I finished.

When *i* is the first letter of a word it is usually dropped if preceded by another word ending in a vowel.

Ainîn 'ainn (for *ainîn ainîn*), I give you.
Ainîn 'e-yiok (for *ainîn i-yiok*), I give the boys.

I is also dropped whenever the sound persists at the beginning of sentences. Thus:

'E-ntîrîn (for *i-ntîrîn*), the stories.
'L-emun (for *il-emun*), the news.

When *i* is the last letter of a word and is followed by a vowel, *y* is often inserted to join the two vowels together. Examples:

Ee-gonî-y-ai (for *ee-gonî ai*), my child.

Numerous changes take place in the spelling of verbs which commence with *i*. For a complete list see page 19. It will be sufficient to give here the general rules.

I. The first letter of the verb (*i*) falls out whenever preceded by another *i* and followed by *i*, *l*, *n*, *dy*, *ny*, *r*, *s*, *n*, *m*, or *p*. Examples:

A-ich, to show (*ineik*);	*A'-ich*, thou showest (*ineik*).
A-ing, to climb;	*A'-ing*, thou climbest.
A-inyan, to count;	*A'-inyan*, thou countest.
A-ilgîn, to look;	*A'-lgîn*, thou lookest.
A-inyîdig-a, to buy;	*A'-inyîdig-a*, thou buyest.
A-ing, to sleep;	*A'-ing*, thou sleepest.
A-inîpa, to touch;	*A'-inîpa*, thou touchest.
A-inîn, to hear;	*A'-inîn*, thou hearest.
A-irir-a, to catch (hard in a vessel);	*A'-irir-a*, thou catchest (hard in a vessel).
A-ipam, to marry;	*A'-ipam*, thou marriest.

II. The *i* is changed to *e* whenever it is preceded by another *i* and followed by *d*, *g*, *k*, *t*, and *ch*. As will be shown shortly, this letter

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

194
104

k, *t*, and *sh* cannot follow *n*; these letters therefore change at the same time to *g*, *d*, and *j* respectively. Example:

A-ilim, to be able;	*i-nilim*, thou art able.
A-ipany, to fill;	*i-napany*, thou fillest.
A-ikera, to count;	*i-nagera*, thou countest.
A-ishiki, to prepare;	*i-nishiki*, thou preparest.
A-ishop, to wear;	*i-najop*, thou wearest.

III. The *i* is changed to *o* whenever it is preceded by another *i* and followed by *k*, *p*, *s*, or *sp*. It will be shown presently that *p*, *s*, and *sp* are interchangeable and cannot follow *n*; these letters are consequently changed at the same time to *b*. Example:

A-ilolokony, to turn over;	*i-nolokony*, thou turnest over.
A-ipsi, or *A-ispsi*, or *A-ispsi*, to fall;	*i-nabsi*, thou falleth.

f and *y* are interchangeable when followed by *e* or *a*. The Northern Masai generally use the former, the Southern the latter. Example:

Ee-gwiria or *ee-gwiryo*, the night.
Tolfilo or *tolfiyo*, hill.

Ts sometimes becomes *ts* after *n*. Example:

A-tsoie (for *a-tsiye*), to sit on.
A-intsie (for *a-intsiye*), to lose.

O becomes *u* when joined by a consonant to *n*. Example:

A-ilo, to do;	*a-ilu-na*, I did.
A-ilgor, to look;	*a-ilgur-a*, I looked.

The Northern Masai sometimes pronounce *u* like *o*, or like the German *ö*. Example:

A-ilur (for *a-ilor*), to move. *A-ulj* (for *a-olj*), to follow.

B and *b* are sometimes interchangeable. Example:

Ee-gwililiu or *ee-gwililiu*, the tongues.
Kiatbop or *Kiatbop*, a district near Naivasha known to Europeans as Kinangop.

Gh and *k* are interchangeable. The former sound is more used by the Southern Masai than by the Northern, and the women of Naivasha and Naivasha employ it more frequently than the men.

Both *gh* and *k* change to *g* when following *n*:

Ilwa-kwai or *ana-ghwai*, this child; *en-gwai*, the child.
Ol-kaplia or *en-gaplia*, the blade of grass.
A-ilo or *a-ighu*, to do; *i-nagu*, thou dost; *i-nagilo* or *i-nagighu*, you do.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

P, *p*, and *ɸ* are interchangeable. The Northern Masai generally use *p*, the Southern *p* or *ɸ*. Examples: 194 164

Ol-porur, ol-porur, *or* ol-ɸorur, the generation, age.
Pŭkin, pŭkin, *or* ɸŭkin, all.

K is occasionally interchangeable with *p*, *p*, and *ɸ*.

For instance, ol-pukuri (*or* ol-pukuri *or* ol-ɸukuri), the (large) gourd, is also sometimes expressed ol-kupuri (pl. il-pukurie *or* il-kupurie).

Before *p*, *p*, and *ɸ*, *u* becomes *o*, and the *p*, *p*, or *ɸ* changes to *k*. Examples:

Ol-pukuri (*or* ol-pukuri *or* ol-ɸukuri), the (large) gourd.
Em-kukuri, the (small) gourd.
I-ukiri, thou flest, (from *a-ipiri*, to fly).

When *k* is the last letter of a verb, the root undergoes various changes in the formation of the past tense. For a complete list see p. 56.

It will be sufficient to state here that the *k* is dropped unless the letter which precedes it is *i* or *u*. Examples:

A-lak, to unfasten; a-ta-la-a, I unfastened.
A-mak, to become accustomed to; a-ta-ma-a, I became accustomed to.

But A-rik, to take (a person); a-ta-rik-a, I took (a person).
A-ɸunuk, to fold; a-ta-ɸunuk-a, I folded.

The Northern Masai also frequently omit *k* both at the end and in the body of a word. Examples:

Il-tuiguna (for il-tuiguanak), the men.
Il-ɸgunaiyu (for il-ɸgunaiyuk), the fruit.
Kitua (for kituak), big (pl.).
A-ikwuniye (for a-ikwunikye), to laugh at.
Arai (for araki), or.

Sh can only be used after a vowel or at the commencement of a word. Examples:

A-ishu, to give.
Shoo, the grazing ground.
Ele-shani *or* ema-shani, this tree.
Le-shorust, na-shorust, O (the) friend!

After *l*, *sh* becomes *ch*, and after *n*, *j*. Examples:

I-ajo, thou givest.
Ol-chani *or* en-jani, the tree.
Ol-chorust *or* en-jorust, the friend.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

104 Ch can only be used after l.

104 *l* occasionally changes to *r* in the formation of past tenses of verbs. Examples:

A-ji-ryo, not to return; a-ki-ryo, I have not returned.
A-j-ikki, to say to; a-ki-ake, I said to.

The *l* of the masculine article (vide p. 10) is dropped before words beginning with *a*, *i*, *o*, *u*, and *p*. Examples:

O-ongot (for ol-ongot), the male wildebeest.
O-iarata (for ol-iarata), the valley.
O-oori (for ol-oori), the word.
O-ourge (for ol-ourge), the blood.
O-ypyai (for ol-ypyai), the porcupine.

It may have stated that before *o* and *u* the *l* of the masculine article is assimilated as in *Arabic*, and that the double consonant is heard. This is, however, not the case. When the syllables are spoken separately, the singular article is clearly pronounced *o*, not *o* or *ou*; and in the plural the article drops out altogether; unless it follows a word ending in a consonant, when an *i* is used, as *ir* or *in*.

Ch, *k*, *t*, and *sh* change to *p*, *p*, *d*, and *j* respectively after *n*. Examples:

En-pyo (for en-chyo), the daughter.
'N-pitia (for 'n-kitia), the cattle.
I-ngilikwan-o (for i-nkilikwan-o), ask!
En-dia (for en-tia), the wood.
I-ndandu-o (for i-ntandu-o), stand!
En-jiai (for en-shiai), the piece of kids.
I-ndjup-o (for i-nshup-o), wear!

The *n* of the feminine article (vide p. 10) falls out before nouns commencing with one of the following letters: *a*, *i*, *m*, *ng*, *ny*, *o*, *u*, *n*, *m*, and *p*. Examples:

E-ongot (for en-ongot), the female wildebeest.
E-iata (for en-iata), the oil.
E-mitil (for en-mitil), the cooking pot.
E-ngorityai (for en-ngorityai), the women.
E-nyiata (for en-nyiata), the seal.
E-ung (for en-ung), the lamp.
E-nangiki (for en-nangiki), the young women.
E-ninia (for en-ninia), the pit.
E-nungan (for en-nungan), the female Grant's gazelle.
E-pi (for en-pi), the male.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Before *l*, *n* becomes *m*, and before *p*, *t*, or *ṭ*, *n* becomes *m*, and the *p*, *t*, or *ṭ* changes to *b*: 194 104

Em-bas (for en-las), the arrow.
I-mlalakany-a (for i-nlalakany-a), turn over!
Em-bott (for en-pott, or en-ṭott, or en-wott), the trench.
I-mbot-o (for i-npot-o, or i-nṭot-o, or i-nwot-o), call!

Before substantives commencing with *l*, the *n* of the feminine article is assimilated, the double consonant being distinctly pronounced. Example:

El-lapa (for en-lapa), the hole in the wall.
El-lolgo (for en-lolgo), the shield.

N must always be preceded by a vowel or another *n*. Example:

Ol-onna, the arrow. N-gana, the children. N-gana, the sheep.

N is sometimes omitted in the body of a noun to form diminutives, or is changed to *l* or *p*. Example:

E-ngorytoi, the woman;	e-ngorytoi, the female (used in a depreciatory sense).
En-gani, the child;	en-gani, the little child.
Ol-ewara, the beast of prey;	ang-ewara, the small beast of prey.

U and *w*, when followed by a vowel, are interchangeable, the former being used by the Northern, the latter by the Southern Masai. Example:

Aina or *aiwa*, I find or within.
Ol-mdura or ol-mdowa, the old man.

Ew is commonly substituted for *u* or *w*, otherwise it is not used. Example:

E-kwiji (for e-uiji), the plow.
E-kwan (for e-uan), the river.
Ol-mdwan (for ol-mdwan), the buffalo.

THE ACCENT.

In most words all syllables are accentuated alike, a very slight stress being perhaps laid on the penultimate. This is more particularly noticeable when the last syllable but one contains a long vowel, e.g. ol-ayiai, 'a-jaiai. 194

Should the accent fall on any other syllable but the penultimate, it is specially marked, thus: ol-mdwa, kowria.

These words are sometimes, and probably correctly, pronounced ol-mdowa, kowrya; but owing possibly to the difficulty of making

4:Sandford G-4,5 (1918) 1919 FL12 Masai FL12

[p. ii]

[04] With the exception of Chapter II., the matter contained in this Administrative
[05] and Political Record of the Masai has been drawn from official papers. Chapter II.
has been compiled from early reports and various published books, and assistance
in arranging and in checking detail for this chapter has been obtained from
Mr. Ainsworth, who has personal knowledge of the early history of administrative
contact with the tribe.

[02] The maps which have been distributed where necessary throughout the text
have occasioned considerable difficulty, as a large part of the Masai Reserve is
unsurveyed. The given general maps must be regarded only as diagrammatical, and
it is probable that much of the detail is inaccurate. The boundary of the Masai
Reserve still awaits demarcation, and the line purporting to show its position
is therefore tentative.

[04] A case of inconsistency in the spelling of tribal and geographical names
pervades the official records, and the spelling adopted here, selected as that most
constantly employed, makes no pretension to phonological or linguistic accuracy.

G. R. SANDFORD.

Kajiado,

October 28th, 1918.

Kisonko

126 of ceremonial dances taken during the Jubilee Celebrations of King George V in 1935, and of water drawing from the deep pre-historic wells of Central Massailand.

A word about Masai terms; throughout clarity rather than pedantic accuracy has been the aim. Thus the anglicised "Laibon" has been used for *ol Oibont*, "Unoto" for *e Unoto*, "Laiser" for *l Aiser*, etc., i.e. the article has been retained or dropped as the occasion demands. Where the plural forms have become current in local administrative usage, e.g. Laigwanak, they have been retained, but in other cases their employment would merely have led to confusion. When anglicised or in common use, these terms have been left in standard print: when italicised the word or phrase is, as far as known, grammatically correct.

Finally, it was thought undesirable to burden the report with frequent references and footnotes. A list of the works consulted is appended.

SECTION 1. — HISTORY.

A. Early History: the Exodus — origin of the Laibonok — southward penetration — consolidation in Tanganyika under Sabei — origin of the Lembwa or Kwavi — limit of expansion — disposessed tribes — archaeological evidence.

The Masai are generally regarded as coming from Nilo-Hamitic stock. From the known history of other tribes, and a comparison of various cultures with that of the Masai, it is believed that, some four hundred

* Fully illustrated.

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

561 change. To assume elderhood a Masai must have a wife or wives, and cattle. But the majority of both of these are at present under the control of the elders. How this has come about is recorded in the later section on Clan and Family matters.

The root difficulty is that neither party, the moran nor the elders desire any change; the former are perfectly happy to be in a more or less irresponsible state, the latter naturally unwilling to give up their matrimonial and economic privileges. But there is little doubt that this difficulty can in course of time be overcome, both by constant propaganda and also by economic methods. Thus, if the principle is accepted of using taxation to achieve desirable social ends, a cattle tax might be adapted to ensure a more even distribution of stock among adult males. If such a tax were so graduated that, say, 400 head in a single herd would be taxed at four times the rate applicable when divided into two herds, direct encouragement could be given to an elder to allow his sons to depart with their cattle and to the sons to take over that control, to marry and settle down.

080 Many other methods of tackling the problem may be devised, but whatever the means there is no doubt that the adaptation of the age grade system is the most urgent administrative problem and the key to political development, increased family stability, improved treatment of women and economic progress.

SECTION IV: TRIBAL OFFICIALS.

A. The Laigwanan and his Assistants — choice of Laigwanak — visits to the Laibon — installation — unpopularity of office — the head Laigwanan — relations between officials.

104 561 624 The following are brief definitions of the Masai terms involved :—

ol aiguenani, pl. *il aiguenak*. Hollis translates this word as 'counsellor or spokesman.' It is a generic term, and specific appointments bear their own designation, i.e.

ol aiguenani loongishu pokin, literally, the laigwanan of all the cattle. The chief lai gwanan of the age.

ol aiguenani lol kuma orok; a duly appointed laigwanan, to whom a black club has been presented.

e murt ol aiguenani; literally, the "neck of the laigwanan," the laigwanan's right hand man, in whose absence no important decisions are taken.

engobiro, pl. *ingobir*; the leading men of a given age and area. They form an inner council for appointing or degrading the laigwanan, and for the conduct of important public business.

561 624 The officers of an age are not appointed simultaneously, nor do they immediately attain their full status. Some years prior to circumcision, the *il piron* elders, i.e. the guardians of the youths, start coaching the senior boys in citizenship, taking them to the laibon, making them sit at their meetings, etc. These senior boys are the *ingobir*, and it is their duty, under the guidance of the elders, to choose the laigwanan. At first a

el gelat -- see ol gelata
el goiatek -- see ol goiatiki
em boschona -- a violent attack brought on by consumption of certain nerve stimulants
en dorosi -- a sort of Rütli oath
ẻng aṅ el moruak -- kraals for the married
eṅ gebäta -- the circumcision festival for boys
eṅ giguana -- any gathering for a consultation
eṅ gischomi -- the "Tribe" (clan)
erta gonjek -- the evil eye
es sĕtăn -- sorcery
gituṅguat -- the painting of the body
ol abani -- surgeon
ol adji -- an association of two age classes
ol aigwenani -- speaker for a warrior age class
ol aunoni -- head of married men's class and also district leader
ol boror -- age class
ol gelata -- a lineage
ol gelata kitok -- principal lineages
ol gelat´ate -- sublineages
ol geretti -- a magical amulet that protects one against sorcery

ol gibet -- one-half of the dual division of a warrior mess company
ol goiatiki -- sorcerer
ol kononi, el konono -- blacksmith
ol manjata -- warrior kraals
ol megi, el meg -- unbeliever
ol momai -- ordeals for exacting truth from a defendent during trials
ol morani -- warriors
ol móruo -- married man
ol oiboni -- chief
ol oikob -- killers, rough, brutal persons used as an invective against the Masai
ol oscho' bo -- a province
os sandja -- a girl's lover
os sirit ol bul -- individual members of a warrior mess company
sirit' ol bul -- warrior mess companies

/vii cont./

104 For the spelling of Masai words the German pronunciation was generally decisive. Hence only the following signs remain to be explained:

e is the German ä sound in Wärme or in maison, to bear.
ǫ is a middle sound between a and o.
oi as in Leu, boy.
y is a German j, fayance.
ñ is the nasal n in Wange, allons.

[193] Concerning the grammar, it is to be noted that ol, el, en (eñ, eńg), n (ñ, ng) are articles, the vowels of which, for the sake of euphony, may take on the most varied tone-color: ol and en are the articles of the singular, el and n those of the plural.

122 Before I conclude these lines, I have to pay a debt of gratitude. To His Highness, Duke Johann Albrecht of Mecklenburg, as the President of the Deutschen Kolonialgesellschaft /German Colonial Society/, I owe most humble thanks for the granting of a sum which made possible the printing of this book, and similarly
128 to the Director and Board of this Gesellschaft. Furthermore, I have to thank Herr Stabsarzt /staff physician/ Dr. Skrodzki for his kind assistance in the preparation of the material collected, Herr Marinestabsarzt (retired) Dr. L. Sander, who kindly supervised the reading of the proofs, which I was prevented from doing because of my return to German East Africa, as well as Herr Professor Volkens, who looked over the botanical appendix. I also extend heartfelt thanks to Herr C. G. Schillings and Herr Missionar Emil Müller, Herr Oberleutnant i.d. Sch. Fonck II, Herr Regierungsveterinärarzt /government veterinarian/ Brauer, and Herr Kaufmann /merchant/ Meimaridis (Moschi /Moshi/), who most obligingly lent me a large number of photographs for the explanatory illustrations.

The Author.

/Page viii is blank./

634 162 561 231 The Sighirari of the Engidongi inhabit the country in the neighbourhood of the Ngong Hills and En Doinyo Narok. To this division belong the medicine-men of the L'Aiser Gilata of whom Seggi is now the chief. The Division is estimated to possess a population of 1,900 of whom 120 are Muran, 28,000 head of cattle, 80,000 sheep and 300 donkeys. Sighirari of the Engidongi.

[563] [194] The Il Dala Lekutuk came from Laikipia in 1912 and are sometimes known as the Nyeri Masai. They have a considerable admixture of Kikuyu blood in them. They inhabit generally the neighbourhood of En Doinyo Narok and their population is estimated at 700, including some 75 Muran. They are said to possess 6,000 head of cattle, 20,000 sheep and 75 donkeys. Their Muran are divided into two "Sirita" named Il Tareto and Seare. Il Dala Lekutuk.

The Kaputiei are to be found in the neighbourhood of the Nyiri Desert. Their population is estimated at 2,600 including 175 Muran, and their possessions at 30,000 head of cattle, 100,000 sheep and 400 donkeys. Their Muran are divided into four "Sirita" whose names are Il Mokusen, Il Mejuali, Il Kitoomi and Il Sogon. Kaputiei.

The Sighirari of Laitokitok inhabit the country to the north of Kilimanjaro, which country is watered by the Engare Rongai, Kikaleiwa, Naromoro, Ol el Turesh and Rombo streams. The population of this division is estimated to number about 2,800 of whom 180 are Muran. These are divided into two "Sirita," named Il Kitoli and Il Mejuali. The live-stock possessions are said to number 60,000 head of cattle, 175,000 sheep and 500 donkeys. Sighirari of Laitokitok.

563 In addition to the Masai, there are considerable numbers of Wandorobo ("Il Torobo") living in the Masai Reserve. Their numbers are probably not less than three or four thousand, and many of them possess considerable herds of cattle, and live the life of ordinary Masai, from whom it is difficult to distinguish them. They may be conveniently divided into two classes, namely, those who live in the bush and forest, and those who possess cattle. The former possess little or no live-stock, and subsist almost entirely upon wild animals and honey, while the latter live in villages and subsist only to a very limited extent on game. Wandorobo.

The former are to be found mainly in the neighbourhood of the Mau, but small parties of them are also met on the Uaso Nyiro, on the Lower Mara River, along the Sotik border, and in the Trans-Mara region. They live on tree rabbits and the smaller game animals, in rough shelters in the forests, or in the huts in some of the Masai villages.

The latter are to be found on the Uaso Nyiro, in the neighbourhood of Ol Alonga and Ol Doinyo Rasha, on the western bank of the Mara River, and in the Siria country. In all, they probably number about 1,000.

564 326 There exists in the reserve, a special tribe of smiths, somewhat similar to the Wandorobo, called Il-Kumoni, who make iron weapons, but are treated as inferiors, and are not allowed to marry Masai women. Il-Kumoni.

181 105 To recapitulate, the Masai are a listless, conservative, slothful people, inadequately governed by Councils of Elders, who admit themselves to be incompetent to deal with the idle body of warriors whose reason d'être has now disappeared, but who are still sufficiently insubordinate to render ineffective the commands of their seniors. They have been concentrated in one area, where they have amassed enormous herds of cattle of a poor quality, and countless sheep. No suitable means of employment has as yet been found for the males of the tribe as a whole, though they are experts in the care of stock, and once possessed fighting qualities of a savage nature, which spread the terror of their name far and wide. They have considerable latent powers of organization, shrewdness and ability, but these are largely discounted owing to their unreliability; they have always realized that it is in their best interests to be loyal to the British Government, and have never been responsible for any serious disturbance, being too proud to work, and rich enough to disregard them, they are probably the most backward administered native tribe in the East Africa Protectorate. Summary.

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

of plains, with inhabitants ranging from the purest of Bantu, through various Hamitic strains to the Nilo-Hamitic Masai. 114

Lest my interest in and affection for the Masai may label me in the minds of my readers as an exponent of the theory that the so-called unspoilt primitive tribes should be preserved as museum specimens, I would here state my belief that, for survival, any culture must adapt itself to its environment: and environment includes not only the physical, but the political, social and economic forces with which [illegible] culture finds itself in contact.

There are numerous features in the Masai [illegible] life which, relative to these external forces, can only be reg[illegible] undesirable. On the physical side one frequently hears cited [illegible] hygienic state of life in the bomas and the high incidence of venereal disease brought about, it is alleged, by the social system. But is life any more hygienic in the slums of great cities in Europe and America? 105 114

On the political side there is much talk of broadening the basis of Native Administrations, of greater democratic representation in the local government machine. How do the Masai compare with their neighbours in this respect? It has been written of Kenya — and within my knowledge it applies to certain areas of Tanganyika, — that "In districts where hereditary chiefs were unknown the Government-appointed chief or the chief elected without secret ballot from a short list of men presented to the people, very often now possesses wealth, lands and power." But this is obviously no new tendency in African social development: it is significant that in two cases the word for "Chief" in one dialect of a language group means "rich man" in a neighbouring dialect. (ol-karia in Masai means a rich man, in Arusha, a chief: mwengali in Iraqi means a rich man, in Mbugwe a chief). This political nest-feathering is, however, a tendency not to be found in Masailand; the laibons by their magico-religious position have waxed and grown fat on the gifts of their followers, but the chosen representatives of the people, the laigwanak, never. Once a departure was made from the original misconception that the laibon was a type of chief, the Native Administration of the Masai was set on a truly broad-based democratic foundation of African, not European, conception. Of how many neighbouring tribes can the same be said? [661]

On the economic side the Masai are frequently alleged to maintain large herds of useless cattle, but to one who has watched the process develop over the last 14 years, the growth of the livestock marketing system and the conception of the economic value of cattle is not the least remarkable feature of Masai development. Is this conception growing at an equal rate amongst neighbouring tribes? Over the last decade has any African tribe exported a greater number of cattle than the Masai, without at the same time exporting the stored fertility of its land?

It is fair criticism of Masai pastoralism that much forest has been burnt out and many waters trampled. But the well-managed grass land which replaced the forest at least preserves soil stability, as contrasted with forest cut by agricultural tribes who expose the soil to erosion; and the trampled out waters can be restored by suitable conservation

9:Foxbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

105 114 measures, as contrasted with the devastation which agricultural means has caused the drainage systems in the Mbulu, Irangi and Ufuguru Highlands; devastation which only vast expenditure or decades of natural healing will restore.

So, with all its faults, the Masai social and economic system does at least preserve a tradition of open range animal husbandry which may prove most useful if large areas are cleared for ranching by new insecticides or in relation or conjunction with major agricultural projects such as the Groundnut Scheme.

It has been pertinently stated that the two great evils from which Africa is suffering are Soil erosion and Soul erosion. Concerning the former the Masai must incontrovertibly be classed amongst the lesser offenders: what is their position in relation to the latter?

If by soul erosion is meant a deterioration in obedience to existing moral standards, a falling off in observance of organised religion, a lack of purpose in life, then the Masai are amongst the least affected of peoples. Ever since their original contact with Europeans, more than half a century ago, they have as a people most courteously defined their attitude, more by deeds than words, that they are satisfied with their mode of life and intend to adhere to it. Certain adaptations and concessions they have made but only after critical examination and slow absorption, not by unreasonable apeing.

The above points provide an answer to those who maintain, either in despair or in anticipation of acquiring the varnished land, that the Masai are doomed. True, adaptations must be made; undesirable features must be weeded out; some territorial adjustments must be made; but let not the land-hungry expect to be handed well-watered, 'fly-free' land — there is a sufficiency of tsetse-infested bush in Masailand awaiting utilisation to provide all the land needed for many a decade.

Thus a critical comparative examination shows that there is too much of value in the Masai mode of life for any right-thinking person to regard with equanimity its extinction: it sets a standard of democratic representation, of social behaviour and of land usage, without which East Africa would be immeasurably the poorer.

THE SOUTHERN NILO-HAMITES

INTRODUCTION

The Nilo-Hamitic peoples included in this volume have, in the main, two numerically compact related groups: the Nandi, who live on the western edge of the Kenya highlands; and to the east of them, the Masai, whose tail formerly stretched north and south for 400 miles along the Great Rift Valley. The Nandi-speaking tribes, homogeneous in culture, are derived from a common stock; and their culture has in turn a good deal in common with that of the Masai. Interlocked through the highlands occupied by the Nandi and Masai are the scattered hunters of Okiek, more commonly known as Dorobo or Wandorobo, the forest-dwelling hunters who preceded the present native inhabitants of Kenya Colony and northern Tanganyika Territory. The racial position of these Dorobo is uncertain: some people regard them (I believe erroneously) as early Nilo-Hamites; but since they have derived their present language and much of their culture from the Nandi, they are entitled to a place among the Nilo-Hamites.

The Taturu division of the Nandi group is separated from the rest of the Nandi-speakers, and lies close to the edge of the southern Masai; these people are included with the Nilo-Hamites on the score of language alone, since at present there seems to be no evidence of physical or cultural connection between them and the rest of the Nandi group. The languages, however, are unmistakably related, and therefore justify their inclusion here.

The third group, described as "unclassified," has been included because the peoples embraced by it live on the fringe of the Nilo-Hamites and would otherwise have been left out of the Ethnographic Survey altogether, since they cannot be fitted into any East African group under any existing scheme of classification. For these reasons it is considered that their appearance here is justifiable. The Iraqw and their congeners are sometimes described as Hamitic; in this attribution is by no means certain, nor has it yet been possible to classify their languages in spite of the availability of material, and for the present they may be left as "unclassified." The Hadzapi are "bushmen"—wild hunting people of the bush; and the Sandawe seem to be analogous to the Hadzapi. There have a number of links with the Sandawe and Hadzapi of South-West Africa; but they belong territorially to East Africa.

The majority of the Southern Nilo-Hamites are pastoralists practising (with the exception of the Pastoral Masai) a little agriculture, heavily pastoral, devoted to their cattle, and regarding the rest of the world with contempt, a condition from which even now many of them are not clearly emerged. These characteristics help to explain such things as the absence of any extensive development of trade, and the lack of hereditary craftsmen among many of them by comparison with other Kenyan tribes they not only lay outside the slave trade, but largely controlled the ordinary coast trade to the highlands; hence Islam did not appear among them.

NOMENCLATURE

1. Name Center

There is no general term which is used by the Nilo-Hamites themselves to cover the entire Nandi-speaking group, but (1) all Dorobo call Nandi-speaking Okiek, sing. Okiet, though they have no Nandi-speech of their own; (2) ᵏ, term Tatoga is a group name covering eight tribes of which the Barabaig are largest.

[1] For the relationship of the Southern Nilo-Hamites to Western Nilo-Hamitic Peoples, see Ethnographic Survey, East Central Africa, Part IV.

[2] For reasons for choosing this term, "Nandi," see given in my paper "The social institutions of the Dorobo" (Antropos, 1951, 46-47), p. 7.

Aiser, which here the first tribes, Ole Moriaa, was found on the Njong hills near Naivasha; and as an historical person, the first tribes may go back to about the middle of the 17th century. The Masai tribes were at the height of their power between about 1850 and 1890. They raided far and wide, and even Mombasa and other places on the coast were not safe from them. So constant were their raids, and so great the fear they inspired, that many Bantu tribes, notably the Kikuyu, and to a lesser extent the Gogo, Shambala, Taveta, and others, copied their arms, ornaments, and even institutions. To the Masai, however, must be given the credit for preserving—unintentionally, of course—the highlands from the slave trade, for no caravan got through without their permission, and the road was often closed for months on end. About 1840 the Il-Waanto-Kiteto were defeated by the Il-Ahlpiak in Naroki—the beginning of the overthrow of this tribe which was completed some 10 years later by an alliance between the Il-Ahlpiak and Il-Kisonjo, the defeated tribesmen taking refuge in Naroki. The Kisonjo reached the southern limit of their expansion about 1850, their way being blocked by the Bantu of Tanganyika Territory; and about this time the Masai and Gogo came into conflict over grazing grounds, the Masai being successful as long as they kept to the plains. In the middle of the century the Sambur were forced south by the Turkana, and the survivors of a section called Il-Dalgin having lost their cattle took to agriculture at Njemps near Lake Baringo. About 1880 the great rinderpest epidemic spread over much of East Africa, and the herds of the Naivasha and Laikipia Masai suffered heavily from it. In 1892 an outbreak of smallpox reduced the numbers of the Masai, already weakened by inter-tribal war, and they became a prey to the Kikuyu; had the Europeans not come at this juncture, the Masai would have been reduced to serious straits under the combined attacks of disease and human enemies. At the death, about 1890, of Mbatyany, the great laibon of the Loita, the central Masai were split by the feud between his sons, Ol-oonyo (Lenana) and Sendeu, over the succession. Most of the Loita and Kaputei supported Ol-oonyo, but Sendeu was successful for a time. All the Il-Purko joined the followers of Ol-oonyo, and Sendeu was eventually defeated and forced to seek peace. Three other tribes in the Naivasha district had backed Sendeu, which gives some idea of the state of disunity into which the people had been thrown during their decline.

CULTURAL SUMMARY

M
M5
NJ
M5
M4
M1

The Nandi and Masai form a distinct culture group; but the Suk, though they share certain of these features, have no much affinity with the Karamojong culture that they stand alone in the Nandi group from the cultural point of view. Certain features of these cultures are distinctive, and can best be shown in tabular form:

A.

	Karamojong Culture: Latuka and Turkana	Suk	Masai and Nandi
Shields: long and narrow	Yes	Yes	No
Chignons	Yes	Yes	No
Wives and finger knives	Yes	Yes	No
Skin capes (moist)	Yes	Yes	No
Lip plugs and nose rings	Yes	Yes	No
Shaved stools	Yes	Yes	No
Circumcision (m. and f.)	No	Yes	Yes

* Throughout the Mami division of the Mami group.

M 2 105

The Mami and Mami tribes are not merely similar, but often practically identical. Shields, spears, and swords, for example, are of the same shape and size, and indeed are peculiar to the Mami and Mami, though the shapes have been imitated by some of the neighbouring Bantu, e.g., the Kikuyu and others. The ivory arm-clamp appears to be peculiar to this group, and has no early Hamitic prototype.* Mami and Mami beads (now is of the same general type, and in both the women wear a great deal of coiled wire on the arms and legs.* The Nak tribe, however, are undoubtedly of Mami stock, and speak a language of strong Mami type; all the Nak also practise male and female circumcision,* which is not a custom of the Northern and Central Nilo-Hamites. But types differ in all items: Nak huts are little more than rough grass shelters, those of the Mami being strongly built and well made structures with dome-roofed thatched roofs; but the huts of the Mami have flat roofs and straight walls plastered with dung, a shape which seems to be derived from the meeting hut of each Hamitic or Nilo-Hamitic age. All members of the Mami group, including the Shorbo, remove the two middle lower teeth of the lower jaw. (Further details on Southern Nilo-Hamitic culture are given in the Ethnographic Survey of Africa, East Central Africa, Part VI, pp. 16-20.)

M 2 1 1977

LANGUAGE

The Southern Nilo-Hamites speak two main types of language, which are closely related, Mami and Mami. These languages exhibit the same traits as indicated under the Northern and Central Nilo-Hamitic languages, except that Mami has no "S" and "Z" to grammatical sex determination.

It now seems that the languages of the Mami-speaking group may be divided into three separate languages: Nak, Tatoga, and Mami, which have developed from a common stock. Nak has the dialects of Nak and Mandaat, and Mami the dialects of Kipsikis, Tarit, Kipsi Tabon, Kony, Pok, and Sapo, as well as the various Shorbo dialects. Nak, Mami, and Mandaat are very close, and are mutually intelligible, as also are the Mami and Shorbo dialects. Nak, though basically similar in structure and vocabulary to Mami, has certain striking phonetic and grammatical differences which render the two languages mutually unintelligible when heard. Tatoga, as exemplified by Mantaqa, is considerably of Mami stock, but its sound and much of its vocabulary would be utterly unintelligible to Mami. Its important

* The reference to H. Frankfort's paper "Ancient necklaces from Peru" in Series presented in P. 101 might lead you into a distribution on this point.

** [illegible] circumcision is certain both the operation properly so called on males and the operation of clitoridectomy performed on females.

[illegible]

Identification

The Mawi (Mawi) are a "Nilo-Hamitic" people belonging to the Southern division of the Eastern branch of the Sudanic linguistic stock. They number about 87,000 (1948) on 41,000 square miles. They were greatly reduced in population and territory by dinkepest and smallpox plagues around 1890-97. Among them live dispersed groups of Swahili hunters, largely dependent, and various related peoples, known collectively as Kwafi (Kwafi), who for one cause or another have lost their lands and become agricultural. These include the Lumbwa (Nimbe, I-Lumpwa), who fled to the Rigum and Kapsu tribes, the Chepe (Ki-Chepe), and the Kipsua (Kipsua, Ki-Jerwat, Lesiep, Ki-Tiemm, Kipsqa), who are settled in the Lake Baringo region. The Samburu are a blended tribe living further to the north toward Lake Rudolf. The Arabs of Mount Mawi are a mixed people who are primarily agricultural.

Basic Economy

Exclusively pastoral except for groups of Kwafi, who have been forced by circumstances to practice agriculture (chiefly millet and sheetrot). There is no fishing (fish are despised as food). Little gathering (except of honey), and a very limited amount of hunting (only buffalo and eland, all other game, as well as fowl and eggs being tabooed as food). Large numbers of zebu cattle, sheep, and goats are kept, as well as donkeys and dogs, but no chickens. The diet consists chiefly of meat, milk, and blood (drawn by a special arrow from the necks of cattle that from above the eyes of sheep). Milk may not be boiled, and meat not be drunk on the same day that meat is eaten.

Sex Division of Labor

Herding is done by males—chiefly unbrandmed boys but also occasionally by old men. Milking is done by females—chiefly young girls. Women also do the cooking—especially for regular beds with the Chepe, Kipsqa, and Tiemm.

Property

Livestock is by far the principal form of wealth. There is no private property in land, which is owned collectively by subtribes.

[illegible]

Men allocate their cattle among their wives, to be inherited by the sons of the latter. As elders sons, especially of the chief wife, receive a larger share. If a wife has no sons, her cattle go to the sons of other wives, but only on the same "side."

Social Stratification

Slavery is not practiced, and there are no formal social classes. Secrets societies are despised, and there is a despised and endogamous caste of smiths.

Marriage

Marriage involves a substantial bride-price in livestock; Lesley gives 9 bullocks, an ox, a cow, and ram, and honey beer as normal. There are occasional elopements. A man may not marry until he graduates from the warrior age-grade—some before the Samre ceremony and usually not before the Ongulur ceremony.

Polygyny is general and exclusively sororal. One wife is chief wife,but each wife has her own dwelling. A man's wives are divided into a right-hand and a left-hand "house" with squares gone into the compound. Wife-lending occurs between men of the same age-set, but sex relations are forbidden with BWI and WBS. Both sororate and levirate unions are forbidden, though a widow may cohabit with her dead (children being ascribed to the deceased Ist). Only childless widows may remarry. Sex relations are strictly forbidden between a married man and an uninitiated girl, between a married woman and either a warrior or an uninitiated boy; nor, however, between the unmarried or between married persons not excluded by exogamous rules. The children of a woman by a married man other than her Ho are ascribed to her husband.

Family

There are special huts occupied by warrior age-sets. The normal household group is a polygynous family, occupying a kraal.

Residence

Residence is normally patrilocal, sons belonging to the

©1956

localized his group of their fathers, but matrilocal residence is a not uncommon alternative; if a man joins his wife's kraal, however, he has an independent cattle gate. A young man, after marrying, may live temporarily in his father's kraal, but eventually every man establishes his own independent kraal. A groom is reported to wear female garb for one month.

Kin Groups and Exogamy

Local agnatic is inferential.

Marriage and sex relations are forbidden with any first, second, or third cousin. Also a man may not marry a woman associated with his own age-set or the set paired with it or with a woman associated with a senior age-set.

There are exogamous, unnamed patri-sib, divided into sub-sib. However, Hollis (contra Fadiman, Merker, and Huntingford) states that only sub-sib are exogamous. Exogamy extends to sex relations as well as marriage, and to the mother's as well as Ego's patri-sib.

The avunculate exists in the form of a reciprocal property privilege between Mother and Sibs.

Kinship Terminology

Fa--papa. Mo--yayia. Ch--en-kerai. So--ol-ayiani. Da--en-ninn. Br--ol-alaiba. Si--esh-aaaba. Hu--ol-payian. ol-murua. Wi--e-ngumyiani, en-kimk.

Bifurcate merging terms for avuncular and neptic relatives. Mother--ol-epu. Faki and Mothi both equated with Mo. Gifa--ol-ainai. Gifaba--kaba.

Sibling terms extended to FaBrCh. MoSiCh--e-le-sonua. MoBrSo--e-le-ak-epu. FaSiDa, MoSiDa, SiDa (m. s.)--en-esh-epu. FaSiSo equated with Mother.

Settlement Pattern

A settlement is migratory, being moved when pasturage is exhausted. It consists of a kraal or circle of huts around pens for cattle, calves, sheep, and goats. Huts are elongated and of Quonset-like shape, with flattish roofs and rounded corners. The framework is of poles bent over, tied together, interlaced with grass or brush, and smeared over with a plaster of mud and

cow dung. Several hamlets or kraals, with 15-50 persons each, for the community, a semi-nomadic neighborhood, the hamlets being separated by 2-5 miles. Several such hamlet clusters, separated by a greater distance, form a larger territorial group. The Humba Kwafi dwellings are of tembe type.

Community Organization

Sibs are not localized as clans. Boys are circumcised at 14-15, at entrance into the junior warrior age-grade. Age-grades are of linear type, 15 years apart, and are divided into left-hand and right-hand sides. There is an overlap between junior and senior warrior age-sets. Junior warriors live in barrack kraals with their mothers, some of their sisters, and uninitiated girl lovers, of whom each youth has one with whom he sleeps (but without penetration). Men of the senior warrior age-set are permitted to marry. There are no age-sets for women.

Local Government

The community is governed by a council of elders, but the warrior age-sets have an independent organization.

State

Sub-tribes, territorial units of 200-500 persons, are the political units. Each has an autonomous age-grade organization. Political authority is exercised by the men of 35-50 years old who occupy the age-grade of junior elders. Medicine men, diviners, and rainmakers exert great influence, but lack coercitive powers.

Warfare

The Masai were formerly the scourge of other tribes over a wide area, raiding them for cattle. Enemy men were killed; women were spared.

[illegible]

Identification

The Ambu (Wendi) numbered [illegible] in [illegible]. They are linguistically closely akin to the Meru, from whom they are practically indistinguishable in dress.

Basic Economy

Primarily agricultural, with maize, bananas, and beans (Dolichos lablab) as the staples. Coffee is the chief cash crop. Animal husbandry is important. Cattle are kept, and milked.

Sex Division of Labor

Women mainly cover and cultivate the land.

Property

Private property in land is recognized.

Inheritance is patrilineal, by sons during equally. The youngest son, however, inherits the house.

Marriage

General polygyny prevails, preferably in the non-moral form. Each wife has her own hut.

Family

Polygynous families are divided into "houses" for each wife. The household unit is a small patrilineal (or mono) family, consisting of the families of a father and his married youngest son.

Kin Groups and Kinship

Inheritance is patrilineal, as land for the youngest son of each "house" who continues to live with his father and inherits the house. Other sons move away and establish independent households.

Descent is patrilineal.

Settlement Pattern

The Ambu live in neighborhoods of dispersed homesteads. The village are of the cone-cylinder type.

[illegible]

Community Organization.

There are no class. A new settlement is usually founded by members of an age-grade.

Bibliography

Gillow, F.H. Interim Report on Land and Population in the Aculia Chieftain. Mimeographed ms., June, 1937. (Completed only to p. 40).

Identification

The Samburu (Burkeneji, Sembur, Tribe) are closely related to the Masai, and like the latter speak a language of the Great Lakes or "Nile-Hamitic" section of the Southern branch of the Eastern Sudanic linguistic stock. They number about 31,000 (1948) but were formerly much more numerous. With them are included the following tribes:

a. Ilkunja--a group of sedentary Masai acculturated to the Kikuyu.

b. Elmolo--a small fishing tribe (300 in 1948, 84 in 1956) on the shore of Lake Rudolf, speaking a language mutually intelligible with Samburu.

c. Lechipiak (Lechipia, Lechep, Lelkep, Lekkedh, Olkeny)--intrusive Masai, subsequently fractured by rinderpest and war, their remnants being mixed with Ewoll elements like the Njemps.

d. Ntorgopolo (Ntolegopolo)--a group driven from Mt. Kenia by the Lechipiak and scattered among the Samburu.

e. Njemps (Njemps, Rejemps, D'Njemps, Njempt)--a mixed tribe of about 1000 near S end of Lake Baringo. They include refugee Ewoll (sedentary Masai) and Samburu elements and speak a Samburu dialect, akin to Masai.

Basic Economy

Almost exclusively pastoral, keeping large herds of cattle, sheep, goats, and a few camels. Milk is a staple food. There are dogs but horses are lacking. There is some hunting. Agriculture is practiced only by sedentary Masai or Ewoll groups, e.g., the Ilkunja and Njemps. A few poverty-stricken villages of Elmolo on the SE rim of Lake Rudolf subsist mainly by fishing, with supplementary hunting of crocodiles, turtles, and hippopotamus, and keep only goats and dogs. Fishing and hunting are also very important among the Njemps, who have some livestock and do some irrigation agriculture. The Ntorgopolo have neither marine nor cattle.

Sex Division of Labor

Among the Elmolo only women do line-fishing, men predominantly

55

fishing with nets and harpoons.

Property

Livestock are the principal possessions.

Marriage

The Samburu pay a bride-price of 3 cows to WiFs, the Elmolo a bride-price in goats.

Polygyny is reported.

Family

There are polygynous family homesteads.

Kin Groups and Exogamy

Non-totemic and presumably exogamous patri-sibs are reported for the Lekipiak, Elmolo, Samburu, and Njemps.

Settlement Pattern

The Samburu live in migratory bands; a camp consists of two concentric fences, the inner one enclosing the cattle kraal and the huts located between the two in clusters separated from each other by partitions; the huts are round and dome-shaped, and consist of poles covered with sheep or goat skins. The Elmolo have concentrated villages of beehive-shaped grass huts.

Community Organization

The Lekipiak Masai have age-grades. The Elmolo do not circumcise. The Samburu circumcise and extract the two lower incisors like the Masai.

Local Government

Local groups, composed of a number of family homesteads, are ruled by councils of elders.

Data

Local groups are in turn grouped into 8 "sections," each with a council of local group leaders. These are further grouped into two large sections with "cattle names."

1106

186

Warfare

The Samburu maintained hostile relations with the Boran, Rendile, and Turkana. After the Rendile were almost decimated by smallpox, they entered into a protective relationship with the Samburu, who plundered them of livestock in return for military protection; the two tribes shared much of the same territory, and even sometimes occupied the same villages. The Laikipiak, like other Masai, were warlike, and drove the Samburu out of part of the their territory until they were broken by rinderpest and war with other Masai. The Njemps have a Masai type of military organization, but are subject to periodic raids from the Laikipiak, Suk, and Turkana.

Yale: Nk688 M3 905h.

[This book is an old account of the Masai written by a British colonial officer. Except for a large section on Masai language and grammar, the rest of the book is translations of Masai texts dealing primarily with their folklore, stories, proverbs songs. Data is presented in narrative, disjointed fashion and there is no attempt at organizing it nor treating it from any theoretical viewpoint. A wealth of data is included on Masai apparel, ornaments, medicine, diet and weapons. A lengthy introduction by C. Eliot attempts a brief ethnographic summary of the Masai, locates them geographically and delves briefly into their racial and linguistic affiliations with neighboring peoples.]

Yale: Nk10 R66E 17-18

[This paper is a study of the social and the political structure of the Masai in terms of their age-group system. The author analyzes the existing literature on the Masai and attempts to elucidate and reconcile some discrepancies with regard to the structure and function of the age and class units among the Masai. This results in detailed analytical descriptions of initiation ceremonies, military activities and ranking procedure of the age units. Almost every aspect of Masai life is touched upon, since it is the author's main thesis that the age-system both permeates and helps to explain the totality of the culture.]

/This study presents a survey of the dietaries of both the Masai and the Kikuyu tribes of Kenya. Most of the native foods were chemically analyzed and their nutritional values assessed. The two tribes have very different diets: The Masai's being high in protein, fats and calcium whereas that of the Kikuyu was high in carbohydrates. Marked differences were found in the incidence and kinds of diseases among the two tribes. Included in the report is a thorough description of tropical ulcer as found in Kenya. A number of

16: Ore, J. B. and J. L. Gilks.

experiments were carried out to determine the relation between changes in diet and rates of growth among children and adolescent natives. Tentative conclusions are presented on various aspects of native diseases, rates of development and nutritional values of foods consumed as they affect the physique and strength of the Kenya natives. /

Bartholomew University Library: [illegible] [illegible] [illegible] 1.]

Translated from the German for the Human Relations Area Files by Francis Kelliher.

[This narrative ethnography of the Ilawi people was written by a Captain in the German "Protectorate Troops" who, in his capacity as a military officer spent more than 7 years among the Ilawi. Part One of the source discusses the origins of the Ilawi and presents the author's hypothesis that the Ilawi are descendants of the nomadic Bantoo whose ancestral home was on the Arabian peninsula. It also describes what the author considers to be the three branches of the Ilawi people, the Wokuri (Eastl), the Ilan, and the Ilawi proper, and discusses the sequence of their migrations from the Arabian peninsula to their current location. Part Two contains a thorough ethnographic description of the Ilawi proper, and the Eastl, while Part Three contains a briefer, somewhat sketchy ethnography of the Ilan. As the Ilan are currently considered to be a branch of the Swahili, information in Part Three has been marked

[illegible]

only for the Kyl Gandor Sin. In Pan Ruan, the author compares Ideas myths and traditions with those of the Bible and with sections from Babylonia. The remarkable similarity between the traditions of these three peoples is used as corroborating evidence for the author's belief in the common origin of the various Ideas and the Ideas.]

V. *Massailand-Expedition*, Fischer. (Mittheilungen der geographischen Gesellschaft in Hamburg, 1882-3).

VI. *A Visit to the Masai People*, Last. The Geographical Journal, 1883.

VII. *Die Sprache der Il-Oigob* (die sogenannten Wakuafi und Masai). Grundriss der Sprachwissenschaft (Band III), Müller, Vienna, 1884.

VIII. *Polyglotta Africana orientalis*, Last, London, 1885.

IX. *The Kilima-Njaro Expedition*, Johnston, London, 1886.

X. *Durch Massailand zur Nilquelle*, Baumann, Berlin, 1894.

XI. *Masai Grammar*, Hinde, Cambridge, 1901.

XII. *The Uganda Protectorate*, Johnston, London, 1902.

121 My endeavour in writing this book has been to place on record some of the thoughts and ideas of the Masai people, before their extinction or their admixture with Bantu elements and contact with civilization renders this an impossibility. The stories, the proverbs, the riddles, the songs, and the account of the customs and beliefs of this interesting people are all given in the words of the relaters themselves.

000 My thanks are due to Sir C. Eliot for many valuable hints, and for the kindly interest he has shown in my work;
[128] to Mr. W. J. Monson for the free translation of the songs
[127] and prayers; to Mr. R. J. Stordy and to Saleh bin Ali for the loan of their photographs; and to the Director of the Royal Botanic Gardens, Kew, and to the officials of the Agricultural and Forestry Departments, East Africa Protectorate, for determining the names of the trees and plants.

797 In conclusion I wish to pay a tribute of the highest praise to the work of the Church Missionary Society in East Africa.

*539 On one occasion he devoured a large number of people and cattle—so many, in fact, that he thought he had exterminated the whole tribe. One woman, however, succeeded in hiding herself with her child in a pit, and after the demon had taken his departure she returned to the kraal and collected together all the food that had been left there.

The child was brought up in the pit, and when he was old enough to understand, his mother told him the story of the demon. For some time he did not venture away from the hiding-place, but after a while he made a bow and some arrows, and went for a walk. He shot a small bird, which he took back with him to the pit, and asked his mother if that was the demon. On being told that it was not, he went out again and shot another bird, and after that a Thomson's gazelle. He continued his search for a long time, and shot all kinds of things in the hope of killing the demon, but when he showed them to his mother, he found that he had not been successful.

The woman repeatedly urged her son not to leave the pit as they were the sole survivors of the tribe, but the boy was determined if possible to shoot the demon. One day he searched for a number of arrows and spears which he took to the top of a tree. He then climbed with his mother into the tree and lit a fire in the branches to attract the demon's attention. When the demon saw the smoke, he was greatly surprised, as he thought he had eaten all the inhabitants of the country. Having procured some axes, he went to the spot, and called out to the child and his mother to descend. As they refused to comply with his order, he commenced to cut down the tree. The boy shot him twice with his arrows, but the demon only thought he was being bitten by gadflies. As the arrows continued to hit him, however, he had to give up his intention of cutting down the tree, and shortly afterwards he lay down to die.

When he felt that his end was approaching, he said to the child: 'When I am dead, cut off my little finger, and your cattle will be restored to you. Then, cut off my thumb, and you will get back your people. After that cut open my face, and one man will come out.'

Having said this, he died, and the boy descended from the tree and

[01] [13] many of them being actually descended from that race. An account of their history and customs, by the author, was published in the *Journal of the African Society*, No. 1, October, 1901.

the-who-was-without-blemish only.

What does it matter whether a person is one's own child or somebody else's as long as he does his duty?

[The Swahili have a somewhat similar proverb: 'Kheri Kafiri akufaaye kuliko Islam asiyekufaa' (it is better to have a Kaffir who pleases you than a Mahommedan who displeases you).]

No. 49. Mĕoro 'l-tuli o en-gop.
They-separate-not the-buttocks and the-ground.

The buttocks and the ground do not remain long apart.

[One explanation of this proverb is that a man must sit down, and though he may walk about or lie down, he will sit on the ground again later. Another theory is that it has in some way reference to the disposal of the dead. With the exception, however, of the medicine-men and rich people, who are buried in shallow trenches, burial is unknown amongst the Masai. But it is perhaps a remarkable coincidence that the Tavetans[1], who are closely allied to the Masai, and the Bari, Dinka, and Madi[2], who live nearly 1,000 miles away, and not very far from the country whence the ancestors of the Masai are believed to have hailed, bury their dead in a *sitting* posture.]

The beginner of the earth.

The thing which is called Naiteru-kop is a god, but not as great as the black god[2].

This is the story which was told us by the elders:

The Masai were formerly Dorobo, and had no cattle: it was the Dorobo who possessed the cattle.

Naiteru-kop came one day and said to a Dorobo: 'Come early tomorrow morning, I have something to tell you.'

The Dorobo replied: 'Very well,' and went to sleep.

A Masai named Le-eyo, having heard what had been said to the Dorobo, arose during the night, and waited near the spot where Naiteru-kop was.

When it dawned he went to Naiteru-kop, who said to him: 'Who are you?'

On Le-eyo telling him his name, Naiteru-kop asked where the Dorobo was. Le-eyo replied that he did not know.

Naiteru-kop then dropped one end of a piece of hide from the heavens, and let cattle down one by one until the Masai told him to stop.

[1] Related by Napisyoki, an elder of the Aiser clan (Sighirari sub-district).

[113] [2] Krapf in his *Travels and Missionary Labours in East Africa* writes (p. 360), 'These truculent savages (the Masai and Wakwavi) have a tradition that Engai—heaven or rain—placed a man named Neiterkop on Mount Kenya. He was a kind of demi-god, for he was exalted above men and yet not equal to Engai.'

[3] For tayooku.

Caves[1].—The story of the cave in the mountain of smoke.

There is a cave in the mountain of smoke, or as it is otherwise called Donyo Erok, in which Masai live. If you stand near its mouth you hear the voices of people calling one another and also the lowing of cattle[3].

Women go to pray at this cave, and take with them gourds full of milk and honey and butter, which they leave there. The inhabitants of the cave come during the night and eat these things.

Barren women, however, do not go to the cave as their offerings are not accepted.

If strangers who do not know about the cave cut a tree near it, blood is seen to issue from the wood.

a one, they do not inform him; it is kept hidden from him until the time for the celebration of the feast arrives.

If the chief medicine-man approves of the selection, a cloth is made for the new chief like those worn by the old men, and surutya ear-rings are obtained.

Just before the feast a small kraal, called O-singira, is built a short distance from the warriors' kraal.

Only milch cows are placed in this kraal.

On the day of the feast the chief is seized, for if he were told that he is to be chosen, he would run away and hide, or kill some one. The idea of becoming an old man is distasteful to him, since he will be unable to again go to the wars.

When he has been seized, the surutya ear-rings are put on him, and he is clothed like an old man. After this the work for the day is over.

On the morrow a black bullock with a white neck and belly is sought out from the herds, and surrounded by the warriors.

When the cattle go to the grazing ground, a strong man is chosen, who holds the bullock by the horn at arm's length, whilst another one seizes it by the navel.

The bullock is stabbed in the nape of the neck [1], and skinned on the spot.

The old men then light a big fire in the centre of the warriors' kraal, and throw a buffalo horn into it.

[1] All the Nilotic tribes butcher their cattle by stabbing them in the nape of the neck (Schweinfurth, *The Heart of Africa*, vol. i, p. 60).

A knife is used with which to perform the operation.

Eisho 'l-Maasae: nebwa 'n-gera enye kat'-are. Ten eîni en-gerai, pe ebaya 'l-apaltin isyet, etubulutua 'l-ala pôkin, nebwai. Netonii.

The Masai extract their children's two middle teeth twice. They extract them first of all when the child is about eight months old, and all its teeth have grown. Then they wait.

Nepwo 'l-ala pôkin, neiñgwari 'l-opa-ootubulutua. Ore p' eitôki aabulu 'l-ala pôkin, nebaya en-gerai anaa en-oo-'l-arin tomon o aare, nebwai em-bwata e-kitoo, nemeitôki aabulu.

After the child has lost all its milk teeth and obtained the permanent set, i. e. when it is about twelve years old, the teeth are extracted a second time, and never grow again.

Ore p' eidip aatôbwa engerai, nesirieki eng-omom il-mur loo-'sirkon, nêji: 'I'rôbija.'

When a child has had its teeth extracted, donkey's dung is put on its face in order to cool it. [237]

Ore opa p' eiteruaki aabwa 'l-tuñganak êji, pe ten emweiyu ol-tuñgani, p' eitere, neony il-ala, neimyeki eng-are innabwata natôbwaki opa.

The origin of this custom of extracting teeth was to enable people, in the event of a man falling ill or being on the point of death, when his teeth would pain him, to pour water through the orifice[1].

[1] Hinde (*The Last of the Masai*, p. 42) writes: 'The origin of this custom is supposed to date back to a time when tetanus was a great scourge amongst the Masai, and they discovered that it was a comparatively simple matter to feed a man suffering from lockjaw if two of his front teeth were missing.' [113]

If warriors are not in mourning[2], they may not shave their heads until they have held the feast called e-unoto[3], and they grow pigtails.

Ore ten elu e-ñgorōyōni en-gerai, nemebarn ninye o en-gerai enye metabana nebulu

When a woman gives birth to a child, neither she nor the child are shaved until the latter has four

[113] [171] [174] Sir H. Johnston, in commenting upon this, says (*The Uganda Protectorate*, p. 805): 'It may be this explanation has been invented recently to explain a very ancient custom inherited by the Masai from the Nilotic stock, which was their origin; for amongst these people the removal of the lower incisor teeth is a very common practice.' Hinde's explanation, however, appears to be very widely spread.

[171] [1] This very uncommon practice for women to shave their heads is also followed by the Dinkas, Baria, and Latukas (Cummins, 'Sub-Tribes of the Bahr-el-Ghazal Dinkas,' *Journal of the Anthropological Institute*, June, 1904; and Baker, *The Albert Nyanza*, p. 90, &c.).

Food.

Amongst the Masai the principal food of the old men, the women, and the children is milk. 262

The warriors alone drive bullocks into the forest, and slaughter them there: at other times they go to the married people's kraals and drink milk, but they never remain for two months together without slaughtering.

Whenever the old men, the women, and the boys are able to do so, they likewise eat meat. They also eat an ox if it dies a natural death[1], or if it is bitten by a snake, or if a beast of prey has killed it.

The Masai elders, however, do not slaughter their cattle without good cause, and a man who is very fond of meat is called a Durubo. [186]

Whenever a woman gives birth to a child, a bullock is slaughtered, and she is given the fat. [846]

A pregnant woman is not given good food. When she wants meat, she is given bones or lean scraps; and when she wants milk, water is mixed with it. [843]

The Masai are also very fond of blood. They tie a leather ligature round the neck of a beast and pierce a vein with an arrow, the shaft of which has been blocked. When the blood gushes forth, they catch it [415]

[1] The Shilluk and other Nilotic tribes also eat cattle which have died a natural death (Gessi, *Seven Years in the Soudan*, p. 30, &c.). [121] [113]

portant elders, and take a cow which has a calf, and a woman who has a baby; and the enemy do the same.

They then meet together at a certain spot, everybody present holding grass in his right hand, and exchange the cattle, the Masai taking the enemy's cow and the enemy the Masai's. The enemy's child is suckled at the breast of the Masai woman, and the Masai baby at the breast of the woman belonging to the enemy.

After this they return to their kraals, knowing that a solemn peace has been entered into.

Thus was peace restored between the Lumbwa Masai and the Masai proper[1], in the year of the sun[2], at the place called the *Ford of Sangurura*[3].

Formerly when the Masai did not wish to make a solemn peace with the savages, they entered into blood brotherhood with them.

A Masai elder would sit down with one of the elders of the savages; each of them would then cut his left arm, and after dipping in the blood some meat of a bullock which was killed on the spot, would eat it.

When they had finished, the Masai went away, but they did not keep the peace.

[1] Hobley (*Eastern Uganda*, p. 41) and Johnston (*The Uganda Protectorate*, p. 884) describe a similar ceremony after a war between the Masai and the Lumbwa or Kip-sikisi.

T. N. & R. — Tanganyika Notes and Records.

by numerous tributaries, which run in deep valleys from the heights of the Mau. Chief among these are the streams known as Narok, Siyabei, Pusi Lukuayi, Olodari, Penyin and Sosian. At latitude 1° 30′ south, the Uaso Nyiro enters a deep gorge and flows sluggishly through swamps and tall grass from that point to Lake Natron, flanked throughout by the Nguruman Escarpment on its right bank. Eight miles from its mouth, it becomes lost in a swamp, but its course is sometimes visible as far as the lake. 133

The Mara River also rises on the Mau, whence it cataracts down in a south-westerly direction until, a few miles below the Mara Bridge, it too becomes sluggish. After crossing the Anglo-German boundary, this river proceeds due west until it reaches the Victoria Nyanza, seventy miles away.

Other less important rivers are the Gori River, in the trans-Mara country, which rises from Gelegele Hill, and finally flows into the Kuja near Karungu Bay, the temporary river Kikalelwa flowing eastwards from Kilimanjaro, and the Namanga flowing from Mount Orok.

Lakes.

There are no permanent lakes of water of any size within the reserve. Perhaps the most interesting feature of the country is found in the soda lake at Magadi, whose deposits are now forming the object of commercial enterprise. Lake Amboseli is a flood of water in the wet season, but dries up during dry weather.

The Rift Valley.

The Rift Valley, which marks the termination of the lava plains of Kaputiei and Athi on the east, crosses the Masai Reserve from north to south from the Kedong Valley to Lake Natron. This valley, the Erythrean or Great Rift Valley, extends through East Africa from the German frontier to Abyssinia, and thence to the Jordon Valley. "This valley," writes Professor Gregory, "has been formed by the subsidence of the block of material that once filled it. At one time, the surface of the volcanic plains to the east of the Rift Valley were continuous with the similar plains to the west. Parallel cracks, hundreds of miles in length, broke across the rocks: the block of material between these cracks sank, leaving walls, in places, so precipitous that the Uganda Railway has had temporarily to use a cable-worked funicular railway for the descent into the valley from the Kikuyu plateau. The walls of the valley, however, are not always precipitous. The lines along which the subsidence occurred cut across ridges, valleys, and basins: and the character of the scarps that now bound the valley varies with the structure of the country on either side of the Rift Valley."*

Eastern portion.

Dealing more particularly with the geographical divisions into which the reserve is divisible, the eastern portion of the reserve consists initially of an open plain, known as the Nyiri Desert, situated to the west of the Chyulu Hills. This so-called desert is at an altitude of about 4,000 feet, and is covered with bush of a varying density. There is no surface water in it, but the bed of a stream, known as the Sand River, crosses it from west to east, a bed averaging two to three hundred yards broad, from which water can be obtained by digging. One branch of this underground watercourse appears to be the continuation of the Kajiado River.

Further to the south, and at about the same altitude, lies the sometimes swampy country at the foot of Kilimanjaro. This plain consists of muddy sand, impregnated with various salts, which renders difficult the growth of any vegetation. Here and there a few sheets of water are to be found in the wet weather, surrounded by rings of grass, while considerable areas are covered with the white crust of soda and saltpetre. No rivers run from Kilimanjaro on its northern face, and the small streamlets which are occasionally running from the snow line do not proceed further than this plain.

Perhaps the most remarkable feature of the Nyiri Desert and the plains to the south is the quantity of game which exists in those areas, and it must be remembered, in this connection, that that country forms part of the Southern Game Reserve. [136]

Further to the west, the ground falls slightly to an altitude of under 3,800 feet at Lake Amboseli, and then rises to Mount Orok. From this mountain rise

Kisonko

126 of ceremonial dances taken during the Jubilee Celebrations of King George V in 1935, and of water drawing from the deep pre-historic wells of Central Masailand.

104 A word about Masai terms; throughout clarity rather than pedantic accuracy has been the aim. Thus the anglicized "Laibon" has been used for *ol Oiboni*, "Unoto" for *e Unoto*, "Laiser" for *'l Aiser*, etc., i.e. the article has been retained or dropped as the occasion demands. Where the plural forms have become current in local administrative usage, e.g. Laigwanak, they have been retained, but in other cases their employment would merely have led to confusion. When anglicized or in common use, these terms have been left in standard print: when italicized the word or phrase is, as far as known, grammatically correct.

● 113 Finally, it was thought undesirable to burden the report with frequent references and footnotes. A list of the works consulted is appended.

Admiralty, Naval Intelligence Division.
Handbook of Kenya Colony and the Kenya Protectorate. Undated, but *c.* 1920.
Useful as a reference book, but to be used with caution in matters of ethnography.

Bader, H. E.
1933. "Memorandum on the Samburu." *Kenya Land Commission, Evidence,* II, pp. 1,697–717.
An able and interesting historical study.

Bagge, S. S.
1904. "The circumcision ceremony among the Naivasha Masai." *JRAI,* XXXIV, pp. 167–9.
A somewhat confused account of the circumcision, but still useful.

Bagshawe, F. J.
1924–6. "The Peoples of the Happy Valley." *JAS,* XXIV, pp. 117–30, on the Hadzapi; pp. 25–33, 219–27, 328–47, on the Sandawe; XXV, pp. 59–74, on the Iraqw.
Not very detailed, but useful in the absence of anything better.

Barton, C., Juxon, T.
1921. "Notes on the Suk tribe of Kenya Colony." *JRAI,* LI, pp. 82–90.
At present a useful supplement to Beech; not always reliable.
1923. "Notes on the Kipsikis or Lumbwa Tribe of Kenya Colony." *JRAI,* LIII, pp. 42–78.
Still useful in parts.

Baumann, O.
1894. *Durch Massailand zur Nilquelle.* Berlin.
Useful in parts for early observations on the Masai.

Beadnell, C. M.
1905. "Circumcision and clitoridectomy as practised by the natives of British East Africa." *Brit. Med. Journ.,* 1905, pp. 964–5.
Details of the operation among the Masai and Nandi.

Beech, M[ervyn] W. H.
1911. *The Suk, their language and folklore.* Oxford.
Rather brief and not always accurate account of ethnography; fuller on language, with good vocabulary.
1920–1. "Sketch of Elgeyo law and custom." *JAS,* XX, pp. 195–203.
The only available account of legal sanctions in this tribe.

Bell, C. R. V.
See Huntingford.

Bleek, Miss D. F.
1931. "The Hadzapi or Watindega of Tanganyika Territory." *Africa,* IV, pp. 273–86.
A useful account, with some linguistic notes.

Braunholtz, H. J.
1921. "A peculiar type of armlet." *Man,* 1921, 37.
Description and distribution of the *e-rrop* type of arm-clamp worn by the Masai.

114

Cooper, B.
1947. "The Kindiga." *TNR*, No. 27, pp. 8–15.
A short account of Hadzapi life, with some good photographs, by a game ranger.

Dallas, D.
1931. "The sacred tree of Ol Donyosha." *Man*, 1931, 48.
An account of a fig-tree with supposed magical properties.

Dempwolff, O.
1916. *Die Sandawe*. Hamburg.
A detailed account of the Sandawe, with notes on the language and texts; does not always agree with van de Kimmenade.

Dobbs, C. M.
1919. "Diseases of stock in Lumbwa District." *JEAUNHS*, p. 461.
1921. "Lumbwa circumcision ages." *JEAUNHS*, 15, p. 55.
A short account, not very accurate, of the age-sets of the Kipsikis.

Dundas, Hon. K. R.
1908. "Notes on the origin and history of the Dorobo tribes." *Man*, 1908, 78.
A collection of traditions, mostly obtained in Kikuyuland.
1910. "Notes on the tribes inhabiting the Baringo district." *JRAI*, XL, pp. 49–72.
Contains some notes on the Keyo and Suk. Useful, but not entirely reliable.
1913. "The Wawanga and other tribes of the Elgon district." *JRAI*, XLIII, pp. 19–75.
Contains some notes on the Pok and Kony, pp. 60–2.

East African Statistical Department
1950. Census. (1) African population of Kenya Colony and Protectorate, Sept., 1950. (2) African population of Uganda Protectorate, Dec., 1950. (3) African population of Tanganyika Territory, Dec., 1950. [Referred to as *E.A. Census, 1948*, the year in which the census was taken.]
Described as "Geographical and tribal studies from the East African Population Census, 1948."

Erhardt, Rev. J. L.
1857. *Vocabulary of the Enguduk Iloigob*. Ludwigsburg.
A useful vocabulary (bearing in mind its age and the way in which it was collected), with a short account of the people.

Evans-Pritchard, E. E.
1940. "The political structure of the Nandi-speaking peoples of Kenya." *Africa*, XIII, pp. 250–67.
A survey of the literature dealing with the political organisation of the Nandi group.

Fischer, G. A.
1885. *Das Massai-Land*. Hamburg.
A few useful observations on the Masai, their material culture and country; mainly geographical.

Fokken, H.
1917. "Gottesanschauungen und religiose Ueberlieferung der Masai." *Archiv. f. Anthrop.* XV, pp. 237–52.
Refers to the Kisonko of Tanganyika Territory.

Forde, C. Daryll.
1934. *Habitat, Economy, and Society*. London.
Chapter XIV, pp. 287–304, contains a short general account of the Masai. Good as an introduction.

Fosbrooke, H. A.
1948. "An administrative survey of the Masai social system." *TNR*, No. 26, pp. 1–50.
The best account so far published of the political organization and age-set system of the Masai.

Fox, D. Storrs
1930 (1). "Further notes on the Masai of Kenya Colony." *JRAI*, LX, pp. 447–68.
1930 (2). "Description of Masai shields and spears." *JEAUNHS*, 27, pp. 201–2.
1931. "Notes on marriage customs among the Masai." *JEAUNHS*, 32–43 pp. 183–92.
Contains also some notes on circumcision and age-sets.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

113
114

Frazer, Sir James G.
1910. *Totemism and Exogamy*, vol. II. Exogamy and the classificatory system of relationship among the Masai. Pp. 407–17.
A concise account based on Hollis and Merker.

Fuchs, H.
1910. *Sagen, Mythen und Sitten der Masai*. Jena.
A collection of folk-literature.

Gilks, J. L.
See Orr.

Hailey, Lord.
1950. *Native Administration in the British African Territories*. *HMSO*. Part I. Deals with Nandi and Suk, pp. 138–46; Kipsikis, pp. 147–62; Kenya Masai, pp. 167–77; Tanganyika Masai, pp. 282, 283, 287, 288; Mbulu district, pp. 281, 282.

Hamilton-Ross, J. G.
1933. *Kenya Land Commission, Evidence*, Vol. II.
Memorandum on the Keyo, pp. 1,951–70.

Hemsted, C. S.
1923. "Tribal organization of the Nandi." *JEAUNHS*, 18, pp. 3–15.
Rather inaccurate notes.

Hennings, R. O.
1951. *African Morning*. London.
This is not an anthropological book; but it contains the fullest description available of Marakuet irrigation.

Hinde, S. L. and H.
1901. *The Last of the Masai*. London.
Unreliable; nearly half the book deals with wild animals.

Hobley, C. W.
1902. *Eastern Uganda*. London.
Useful, but must be read with caution; has some historical value. Deals with the Nandi, pp. 36–42, 58, 59; Masai, p. 58; Dorobo, pp. 11, 12.
1903 (1). "Anthropological studies in Nandi and Kavirondo." *JAI*, XXXIII, p. 325.
Contains some traditions of Nandi origins.
1903 (2). "Notes concerning the Eldorobo of Mau." *Man*, 1903, 17.
1905. "Further notes on the Eldorobo or Oggiek." *Man*, 1905, 21.
1906. "Notes on the Dorobo people." *Man*, 1906, 54.
This and the previous paper are mainly on language, and are useful as showing that the Kenya Dorobo speak dialects of Nandi.
1910. *Ethnology of A-Kamba and other East African tribes*. Cambridge.
Contains a short chapter on the Masai, somewhat confused.

Hollis, A. C. [Sir Claud]
1905. *The Masai, their language and folklore*. Oxford.
The best book available on the Masai; much of it is in the form of texts with translation; there are also the texts of folk-tales, and a full and reliable grammar.
1905. "Masai ear-ring of stone." *Man*, 1905, 12.
1908. "The religion of the Nandi." *Transactions of the Third International Congress for the History of Religions*. Oxford. I, p. 87.
Absorbed into his book on the Nandi.
1909 (1). *The Nandi, their language and folklore*. Oxford.
A good account of material culture and a number of customs; has little about social and political organization. Nearly half the book is grammar and vocabulary, both reliable. Both his books are indispensable for a study of the Masai and Nandi languages.
1909 (2). "Some Dorobo beliefs." *Man*, 1909, 101.
Note on a Dorobo rain-maker between Naivasha and the Anglo-German frontier.
1910. "A note on the Masai system of relationship and other matters connected therewith." *JRAI*, XL, pp. 473–82.
The best account of the Masai kinship system.
1943. "The Masai." *JRAS*, XLII, pp. 119–26.
ew of changes in the Masai since the publication of his book in 1905.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

Huntingford, G. W. B.

1927. "Miscellaneous records relating to the Nandi and Kony." *JRAI*, LVII, pp. 417–61. 113
Includes notes on diviners, age-sets, marriage, names, texts, and a brief account of the Kony. 114

1929. "Modern Hunters." *JRAI*, LIX, pp. 333–78.
An illustrated account of Dorobo material culture (the horde described in this volume), with a short grammar and vocabulary.

1933 (1). "The Nandi military divisions and their bearing on the land system." *Kenya Land Commission, Evidence*, Vol. II, pp. 2,045–60. Nairobi.
Memorandum presented to the Land Commission in 1932.

1933 (2). "The significance of bride-price, with special reference to the Nandi." *JEAUNHS*, 45–6, p. 51.

1933 (3). Memorandum on a suggested Reserve of land for the Tindiret Dorobo. *Kenya Land Commission, Evidence*, Vol. II, pp. 2,039–45.

1934. "Some aspects of Nandi stock-raising." *JEAUNHS*, 49–50, pp. 250–62.
Notes on Nandi methods of cattle management.

1935. "The Nandi Puroriet." *JRAI*, LXV, pp. 133–43.
A short account, with a Nandi text.

1942. "The social organization of the Dorobo." *African Studies*, I, pp. 183–200.
Short summary of field-work done in 1938–40.

1944. *The Nandi*. (Peoples of Kenya series No. 11.) Nairobi.
A short account of social and political organization.

1950. *Nandi Work and Culture*. London.
A detailed account of economic life, with a chapter on Nandi history and topography, and a discussion of Nandi culture.

1951. "The social institutions of the Dorobo." *Anthropos*, XLVI, pp. 1–48.
Deals with kinship, family life, behaviour, age-sets, the clan, circumcision, marriage, and names.

1953. *The Nandi of Kenya: Tribal control in a pastoral society*. London.

Huntingford, G. W. B., and Bell, C. R. V.

1950. *East African Background*. London.
An introduction to East African ethnography for non-specialists, with sections on Nandi organization, age-sets, and warfare, and an analysis of the Masai age-sets.

James, L.

1939. "The Kenya Masai." *Africa*, XII, pp. 49–73.
An account of the Masai in 1939, and a critical discussion of their administration.

Johnston, H. H. [Sir Harry]

1886. *The Kilimanjaro Expedition*. London.
A useful account of the Masai before the coming of the European administrations.

1902. *The Uganda Protectorate*. London.
Though now largely superseded by other works, this book is still useful (with caution) for certain aspects of East African ethnography. It contains accounts of the Masai, pp. 796–835; Suk, pp. 841–53; Nandi group, including Dorobo, pp. 913–26.

1915. Article "Masai" in Hastings, *Encyclopædia of Religion and Ethics*. Vol. VIII, pp. 480–3.

Kenya Land Commission

1933. *Evidence*, Vol. III. Nairobi.
This volume contains material relating to the history and land problems of the following peoples: Nandi, pp. 1,948–51, 2,029–60, 2,066–79; Dorobo, pp. 1,868–72, 1,879–96; Keyo, pp. 1,931–47; Kamasya, pp. 1,781–94, 1,830–48, 1,853–62, 1,899–1,901; Suk, pp. 1,722–7, 1,733–55, 1,773–81, 1,839–42; Masai, 1,175–266. [Abbreviated as K.L.C.]

Kenya Land Commission

1933. *Report*. Nairobi.
Contains references to the Nandi, sections 1,030–75; and Kipsikis, sections 1,149–85.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

113
114

Krapf, Rev. J. L.
1854. *Vocabulary of the Engutuk Eloikob.* Tubingen.
Apart from its historical interest, the vocabulary is still useful. There is a short account of the Masai on pp. 3–31.
1860. *Travels, Researches, and Missionary Labours during an Eighteen Years' Residence in Eastern Africa.* London.
Krapf was the first European to travel through any part of the Masai sphere of influence.

Lambert, H. E.
1950. *The systems of land tenure in the Kikuyu Land Unit. Part I. History of the tribal occupation of the land.* University of Cape Town.
A useful study, with many references to the Dorobo who occupied the land before the Kikuyu. Short account of the Keriita Dorobo, pp. 67–8.

Leakey, L. S. B.
1930. "Some notes on the Masai of Kenya Colony." *JRAI*, LX, pp. 185–209.
Based on information from Kikuyu-speaking Masai.

Lindblom, K. G.
1921 (1). "Mount Elgons grottor och folk." *Ymer*, p. 139.
Deals with the Kony.
1921 (2). *I vildmark och negerbyar a° Mount Elgon och annorstädes i Ostafrika.* Stockholm.
The Nandi-speakers on Mount Elgon.
1924. "Some words of the language spoken by the Elgoni people." *Le Monde Oriental*, XVIII, pp. 46–55.
Contains some brief notes on the people and their religion (Kony).

Macdonald, Lt.-Col. R. L.
1899. "Notes on the ethnography of tribes met with during the progress of the Juba expedition." *JAI*, I, p. 226.

Maguire, R. A. J.
1927–8. "Il-Torobo." *JAS*, XXVII, pp. 127, 249.
An account of the Dorobo of Tanganyika Territory.
1948. "Il-Torobo." *TNR*, June, 1948, pp. 1–28.
Reprint of previous article.
1928. "The Masai penal code." *JAS*, XXVIII, pp. 12–18.
1931. "Masai water trees." *Man*, 1931, 158.
Note on Dallas's paper in *Man*, 1931, 43.

Massam, J. A.
1927. *The Cliff Dwellers of Kenya.* London.
A superficial account of the Keyo.

Merker, M.
1903. "Religion und Tradition der Masai." *Zeits. f. Ethnol.*, XXXV, pp. 733–44.
Absorbed into his *Die Masai.*
1910. *Die Masai: ethnographische Monographie eines ostafrikanischen Semitenvolkes.* Berlin. (1st ed., 1904.)
Valuable for material culture and descriptive accounts of visible features of Masai life; much valueless discussion of Masai racial affinities.

Obst, E.
1913. "Der östliche Abschnitt der grossen ostafrikanischen Störungszone." *Mitt. d. Geogr. Ges. in Hamburg*, XXVII, pp. 153–202.
Has some material on the Sandawe.
1915. "Das abflusslose Rumpfschollenland im nordöstlichen Deutsch-Ostafrika." *Mitt. d. Geogr. Ges. in Hamburg*, XXIX.
Has some material on the Sandawe.

Oschardson, Ian Q.
1919. "Supernatural beliefs of the Lumbwa." *JEAUNHS*, pp. 417–20.
Deals with the religion of the Kipsikis; useful.
1932 (1). "Religious beliefs among the Kipsigis." *East African Standard*, 13 Aug., 1932.
Report of a lecture to the East Africa and Uganda Natural History Society.
1932 (2). "Marriage customs of the Kipsigis." *JEAUNHS*, 40–1, pp. 99–112.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

Orchardson, Ian Q.—*continued.*
1933. "Religious beliefs and practices of the Kipsigis." *JEAUNHS*, 47–8, pp. 154–62. 113
1935. "The African explains witchcraft: II. Kipsigis." *Africa*, VIII, pp. 509–15. 114
A useful collection of statements by three Kipsikis, with comments. The author has known the Kipsikis well for many years.
1936. "Future development of the Kipsigis, with special reference to land tenure." *JEAUNHS*, 5–6, pp. 200–10.
Some useful notes on land tenure.

Orr, J. B., and Gilks, J. L.
Studies of nutrition: the physique and health of two African tribes. *HMSO.* London.
A valuable description of the diet of the Masai and Kikuyu.

Page-Jones, F. H.
1948. "Water in Masailand." *TNR*, No. 26, pp. 51–9.
An account of the water supplies in the Masai district of Tanganyika, their ownership, the related settlement pattern, and seasonal migrations determined by them.

Peristiany, J. G.
1939. *The social institutions of the Kipsigis.* London.
The first full account of the Kipsikis; useful for material culture and legal processes.
1949. *La vie et le droit coutumier des Kipsigis du Kenya.* Ét. soc. et ethnol. jurid. sous dir. R. Maunier, XXVIII. Paris.
1951. "The age-set system of the pastoral Pokot." *Africa*, XXI, pp. 189–206, 279–302.
A full and detailed account of the *sapana* and post-*sapana* ceremonies among the pastoral Suk.

Phillips, A.
1945. *Report on Native Tribunals.* Nairobi.
Nandi, pp. 109–11; Masai, pp. 141–4.

Radcliffe-Brown, A. R.
1950. *African Systems of Kinship and Marriage.* London.
Good analysis of the Masai kinship system, based on Hollis, pp. 18–22.

Reche, O.
1914. *Zur Ethnographie des abflusslosen Gebietes Deutsch-Ostafrikas.* Hamburg.
Useful account of material culture of "Kindiga" (Hadzapi), pp. 4–23; Sandawe, pp. 24–31; "Fiomi" (Gorowa), pp. 103–7; Burungi, pp. 107–10; together with material on the Bantu neighbours of these peoples. Good for comparative study.

Ried, H. A.
1915. *Zur Anthropologie des abflusslosen Rumpfschollenlandes im nordöstlichen Deutsch-Ostafrika.* Hamburg.
Physical anthropology; has some material on the Hadzapi.

Roscoe, Rev. J.
1924. *The Bagesu.* Cambridge.
Chapter VIII deals unconvincingly with the Sapei, who are referred to as "Basabei."

Routledge, W. S. and K.
1910. *With a prehistoric people: the Akikuyu of British East Africa.* London.
Appendix II (pp. 344–9) contains a short account of the Masai; not very useful.

Sandford, G. R.
1919. *An administrative and political history of the Masai Reserve.* London.
A useful and valuable study, with good maps.

Seligman, B. Z.
1917. "The relationship systems of the Nandi, Masai, and Thonga." *Man*, 1917, 48.
A short comparative study, based on Hollis's material for the Nandi and Masai.

Shelford, F.
1910. "Notes on the Masai." *JAS*, IX, pp. 267–9.
Short account of a journey through Masailand.

Stigand, C. H.
1913. *The Land of Zinj.* London.
Sketchy account of the Masai on pp. 204–32.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

113
114

Stoneham, Lt.-Col. H. F.
1933. Memorandum on the Dorobo. *Kenya Land Commission, Evidence*, Vol. II, pp. 2,081–2.

Thomson, J.
1884. "Through the Masai country to Victoria Nyanza." *Proc. RGS.*, VI, pp. 690–712.
1885. *Through Masai Land*. London.
Thomson was the first European to traverse Masailand, and his book has an historical value. Besides many details of great interest on the Masai, he has a little to say about the Dorobo (chap. X), and the Kony and Suk (chap. XII). Indispensable in a study of the Masai.

Totty, L. H., and Chaundy, G. H.
1944. *The people and district of West Suk*. (Peoples of Kenya series, No. 17.) Nairobi.

Trevor, J. C.
1947. "The physical characters of the Sandawe." *JRAI*, LXXVII, pp. 61–78.
Though mainly on physical anthropology, there are some notes on ethnography.

Van de Kimmenade, Rev. M.
1938. "Les Sandawe." *Anthropos*, XXXI, pp. 395–416.
An account of social organization and religion; of some value.

Von Höhnel, L.
1894. *Discovery of Lakes Rudolf and Stefanie* (English translation). London.
The narrative of Count Teleki's hunting and exploring expedition in East Africa in 1887–8. Very useful for details of tribal distribution, and other items of ethnographical interest.

Von Luschan, F.
1898. "Beiträge zur Ethnographie des abflusslosen Gebietes von Deutsch-Ostafrika" in Werther, q.v.

Ward, C. E.
1928. "Sunworship amongst the Kipsikis or Lumbwa tribe." *JEAUNHS*, pp. 26, 27.
Description of a ceremony held in the month of May.

Weiss, Max.
1910. *Die Völkerstämme im Norden Deutsch-Ostafrikas*. Berlin.
Good photographs of Masai and Dorobo of Masailand.

Werther, W.
1898. *Die mittleren Hochländer des nördlichen Deutsch-Ostafrika*. Berlin.

Whitehouse, L. E.
1933. "Masai Social Customs." *JEAUNHS*, 47–8, pp. 146–53.
A valuable but somewhat confused account of the formation of age-sets; many misprints in the Masai words used.

Woodhouse, C. W.
1913. "People of the South-east slopes of Mount Elgon." *JEAUNHS*, 3, pp. 16–25.
Notes on the divisions and organization of the Kony.

[P. 192]

561 789 25 July, 1958, and the place was somewhere between Uaso Kedong and Suswa, *i.e.* west of the Kedong River in the Rift valley below the Kikuyu escarpment in Kenya. The gathering site for the warriors was deep in the bush about two hours march from the *manyatta* outside of which the *O-singira* hut was located. Europeans in the party, in addition to myself, were Charles Hayes, Jack Couldrey and Jeremy D. Lunn. About 500 *muran*, heads shaved and reddened with ochre, carrying sticks instead of spears, sat around in a huge circle. The forehead of each warrior was rubbed with the heart of the slaughtered animal and then the *muran* took a bite of it. Following this, a strip of hide, about four or five inches long and one-half or one inch wide, pierced at one end by a one-inch slit, was placed over the middle finger of the right hand of each tribesman.

The magical significance of the heart and finger strip is not accurately known. Nothing magical is ever very clear! The heart probably signifies life and blood, and the binding of the warrior to cattle, the life-giver of the Masai. The significance of the hide strip is even more obscure, perhaps merely a symbol of brotherhood and of the association with cattle but possibly of sexual connexion (finger symbolizing male genitals, slit in skin female). If the latter, the individual Masai would certainly not be aware of this meaning, which would have originated long ago in an individual magician's mind and have been obscured for all others over the years. Finger strips and rings, and wristlets, are commonly (though not always) used as symbols of sexual union in East African tribes, *e.g.* the Wakamba use a finger ring from the knuckle hide of a goat as an amulet against male sexual impotence (Margetts, personal observation) and prior to marital sex consummation the Nandi groom wears a goatskin ring on his right middle finger and the bride a strip around her left wrist (Huntingford, 1953, p. 28).

[171]

After this day-long ritual the tribesmen returned late at night to the *manyatta*, where further ceremony was carried out at the *O-singira* hut.

BIBLIOGRAPHY OF THE MASAI

113 This bibliography is a revision of a mimeographed copy which I compiled several years ago and which has been circulated privately on 101 request. Continued interest has now prompted me to revise and publish it here. It deals mainly with the Pastoral or "Rift Valley" Masai of both Kenya and Tanzania. But it also includes many important references to other Maa-speaking peoples--such as the Samburu and Njemps (Tiamus) of Kenya and the Arusha and Baraguyu of Tanzania--who are referred to variously in the early literature as the Wakwavi, Wahumba, or Iloikop or simply as the Agricultural Masai.

113 Although by no means exhaustive, the bibliography is designed to include all the major works dealing with the history, language, and traditional social, political, and economic life of the Pastoral Masai. Other important items, not included here, may be found in the following: (1) Colonial Office Files, Public Record Office, London; (2) Secretariat Archives, Nairobi, Mombasa, and Dar es Salaam; and (3) Regional and Area Administrative Office Files, Kenya and Tanzania.

Titles in this bibliography are arranged alphabetically according to author or organization. The following abbreviations are used:

JAS	Journal of the African Society
JEAUNHS	Journal of East Africa and Uganda Natural History Society
JRAI	Journal of the Royal Anthropological Institute
JRGS	Journal of the Royal Geographical Society
MS NAD	Manuscript in former Department of Native Affairs, Secretariat Building, Nairobi
Pro. RGS	Proceedings of the Royal Geographical Society
TNR	Tanganyika Notes and Records

114 in the Church Missionary Society's station in Taveta" /cited in
177 English/, this, as Merker himself told me, can only refer to a
773 Masai man from whom he received other information; since for
797 the many investigations on /xiv/ which his ethnological work is
[115] based (habits, customs, names, etc. etc.), he had quite different
114 informants, of course. And Hollis' objection (1)
773

> 1. Personal communication from the researcher, highly esteemed by me, whom I had the good fortune to become acquainted with in September, 1908, in Oxford (at the Kongress für Religionsgeschichte /Congress on the History of Religion/), just as I was also able to become personally acquainted with the deceased Merker in 1907, after I had previously corresponded with him, which was extremely valuable to me in view of the so highly controversial Masai problem.

that he (Hollis), who was also acquainted with the Masai of his region for many years, would then also have had to come across the traces of such early history is only an argumentum e silentio. Either the more southerly Masai (in German East Africa), with whom Merker worked, were more faithful guardians of those ancient treasures, which is not impossible, or Merker also had more luck in gaining their confidence on this point than Hollis, who, just there, did not come across the right people. Merker, however, indeed also expressly states in the foreword to the first edition that it was not until the fifth year after the beginning of his work that he came across those traditions from ancient times, which by no means commonly cross people's lips, but are handed down only in particular families and there are only ever to be found among a few old men. And then it took another year and a half before Merker had completely learned what is set down in
114 his fourth chapter. Moreover, even according to Hollis (cf. also
776 C. Eliot's introduction to A. C. Hollis, The Masai, their
782 language and folklore, p. xix), the monotheism of the Masai
• 113

/xiv cont./

114 776 782 113 and their imageless worship of God ("they have definite prayers and they petition the deity more frequently and fervently than the surrounding tribes are known to do" /cited in English/), stand unquestionably, just as generally a comparison of the book by Hollis, appearing shortly after Merker's book, with Merker's Masai is the best apologia for the reliability of Merker's ethnological as well as linguistic observations.

114 174 Another outstanding African scholar, the praiseworthy, well-known linguist Carl Meinhof of Berlin (now Hamburg), has above all, and, to be sure, for linguistic reasons, turned against Merker's designation of the Masai as a "Semite people," and with that then also at the same time against their onetime ancestral home in Arabia (2).

[113] 2. Cf. his review in Zeitschr. f. Ethnol., 36, 1904, pp. 735-744.

But what the Arabist Schwally (in Giessen) said about the Masai traditions (Archiv für Rel.-Gesch., IX, 1906, p. 505), that here "features of Semitic origin are well grafted on African ones" (but "when and under what circumstances is hard to say"), also applies to the language, as I was able to convince myself by a thorough study of Hollis' book. Definite remains show that the Masai must once have been Semites, and, to be sure, Arabian Semites. This will be briefly discussed in what follows next.

174 197 [173] [113] [802] Not only does their own tradition teach that they came from the north, but this is also confirmed by a comparison of some of their number words with those /xv/ of the Cushitic languages (especially Somali and Galla) and of Nuba. One should compare the following lists, to which I have also further added the number words of Nandi, closely related to the Masai, from the new book by Hollis (The Nandi, their language and folklore, with Introduction by C. Eliot, Oxford, 1909):

/307 cont./

*121 *793 *539 *171

In Gen. 2, V. 4 to 6, the first version again appears, according to which in the beginning the earth was a desolate waste in which no shrub and no herb of the field grew. Then God sent the fructifying rain and watered the whole surface of the earth. Here therefore the primeval flood is entirely absent.

A third interpretation is scattered throughout various parts of the Old Testament, especially in Psalms 74 and 89, in the 51st chapter of Isaiah, and in the 26th and 40th of the Book of Job. It was first discovered by Hommel and then reconstructed by Gunkel into a description of creation. According to it, God Jahve /Yahweh/ goes to battle against the dragon Rahab or Liwjatan and shatters its heads. Then he dries up the sea, the waters of the great Tehom, and with that begins his act of creation.

In the Babylonian myth of creation (1)

[113]

1. According to Prof. Dr. Heinrich Zimmern, "Biblische und babylonische Urgeschichte. Der alte Orient II." /Biblical and Babylonian Earliest History. The Ancient Orient II./

we find in the beginning the original flood, which sometimes is personified as a male being, sometimes as a female one. In the latter case she is called Tiamat. Then the gods arise first, among whom Marduk is supreme. Tiamat is displeased with the gods, creates dragons to fight the world of the gods, and becomes indignant. God Marduk sets out to battle her, kills her, and, out of her corpse split in two, makes the water above and under the firmament. Then Marduk creates sun, moon, and stars, the dry land, the plants and animals, and, finally, the human beings.

Among all three peoples we find initially, before the beginning of the actual creation, God's battle with the dragon. With regard to the original state, we found two versions: the desolate, barren waste among the Masai and in Gen. 1 and 2; the original flood in Gen. 1, the other Biblical passages, and in Babylon.

Paradise and the Fall of Man

#121
#993
#539
#191

According to the account of the Manel, paradise, a patch of earth with marvelously luxuriant vegetation, arose there where, out of the cadaver of the slain dragon, its blood poured over the earth and made fertile the hitherto barren waste. In the midst of the trees covered with the most delicious fruits there stood one whose fruits God had forbidden human beings to eat. Then one day the serpent, as tempter, approached the woman and persuaded her to eat some of the forbidden fruit, the consumption of which would make human beings the equals of God. The woman ate and gave the man some to eat as well. After both had eaten, they were ashamed of their disobedience and hid before God, when the latter again -- as he often did -- came to them in paradise. When, upon being questioned, they had confessed their guilt, he ordered them out of paradise and posted before it the morning star as guard.

Whether we should see in the well-known picture on a seal cylinder in the British Museum a representation relating to the fall from the Babylonian one must as yet remain undecided. In the center stands a pinelike tree with two fruits hanging on it, in which Professor Hommel (1)

• [113]

1. Prof. Dr. Fr. Hommel, "Die altorientalischen Denkmäler und das alte Testament /The Ancient Oriental Monuments and the Old Testament/."

recognized the sacred cedar of Eridu with its fruits possessing vital energy and generative power. To the right and left of it a figure clothed in long garments sits on a kind of throne. The right one wears two horns as a head ornament, and through that is designated as a god or at least a semidivine being; the person on the left is usually interpreted as a woman. Behind her a snake stands upright. Each of the two figures is extending one hand toward one of the fruits. Perhaps Jensen's interpretation (2),

FL12 Masai FL12

PREFACE

THE Masai occupy a considerable part of the large plains which extend from about one degree north of the equator to six degrees south of it, situate in both British and German East Africa. Those living in British territory commonly call themselves Il-Maasae[1], whilst the 'German Masai' are to a large extent known as 'L-Oikop[2] or Il-Lumbwa[3]. In olden days the coast people termed them without discrimination Wa-Masái or Wa-Kwayi[4], names which have been perpetuated by Krapf and others. 101 [131]

Sir H. Johnston states[5], and probably correctly, that the Masai represent an early mixture between the Nilotic negro and the Hamite (Gala-Somali); and that this blend of peoples must have been isolated somewhere in the high mountains or plateaux which lie between the Nile and the Karamojo country. Certain it is that the Latuka, who are supposed to be descendants of the ancestral Masai, and who occupy this country, speak a language that is closely allied to the Masai tongue, and have many customs in common with the Masai. The accounts which have been published of the habits and 174 [144] [197] 114

[1] When spoken rapidly this word is sometimes pronounced Il-Máasá (for further particulars see also p. 29, note 4).

[2] 'L-Oikop is believed to signify the possessors of the land. It also means murder (see p. 27, note 3, and p. 311).

[3] Not to be confounded with the so-called Lumbwa (whose real name is Kip-sikisi), a tribe living near the Victoria Nyanza in British East Africa. These Lumbwa or Kip-sikisi are nearly related to the Nandi, and are believed to have migrated from north of Mount Elgon (Hobley, *Eastern Uganda*, p. 10). Lumbwa is a term of contempt, and signifies a pastoral people who have taken to agriculture.

[4] The meaning of Kwayi (or Kwapi) in Masai is countries or somewhere. Hildebrandt's suggestion (*Zeitschrift für Ethnologie*, 1878, p. 349) that Maasae is derived from the Masai word 'masaa, property, and that Kwayi is a corruption of kafi, the Swahili for paddle (given in allusion to their broad-bladed spears), is probably incorrect.

[5] *The Uganda Protectorate*, vol. ii, p. 796.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

114 customs of the Masai are both numerous and varied, but comparatively little is known of their language. The following
113 books, which contain either short vocabularies or grammatical
114 notes, are probably all that exist [1].

II. *Vocabulary of the Enguduk Iloigob*, Erhardt, Ludwigsburg, 1857.

III. *Life, Wanderings and Labours in Eastern Africa*, New, London, 1874.

IV. *Nubische Grammatik* (Einleitung), Lepsius, Berlin, 1880.

V. *Massailand-Expedition*, Fischer. (Mittheilungen der geographischen Gesellschaft in Hamburg, 1882-3).

VI. *A Visit to the Masai People*, Last. The Geographical Journal, 1883.

VII. *Die Sprache der Il-Oigob* (die sogenannten Wakuafi und Masai). Grundriss der Sprachwissenschaft (Band III), Müller, Vienna, 1884.

VIII. *Polyglotta Africana orientalis*, Last, London, 1885.

IX. *The Kilima-Njaro Expedition*, Johnston, London, 1886.

X. *Durch Massailand zur Nilquelle*, Baumann, Berlin, 1894.

XI. *Masai Grammar*, Hinde, Cambridge, 1901.

XII. *The Uganda Protectorate*, Johnston, London, 1902.

121 My endeavour in writing this book has been to place on record some of the thoughts and ideas of the Masai people, before their extinction or their admixture with Bantu elements and contact with civilization renders this an impossibility. The stories, the proverbs, the riddles, the songs, and the account of the customs and beliefs of this interesting people are all given in the words of the relaters themselves.

000 My thanks are due to Sir C. Eliot for many valuable hints, and for the kindly interest he has shown in my work;
[128] to Mr. W. J. Monson for the free translation of the songs
[127] and prayers; to Mr. R. J. Stordy and to Saleh bin Ali for the loan of their photographs; and to the Director of the Royal Botanic Gardens, Kew, and to the officials of the Agricultural and Forestry Departments, East Africa Protectorate, for determining the names of the trees and plants.

797 In conclusion I wish to pay a tribute of the highest praise to the work of the Church Missionary Society in East Africa.

[1] When this was written Merker's book *Die Masai* (Berlin, 1904) had not been published.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

INTRODUCTION

THE present work, by Mr. Hollis, Chief Secretary to the Administration of the East Africa Protectorate, treats of the language, traditions, and customs of the Masai, one of the most interesting and important tribes of those territories. I am not competent—and there must be few people in the world who are—to criticize by the light of independent knowledge the mass of material which he has brought together, and will merely attempt briefly to summarize the information about the race which we now possess. Mr. Hollis's previous contributions to anthropology, his opportunities for studying and daily conversing with the Masai, and his linguistic talents, which are well known to every one in East Africa, are a sufficient guarantee for the thoroughness and excellence of his work. 114

The Masai at present inhabit the inland districts of British and German East Africa from the equator to about 6° S. Few of them are found north of the Line, except an isolated settlement just south of Lake Rudolf, and they seem to avoid both the sea and the great central lakes. Many smaller pieces of water, such as Lakes Naivasha and Nakuru, are found in their haunts, but they neither use boats nor catch fish. They are divided at present into two sections, one of which, called 'L-Oikop, is agricultural and settled, while the other, or Masai proper, is entirely pastoral and nomadic. The difference between the two is evidently not ancient, for both speak practically the same language, and it is probable that the agriculturalists of the present time are nomads who have settled down. On the other hand, tradition does not carry the history of the tribe further back than a century at the most[1], and it would be rash to assume that the nomad pastoral state is primitive or very ancient. It is quite probable that there was a large agricultural settlement on the Uasin-Gishu plateau from which the more adventurous warriors detached themselves. 101 13 [501] [226] 101 [197] 173 174

In East Africa the Masai are clearly distinguished by their language, customs, and appearance from the Bantu races (although the latter often imitate them, and have received a certain proportion of Masai blood), and equally clearly 101 144

[1] The genealogy of the medicine men goes back about 200 years.

1:Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

the case with the Gallas, Somalis, and Abyssinians (who are 174
rapidly encroaching on the Protectorate), and probably with the Bahima. It also seems probable that the physical type of these races (Masai, Nandi, Turkana, Dinka, &c.) represents a mixture between the negro and some other factor. It does not seem to me possible to make any definite statement as to what that factor may be, but the neighbourhood of Egypt and Abyssinia renders several hypotheses plausible. Baker states that the appearance of the Latuka (who are probably the closest allies of the Masai) points to a Galla origin, and that there are Gallas on the east bank of the river Chol only fifty miles east of Latuka, which they have often invaded. It may therefore be that the Nilotic tribes, and possibly also the Hausas to the west, represent a hybrid of the negro and Galla.

There is absolutely nothing to show when the Masai moved 174
southwards, but the traditions reported by Mr. Hollis (p. 264, 173
&c.) seem to place the earliest history of the world in an East African setting, and convey no hint of an earlier home. The chief characters in these stories are the Masai, the Dorobo (hunting tribes), and the Bantu (Meek), and the principal event some arrangement by which the Masai obtain a right to all the cattle in the world. This seems to indicate that they must have been a long time in their present haunts, and have lost all remembrance of their origin. Some of the proverbs, such as 'The zebra cannot change his stripes,' and [539]
'Mountain does not meet mountain,' have a familiar oriental ring; but it would be unsafe to speculate how they came to Masailand.

A very different view of the past of the Masai is suggested 174
by Merker's recent work (*Die Masai*, Berlin, 1904). He 114
regards them as belonging to the same stock as the ancient Hebrews, and quotes a great number of traditions respecting the creation, deluge, ten commandments, &c. which resemble the Biblical and Babylonian versions of primitive history. A critical examination of these stories is very desirable, as one cannot help suspecting that they contain elements borrowed from Christian or Mohammedan sources. On the 174
other hand, in all questions affecting the origin of East African races, our only data are the most recent types of physique, religion, and language, and we cannot, as in the case of more civilized nations, go back two or three thousand years with comparative certainty. We can form no idea of how many strata of population such a period would represent in Africa; what mixtures and disruptions of races it would include.

I – INTRODUCTION AND BIBLIOGRAPHY

In the October issue, 1952, of *Africa*, the *Journal of the International African Institute*, I published a critical evaluation of the age-system of the Nilo-Hamitic Peoples. That evaluation was based on an analysis of the existing anthropological literature of which the present paper offers the section on the Masai. It will be followed, I hope, by other papers on the other Nilo-Hamites. In the last few years intense fieldresearch has been going on, and new material is being made available. This will make it possible to fill in the gaps and complete the picture of the Nilo-Hamitic age-system. All this analytical work should be preliminary to a deeper study of Nilo-Hamites' social and religious organisation and possibly provide a basis for defining their cultural-historical relation with such other peoples as the Bantu-Hamites of East Africa, the Kikuyu, the Kamba, etc. 114

The literature on the Masai is comparatively voluminous, though much of it is irrelevant and unreliable and makes reading confusing and any analytical work complicate. I shall not compile here a full bibliography, but limit my indication to the actual works which deal with the age system and a few others I have used. I wish to thank 127

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

756 tices are alleged to be efficacious for the above-mentioned complaints,
791 and may also prove useful in procuring success in war, adequate rainfall, or immunity from disease, both human and bovine. Such a laibon of course retains his private practice. The final stage is when a laibon is invited to superintend and bless ceremonials affecting the whole tribe, such as circumcision, promotion of warriors, standing down, etc. Such a one retains the duties of the two previous stages, and is in fact the Chief Medicine Man of the section or tribe. This is the status which the term laibon popularly connotes." Therefore, it is clear first that the prophet is essentially a private practictioner, and secondly that his promotion to the higher stages of the practice derive primarily from his personal skill and good luck which give him reputation and, hence, influence on tribal matters. It is significant, however, that the prophet, even when he has reached the highest stage "retains the duties of the two previous stages", in other words, he does not cease to be a private practitioner. Therefore, the title "Chief which FOSBROOKE also uses, does not properly describe the prophet's office and makes it Medicine Man", more formal than it really is. [35] It is for the same over-formalisation that our early authorities and the Administration were misled in the evaluation of the prophet institution. [36]

III – PRELIMINARIES TO THE INSTITUTION OF THE AGE-CLASS

561 The age-system of the Masai consists essentially in a structure of age-classes distinguished from one another in terms of seniority. An age-class is instituted as the final result of a long course of initiation ceremonies, performed during an official approved time.

The age-class must be distinguished from other minor groups such as the age-units. These are formed at different stages of the initiation course as intermediate steps to the establishment of the age-class. The age-class follows from the merging and unification of two age-units.

The Masai term for age-class is *old aje*, pl. *il ajijik*; for age-unit, *ol poror*, pl. *il poror*. [37] These terms are frequently rendered into

[114] [35] Indeed FOSBROOKE is unable to decide wether the *laibon* is the chief medicine man of the section or tribe.

[36] See also below, and on the relationship of the prophetinstitution to the structure of the age-system as a whole see BERNARDI, *l. c.*, pp. 323, 331.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

881 593 of so-and-so. When he replies to his name, he is told to go and make a profit. He answers: " Herds and flocks ". This is repeated four times, and the ceremony is over ".

554 561 881 593 The ceremony is performed only once in a man's life, namely when he " wishes to have his eldest child circumcised ". This particular circumstance shows that by " the passing of the fence " a man obtains a special elderly status which gives him a right to have all his children initiated.

Thus, there is a relationship between the father's social status and the initiation into the age-class of his son's. None of these may be initiated unless the father has reached the proper status. The personal status of the father is reflected on his children. Therefore the " passing of the fence " is not in itself part of the age-system initiation, but a condition which must have been observed before a man is allowed to have his sons initiated.

[565] Other authorities (Fox) have stressed the fact that class membership of a Masai is somehow dictated by the class to which his father belongs. " The passing of the fence " gives a special emphasis to this fact and shows how a Masai's initiation into a class is conditioned by the social status of his father. It shows how the structure of Masai society stands on the balance of status of its members. [41]

881 634 [184] " *The tearing of the ox* " (*Embolosat ol Kiteng*). [42] Though this ceremony is performed by a single section or a group of sections, its performance has a far reaching value which is accepted throughout Masailand. The ceremony is performed by such sections as the Kakonyuke, the Dalalakotok and the Purko (all Kapiti). According to Fox the Kisongo also perform it. But this is denied by Fosbrooke, who qualifies Fox's statement by saying that the Kisongo acknowledge and respect the value of the ceremony performed by the Kakonyuke. [114]

881 561 634 As a matter of fact special importance is attached to the ceremony performed by the Kakonyuke, who in any case must be the first to do it and who have the lead in the matter. All the sections which

[41] The social balance between the father and his son is only an expression of a wider and basic principle, which, in our opinion, is an essential principle of Masai social organisation: the principle of the distribution of power. See Bernardi, *l. c.*, pp. 326 ss.

[42] Fox, *Notes on Marriage Customs among the Masai*, in *J. E. A. U. N. H. S.*, 42-43, 1931, pp. 189 s.; Leaky, *l. c.*, p. 448: *NAD*, 1926, p. 9, n. 11; 1927, p. 15, n. 61; Fosbrooke, *l. c.*, p. 27.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

88 56 in sight. Victory consists in getting a hold of the bullock by its right horn and maintaining the grip.

c) After the contest the bull is smothered, and skinned; rings are made out of the skin and distributed by the *ol opolos.*[46] "The meat is eaten and the elders go to a place apart to pray to God for the boys. The age is then given a name which is kept until the *E-Unoto* ceremony, which takes place some years later". (Fox).

The bones of the ox are burnt and the fire is guarded to avoid any evil spell being cast on it.

Eventually the boys return to their homes and wait for their turn to be circumcised.

The fact that "only the right hand circumcision", i. e. the first of the two age-units of an age class, performs the ceremony is essential to an analysis of the significance of *Embolosat.*[47] It means that *Embolosat* is the first ceremony of the initiation which institutes the class, and not simply of the initiation which institutes the age-unit. Indeed the left hand circumcision, i. e. the junior age-unit of the class, does not perform *Embolosat*, and therefore the senior age-unit acting at *Embolosat* does it on behalf of the whole class. *Embolosat* should then be regarded as the starting point of a new class, opening the period during which the class is instituted. This specific value of *Embolosat* is confirmed by the acceptance on the part of all the Masai of the Kakonyuke ceremony. We do not know the reason why this ceremony should have such a paramount importance, but its social significance seems to be a thoroughly established fact. LEAKEY states that "only one ox-seizing ceremony (is held) in the whole Masai country, before a new age-group proceeds to initiation and circumcison". This statement is qualified by FOX in the sense that *Embolosat* is also performed by other sections, as we mentioned above, but the Kakonyuke must first perform it. Of the Kisongo FOSBROOKE writes: "the elders are extremely vague as to its (of *Embolosat*) meaning, but that the new age is formally inaugurated by *Embolosat* in Kenya is fully confirmed by the elders round Mondul".

[46] According to LEAKEY, the *ol opolos* is given a thong made from the skin and he is supposed never to throw it away, an obligation which does not apply to the youths who are given the rings.

[47] In the chart of Masai "age-grades" arranged by FOSBROOKE, *l. c.*, p. 24, *embolossi* is shown as taking place before the two circumcision periods of the age-units. This does not agree with the evidence offered by FOX.

[114]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

warriorhood ". He also states that *Unoto* " is probably the best known and most misconstrued ceremony in the Masai age-grade system ". 884 561

Unoto is not performed at a single place for whole Masailand, but in every territorial section or group of sections. [90] It consists of three main stage: (a) a testing of the candidates by the elders; (b) the election of the ceremonial leader of the unit; (c) a sacrifice of a bull. [634]

a) The first stage takes place in a special hut called *singira*. [91] Not all the candidates, i. e., junior initiates, are allowed into the *singira*, but only those who have kept the sexual regulations which bind junior initiates. In order that no one may enter the *singira* under false pretences the entrance is bewitched by the elders. According to LEAKEY, [92] another test is performed insidie the hut aiming at detecting those who have entered surreptitiously. [346] [834] [754]

In the annual report of the *NAD*, [93] we read that every candidate is expected to give " an account " of his past life. " The importance of the *E-Unoto* " states the same report, " lies in the fact that it imposes an obligation upon a warrior who has disgraced himself in any way to clear himself of the stigma before he can marry and settle down as a respected Elder of the tribe ". " The *O-Singira* " says FOX, [94] " gives the warriors permission to have sexual relations with initiated women ". [783]

b) The nomination of the ceremonial leader (*ol aunoni*, pl. *il aunok*, or *ol otuno*) takes place inside the *singira* hut. The elders 561 624

[90] LEAKEY's statement, p. 194, that at the *Unoto* " all the members of a given group (i. e., age-unit) from the whole of the Masai country, north, south, east and west are required to be present " is emphatically denied by FOX, p. 451, and FOSBROOKE, p. 29. According to FOX the following sections perform it: (a) Purko; (b) Loita and Siria; (c) Damat; (d) Kuputiei, Lodokilani and Matapatu; (e) Laitokitok; (f) Kisongo. And FOSBROOKE says that the *Unoto* is celebrated " by sections or groups of sections " and is attended by as many warriors as possibile, " but by no means all ". SANDFORD, on HEMSTED's authority, recorded that the *Unoto* was held by the Purko, Kakonyuke, Dalalekutuk and Damat on the Kinangop. The Sigirari, Matapatu, Kaputiei and other divisions where it suited them best. [114] [184] [634]

[91] There are contradictory descriptions of the *singira*. MERKER states that it is a 'very big hut'; BAGGE says " not so big "; HOLLIS " small ". Leakey and Fox state respectively " an enormous ", and a " very large " hut. Probably it all depends on the actual number of the initiates involved.

[92] LEAKEY, *l. c.*, p. 195.

[93] *NAD*, p. 21.

[94] FOX, *l. c.*, p. 452.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

MERKER,[106] states that each year for three successive years, candidates are individually initiated and formed into separate minimal age-divisions. A fourth one follows immediately before the closing ceremony is celebrated. He does not state the length of the interval between two successive clossing ceremonies. 561

HOLLIS,[107] is very definite on this point. He writes that individual initiation is performed for four years in succession, and all those initiated during these years belong to the right-hand unit. "An interval of about three and half years then intervenes before another festival is held". All those initiated during the netx four years belong to the left-hand unit. Therefore, according to HOLLIS, the period for the institution of each age-unit would be about seven and half years.

LEAKEY,[108] states that *Unoto* is celebrated after "nine years of junior warriorhood". But FOX,[109] disputes this and says that "nowadays it takes place from three to five years after initiation".

WHITEHOUSE,[110] writes that "the (initiation) ceremonies which commence about every 7 years extend over a period of about 5 years".

FOSBROOKE,[111] says that the right-hand unit performs *Unoto* 7 years after their initiation period has been opened; and the left-hand unit 5 years after it.

All these statements show clearly that there is no hard and fast definition of the period for the institution of the age-units, and they are evidence that our system of measuring time does not apply to the Masai. The major factor for fixing that period are the presence of candidates, the authority of the elders stating that the right time for performing the various ceremonies has come, and also the regular occurrence of good rainy seasons.

We may, however, say that the period of seven-eight years is a good approximation of what obtains in actual fact. If we take

[106] MERKER, *l. c.*, p. 70.

[107] HOLLIS, *l. c.*, p. 262. His actual words be misleading. He states that "one feast (circumcision feast) is held in each subdistrict every year for four years in succession". But it is certain that circumcision is not performed at one single ceremony in each sub-district, but in any village where there are candidates. [114]

[108] LEAKY, *l. c.*, p. 194.

[109] FOX, l. c., p. 451.

[110] WHITEHOUSE, *l. c.*, p. 146.

[111] FOSBROOKE, *l. c.*, p. 25.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

residential place of the initiates, and the *sirit* which is a manifold grouping of comradeship. 56 62 70

The *manyatta* is the village where the initiates live in segregation from other people. Externally it does not differ from any ordinary village. Some authorities state that there is only one *manyatta* for each territorial section.[124] But FOX,[125] qualifying LEAKEY, states that this is only true for some special occasions as when all the initiates of one section come together to perform some special ceremonies, as, e. g., *Unoto*. 62

In the *manyatta* the initiates are assisted by their mothers who do the housework, and by some unitiated girls (*na sandja* or *ditto*)[126] who are there mostly for their sexual pleasure.[127] Uninitiated boys may also live in the *manyatta* for the menial works and for tending cattle.[128]

The groupings named *sirit*, pl. *isirit*, are formed, according to WHITEHOUSE,[129] at a meeting called by the *ingobir* when it is decided to build the *manyatta*. Membership of the *sirit* is a matter of free choise. An initiate is free to join any *sirit*, and he is free to change it for another soon after his first election. But if he does so when the *manyatta* has been formed, he "incurs the bitter resentment" of his *sirit*-mates, and he may even be fined for that. 70

As far as numbers go, WHITEHOUSE states that "groups of 5 (initiates) will go together to join the same company" (*sirit*).[130] MERKER, however, says that the inhabitants of a single *manyatta* 70 62

[124] MERKER, *l. c.*, p. 82; LEAKEY, *l. c.*, p. 192; HINDE, *l. c.*, p. 91 writes that "every section has usually some three favourite districts, in each of which is a village, called 'mangatta'".

[125] FOX, *l. c.*, p. 451.

[126] MERKER, *l. c.*, p. 83.

[127] Although the sexual life of the initiates with these girls is promiscous and free, full sexual intercourse is strongly condemned. 831 833

[128] According to MERKER, *l. c.*, p. 110, the initiates who belong to the smith trade usually do not share the village with the other initiates, but have their own villages and the girls who live with them are from families of the same trade. The smith initiates organise their own raids, but because they are few their booty is always small and they are easily deprived of it by other warriors. 564

[129] WHITEHOUSE, *l. c.*, p. 150.

[130] WHITEHOUSE described the *sirit* as based on the clan. The *MS*, 46, p. 8, states that "*amanyata* is inhabitated by the *moran* of one particular clan". It seems, however, that this is not a fixed principale, and certainly does not obtain with the Kisongo. *Cf.* FOSBROOKE, *l. c.*, p. 28. 114

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

527
561

they last for three or four days and generally take place before a raid. [125]

At this point it is relevant to discuss the relationship of military organisation and the age units. MERKER, [126] gives a description of Masai military organization. He assumes the existence of a standing army (das stehende Heer), in which he distinguishes the recruits, the warriors and the reserve. 701

The recruits are " the shaved ones " (*el barnot*). [127] These, together with " the warriors " (*el moran* = initiates) [128] constitute the peace-time force (Friedensstärke), under conscription. [129]

The junior elders come into action in time of war but they may be reckoned as members of the standing army (" ... kann man als Reserve ansehen und mit zum stehenden Heer rechnen... "). The senior elders take arms only in defence of their own territorial areas and sections (Distrikt).

The above description appears to be very formal. [130] It shows, *however, that military activity is not confined to the initiates but* extends to the classes of elders. And this is a relevant point. We can say, therefore, that the initiates become warriors not to the exclusion of the other classes above them. A further point brought out by MERKER's description is the distinction between an offensive army constituted by the so called recruits, the warriors and the reserve, and a defensive army in which the senior elders are also incorporated.

721
701

It would be of great interest to know how the organisation of a raid or any other military action is formed, and whether there is any relationship between such an organisation and the *manyatta*

[125] MERKER, *l. c.*, p. 84. See also HOLLIS, *l. c.*, p. 317. At p. 292, n. 1, he states that " il *puli* are special places erected in the woods, to which the warriors retire when they slaughter cattle ".

[126] MERKER, *l. c.*, p. 73.

[127] " The shaved ones ", (*el barnoti*, pl. *el barnot*), is the term applied to those who have just come out of their individual initiation and have been given the warriors' arms. They are the junior initiates.

[128] We may assume that the general term " warriors " as used by MERKER at this place (see also p. 56) refers to the senior initiates.

[129] MERKER, *l. c.*, p. 73, regards circumcision as a kind of compulsory conscription (... seiner — der allgemeinen — Wehrpflicht ins Heer...).

[130] One may note here that it is MERKER's tendency to describe Masai customs in a way which fits his own scheme. As known, his thesis on the semitic origin of the Masai has so influenced his way as to make his informations in many a case unreliable. [114]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

Thereupon we infer that the function of the age-unit is primarily social. Its scope is to organise the initiates into a corporate body, separate and distinct from other similar bodies, and to lead them, both as individuals and as a corporate whole, towards a full social and economic independence and towards taking a full share in political life.[159] 561 182

IX – THE CEREMONIES FOR THE INSTITUTION OF THE AGE CLASS

The institution of the age class is brought about by the performance of some special ceremonies, of which the most important is the *ngekerr* proper. Before this takes place, other ceremonies, such as "the slaughtering of the ox with jousting" (*ol geten 1 ol baa*), "the *ngekerr* of milk" and "the *ngekerr* of meat", must be performed by every initiate. Through these performances the initiate obtains the status of an elder. The *ewuoni* is the forerunner of all his age-mates. As was seen, at *Uwate*, he is given the status of an elder, and soon after that he settles down as a married man. 561 [884]

LEAKEY,[160] states that a warrior (i. e. an initiate) who marries cannot have sexual intercourse with his initiated wife.[161] FOX,[162] qualifies LEAKEY's statement and says that such a case "is hypothetical, and does not occur in practice", because usually the senior initiates marry after the *ngekerr* of milk.

MERKER,[164] is our only authority for "the slaughtering of the ox with jousting". The ceremony consists in a meat festival offered by the candidate to the elders of the neighbourhood of his father's village. Other initiates share the meat, but eat apart being still under the restrictions of junior initiates. A mock fight follows in which the initiates and women take part. Finally before the sun sets, "a married man with his chief wife comes near to their host and addresses him with the following words": [539]

[159] Each unit seems to be distinguished from the other by its peculiar songs. FOX, *l. c.*, p. 454, states that almost all of these songs are in a "rather cryptic language". [533]

[160] LEAKEY, *l. c.*, p. 300.

[161] LEAKEY was somehow misled in his information; he also states *l. c.*, p. 196, that "the actual transfer from the senior warrior stage to the Elder's stage takes place without any ceremonial", which is not correct. [114]

[162] FOX, *l. c.*, p. 455.

[164] MERKER, *l. c.*, pp. 102 ss.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

tact with a prophet is established before a raid. All these delegations are expected to pay the prophet a number of cattle contributed by the age-set's members they represent. The responsibility for collections of this kind is one of the main duties of the leaders.[179] 56 99

The authority and the influence of the prophet do not extend beyond these contacts. The elders alone are responsible for the organisation of the initiation ceremonies and hence for the institution of the age-class.

However, in his description of the *laibon* FOERBOOKE assumes too much. He writes,[180] "On evidence which need not be recorded here, it seems certain that the Masai, whose age grade custom so closely approaches that of the Galla, were possessed of their present military organisation prior to leaving their original home.[181] Thus it appears that the *laibon* is a later adaptation imposed on a self-sufficient organisation of government through age-grades. Probably much of the confusion of function which exists today, the indefinite division of governmental authority between the *laibon* and the age-set leaders, is due to the adoption of an institution (namely, the *laibon* hood, B. B.) incompatible with the original culture. It would be wrong to regard the institution as being foreign to Masai nature, but it is probably true that it is a feature which had not found its true level in the tribal structure when European influence intervened". [171]

The assumption that the Masai age-system is related to the Galla age-system is frequently taken for granted but up to the present, nothing definite has been ascertained on this point.[182] On the basis of our present analysis we agree with FOERBOOKE's conclusion on the secondary character oft he prophet's function in the institution of the age-class.[183] But we find it difficult to agree with him when he states that "the age grades" have been the channel through which the *laibon* institution came to be established as an [171] [114]

[179] It frequently happens, remarks FOERBOOKE, *l. c.*, p. 18, that the contributor does not know exactly the reason for his contribution. Of course he relies entirely on his leader.

[180] FOERBOOKE, *l. c.*, p. 12.

[181] FOERBOOKE, *l. c.*, p. 3, "lying between Lake Rudolf and Kenya Highlands".

[182] On this point, see BERNARDI, *l. c.*, p. 315, fn. 2.

[183] FOERBOOKE, *l. c.*, p. 16: "But he (the prophet) is not responsible for the organisation of such matters (i. e. *Bubolosi*, *Uasin* and *Ngakaw* ceremonies) nor is it on his initiative that new ages commence or hold some stand down".

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

56 79 [114] institution of Masai culture. We are much inclined to think on different lines. The office of the prophet is essentially a ritual office. His true power derives from his ritual value. It seems evident from the preceding analysis that Masai political and social structure is primarily based on the age-system. We think that it is solely for this system that the *laikow* did not entirely succeed in invading the political field and usurping the authority of the elders.

That the function of the prophet is essentially foreign to the age system is a fact which the present analysis may also have helped to make evident. The conclusion arrived at by FOSBROOKE on "the incompatibility" of the *laikow* institution "with the original culture" of the Masai is one that could only be properly reached after an historical and critical study of Masai ritual and religious institutions and not merely from a survey of their political and social institutions. [114]

XII – THE RELATIONSHIP OF CLASS-MEMBERS [illegible]

561 574 A strong bond of solidarity is felt by all members of a class. Such feeling is primarily due, as is natural, to the mere fact of belonging to the same social body. Other factors, such as a more or less equal age and the contemporaneous performance of essential initiation ceremonies give substantial cause for a feeling and bond of that kind. That such a bond is strong and effective is clearly shown by Masai hospitality customs. They show also what force of cohesion springs from the age-system structure. Any class-member has a right to stay and live at the house of any of his age-mates. While he is a stranger to the place, he is not a stranger to his age-mate for they are members of the same class. The latter cannot refuse him, otherwise he would be cursed by his own class. This cursing power of the age-class is very significant to our present purpose. It shows the authority and power possessed by the class for keeping its structural cohesion and for defending itself from any disruptive attack. [illegible] [56]

[illegible] MERKER, l. c., p. 47; HOLLIS, l. c., p. 486; FOX, l. c., p. 168.

[illegible] Masai hospitality customs are best described by HOLLIS, l. c., pp. 397 s. Translating, as he does, direct Masai accounts, he writes: "When a Masai goes to other kraals to pay a visit, he does not on his arrival enter a hut unless he knows the owner, for if he belongs, for instance, to the *Kimaro* age, he must not enter the hut of one of the *Kisiwere* age, as he does not belong to this age. He will ask where the huts of the members of the *Kimaro* age are, and when he

*** Figures of years are described by Forbooke as the " approximate date of circumcision. The expression is very vague and there have been [illegible] the usual terminology is. Following our analysis it seems clear that " circumcision " means here " age-class ", and, therefore, dates may be referred to either the performance of *Rahakaui* or the performance of the *Tohunga* proper.

*** A fourth list recorded by Dixon, l. c., p. 300, is not reproduced here because it is evident from a comparison with the other lists that it contains " no indiscriminate mixture of age (rati) and class-names " (Fox).

Schultz G-3 (ca. 1894-1904) 1935 FL12 Sheet FL12

Besides the power of a maternal uncle to stop a fight, he has also the right to take anything which belongs to his nephew. If the uncle finds anything that is the property of his nephew's father, the nephew must buy it from his father, who will at once give it up when he knows for whom it is required. This power of taking property is reciprocal, and in fact applies to all persons who address one another as of-nyin, of-ka-ka-nyin, etc. A nephew, for instance, may go to his maternal uncle's kraal, and if his uncle is absent, he may slaughter a goat, or drink his uncle's milk, and nothing would be said. He cannot, however, drive off a cow without his uncle's sanction, but permission would not be refused. Other relatives have likewise some power of taking property. A boy or man may go to his father's or paternal uncle's kraal and take or demand a goat or milk, and in all probability nothing would be said, but if it were done repeatedly the father or uncle would express dissatisfaction or refuse slaughter. A man may also go to his sister's husband or wife's brother (*al-ayoboni*) and take anything, but on account is kept and the debt has to be returned. If a man is poor it is customary for him to live with one of his brothers-in-law (*al-ayoboni*) and help to look after the stock. He is fed for his trouble, and no payment receives less out of every pair of cow's gains here.

Free cousins and second cousins may not marry, but there is no objection to third cousins marrying if the relationship is no nearer than *ili-i-ihlo* (*ne-ne-ihlo*). Thus, a man's ego's ego's son may not marry the ego's brother's ego's ego's daughter, nor may a man's ego's ego's son marry the ego's ego's ego's daughter, but there would be no objection to a man's ego's ego's son marrying the brother's daughter's daughter's daughter or the sister's daughter's daughter's daughter. Likewise though a man's ego's ego's son may not marry the ego's maternal uncle's ego's ego's daughter, he may marry the maternal uncle's ego's daughter's daughter. These rules are always contingent on the two parties not belonging to the same sub-clan.[1] The rules of exogamicity and affinity which regulate marriage also apply to the sexual intercourse of married with unmarried girls before marriage and to the rights of hospitality after marriage. No married man may admit as his

[1] The Shaka are divided into five clans—*Ili-ziwe*, *Ili-Ndungwane*, *Ili-Ndwane*, *Ili-Mbelgwa*, and *Ili-Ngobamakosi*. Each clan is again divided into sub-clans, viz. the *Ili-Ziwe* contains amongst others the following: *Ili-qhibidi* and *Ili-Ncheweni*. The men belonging to the *Ili-qhibidi* sub-clan may take as wife the daughter of a man of the same sub-clan, but he may marry the daughter of the *Ili-Ncheweni* or he may marry a daughter of the *Ili-Ndungwane*, *Ili-Ndwane*, *Ili-Mbelgwa*, or *Ili-Ngobamakosi* clans. Members of the various sub-clans are scattered to be found in all the districts and sub-districts. Marriages are not affected by geographical considerations, and a man has the same lawful married relations to all the sub-districts as he has to his own home sub-district.

In his many book, *The Marriage of the Amaxhosa and other Bantu Tribes* (Van Oven Bridge, 1918), Dubley states (p. 181) that the restrictions governing marriage amongst the Shaka are far less simple, and he gives a number of complicated instances. In a number of fact the rules are quite simple if one remembers (1) that though the clans are not exogamous, the sub-clans into which the clans are divided are exogamous; and (2) that no man may marry a nearer relative than a third cousin, and then only if the house of affiliation could not be traced back to a common ancestor.

Conditional G-4.5 (1918) 1919 FL12 Masai FL12

[P. ii]

[i.1] With the exception of Chapter II., the matter contained in this Administrative and Political Record of the Masai has been drawn from official papers. Chapter II. has been compiled from early reports and contemporary published books, and assistance in arranging and in checking detail has been obtained from Mr. Kinnaird, who has personal knowledge of the early history of administrative contact with the tribe.

[i.2] The maps which have been distributed where necessary throughout the text have occasioned considerable difficulty, as a large part of the Masai Reserve is unmapped. The very general maps must be regarded only as illustrative, and it is probable that much of the detail is inaccurate. The boundary of the Masai Reserve still awaits demarcation, and the line purporting to show its position is therefore tentative.

[i.3] A mass of inconsistency in the spelling of tribal and geographical names pervades the official records, and the spelling adopted here, adhered to that most commonly employed, makes no pretension to phonological or linguistic accuracy.

G. R. SAFEMFORD.

Kajiado,

173 Origin of the Masai.

Little is known of the early history of the Masai tribe, but it seems to be an established fact that the original home of this people was the country between the north of Lake Rudolf and the Nile, from which area the Masai are said to have moved in a south-easterly direction so long ago that tradition does not recall any incidents of the exodus, nor the reason therefor.

101 173 Pastoral and agricultural sections.

It seems, also, that there were two distinct sections of the Masai, distinct in point of habits of life and customs, though not of language or ancestry, between which sections continual war was waged, were which now form the greater part of the traditional history of the tribe as it is known at the present day to its members. The sections are usually defined as the agricultural and pastoral sections, the former, known as L'Oikop, being more or less settled, while the latter was entirely nomadic, and never practised agriculture in any form. Masai tradition does not extend back for more than one hundred years, but the history of that century shows, to the exclusion of all other topics, a conflict between these two sections, which resulted in the practical annihilation of the L'Oikop, who have now ceased to exist, with the exception of small settlements found at Ngorongoro, to the north of Lake Natron, two villages, Great and Little Olongo, to the south of Lake Baringo, possibly the so-called Cattle Gulch Masai, now located near Elburna Ravine, and in Kavirondo country, and certain individual settlements of Masai among neighbouring tribes, where they have assimilated the customs and adopted the language of their protectors, and from whom it is now difficult to distinguish them.

[361]

Settlements of L'Oikop.

174 114 Sir Charles Eliot's theory.

The theory suggested by Sir Charles Eliot, to the effect that the pastoral sections cannot be assumed to be primitive or very ancient, and that it is quite probable that there was a large agricultural settlement on the Uasin Gishu plateau, from which the more adventurous of the warriors detached themselves.

179 European influence.

It is this conflict which made the Masai name what it was and which has rendered an complete the question of the administration of the conquering pastoral sections. The victors depended entirely on cattle for their means of subsistence, and were driven to raiding other tribes, in order to secure sufficient herds of cattle. The introduction of the European element, therefore, deprived the Masai of their sole pursuit, and had the inevitable result of reducing the Masai from the first to a very low scale of economic importance among East African tribes.

[321]

101 Wakwavi.

The term Wakwavi (Wakwafi of Krapf) is frequently used by the early writers in reference to the Masai, but it appears that this term has, in fact, no connection with the agricultural sections, being merely a Swahili endeavour borrowed from the Masai Kwavi or Kwapi, meaning plains.

THE MASAI PENAL CODE

Some Notes on the Recognised Masai Punishments for Crimes, with Examples of Masai Oaths or Ordeals

121 The following notes relate to those punishments of ancient origin still remembered among the Kisongo[1] Masai. Some of the penalties are habitually inflicted up to the present day. Some, as will be obvious from a perusal of the text, have, of necessity, fallen into disuse. They have been written down from the statements of certain Masai Elders of the *'L-aiser*[2] age, and have received the *imprimatur* of the *'L-oibon* Pärit. Pärit[3] has asked me to say that he cannot be responsible for the authenticity of what follows, though he has no doubt that it is correct, but being a comparatively young man of the *'Siaye*[4] age, he has not the knowledge of these things that the Elders have.

114 115 [21]

121 The notes are brief and unscientific, and were made, primarily, with the object of adding to our knowledge of Masai custom in the matter of criminal offences in view of the recent formation of Native Courts throughout Tanganyika Territory.

'L-oikop: Murder

C88 (a) If one Masai kills another, all the cattle of the murderer are taken by the relatives of the deceased. A council is then

[1] Kisongo is the Masai name for the southern Masai areas. It includes almost the entire Tanganyika Masai District as constituted to-day. The principal Masai "Districts" included under the name Kisongo are (for the purposes of this article) Moipo and Kiddu.

[2] Generation of 18yr, approximately, according to Hollis.

[3] Pärit is a brother of Sitet and Kimiron, of Kenya. They are all three of the clan of the medicine-men or 'L-oibonok. Ol-Gonos (*Lenana*) was Pärit's father, and Pärit is Sitet's brother by a different mother. Pärit came down to Tanganyika in 1913 by his own desire, and at the request of the Tanganyika Masai. He has lived here ever since in the vicinity of Tarowa. (GBE; Kilimanjaro; E; 7 & 8).

[4] Generation of 18yr, approximately, according to Hollis. I think the date of the ceremony was somewhat later among the Masai of Tanganyika.

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

crookows, with the vultures and the storks, tore their flesh under the light of the moon. Nothing remained but a couple of grim skulls and some bloody bones when the sun rose over the grassy plain in the morning; and the young urchins of the kraal kicked them about and laughed as they threw them at one another.

MASAI MOURNING WOMEN, MOMBASA.

Such is the history of the consumptive life of Mwera as entitled to me by men who had lived with him as boy, warrior, and husband, and for whom memory and truthfulness I can vouch. The next traveller will listen to the same story, and will doubtless be able to verify the main features of the narrative.

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

173 the bomas subsequently returned north, the other went as far south as Usagara. Laibon Subet sent instructions to this boma to return, but they disobeyed his order so were brought back by force. The descendants of the members of this boma are to-day known as il Muli.

The first half of the nineteenth century was a period of consolidation in the area now known as Tanganyika. To nearly every area of the Masai District there is attached a legend of how, and by and from whom it was conquered; examples of these are quoted below.

The Lake Manyara area was in the old days inhabited by a pastoral tribe known to the Masai as il Adoru. From descriptions it would appear that this tribe was one of the branches of the Tatog group, possibly the Barabaig. The moran of the Merishari age had a pitched battle on one side of a rain pond or lake, now known as Balbal loi Merishari, and there defeated one half of the Adoru warriors. The remainder stood drawn up on the far side of the lake and urged the Masai to attack. The latter consequently waded into the lake until the water reached their necks, but were unable to cross. They were thus left floundering whilst the balance of the Adoru made good their escape.

The Kidetu age was responsible for the capture of the Naberera wells from the Lumbwa or Kwavi. The Lumbwa made their escape whilst each Masai was engaged in pegging out a claim to the captured wells. The Lumbwa laibon, father of the present one, closed the pass to the west of Naberera, Engamata o ndareta, by magical means, which prevented pursuit by the Masai. It is alleged that, to the present day, no Masai will pass the spot where the medicine was placed without throwing a stone on to a cairn which has thus grown up there.

A third story also concerns the Lumbwa, this time those of Sanya. Two Lumbwa manyattas, known as Sabuki and Sitet, fled before the onslaught of the earlier Dwati moran, and following down the Ruvu valley, then cut across country and inhabited an area near Kilusa known as Kilema. Here they fought with the local inhabitants; the Sabuki, being beaten, retreated back to Ngau country. The Sitet, however, penetrated southward, where they found a large crater similar to Ngorongoro. They closed the pass by which they had entered the crater with stones and wild fig trees, and there lived at peace till a German was led to the place by a dog.

173 It is as well at this point to examine the origins of these Lumbwa or
174 Kwavi. The Masai regard themselves as having a common origin with
114 the Lumbwa, and consider that only recently have the latter diverged from Masai ways and taken to agriculture. As evidence the Masai cite physical appearance, common language and customs, and historical data. On the other hand, Elliot in the introduction to Hollis talks of the agricultural and pastoral sections and says that "it would be rash to assume that the nomad pastoral state is primitive or very ancient." Hollis states that "the Coast people termed them without discrimination Wa-Masai or Wa-Kwavi, names which have been perpetuated by Krapf and others." It would appear that this lack of discrimination was due to the fact that at the time when Krapf was writing (circ. 1850) the Masai

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

and Lumbwa were indistinguishable, merely two sub-tribes of a pastoral tribe, indulging in civil war; c.f. Krapf—"the two kindred tribes the Wakuafi and the Masai hate each other mortally, which is, however, a fortunate circumstance for the weaker African tribes"; Thomson also regards the Masai and Kwavi as two sections of the same pastoral tribe, and records in detail the ascendancy of the former. As he was writing fifty years ago, when all phases of the civil war were well within living memory, his account may certainly be accepted as correct. Elliot's suggestion that the nomads are offshoots from an agricultural Masai tribe is also discounted by legends recorded since he wrote, notably that of the exodus. 173 174 114

The first part of this section, dealing with events occurring prior to those within living memory, may well be closed with a review of the state of affairs circa 1869, a survey of the tribes dispossessed by the Masai, and an examination of any evidence throwing light on the era prior to Masai invasion. Subet, who died about 1880, was settled at Lashaine, below the present District Office at Mondul, with Rasharasha as his main water. He was surrounded by members of the Engidong clan at Musa, Engare ol Motonyi and Olgeju Lolera. The Arusha were established on the slopes of Mount Meru, and the Masai effectively occupied an area corresponding closely to their present boundaries. They had suffered a severe famine about 1850, but owing to the warlike efforts of the first Dwati age the country was by this time fully restocked. The Nyangusi, a few of whom are alive to-day (1939), were carrying on border wars with the Ngua, Gogo and Mbulu tribes, and it is doubtful whether Karatu, Talamai or Kiteto were as yet in Masai hands. On the other hand, they at this time possessed areas now lost to them, as for example the country between the east bank of the Ruvu and the Pare Hills, extending as far south as Bwiko; the alienated and reserved areas around Kilimanjaro, Meru and Mondul; and the country between the Naberera-Kibaya road and the Kondoa Hills, now lost to "Sy". 175

To the west of, and also immediately below the Rift Wall, the country was probably inhabited by at least three tribes, the il Datwa ld Orokishu (Mbulu ?), the il Datwa ld Kurotu (Mbugwe ?) and the Sonjo. It seems likely that at any rate some of these tribes practised agriculture under irrigation, but that they possessed cattle also is almost certain. The Manyara area, as shown above, was in possession of the Adoru, a pastoral tribe, whilst the Mondul, Mwandet, Engare Nanyuki and Simanjiro areas were occupied by the Ilgiyala, again pastoralists, said to have been akin to the Masai.

Further south, Masai tradition of previous habitation, except by the various tribes of Dorobo, is lacking, owing to the fact that the Lumbwa and not the Masai evicted the previous occupants, if any. It is possible that the Ngua and Surungi tribes extended slightly farther to the north than they do at present, but existing climatic conditions indicate that, at most, these people have lost no more than a few border waters to the Masai.

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

When the whole of one age has been circumcised, and the *endungore* ceremony performed, the members of the completed age feel it is about time to claim some privileges from the prior age. Whether the age immediately above is of the same or a different generation does not appear to affect the rule that these privileges are only granted when the senior age begins to doubt its capacity to retain them by force. The chief privleges are (a) the marking on the shield known as *oseret onyuki* (most important), (b) the spear handle of black wood called *enjata narok*, and (c) the right to hold a dance without seeking permission from the senior moran. 561

No formal demand is made. The juniors will assume one of the privleges, and when met by a band of seniors will be promptly beaten up and retract. This process continues till wounds become frequent in these affrays. When the seniors feel that they are on the point of losing their ascendancy they graciously hand over these privileges to the juniors, who may then proceed to the Unoto ceremony. [579]

In the first few years subsequent to circumcision, the new moran have been kept in a position of subjection by the moran of the preceding age or generation But these latter have now handed over the marks of seniority and entered into elderhood through the *ngeherr* ceremony. What does this change of status mean to the moran concerned?

Fundamentally it means that having shown their worth in the fights for the coveted insignia, the junior moran are now deemed capable of guarding the country. Their seniors can retire to the more peaceful occupations of marriage and animal husbandry, in the knowledge that their juniors are worthy successors. But their period of junior service has done more than make them efficient warriors; it has moulded them in ways which are to-day more important than the purely military aspect. But as individuals and as a group they have been taught respect for authority. If as individuals they are found associating with the mature girls who are the perquisite of the seniors, they are beaten; if as individuals they quarrel with a member of the senior grade, the wrath of the whole of that age falls upon them. An example of this is the case of a Merisho of Kibaya who at Kibaya quarrelled with a Kisale of Makami. The Kibaya Kisale promptly gave the Merisho a good beating. A few days later, having got news of the quarrel, a party of Makami Kisale appeared on the scene to beat the Merisho. But having heard that the Kibaya Kisale had done the job for them they went home forthwith. [626]

The ceremony of promotion from junior to senior warriorhood, called *eunoto*, is probably the best known and most misconstrued ceremony in the Masai age grade system. Hollis, Merker and Storrs Fox all regard it as the step between warriorhood and eldership, and only Leakey and Hunted (the latter somewhat vaguely) regard it as a ceremony of promotion. [114]

It is performed by sections or groups of sections. The Kisongo traditionally perform the ceremony at Mugulat near Musa, i.e. on the eastern slopes of Mondul mountain, actually in the Arusha district. As many as possible of the age attend, but by no means all. The Arusha tribe

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

561 also by tradition join in the Kissongo ceremony. The Laitayok of Loliondo are believed to perform the ceremony by themselves. The Loita and Purku of that area do not apparently attend the ceremony performed by the remainder of those sections living in Kenya. They are sent a bit of the hide of the ceremonially slaughtered ox, and certain charms, and hold what one might call a "sub-ceremony" of their own.

Not all members of the age attend; some are doubtless detained by family matters; others are perhaps deterred by a magical test designed to discover whether they have had intercourse with a married woman. However, a very large number do attend and perform various ceremonies. They compete in seizing an ox by the horns, ceremonial fire is kindled, pigtails are cut off but are subsequently grown again, the *launon* or *olotuno*, the ceremonial and spiritual head of the age, is chosen and installed. (The [114] details of the ceremonial are described by Whitehouse under the term "fire drilling ceremony", which must in fact be the unoto; the exact procedure is however unimportant). The change in status which the ceremony gives is discussed earlier in this chapter.

C. Senior Warriorhood and the passage to elderhood — the Ngeherr ceremony — economic status of Warriors — elderhood — the distribution of population between the ages — advantages and disadvantages of the system.

561 It is obvious from the chart that the right hand age of any generation must go through a longer period of senior warriorhood than the left 582 hand age. That moran may not marry is a rule so frequently repeated that one is almost compelled to believe that in pre-European times they did not marry. But there are many indications to the contrary. Aged informants will sometimes admit that they were married whilst still moran, though they often did not set up house on their own, but left the wife with her mother or mother-in-law. Again there is a special ceremony by which a moran is permitted to drink the milk from his wife's cattle. He brews beer for his age mates, calls them to his house and receives the necessary permission and blessing. This does not, however, permit him to drink milk by himself; this must always be done in company with his age mates until such time as all go through the ngeherr ceremony. It is improbable that this ceremony is of recent origin; one therefore feels justified in concluding that towards the end of the period of senior warriorhood the moran were beginning to marry and settle down.

561 The final step between warrior- and elder-hood is taken at the *olngeherr* or *olngesher* ceremony. Just as the Kakonyuke ceremony of *embolosat* starts off the age for the whole tribe, it appears that the Kissongo *ngeherr* closes it throughout Masailand. It is traditionally held at Oldonyo loo 'Imoruak (the hill of the Elders), Upper Sanya, Moshi District. Here again details are only of interest in so far as they show the purpose of the ceremony. Pigtails are cut off and are not allowed to grow again, showing entrance to elderhood. A single official, *ol-loo-suratya*, is chosen as the head of the whole generation, thus symbolising the union of the two ages which have up to now been independent, each with its own launon or ceremonial leader.

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

422 593 husbandry side, deciding which beasts shall be castrated, etc. He may also take bullocks and exchange them for heifers, or sell them at auctions and buy heifers. He is however expected to use his own reserve (*ongishu le boo*) for tax payments, and if he uses his wife's bullock he should later replace it with a heifer. When however the son takes over responsibility for his mother, the tax payable on their hut will be met by a bullock from the mother's herd.

When relations come to beg cattle, if they are clansmen of the husband, he should try to find cattle for them out of his own reserve, but may beg on their behalf from his wives. If a relation of one of his wives comes begging, the request should be met from that wife's herd, but the elder may also help from his own cattle. But wife B is not expected to assist the relations of wife A, and would in fact be very insulted if asked.

In the matter of milk and beer, the wife is in control. The husband should not go into the partitioned-off, private bed-chamber of the wife, where such drinks are kept. If the wife says the milk or beer is finished, the husband should accept her word, but if it is obviously untrue, he [579] will at times look for himself. If he finds any, the wife is in the wrong; if he does not, he himself is: so in either case a quarrel starts.

Concerning cash realised by the sale of bullocks, the husband will grudgingly give it out to his wives for purchase of beads, wire, etc., but one sees no great display of generosity at auctions. When a man pays another's tax — the most frequent occasion on which one sees cash changing hands — the matter is always remembered and set off later, even in the case of a son.

Though these notes are only superficial, certain aspects of them must be regarded as important. In some cases the wives doubtless follow the advice of their husbands concerning the sale of stock, but they do possess rights of their own, on which — if strong-minded — they can insist. Thus if, for example, stock limitation were made compulsory, many an elder would be placed in an awkward position; if he refused to cull his stock, he would be prosecuted, if he arbitrarily sold his wives' beasts, he would have to face their wrath.

000 The introduction of economic schemes should, therefore, be preceded by consideration of their social aspects, so that the co-operation of the right person can be enlisted. It has been mentioned for instance that the women have complete control of the distribution of milk; it would appear, therefore, that the women should be consulted and agree to the establishment of any creamery or ghee manufacturing project, and that they should also directly enjoy its profits.

CONCLUSION.

● 114 In place of the administrative proposals with which this paper originally concluded, perhaps the writer may be permitted to substitute a few general reflections. These are based on 17 years' experience of purely District Administration in country ranging from the most unspoilt to the most heavily eroded, from the thickest of fly bush to the broadest

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

of plains, with inhabitants ranging from the purest of Bantu, through various Hamitic strains to the Nilo-Hamitic Masai. 114

Lest my interest in and affection for the Masai may label me in the minds of my readers as an exponent of the theory that the so-called unspoilt primitive tribes should be preserved as museum specimens, I would here state my belief that, for survival, any culture must adapt itself to its environment: and environment includes not only the physical, but the political, social and economic forces with which such culture finds itself in contact.

There are numerous features in the Masai mode of life which, relative to these external forces, can only be regarded as undesirable. On the physical side one frequently hears cited the unhygienic state of life in the bomas and the high incidence of venereal disase brought about, it is alleged, by the social system. But is life any more hygienic in the slums of great cities in Europe and America? 105 114

On the political side there is much talk of broadening the basis of Native Administrations, of greater democratic representation in the local government machine. How do the Masai compare with their neighbours to this respect? It has been written of Kenya — and within my knowledge it applies to certain areas of Tanganyika, — that "In districts where hereditary chiefs were unknown the Government-appointed chief or the chief elected without secret ballot from a short list of men presented to the people, very often now possesses wealth, lands and power." But this is obviously no new tendency in African social development: it is significant that in two cases the word for "Chief" in one dialect of a language group means "rich man" in a neighbouring dialect. (*ol-kursis* in Masai means a rich man, in Arusha, a chief: *maungati* in Irangi means a rich man, in Mbugwe a chief). This political nest-feathering is, however, a tendency not to be found in Masailand; the laibons by their magico-religious position have waxed and grown fat on the gifts of their followers, but the chosen representatives of the people, the laigwanak, never. Once a departure was made from the original misconception that the laibon was a type of chief, the Native Administration of the Masai was set on a truly broad-based democratic foundation of African, not European, conception. Of how many neighbouring tribes can the same be said? [661]

On the economic side the Masai are frequently alleged to maintain large herds of useless cattle, but to one who has watched the process develop over the last 14 years, the growth of the livestock marketing system and the conception of the economic value of cattle is not the least remarkable feature of Masai development. Is this conception growing at an equal rate amongst neighbouring tribes? Over the last decade has any African tribe exported a greater number of cattle than the Masai, without at the same time exporting the stored fertility of its land?

It is fair criticism of Masai pastoralism that much forest has been burnt out and many waters trampled. But the well-managed grass land which replaced the forest at least preserves soil stability, as contrasted with forest cut by agricultural tribes who expose the soil to erosion; and the trampled out waters can be restored by suitable conservation

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

105 114 measures, as contrasted with the devastation which agricultural misuse has caused the drainage systems in the Mbulu, Irangi and Uluguru Highlands; devastation which only vast expenditure or decades of natural healing will restore.

So, with all its faults, the Masai social and economic system does at least preserve a tradition of open range animal husbandry which may prove most useful if large areas are cleared for ranching by new insecticides or in rotation or conjunction with major agricultural projects such as the Groundnut Scheme.

It has been pertinently stated that the two great evils from which Africa is suffering are Soil erosion and Soul erosion. Concerning the former the Masai must incontrovertibly be classed amongst the lesser offenders: what is their position in relation to the latter?

If by soul erosion is meant a deterioration in obedience to existing moral standards, a falling off in observance of organised religion, a lack of purpose in life, then the Masai are amongst the least affected of peoples. Ever since their original contact with Europeans, more than half a century ago, they have as a people most courteously defined their attitude, more by deeds than words, that they are satisfied with their mode of life and intend to adhere to it. Certain adaptations and concessions they have made but only after critical examination and slow absorption, not by unreasonable apeing.

The above points provide an answer to those who maintain, either in despair or in anticipation of acquiring the vacated land, that the Masai are doomed. True, adaptations must be made; undesirable features must be weeded out; some territorial adjustments must be made; but let not the land-hungry expect to be handed well-watered, 'fly-free' land — there is a sufficiency of tsetse-infested bush in Masailand awaiting utilisation to provide all the land needed for many a decade.

Thus a critical comparative examination shews that there is too much of value in the Masai mode of life for any right-thinking person to regard with equanimity its extinction: it sets a standard of democratic representation, of social behaviour and of land usage, without which East Africa would be immeasurably the poorer.

PREFACE.

114 In the past very little detailed work on the social life of the Masai has been attempted,
115 since such investigations cannot well be made through interpreters, while few, if any, Europeans speak the Masai language sufficiently fluently to make such an investigation in that language.

Although I cannot claim any knowledge of the language of the Masai, I have been [122] fortunate enough to become friendly with four Masai who speak Kikuyu fluently, and as I speak Kikuyu as well as I do English I was able to learn something from them about their customs.

These notes are of necessity brief and full of lacunæ, since I avoided asking direct [124] leading questions, though tempted to do so, and also because they do not include information unless it was obtained from or corroborated by more than one informant.

The Masai from whom this information was obtained came from that part [101] of the Masai Reserve which lies to the west of the Mau Escarpment, and I was not able to find out whether these customs prevailed among the whole of the Masai group.

My two principal informants were an old woman, past child-bearing, and her married son, aged about 35 (I have unfortunately lost the paper with their names). [848] They were insistent that most of these customs have been slightly modified since [128] government control has been set up, but I have, notwithstanding, written mainly in the present tense.

PART I.—CHILDHOOD.

844 *Birth.*—Among the Masai, birth takes place in the woman's own hut in her husband's village and she is attended by an old woman of her husband's family. Other women may be present, but no men. If a woman is having her first child she assumes a stooping position supported by other women, as the first child is considered more difficult to deliver; otherwise a woman giving birth to a child lies upon the bed. The acting midwife cuts the cord with a special instrument,[1] and both the woman and new-born child are washed with warm water. The placenta is carried out and thrown down in the cattle yard, but is not buried. As soon as the child is born its sex is ascertained in order that an animal may be bled to supply blood for the mother to drink. If the child is a boy the blood is obtained from a young bull, and if a girl, from a young heifer. (For method of procuring blood *see* Part IX.) From the day of birth onwards many sheep and goats are killed to supply meat and fat for the mother [946] in order that the child may grow up strong, but these animals have no special significance, and are not sacrificial or for purification purposes.

553 *Naming Ceremony.*—Children are not named until they can run about, and unlike [971] some other East African tribes, the child does not inherit any name from any PARTICULAR RELATION.

[1] There is some mystery attaching to the instrument used, and I am not sure what it is.

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

FURTHER NOTES ON THE MASAI OF KENYA COLONY.

[WITH PLATES XIII–XV.]

By D. STORRS FOX.

Preface.

MY excuse for writing the following is that in the capacity of District Officer, Kenya Colony, I have administered the Kenya Masai for periods aggregating rather more than three years between 1925 and 1930. Being able to speak the language fluently, and having observed their life and habits from day to day, I can supply a certain amount of information supplementary to the notes recently published in the *Journal* (pp. 185–209) by Mr. Leakey and the earlier work of Sir A. C. Hollis (*The Masai*, by A. C. Hollis, Clarendon Press, 1905). I have avoided repeating facts already recorded by these two authorities except where I can add to them or correct them. 114 [121]

In the following notes the first part consists mainly of additions to and comments on Mr. Leakey's article. Later on, I have dealt with other matters with which I am conversant. By the Masai I mean the people who comprise the territorial sections enumerated in the age-group table below. There are other tribes sometimes called Masai, *i.e.* the Uasin-Gishu, Arusha, Samburu Njempe and Nguruman, of doubtful origin and divergent customs to whom this article does not refer. 128 101

The Masai are a secretive people, suspicious of strangers, and unwilling for the most part to discuss with them their customs. But there live amongst them a number of natives of other tribes such as Kikuyu, who have been adopted by the Masai. Such folk are very ready to expatiate on Masai customs, but their testimony is often misleading because it is only half the truth. 181 563

Until recently I had no idea of setting down in writing the facts which I knew about the tribe. I made myself acquainted with their language and customs simply because, without such knowledge, I should have been largely unable to appreciate their point of view or make decisions and give advice of value to them. 114

As there are many things still to learn about the Masai, I have omitted the matters on which my information is as yet insufficiently verified.

Childhood. Games.—Little girls sometimes play with dolls. These are made crudely by their mothers of mud, which then dries. I have seen a little girl dressing her doll with a bit of cloth, giving it milk from a tiny gourd, suckling it at her breast and rocking it to sleep, just as a European child might do. The Masai name for a doll is *Ee-geni e e-nerng'ep*, which means child of mud. (See Hollis, p. 321.) 524

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

As stated above, *Ol Piron* means a firestick. I have been given a reason for the use of this term, but was not convinced of its truth. The elders of the *Ol Piron* generation stand in a particular position of guardians to their juniors who recognise their authority to a far greater extent than they do that of elders of other generations. This relationship has considerable political as well as domestic importance. 561

Manyattas.—The *sirit* is the unit for a single *manyatta*, except when the whole age-group of a single area combine to form one *manyatta* for some ceremony, *e.g.* the *E-Unoto*. 561 36 648

For some years the policy of Government was directed towards suppressing the warrior system, and *manyattas* were prohibited, each warrior being supposed to live in his father's village. With increasing control and understanding of the tribe this rule has been somewhat relaxed, and the warriors are now commonly allowed to have *manyattas* provided that they continue to behave themselves before the law.

But the general effect of Government policy has profoundly modified the original customs with regard to warriorhood, and it is now rather difficult at times to know exactly what these were. The main political effect is that warriorhood lasts for a much shorter period than formerly, and most men marry and become elders within four or five years of their circumcision. 561 177 361

Nowadays the parents are somewhat unwilling that the girls should live in the *manyattas*, and so there are only a few of them to be seen there.

A *manyatta* usually differs structurally from an elder's village in that it is simply a circle of huts without the usual thorn hedge round it.

Sex Life.—The word written by Mr. Leakey *tasiakiu* would perhaps best be spelt as two words *Tasiaki iyook*. *Tasiaki* is a second person singular imperative of a dative word (see Hollis, p. 77) which I have never heard except as described by Mr. Leakey. *Iyook* means "we" or "us." 836 [193] [114]

When a man has been accepted by a girl who has been so addressed he usually holds out his hand to her with the tips of his forefinger and thumb touching to form a circle. She is then supposed to break the circle so formed with her forefinger. This is regarded as making her acceptance binding. [201] [332]

It is a great disgrace for a warrior to cause an uninitiated girl to conceive, and he must kill an enemy in order to wipe it out. This is, in fact, the usual reason for the occasional murders of people of other tribes, frequently ascribed erroneously to a desire on the part of the murderer to "blood his spear." 842 154

The E-Unoto Ceremony.—Nowadays this takes place from three to five years after initiation. It is not a single ceremony for the whole of the Masai, but there are a number of separate ceremonies according to the groups enumerated in my age-group table above. 561 334

ACKNOWLEDGMENTS

114 The sources from which a survey of the Nilo-Hamites of Kenya and Tanganyika Territory can be compiled go back, with a few exceptions, to the beginning of the present century. To the 19th century, however, belong a few notable works like those of the missionaries Krapf (1854) and Erhardt (1857), and the travellers Fischer (1885), Thomson (1885), Harry Johnston (1886), [illegible]von Höhnel (1894). The first detailed tribal monographs come early in the [illegible], beginning with those of Hollis on the Masai (1905) and the Nandi (1909), [illegible] by Merker on the Masai (1910), Beech on the Suk (1911), Dempwolff [illegible] Andrews (1916), and Perlmann on the Kipsigis (1930). A large number of [illegible] and a few books published up to 1953 have added to our knowledge, if not always in as much detail as one would have wished. These have been freely drawn upon, and our thanks are due to all of them.

We are happy to acknowledge help received in the preparation of this volume. For the Barabaig, on whom there is no published literature at all (except a few scanty linguistic notes which are outside the scope of this Survey), I am greatly indebted to Mr. Gordon M. Wilson, who generously and unhesitatingly provided me with advance material from his recently completed field work. I have also had the advantage of discussing the Masai with Mr. H. A. Fosbrooke, Senior Government Sociologist, Tanganyika, who was good enough to put his knowledge of the Masai at my disposal; I have also to acknowledge his generosity both in allowing me to make use of his unpublished "Sociological Report on the Iraqw of Mbulu District," and for reading my summaries of the Masai and Iraqw. To Mr. Wilfred Whiteley, lately Government Anthropologist, Tanganyika, I am glad to acknowledge the benefit I have derived from discussing with him the Iraqw and Masai; and I have to thank him for several details of Iraqw organization. Lastly, I have to thank John Tombo Ole Mbari for the willing help he has given me in the course of many talks about the ethnography and language of his people, the Masai.

In preparing the section on the Masai I have made use of a summary prepared by Miss E. MacHatton, by whose industry I was much helped, especially with regard to the material contained in Merker's *Die Masai*; and I have acknowledge the use made of her work. I am also grateful to Miss Barbara Pym, of the International African Institute, for patiently answering the many queries which I put to her. I have discussed questions of orthography, in particular that of Masai, with Professor A. N. Tucker, but I have not in every case, for reference purposes, adhered to his spelling as used in the *Handbook of African Languages*.

G. W. B. Huntingford.

[pp. iv and v not processed]

..54 if they are not already married. They have duties also towards the uninitiated boys as guardians and instructors, while the elders of the *el-ají* senior to them (see p. 117) are said to be responsible for the *el-ají* of the warriors. One hundred years ago Krapf wrote that the Masai had six age-divisions: "(1) Engera, little children. (2) Leiok, boys. (3) Elmoran or elmolasa, from 17 to 20 or 25 years of age. These have not yet married wives, nor obtained cattle of their own. . . . (4) Elkiden, who marry and have cattle of their own. (5) Esabuki, older than the Elkiden. (6) The Elkijaro or Elkimirishu, the aged persons."[1] A woman is classed as a girl (small, *en-kiyia*; older, *en-tito*) till married, when she becomes *e-ntonkiki*, "young married woman," and then *en-kiok*, married woman.

Kinship and Behaviour

GDI [171] The Masai kinship system stresses agnatic descent, and in this respect differs somewhat from the kinship systems of the Nandi peoples; but the distinction between agnates is not taken into the third and second ascending generations. The Masai system is therefore different from the Nandi idiot; and though the word *-ntoo*, meaning both "peace" and "relative" occurs in the Masai system, it is not used with the group-significance of the Nandi term *idiot*. The Masai system has not yet been studied in detail, and the following analysis is based mainly on Hollis's account, the fullest that we have.[2] Certain alterations and additions have been made after discussion with John Tumbo ole Mbati; but there are considerable discrepancies between him and Hollis, and this analysis must be regarded as purely provisional.[3]

There are 11 terms used of both kindred and affines, together with two others used only of affines. The words *koko*, *papa*, and *yayya* are used without gender signs; *koko* is derived from *enk-oko*; *papa* and *yayya* are the correct words for "father" and "mother" (not *mayya* and *pata*, which mean "father of" and "mother of"). *Apa* and its derivatives take gender signs (*el-apa*, *e-le-nk-apa*, *en-e-nk-apa*, *ol-apaiani*, *enk-apaiani*); so do *ebai* or *abayia* (*el-ebai*, *enk-ebai*); *ntina* (*e-le-ntina*, *en-e-ntina*); *e-ntodoni* (only feminine); *el-ayiani*, *en-tito*, meaning son and daughter (both covered by *en-kiyia*, "child," referring to either sex); and *el-ainoki*, brother, *enk-ainoki*, sister, which have in addition the internal change of L to N indicating the feminine.

In the third ascending generation all males are *el-ebai* and all females *koko*. In the second ascending generation, all males are *el-ebai*, except the father's mother's brother, who is *el-apa*. The wives of all *-ebai* are *koko*; but the wife of *el-apa* is *papa*. The husbands of *koko* are: (1) of father's brother's sister, *el-apaiani*; (2) of father's mother's sister, mother's father's sister, mother's mother's sister, *e-le-ntina*.

In the first ascending generation, the father and his brothers are *papa*, the mother and her sisters *yayya*, as well as father's sister. Mother's brother is *el-apa*. Father's brother's and mother's brother's wives are *yayya*; husband of father's sister is *el-apaiani*, of mother's sister, *e-le-ntina*.

In a man's own generation, brother and father's brother's son are *el-ainoki*, and their wives *e-ntodoni*, brother's wife being distinguished as *e-ntodoni e-nyoi* to indicate closer relationship. Sister and father's brother's daughter are *enk-ainoki*, and their husbands *el-apaiani*. Father's sister's son is *el-apa*, and his wife *papa*; mother's brother's son is *e-le-nk-apa* and his wife *papa*. Father's sister's daughter is *en-e-nk-apa* and her husband *e-le-ntina*, a term applied also to mother's sister's son and daughter (*ntina*, *e-le-*, *lina*, *en-e-*), and to the husband of the mother's brother's daughter, who is *en-e-nk-apa*.

[1] Pendlebury, pp. 14, 15. In modern spelling the Masai words are as listed, if spelt, if necessary. The remaining words are names of age-sets. (See p. 116).

[2] (B.A.E. 1904, 11), pp. 272-87. This supplements Merker's account in the Masai, pp. 40-9. There is an excellent analysis of the Masai system by Gabriele Sacco in *African Systems of Kinship and Marriage*, pp. 192-99.

[3] It may be mentioned, however, that the use of terms within a tribe is not always uniform, as I have found among the Masai; and this may sometimes account for apparent discrepancies.

Warriors do their hair in pigtails, of braids; other people of both sexes shave their heads periodically. In both sexes the earlobes are pierced and elongated, and the two lower middle incisor teeth are removed. Cicatrized patterns are often made on the upper part of the body in both sexes.

Arms and Armour

Iron is used for weapons (spear and sword of warriors, and arrows of elders), arrows, knife-blades, razors, and many of the ornaments of both sexes. The spears and swords are distinctive of Masai culture and, together with the shield and a wooden arm-clamp, separate the Masai and Nandi culturally from other Nilo-Hamites. Spears are of three shapes: a small leaf-shaped blade with long neck, long shaft, and medium butt; the great "shovel-blade" with short neck, long shaft, and medium butt; and the long-bladed winged spear with short shaft and long butt. The colour of the short shaft of the winged-spear is important: senior warriors have black shafts, others reddish ones, and the demand of junior warriors for the privilege of black shafts is a significant factor in the tension that often between senior and junior warriors. The sword has a long narrow blade and a hoop in a red leather sheath attached to the belt. The winged-spear blade and sword have been borrowed by the Nandi, Kipsigis, Kisii, Kony and others of the Nandi division, together with the arm-clamp; the Elkeyo have borrowed them.

Other Objects

Clubs are made of wood or rhinoceros horn. Shields are roughly oval, about 3 ft. long, and made of buffalo or giraffe hide on a light wooden framework; according to Merker, the old form of shield was circular and (if the scale of his Fig. 246 is correct) about 1 ft. in diameter. Stools are cut out of a solid block of wood and have three legs. Horns are used for summoning people, but there are no musical instruments or drums.

Beliefs and Ceremonies

Religion

Little has been recorded of Masai religious beliefs, except such obvious facts as the invocation of *Enkai* (the Masai word for God, rain, and sky), the ancestor worship, it is generally said that the Masai do not believe in an after-life (and also of the bats) but the alleged belief that the soul of a living or sick man leaves him a snake implies some belief in the survival of the soul. The earlier reports contain investigations; and Merker's statement that each Masai is thus to provide by his guardian angel and let it be by *Enkai* if he has been good, also in Nilo-Hamitic thought. *Enkai* is recognized as a creator, and is prayed to by both men and women. Some of the prayers recorded include an invocation to both *Enkai* and Waritiany, the father who died c. 1890; then Thomson heard the El-Ahigeno prayers to *Enkai* and Waritiany, and the Nandi war dance after a victory, recorded by Hollis after Waritiany's death, contained also an invocation to *Enkai* and Waritiany. The "silver dishes called Nebenkuk," which Thomson thought was an earth-spirit, appears in Kragl's book as the Nebenkuk, "the mediator between God and men." But the Masai word *nebenkuk* means no more than "that which begets the earth," and this would seem really to apply to *Enkai* in his role as creator. *Enkai*, god, is grammatically feminine, and his wife *Olapin*, the moon, is grammatically masculine.

Death and Burial

The bodies of most people are put out for the hyenas, to the east of the kraal, and left on the left side so that the face looks eastward, with the legs drawn up, the head supported by the left hand, and [illegible] head over the breast. The

I.—Introduction: The Physique and Health of Two African Tribes 17

II.—Field Work.

(a) Dietary controls and incidence of disease in the Kikuyu and Masai Reserves ... 20
(i) The Kikuyu ... 21
(ii) The Masai ... 23

(b) General composition of native foodstuffs, edible roots and mineral waters ... 25
(i) Foodstuffs ... 25
(ii) Sub-substitutes and mineral waters ... 26
(iii) Milk from the Masai Reserve ... 28

(c) Composition of the Daily Diet ... 29
(i) The Kikuyu ... 29
(ii) The Masai ... 30
(iii) Comparison of the two tribes ... 30

(d) Physical Condition ... 30

(e) General Observations: Incidence of Disease ... 31

III.—Laboratory and Hospital Work.

(a) A study of the adequacy of hospital and private data to ascertain the effect of additions on (i) the Composition of Blood, (ii) the Calcium Balance, (iii) the Weight of Subjects ... 38

(b) Feeding test on Kikuyu Subvoluntary ... 40

(c) The Etiology of Tropical Ulcers ... 43
(i) Description of Ulcers ... 43
(ii) Associated conditions ... 44
(a) Trauma ... 45
(b) Malaria ... 46
(c) Syphilis ... 46
(d) Intestinal parasites ... 47
(e) Urine, sex, and seasonal incidence ... 48
(iii) Effect of dietary constituents on rate of healing ... 49
(iv) Blood constituents in ulcer and non-ulcer cases ... 51
(a) Calcium content ... 51
(b) Inorganic phosphorus content ... 52
(c) Sugar tolerance ... 52
(d) Blood pH and alkali reserve ... 53
(e) Blood pressure ... 53
(f) Blood cell counts ... 53
(v) Conclusions ... 54

[PP.4-15 NOT PROCESSED]

The information collected directly was supplemented by the replies to two questionnaires issued by the Medical Department to district medical officers, medical missionaries, chiefs of tribes and others interested in the investigation. One questionnaire dealt with the dietary customs of natives and the other with the incidence and etiology of ulcers.

II.—FIELD WORK.

(a) Dietary Customs and Incidence of Disease in the Kikuyu and Masai Reserves.

Dr. J. W. Foster was sent out from the Rowett Research Institute to carry out this part of the investigation, and Dr. J. C. J. Coleman, of the Medical Service in Kenya, was specially detailed to work with him for the first few months.

The two reserves chosen for the investigation were the Kikuyu and Masai, the choice being made on account of the fact that the reserves adjoin while the dietary customs of the tribes are very different, the Akikuyu* being almost exclusively vegetarian and the Masai chiefly carnivorous.

The two Reserve areas were visited alternately during a period of over a year and a half, each trip occupying two or three months. Samples of all foodstuffs in common use were collected and despatched to the Rowett Institute for analysis. The samples consisted of articles of diet in the raw state, cooked foods, edible earths, salt substitutes, and natural mineral waters used in cooking.

A physical examination was made of 6,000 Kikuyu and 1,500 Masai† adult natives of both sexes and all ages. The examination was made under uniform heads, including stature, weight, chest, abdomen and calf measurements; presence of anæmia; condition of teeth and gums; general physical and muscular development; strength as indicated by the dynamometer; presence of hernia, splenomegaly; ulcers.

A similar examination was made of 2,500 Kikuyu and 250 Masai children. The special object of this examination was to compare the relative incidence, during the growth period, of anæmia determinants, dental caries, periodontitis, anæmia, and general signs of malnutrition.

The subjects examined for physical condition were taken at random from the healthy section of the community in all parts of the Reserves. Great care was taken to exclude any sick native who presented himself. Apart from this, no selection was made, and the records may be taken as representative of the average native of the Reserves.

[illegible]

Hospital returns were analysed, but as it became apparent that, for

* The prefix "Ki" in Akikuyu has a collective sense, the word "Akikuyu" referring to the tribe as a whole, while the term "Kikuyu" has only an adjectival significance.

† It should be noted that the estimated populations of the Kikuyu and Masai Reserves at the end of 1930 were respectively 700,000 and 40,000.

(v) *Conclusions.*

In all these blood constituents, the only outstanding point of difference between sleep and non-sleep cases in the high inorganic phosphorus in the blood in sleep. It is of interest to consider the calcium and inorganic phosphorus results together :—

	Serum calcium, mg. per 100 c.c.	*Inorganic phosphorus, mg. per 100 c.c.*
European standards ..	10·0 to 10·8 ..	3
Europeans in Kenya ..	11·4 ..	3·42
Non-sleep natives ..	9·4 ..	3·00
Sleep cases	9·7 ..	4·38

It appears very unlikely that the alteration in balance of calcium and phosphorus in the blood of the natives should be in any way due to environmental influences, since both elements are increased in approximately the same proportion in Europeans. We have already seen that a shift in the direction of high phosphorus, low calcium, occurs in experimental animals on diets containing an excess of phosphorus and deficient in calcium, and the lack of balance in the native dietary, which is closely similar to these experimental diets, would suffice to explain a high phosphorus and low calcium content in the blood. It does not, however, explain the difference between sleep and non-sleep cases, for the sleep cases are so much higher in inorganic phosphate than the non-sleep that their calcium would be expected to be significantly lower. Instead of being lower, it is as low as high.

It would be of great interest to know whether in the individual case a rise in calcium or phosphorus occurs subsequently to the development of sleep, and also whether any change occurs in the form in which calcium is present in the blood. It has been suggested by Greenwald and Gross (1929) that part of the calcium may normally be held in solution in the blood as calcium phosphate, which would be physiologically inert. An increase in this fraction might be thought to occur. Further, Ashford and Hernandez (1929), in analyses of the blood of over 300 subjects in Porto Rico, report that blood calcium is low, relatively to accepted standards, especially in cases of " nutritional anhaemia," and that the decrease is chiefly in the diffusible fraction.

It is stated that tropical sleep cannot be produced by experimental inoculation of the characteristic organisms (sleep, or artificial [illegible] (Manson, 1907; Bruce, 1910). It does not occur in Europeans, according to Kipps (1931), except where the diet is corrected. It would be of the greatest interest to know whether it could be experimentally produced by inoculation of the organisms into animals in which the composition of the blood had first been altered by feeding on ill-balanced, high phosphorus, low calcium diet.

124 investigators and therefore reflect, unclouded, the feelings of the savage.

128 Concerning the origin of the first two chapters of the fourth part, the tradition from primitive times and a comparative study of the /vi/ traditions of the Masai and the Israelites, etc., it should also be said that I first completed the former, in the form in which it appears, as a result of my research, and only afterwards did I approach a comparison with the traditions of the Bible. As alluring as it seemed to compare immediately what was told me by the Masai with Biblical accounts, I nevertheless had to resist this temptation, in order to avoid letting myself be unconsciously influenced in the manner of putting the questions in the checking. It may be mentioned further that it was not until the 114 fifth year after the beginning of the work on the present study 125 that I came across the traditions from ancient times. That is, 123 these are by no means common on people's lips, but are handed down in certain families, so that even in the larger Masai settlements one finds only very few old men who can relate them in detail. But even these few tell the investigator about them only when they know him intimately and know that he also knows them and their psyche intimately. Only when I had gone so far that (124) the people seriously discussed the question as to whether I might not have been one of them, perhaps from the time of their residence in their original homeland, did I learn about these traditions. Yet it still took one and a half years before I had searched out what is presented in the first chapter of the fourth part. I mention this here so that other investigators who turn their attention to the Masai in other regions may not allow themselves to become discouraged if their efforts remain for a long time without the hoped-for success.

128 In the second chapter of the same part I present, among other things, a series of conjectures -- not unfounded, I believe -- which make absolutely no claim of incontestable correctness. Although this already clearly follows from the wording, it may be expressly pointed out here, especially for those who have something to find fault with in everything. I probably hardly need (121)

/iv/ Foreword to the Second Edition

• 114 Five years ago, when the first edition appeared, it found an extraordinarily good reception for such a scientific work directed, after all, to a limited circle of readers, so that in three years it was already out of print. Though sharp attacks also were not lacking, nevertheless the general opinion was that it was a matter of a work of the highest scientific value and greatest colonial interest. Meiner, therefore, with great enthusiasm, set about preparing everything for a second edition, and in 1907, when he returned to Africa for the third time, he was essentially finished with the preliminary work for it. The revolt in East Africa, however, prevented him from finishing it for a longer period of time; then he was transferred to Misaona /Mawsona/ and was once again impeded in his work by his duties as head of the station in this area which was new to him. Nevertheless, he was busily at work, and I had just received a letter from him with instructions for the publishing of the second edition, when the news of his sudden death reached me quite unexpectedly in February, 1910. This necessitated a further delay. At last, however, all difficulties have been surmounted, and I am able to fulfill the final duty of a friend for the cherished deceased. I am sincerely grateful to the publisher for his support and ready helpfulness, which contributed appreciably toward overcoming the not inconsiderable obstacles.

Though the present work is itself the finest monument to preserve for posterity the memory of the departed, yet we two editors feel a sincere need to devote a few words of appreciation to the one so suddenly taken from us. Herr Professor Dr. Fritz Hommel will do justice to his scientific importance; it is my duty, as a friend, to devote this obituary notice to Meiner as a superior human being, to give expression to the feelings that animate all who were privileged to stand closer to him, to describe his career and to lend color to the splendid likeness that is placed at the beginning of the work.

/to cont./

114 Moritz Merker was born December 30, 1887, in Oels, Silesia, as the oldest son of the then Oberleutnant Merker, attended the Realgymnasium in Sprottau from the summer of 1875 to May, 1895, and then joined the cadet /g/ corps in Lichterfelde. From here, in March, 1897, he entered the Füsilierregiment 86, first in Flensburg, then in Sonderburg. In the winter of 1897/98 he was ordered to the Kriegsschule /military academy/ in Glogau, but fell seriously ill there with pulmonary catarrh, which required a protracted cure. From 1899 to 1901 he was then ordered to the Schlossgardekompagnie /Castle Guard Company/, and, after this command expired, he returned to his regiment.

It had always been his aim to join the Pomeranian Troops, and all during his lieutenantship he worked diligently to prepare himself for this service by studying English and French and teaching himself the sciences and skills that might be useful to him for this.

Finally, in May, 1905, his ardent wish was fulfilled. He received his call to the Pomeranian Troops in East Africa, and, overjoyed, he set out on his journey there. He very soon had the good fortune to get to Mawki /Mawki/ on Kilimandscharo /Kilimanjaro/ in the interior and under the command of one of the most commanding officers of the East African Pomeranian Troops, the present Major Johannes. This long-experienced African /African/ became his teacher in things African and now his friend. The love and gratitude with which he speaks of him in his diaries are touching.

Under such excellent guidance he was soon able, when Major Johannes went on leave, to take over the administration of the station, first as a substitute and later, when Johannes was called to another position, completely. He remained in Mawki more than seven years to a day, until 1909, and his stay there was interrupted only by more or less extended official journeys that took him particularly into the inland districts. This period was rich in struggles with the warlike tribes on Kilimandscharo itself and in its vicinity, but also rich in economic activity and scientific work. I myself became acquainted with him in 1905 in Mawki and even then our souls rejoiced when he dared see the sixteen

/1 comma/

114 completed Mwei wk. It is only now, however, when I have his diaries before me, that I understand what infinite diligence, what admirable powers of observation, and what remarkable care were required for him, in the middle of deepest Africa, practically cut off from communication with Europe, to create such a mature and complete work! Only now can I fully appreciate the loss that science, that humanity, has been caused by the all too early death of this outstanding human being and scholar. And I must marvel again and again at the love he gave to his family and friends, at the sympathy with which he devoted himself to the fate of his subordinates, those close to him, at the noble wrath that filled him when confronted with meanness and jealousy, at the intense interest with which he followed important events, and at the strict standard he applied to himself.

In 1905 he undertook leave for the first time, in order to bring home his beloved wife. His stay in Germany, despite his being a bridegroom and his only married state, /of/ was filled with the most diligent scientific activity. Rich in new suggestions and strengthened in his scientific endeavors by conversations that he had acquired with the foremost leading spirits in his sphere of work, he returned, full of big hopes, with his new wife, to the field of his activity, to Amwili. His enemies, however, had been busily at work, and after not so long a time he fell victim to their intrigues. He was recalled from Kilimandjaro, transferred to Dar-es-salam /Dar es Salaam/, of here -- was occupied with the training of recruits! Naturally I was depressed, even though he received many well-meant hues from the highest places and from scientific parties. In physique, accustomed to the lowland climate, did not his sufficient resistance under these conditions. The same thing happened to his wife. And soon, from the letter, from he in 1908, wanted to return to Germany, in order to recuperate from the rose fever.

/xi cont./

114 In 1907 he had regained his health sufficiently to be able once more to undertake the journey out. His wife, however, was not yet able to risk setting out for the tropical climate again; and so he traveled out alone, never to return, without being able to see his beloved wife again. At first he was assigned against the rebels in the Herzogat killer; and then, when he took over the administration of the Bluenta Station, there was only an inferior, unhealthy dwelling available, in which there was no possibility of sheltering his wife. And a few months later, just when a family dwelling had become available and his wife was preparing for the trip abroad, he succumbed within a few days, far from all his loved ones, to an inflammation of the lungs on February 5, 1908. Just when fortune was beckoning to him again, the treacherous illness took him off and ended a life that still seemed destined for the greatest successes!

What he nevertheless accomplished, despite all handicaps, despite sickness and sorrow, even during his darkest days, how indestructible his working strength was -- unfortunately more indestructible than his physical strength -- the proof of this lies before you: seven fully worked up, comprehensive monographs on other African tribes, an enormous quantity of outlines and smaller articles begun, infinitely rich, still unsorted ethnographic material in his most carefully kept diaries! A wealth of finished works, of studies and observations, which would not only have filled more than a full lifetime extending to advanced years, but would have formed one of the most brilliant and important canal. His family and we, his friends, have lost much in him; but even greater is the loss for science. And if I succeed in preserving for it out of his literary remains even only what is now ready for the press, I shall be doing science a great service. May the work presented here find the more favorable reception as his first edition.

Berlin, January, 1910. Dr. Sander.

/Page xii is blank./

Ms Mecker-a G-6 (1906-ca.1958) 1910 FL23 Mami FL23

/[illegible]/

Foreword

by Professor Dr. Fritz Hommel, Munich.

The reports of the deceased Hauptmann /Captain/ Merker, causing a sensation in his time, about the legends of the Masai as remarkably connected with the Hebrew early history are even today still capable of arousing the most widespread interest. The question as to whether traditions preserved for millennia from the Arabian original homeland of the Masai people actually exist here or whether a Christian or even Jewish influence is not still to be assumed has not yet been silenced. As is known, Merker himself was undoubtedly convinced of the absolute impossibility of the latter assumption, and even if such an influence had nevertheless taken place, which is highly improbable in view of the reasons cited by me below, it could only have happened in the early period when the Masai were still living in the north, in the neighborhood of Abyssinia, which, however, also serves again as the basis for many surmises.

First of all, mystification on the part of Merker, whose reliability is beyond all doubt, is completely excluded. Actually, it was only after a long acquaintance with the Masai of his region that he gained the confidence of these old Masai men who finally imparted to him the traditions otherwise entirely kept from strangers; the distinguished Masai expert, our favorite competitor Dengg, and furthermore African experts such as Schillings and Dr. Gerber, are equally firmly convinced that Christian influence through the missionaries working there for only a comparatively short time, toward whose efforts the warlike and proud Masai have been very intractable up to now, is quite inconceivable. If the English missionary Albert S. Duggall, who was active there 1900-1908, says in the Repository Times, XVII, June, 1908, p. 400, that Mr. A. C. Hollis, this eminent authority on the Masai living in British East Africa, related to him from a Masai boy in his service, "that the Masai from whom Captain Merker got much of his information was for many years, during the Masai Revolt, connected with a Roman Catholic station in the neighborhood, as indeed were many others, besides those who came under Lutheran

/[illegible] name./
In the Church Missionary Society's station in Tvoro" /cited in English/, this, as Mecker himself told me, can only refer to a Mawi man from whom he received other information: since he the clay investigations on /[illegible]/ which his ethnological work is based (habits, customs, names, etc. etc.), he had quite different informants, of course. And Hallis' objection (1)

> 1. Personal communication from the researcher, highly esteemed by me, whom I had the good fortune to become acquainted with in September, 1955, in Oxford (at the Congress für Religionsgeschichte /Congress on the History of Religion/), just as I was also able to become personally acquainted with the deceased Mecker in 1957, after I had previously corresponded with him, which was extremely valuable to me in view of the so highly controversial Mawi problem.

that he (Hallis), who was also acquainted with the Mawi of his region for many years, would then also have had to come across the traces of such early history is only an argumentum e silentio. Either the more authentic Mawi (in German Ban Ahiwa), with whom Mecker worked, were more faithful guardians of these ancient treasures, which is not impossible, or Mecker also had more luck in gaining their confidence on this point than Hallis, who, just then, did not come across the right people. Mecker, however, indeed also expressly states in the foreword to the first edition that it was not until the fifth year after the beginning of his work that he came across these traditions from ancient times, which by no means commonly cross people's lips, but are handed down only in particular families and there are only ever to be found among a few old men. And then it took another year and a half before Mecker had completely learned what is set down in the fourth chapter. Moreover, even according to Hallis (cf. also C. Blair's introduction to F. C. Hallis, The Mawi, their language and folklore, p. viii), the acquaintance of the Mawi

Pete says:

and their imaginee worship of God ("they have definite prayers and they petition the deity more frequently and fervently than the surrounding tribes are known to do" /cited in Baghdu/), most conventionally. Just as generally a comparison of the book by Hellin, appearing shortly after Mother's book, with Mother's latest is the best apologia for the reliability of Mother's ethnological as well as linguistic observations.

Another outstanding African scholar, the postmortem, well-known linguist Carl Meinhof of Berlin (see Hastings), has shown all, and, to be sure, for linguistic reasons, raised against Mother's designation of the Mimi as a "bantu people," and with that does also at the same time against their mention mentioned here in Arabia (3).

(13)

3. Cf. his review in Zeitschr. f. Missi., 06, 1904, pp. 700-705.

But what the Arabian historiography (in Gimmer) said about the Mimi traditions (Archiv f. Rel. -Gesch., 06, 1903, p. 103), that have "Bantuan of Semitic origin are well grafted on African soil" (but "when and under what circumstances is hard to say"), also applies to the language, as I am able to ascertain myself by a thorough study of Hellin' book. Definite remains show that the Mimi must have been Semites, and, to be sure, Arabian Semites. This will be briefly discussed in what follows now.

Not only does their own tradition vouch that they came from the north, but this is also confirmed by a comparison of some of their number words with those /yet/ of the Cushitic language (especially Somali and Galla) and of Hebre. One should compare the following lists, to which I have also further added the number words of Hamit, closely related to the Mimi, from the new book by Hellin (The Hamit, their language and folklore, with introduction by C. Meinhof, Oxford, 1903)

According to Delile, 1.278,
Text corr./ the Fielaches are only six years among
the Ishmi. Elsewhere in the parallel representations of South Arabian
tribal descriptions (in contrast to the seven tribes of the Sabyleans
Hamgal symbol), the name of the beasts of the religious tradition
of the Ishmi, al-Ishmi, coincides exactly with the expression
for prison, habb, in the old Ishmian inscriptions of Tamna (5).

5. Quite remarkable also is the correspondence
of the Ishmi custom that when one's house
with has no place his space in front of the hut so
that another will not enter (Delile, p. 110 and p.
[illegible]) with the similar custom among the southern
Arabs (here only staff instead of spear) given by
Doughty (Book III). — Also that the "prefect" stands
at the head of the custom in consistent of South
Arabia (cf. hadi, chief, actually Shaikh, as well
as wilda, "sudden," probably has its name
etymology, cf. Syriac wadda, spear).

The specifically Ishmian word dangal, "ring" (originally prob-
ably "young woman" in general), is the name of the Ishmi an-
dangal, "young woman" (after the characteristic tangle, al-
gamaqa), in the Arabic al-hilfiya, and cowhide, ang-garage,
the Arabic al-ghaf, al-ghaf, Ishmi, prefix the Arabic al-ha-
nadia. The name of the Ishmi species mangaqa, from which
the Ishmi take a fragrant wood for therapeutic purposes (Delile,
p. 27 and cf. p. 110, al-mangaqiyah), a white-wooded perfumery,
a very resistance of the South Arabian name for frankincense,
ingal, just as in general the colouration of the second half of a
word, popular among the Ishmi (for example gadadia, a Zaidi/
Ishmi name, gadadah, a deity), is likewise in use a peculiarity
of Ishmiyaha, where it is used especially for the formation of color
names (example, gaid-green; Hebrew deadia, hazelnuts, green,
for color [illegible], hazelnut; cf. and the Tigre [illegible]
[illegible], [illegible], [illegible], and [illegible]). All these
are indicate more that some Ishmi's naming of the Ishmi as
an originally Semitic and then, more specifically, an Arabian
people were fully justified.

[illegible]
[illegible]

> 1. With regard to the reference to [illegible] popular etymologies cited above only with numbers, at least an example should be given for those who do not happen to have an Old Testament readily at hand. Genesis 25, 25 says "the first of the twins that came out of the womb was red (אדמוני), play on the word Edom) and was (rough) like a hairy garment (כאדרת) and they named him (Esau-Edom) Esau (עשו), where the second between אדר in אדרת and עשו to 'עשו is sufficient evidence; after that came out his brother, whose hand took hold of Esau's heel (עקב), and they therefore named him יעקב." Actually, however, יעקב (Jacob) goes back to a more complete form יעקבאל (in which God is the subject, therefore roughly: Gaon Ya'kov as the land God, that is, he rewards or punishes).

Indeed, in any case the matter is not remotely amounting enough even so, but the imaginative contribution of the will to savage labour, disposed by no one, is also a scarred and, up to now, unparalleled among the peoples of Africa.

I come now to the early history itself, which begins, in Section II of his mountain-pondering Fourth Part, but already compared, bit by bit, with the corresponding features of the Biblical tradition. It should be noted in this connection that the document, who, as he said our himself, had no longer concerned himself with the early history of Gaboon since his childhood, did not recognize [illegible] very important ones. Gollée, who himself wrote a brochure in 1903 on "the biblische Urgeschichte (the Biblical early history) (in the [illegible] and [illegible] (Biblical numbers of the time and representative sense), by Bachmann and Gospel-tale, Leipzig,

/*[illegible]*/

[illegible] published by Eine. Gesgn. [illegible], [illegible], [illegible], had already called attention to his review of Meeker's book in [illegible], [illegible] 4, 1905, pp. [illegible], to the parallel between the [illegible] Sebegenia and Jubal /[illegible]/, Genesis [illegible], [illegible]. The more important, however, is the fact that the Ideal, from the creation of the world to the Deed, exactly like the Hebrew in Gen. 4, count seven ancestors, the seventh of whom bad Gone was, whose correspondence to the Biblical name is illustrated in the following table /in the original source the table appears in part at the bottom of p. [illegible] and in part at the top of p. [illegible]; in the translation below, the footnotes for each of the two parts will appear at the end of the part/:

Hebrewmen	Aziza
Kenitin	Ideal /[illegible]/ (5)
Enoch (6)	Deseeth /[illegible]/

5. Deseeth of Bain /[illegible]/. Since among the Ideal the first member is yet dwelly before the flood (for the motivation of name as judgment), there also falls to take place here the deep of Kain and Hebel, which, in his case, by way of alliteration, recur again in Deseeth (at the end of the 4th chapter) (cf. [illegible] = Hebel /[illegible]/, [illegible] = Kain /[illegible]/ and [illegible] = Deseeth /[illegible]/, so the original text probably really has it is to be noted that Kenitin had a brother Gaia, from whom the Kaiseenitin are descended (Kain /[illegible]/, of course, means "blacksmith").

6. [illegible] Kain /[illegible]/ habitis the first city for Deseeth /[illegible]/, which he names Deseeth, after Deseeth's name.

[illegible]

[illegible] account of [illegible] he could only move forward by jumps, with the help of a stick. He was called [illegible] (from [illegible] country), a name that has been preserved in the Arabic [illegible] (walking along with a limping way). Among the neighboring people of the [illegible] (cf. the Hebrew [illegible] people of the Jog-Gentiles, which phonetically has arisen from [illegible] and has been preserved in the present-day name of [illegible], north of Khartoum), God is called [illegible] (cf. the Biblical Seth, Gen. 5, and what was said about him above, p. [illegible], note 5, end), who is supposed to have been worshiped in the form of a male figure with but a single leg and thus probably corresponds to the [illegible].

I do not believe that this blend away of the beginning must necessarily presuppose a knowledge of the pentateuch of the Ten Commandments by Moses, in which, indeed, for emphasis, the so-called Book of the Covenant also belongs (1):

> 1. With the end of the Book of the Covenant (Ex. 23, 19 = 34, 26), "Thou shalt not seethe a kid in his mother's milk"), cf. the same difference toward calling meat and milk together among the Moses, Herder, pp. 40 and 101.

So rather than, long before Moses, it was a traditional feature of the original tradition that when commandments were given by God this was always done in rain. The sacred number of the divine "Ennead" and order of God, Osiris, moreover, probably most of the Ebonic commandments already existed before Moses, and the division of this man of God, who surely belongs to history, was only that of connecting them to his countrymen in a new arrangement and supplemented by the Book of the Covenant.

This brings me to the last point, namely, the placing together of the Moses pentateuch at Sinai with the Hebrew cult, which seemed distinctly to me from the outset, the old Nilotic Kamal cities with the Nilotic (originally probably Bantu-Ethiopic) Kamitic stereotypes by Herder in Section III of his Fourth Part.

[illegible]

/[illegible]/

[illegible] If one considers few common Arabian tribal and personal names, such as al-'Ānis, 'Anāfir, 'Anāfir (from 'Anafīr), etc., there is not the slightest reason, in connection with the Anonn, to think of the Fravashis, who have played a role only in Palestine and come from the north. Mere likely al-Ghoul, if one is to compared with, say, the Arabian al-Ghūlat (Physician Ghoula, which, in any case, is generally squared with the Hebrew Abraham) or another similar-sounding Arabian name, might be identical with 'Ghoul, the mythical ancestor of the Hebrews, especially since al-Ghoul's son Gadhar sounds remarkably similar to Ghul's grandson Ga'ā (L.R.O. Pope, Appendices of the Dead, August) Gen. 11, 14, which again, however, only points directly back to that Arabian, the original son of all the western Semites, since the Aramaic 'Ghoul-Ming (?)

> 5. -11. In this connection my Grundzüge /Fragen/ (Leipzig, 1904), p. 104, note 1.

mighty coincides with the Arabian Ghoul of Jardhan.

[illegible] While the latest early Semites, as they finally become available to Semites after prolonged effort, are still being variously guarded by a few of the older peoples, there are also among the myths generally widespread among the latest, such as the because been to Gallo to British that Ethiopia, some that are to be regarded as close relions of the sacred myths. Among these I mean /[illegible]/ after Gallo ulsen (p. 177) about the god Melcarthy (the sun), however, has the Fontaine article, that the originatrees of the earth, the forecast of the land, whose therefore the fire of the latest has become a deity, whereas the sunne could be much lee understandable: or the covering of the cattle from heavens (Gallo, p. 170), cf. Gallo, p. 169), or the story of Ja-myo's disobedience (Gallo, p. 171), in which I see a free condensation of Gallo's account of the fall, so strikingly corresponding with the Bible. If one considers few widespread the planting together of the sun of paradise and serpent sun in the ancient Ethiopian (cy to the Greeks), then the resemblance of the particular

Footnote/
Demons among the Mandaeans, with all the rest, is not so astonishing (1).

1. Incidentally, I should like to point out that the name of the old medicine man Lamghiffeki, Mandaean, 55, 56, is certainly to be compared with the name L-Ghiyiwiki, which the Somali bear among the Mandaeans (Stelle, p. 10).

I conclude these considerations with the certain expectation that now, when my deceased friend's book comes out for the second time, the early historian of the Mandaeans will no longer encounter the skepticism to which they were exposed when they first became known, but that they will now be duly appreciated for their as yet incalculable importance to the history of religion, as they deserve to be. And I repeat once more that a Christian or Jewish influence, perhaps even in early times (or all events through the Christian Mobs of the third century A. D., or through the Jewish Mandaeans /Peindas/ on the borders of Abyssinia), from the older northern dwelling-sites of the Mandaeans, is quite out of the question, since one would then, as Mandaeans already emphasized, necessarily have to expect not only connections with the Biblical early and patriarchal histories up to the Jewgiving, but also with the later parts of Biblical history (and above all some allusion to the Gospels, if Christian coincidences are to be considered). The previously discussed connections with the Chaldean early histories, and, to be sure, as points not touched on by

the Bible (2).

2. Perhaps one of these is also the noteworthy accord between the name of the primeval dragon (dammi ; ribbur) Nenamir, and Ki-Nunir, "place of battle," an originally mythical locality of the ancient Babylonian East Tigris region (Kvirima of the Zendavesta, where the three-headed dragon Dahâka-Zohak was defeated; cf. in addition the three-headed serpent of paradise of the Mandi) near Sirgulin; cf. also the make of the tree e'nanir, Marker, p. 375, and the above-mentioned (p. xvii) Mandi etymology of Nenamir, with which may then perhaps be put the Babylonian gil-lu-nir (from gil-lu nu-nir), a weapon of the god Nebo, probably to be thought of as having a dragon shape (cf. my Grundriss /Outline/, p. 378, footnote 4).

completely exclude any doubt.

/[illegible]/

Ill. 1. Wawi woman from Sulwa (Ubangi).

[illegible] That various customs of dress and words of their language also found entry among the Ingrom follows automatically.

[illegible] While some travelers recognize or have a certain relationship between the three branches, others claim to have observed such great somatic differences between them that one might be doubtful about their racial unity and ask himself whether the Wubaville and the Wakwafi of certain colonies should not be counted among the Ingrom. This error is explained by the fact that these travelers have come into contact with them only superficially. /[illegible]/ Some conclusions going too far from isolated individuals to the generality, so that they regarded the Wakwafi, strongly mixed with Ingrom, as pure, and Ingrom strongly mixed with Wawi blood as Wakwafi.

/[illegible]/

[illegible] and could cause this substance illness and death for man and beast. Even in an emergency one never claims the hospitality of a blackbeetle, any more than one ever grants him guest privileges. The services coming from blackbeetle families do not live in the ordinary service levels, but in the similar blackbeetle service-level (cf. [illegible] | cf. [illegible] | cf. [illegible]) and only with daughters of blackbeetles. They do not go out for the battlefield with the other services soldiers, but clean, and severely bring along, since they /[illegible]/ are live in [illegible], only a little heavy cell-time, which then after through is simply taken away from them by the other services. Re-[illegible] [illegible] does not marry the daughter of an cf. [illegible], just as the latter's son does not desire to marriage the daughter of a man who does not belong to the despised blackbeetle caste. Even the conversational association with a woman or girl belonging to the blackbeetle is regarded as disgrace for any other [illegible]. It is believed that he will sooner or later lose his mind, will never be able to become the father of a healthy child, or on the war field expedition he will be killed by the spear or arrow of an enemy. Also despised the blackbeetle are is shown by the fact that a [illegible] does not dare to pronounce the word "cf. [illegible]" after the [illegible] [illegible].

1. Upon [illegible] the people, when in [illegible] to the evening, I wished to speak with [illegible] about the cf. [illegible]. Begged me to abstain from this, because otherwise some misfortune would befall us. Nevertheless it happened from time to time, and this also on the evening of December 15, 1931, when I was camped near a Tiruga settlement on the upper southwest of Ulbara. A lion then prowled into my camp to the right and took a man, whom we, despite prompt pursuit of the lion, could no longer rescue. The next morning the [illegible] made me responsible for this incident. "It would not have happened if you had not spoken about the cf. [illegible] last evening; we have so often told you this."

[illegible]

[illegible] uniform will be supplied up by [illegible] to [illegible] that a [illegible] would get into the head of the [illegible] or [illegible] so that the enemy would carry out an attack. To not someone "[illegible]" is regarded by the other tribes as a [illegible] [illegible] engraving nonsense.

The nonsense sound Ma-bassilla is based on the idea that the Ma-bassilla are [illegible]. God forbids human beings the doubling of [illegible]. By [illegible] weapons, the chief product of the Ma-bassilla among primitive peoples, they [illegible] transgression of the divine commandment, and [illegible] the [illegible]. Where they are [illegible] by God, and therefore they are regarded by their [illegible] as [illegible], [illegible], [illegible] uniformed. Daily observation also [illegible] — as the [illegible] say — that God does not love Ma-bassilla, for a Ma-bassilla actually never [illegible] purposes if he [illegible] happens to become wealthy, however, he would [illegible] this, without being able to enjoy his property.

It [illegible] especially [illegible] that, despite all the efforts devoted to it, I have not been able to determine the [illegible] essential difference between Ma-bassilla and non-Ma-bassilla and that all non-Ma-bassilla questioned by me (there were several hundred) described the Ma-bassilla as poor, [illegible] members of the [illegible] people, which the Ma-bassilla themselves also [illegible] without exception (5).

5. Obviously the [illegible] Ma-bassilla speak the [illegible] language and are another race of their own, as had been supposed from the statement by C. Meiß in his book, The [illegible], their language and religion, Oxford, 1901, p. 10). Meiß writes (the sentence is in English): "The [illegible] have their own language, which, although a [illegible] of [illegible], is not understood by the ordinary [illegible]. [illegible] continued on the next page in the original source) [illegible] language is [illegible] a certain number of [illegible] who learn it." This statement by Meiß is un-

[illegible] //

//Semesters 5 mark // created by the fact that a few [illegible] Kite-beards also live among the Silent Kite-beards. They speak their own dialect, which, of course, is completely alien to the non-Kite-beards. A word ("[illegible]") or Sixth delegation (here) after [illegible], anxiety - mixed to concern with them.

The opinion of many a Sunjeers, that the [illegible] relative obligance of the Kite-beards might have brought to him the news of their type from the non-Kite-beards are isolated to early. In one a [illegible] have become acquainted with a large number of [illegible] beings who for about ten decades have not had a [illegible] to their hands and very many also have not even seen so enough to have the tools, for either live memory (like other Kites). All these, however, were deprived exactly the same as their longing Kites [illegible] [illegible].

Like the Kite-beards themselves, the products of their art, the weapons and swords made by them, are regarded as sacred. In order to side for ownership from them, the Silent side sold for every new object blocked from the Kite-beards's [illegible], as well as for [illegible] which have reached the [illegible] objects.

Even the repentant that a few [illegible] [illegible], as records of the [illegible] of their [illegible] [illegible] nothing to their [illegible] [illegible]. The [illegible] [illegible] [illegible], as well as his [illegible], is just as [illegible] as any other Kite-beards. The [illegible] people, however, [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible].

While the other [illegible], [illegible] to the presence of good [illegible], are [illegible] [illegible] with the disappearance of the [illegible], the Kite-beards [illegible] [illegible] [illegible] [illegible] [illegible]. The [illegible] have only very little [illegible], for for their [illegible] [illegible] [illegible] [illegible]. They [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]. The [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]

[illegible]

[illegible] parts of the provided leaves of a climbing species of asparagus (see figure 4 below). The taking of an extract of the root and bark of [illegible] [illegible] with cattle blood and milk is regarded as beneficial for the healing of suppurating wounds. The decoction of the seed of a [illegible] species (cf. [illegible]) [illegible] is supposed to have a similar effect, in that taking it "makes the wound dry."

Seed flour (3).

[illegible]

1. The seed flour was brought into the blood region in 1997 from Uganda. In June, 1997, it weighed [illegible] kilogrammes.

the function of which in particular was into the soft skin parts of the face, are removed as soon as they condition themselves by an inflammatory pressure resulting from their egg-condition bodies. By means of a deep scratch with a long scratch them, one pierces the layer of skin, usually only quite thin, lying over the seed flour. (3)

[illegible]

2. Step 1d. is extended: The tip of the rear abdomen of the female seed flies jut out into the open, without any skin covering. The 1d. [illegible] 2d. 3.

and then squeezes it out by lateral pressure. During this one is careful to avoid injuring the animal, so that healing will not be delayed.

[illegible] the snake bite is made [illegible] was thoroughly examined and the heavily ligated wound, upon which one has also made a number of punctures with the sharp thorns of a [illegible] [illegible] and then connected to with a red hot iron wire. In the same hole the root of [illegible] is placed, whereupon nothing follows. This method, however, is successful only if the sap bitten is unlike to reach a surgeon. Otherwise one has the [illegible] [illegible] [illegible], and his antidote. Same as the heavily ligated wound several times. Swellings of the lymph glands that may occur are also cauterized. If the [illegible] regards the bite as only slightly poisonous, he escapes it by means of a few incisions and acts it out vigorously. But if he regards it as dangerous to life, he cuts and sucked the bitten spot a piece of cassia from the root of a cut to

PREFACE

Some years ago this Society conceived the idea of educating at their central station at Kambwe, near Kowlem, a few of the most promising of late up-country converts. When sufficiently advanced, the boys or men are sent back to their home and heathen-centers of the Gospel. Thus, one Zi-ennel[1], a member of the Gilang or Lowlem Masai, who had spent some years into the site tuition of the Rev. A. B. Doggett at Tavoi, was baptized under the name of Zadie, and completed Mahomedan at the event. He is now one of the principal reports of the Society in Southern Mashiani. To the Mission of the Society in healing we Zadie Zi-ennel's service, and to the diligence of Zadie Zi-ennel himself, I am a large measure indebted for the material contained in Mihank. Philologists will possibly be interested to hear that these enter Masai (and possibly another of other tribe whose language has ever been a dead tongue) who are the to correspond with one another in their mother tongue. I have in my possession, for instance, several letters written in Masai.

As a well-wisher of the Masai and one who has known them for a decade, I wished that every support should be given to the Church Missionary Society and to the other Missions engaged in proselytizing in their midst, for it is only by the gradual and gradual civilization of the tribe that they can be saved from extinction. The commencements of civilization are beginnings to felt in Masai Africa; and the famous Rift Valley and its high plateaux where the fierce, bloodthirsty Masai once ruled supreme, are now becoming colonized by the white man. It has often been proved in other parts of the globe that the native, on the advent of the white man, shrink into holes or cease to exist, and it is to be hoped that the Masai will choose the first of these alternatives.

A. C. BUCLER.

Pretoria,
Natal Native Commissioner
May 1905

[1] Zi-ennel means the child's laughed. When this name was given him, he was a small, sickly child, so we supposed to live.

THE MASAI PENAL CODE

Some Notes on the Recognised Masai Punishments for Crimes, with Examples of Masai Cases on Record

(2) The following notes relate to those punishments of ancient origin still remembered among the Kisongo* Masai. Some of the penalties are habitually inflicted up to the present day. Some, as will be obvious from a perusal of the text, have, of necessity, fallen into disuse. They have been written down from the statements of certain Masai Elders of the 'Lemiro'* age, and have received the imprimatur of the 'Loibon Piri. Piri* has asked me to say that he cannot be responsible for the authenticity of what follows, though he has no doubt that it is correct, but being a comparatively young man of the 'Siboi'* age, he has not the knowledge of these things that the Elders have.

(3) The notes are brief and unelaborate, and were made, primarily, with the object of adding to our knowledge of Masai customs in the matter of criminal offences in view of the recent formation of Native Courts throughout Tanganyika Territory.

'Lemiro' : Murder

(4) (a) If one Masai kills another, all the cattle of the murderer are taken by the relatives of the deceased. A council is then

* Kisongo is the Masai name for the northern Masai areas. It includes almost the entire Tanganyika Masai District as constituted today. The Lemiro Masai, "Siboiyo," mentioned under the same Kisongo are just the grandsons of the actual Moran and Elders.

* Corresponds of 40-1, approximately according to Hollis.

* Piri is a brother of Mbo and Sindiyo, of Sikirai. They are all three of the sons of the medicine-man or 'Loibonok', Ol-Piemo Kimpaki, the Sikirai Loibon, and Piri is Mbo's brother by a different mother. Piri came down to Tanganyika to vote for the anti Mbo, and at the request of the Tanganyika Masai. He has lived here ever since in the vicinity of Kiserian. (1928) Mbo[illegible]: D. J. P. R.

* Corresponds of 1921 approximately according to Hollis. I think the date of the ceremony was determined land among the Masai of Tanganyika.

[illegible] L. G. B. Leakey — *Some Views on the Mount of Kenya Group*

Discussion

[illegible] In the past very little detailed work on the social life of the Mount has been attempted, [illegible] such investigations cannot well be made through interpreters, while few, if any, Europeans speak the Mount language sufficiently fluently to make such an investigation in their language.

[illegible] Although I cannot claim any knowledge of the language of the Mount, I have been fortunate enough to become friendly with four Mount who speak Kikuyu fluently, and as I speak Kikuyu as well as I do English I was able to learn something from them about their customs.

[illegible] These men are of necessity local and full of lacunae, since I avoided asking them leading questions, though assigned to do so, and also because they do not include information which I was obtained from an environment by more than one informant.

[illegible] The Mount from whom this information was obtained came from that part of the Mount Forest which lies to the west of the Nyeri Reserve, and I was not able to find out whether these customs prevailed among the whole of the Mount group.

My two principal informants were an old woman, great child-bearing, and her married son, aged about 30. I have unfortunately lost the paper with their names. [illegible] They were informed that most of these customs have been slightly modified since government control has been set up, but I have nevertheless, outlined mainly to the general trend.

Part I. — *Pre-natal*

[illegible] Birth — among the Mount, birth takes place in the woman's own hut in her husband's village and she is attended by an old woman of her husband's family. Other women may be present, but no men. If a woman is having her first child she [illegible] a midwife [illegible] supported by other women, as the first child is considered more difficult to deliver. [illegible] a woman giving birth to a child has spent the [illegible] The working methods were the same with a special ceremony and both the woman and new-born child are washed with warm water. The placenta is washed and [illegible] to the middle path, but is not buried. No men or the child's father [illegible] to assist [illegible] to supply food for the mother for [illegible]. If the child is a boy the blood is obtained from a young bull, and if a girl, from a young heifer. (For method of procuring blood see Part II.) [illegible] the day of birth, [illegible] and goats are killed to supply meat and fat for the mother [illegible] that the child may grow up strong. Not those animals have no special significance, and are not sacrificed in the purification ceremony.

[illegible] Naming Ceremony — Children are not named until they are [illegible], and while [illegible] the child does not inherit any name from any [illegible]

[illegible] There is some mystery attaching to the ceremonial name, and I was not [illegible]

[illegible]

by Professor Dr. Peter Kawerau, Marburg.

[116] [illegible] (1)

The reports of the Nestorian Bishopricks (Frankfurt/ Oder), covering a decade to Sir Yuan, when the legends of the Ideal or essentially connected with the Hebrew early history are even today still capable of arousing the same widespread interest. The question as to whether traditions preserved for antiquarians from the Sheikhs original banishment of the Ideal people actually exist here or whether a Christian or even Jewish influence is not still to be assumed has not yet been discussed. As it seems, Martin Luther still was undoubtedly cognizant of the absolute impossibility of the latter assumption, and even if such an influence had nevertheless taken place, which is highly improbable in view of the reasons cited by us below, it could only have happened in the early period when the Ideal were still living in the north, in the neighborhood of Wittenberg, which, however, she never again as the Gate for Heavy accepted.

[116] [illegible] (2) [illegible]

First of all, crystallization on the part of Martin, whose attitude by a lawyer all doubt, is completely excluded. Normally, it was only after a long acquaintance with the Ideal of Sir Aylen Rus he gained the confidence of those old Ideal men who finally imparted to him the traditions otherwise carefully kept from strangers. Sir Ideal Ideal expert, our Bernhard Hoppenrat Ibing, and Hallemann Wilhelm expert will or Hildebrandt Sir. Martin, are equally freely convinced that Christian influence through the intermediate working there for only a comparatively short time, whereas others for middle and great Ideal have been very favorable up to now, is quite incomprehensible. If the English Ideal antiquary William S. Haggard, who was active there 1899-1906, was to the Hesperian Times, 1906, Ideal, 1906, p. 499, that Mr. G. C. Bellis, the ordained authority on the Ideal living in Ancient Ideal Wilhelm, obtained in this from a Ideal Ibing to his service, that the Ideal from whom Captain Martin got wind of the intermediate was for many years, during the Ideal factors, connected with a Roman Catholic Ideal in the neighborhood, an Ideal even many albino, Neither from who more were Ideal

[116] [illegible]

[illegible]

[illegible]

> [illegible]

[illegible]

[Text note]

The last possibility, we investigators know the fact few, is not of the question for the Baleh. [illegible] rolling wonder cannot record in this way with Baleh lands.

I therefore notice to the conclusion that the Ideal had already earned late Willow bag before the period Tree which we passed Egyptian documents. With this comment for Tree question is already for the influence of Baleh, whose civilizations did not arise until the fourth millennium, could by no means have been so far-reaching Tree, with, moreover, the discussion of the Sumerians still permitted there or Baleh times. We now if we could premise a later immigration of the Ideal into Africa, there is still lacking any means for the assumption that the Ideal had ever been Baleh. This, however, would be the basic condition for the possibility of Babylonian influence Baleh, only on a much higher civilization and be mighty away, would have been able to have side by side with a primitive people of agriculture-tribes but it could not have exerted an influence on a nomadic steppe people, either through mental superiority or through force, without practically setting it of its independence. Law of independence for such a people, however, means nothing little than decay of the people's mobility — extinction. This, however, if an influencing by Babylon were conceivable to compared a land nomadic, the possibility of such would be most clearly and positively excluded by the moment and spot of the Ideal-nomadic belt.

In order to elucidate the second case, here is Eve to be submitted the fact that, as far as we have to to the present time, no no and nothing here Chaos. Indeed, [illegible] as the Chaldeans evidence here able to exert an influence on the Ideal people with a mighty reaching scale the steppe. I mean the conclusion the possibility that no Ichnusian people 1/ years of age and nomad could have been influenced on their genre in the slightest ways, according to my investigation conducted without-only along their lines. Moreover, the people were most emphatically that they learned their animals from their fathers, who allegedly in turn learnt them from their fathers.

PREFACE

The Masai occupy a considerable part of the large plains which extend from about one degree north of the equator to six degrees south of it, situate in both British and German East Africa. Those living in British territory commonly call themselves Il-Maasai[1], whilst the 'German Masai' are to a large extent known as 'L-Oikop'[2] or Il-Lumbwa[3]. In olden days the coast people termed them without discrimination Wa-Masai or Wa-Kwafi[4], names which have been perpetuated by Krapf and others. 101 [131]

Sir H. Johnston states[5], and probably correctly, that the Masai represent an early mixture between the Nilotic negro and the Hamite (Galla-Somali); and that this blend of peoples must have been isolated somewhere in the high mountains or plateaux which lie between the Nile and the Karamoja country. Certain it is that the Latuka, who are supposed to be descendants of the ancestral Masai, and who occupy this country, speak a language that is closely allied to the Masai tongue, and have many customs in common with the Masai. The accounts which have been published of the habits and 174 [144] [197] 114

[1] When spoken rapidly this word is sometimes pronounced Il-Maas (for further particulars see also p. xx, note 1).

[2] 'L-Oikop is believed to signify the possessors of the land. It also means number (see p. xx, note 3, and p. xxv).

[3] Not to be confounded with the so-called Lumbwa (whose real name is Kip-sikisi), a tribe living near the Victoria Nyanza in British East Africa. These Lumbwa or Kip-sikisi are nearly related to the Nandi, and are believed to have originated from north of Mount Elgon (Hobley, *Eastern Uganda*, p. xxi). Lumbwa is a term of contempt, and signifies a pastoral people who have taken to agriculture.

[4] The meaning of Kwafi (or Kwafi) in Masai is uncertain or somewhere. Hildebrandt's suggestion (*Zeitschrift für Ethnologie*, 1878, p. 322) that Maasai is derived from the Masai word 'mass, property, and that Kwafi is a corruption of kali, the Swahili for pastoral (given in allusion to their broad-bladed spears), is probably incorrect.

1: Hollis G-S (ca. 1894-1904) 1905
FL12 Masai FL12

114 customs of the Masai are both numerous and varied, but comparatively little is known of their language. The following
113 books, which contain either short vocabularies or grammatical
114 notes, are probably all that exist[1].

I. *Vocabulary of the Kwapisch Kisiksp*, Krapf, Tübingen, 1854.

II. *Vocabulary of the Kwapisch Ilsipsi*, Erhardt, Ludwigsburg, 1857.

III. *Life, Wanderings and Labours in Eastern Africa*, New, London, 1874.

IV. *Suhiesche Grammatik* (Einleitung), Lepsius, Berlin, 1880.

V. *Massailand-Expedition*, Fischer. (Mitteilungen der geographischen Gesellschaft in Hamburg, 1882-3).

VI. *A Visit to the Masai People*, Last. The Geographical Journal, 1883.

VII. *Die Sprache der Il-Oloipi* (Sie repräsentiert Wakwafi und Masai). Grundriss der Sprachwissenschaft (Band III), Müller, Vienna, 1884.

VIII. *Polyglotta Africana orientalis*, Last, London, 1885.

IX. *The Kilima-Njaro Expedition*, Johnston, London, 1886.

X. *Durch Massailand zur Nilquelle*, Baumann, Berlin, 1894.

XI. *Masai Grammar*, Hinde, Cambridge, 1901.

XII. *The Uganda Protectorate*, Johnston, London, 1902.

121 My endeavour in writing this book has been to place on record some of the thoughts and ideas of the Masai people, before their extinction or their admixture with Bantu elements and contact with civilization renders this an impossibility. The stories, the proverbs, the riddles, the songs, and the account of the customs and beliefs of this interesting people are all given in the words of the relators themselves.

000 My thanks are due to Sir C. Eliot for many valuable hints, and for the kindly interest he has shown in my work;
[128] to Mr. W. J. Monson for the free translation of the songs
[127] and prayers; to Mr. R. J. Stordy and to Saleh bin Ali for the loan of their photographs; and to the Director of the Royal Botanic Gardens, Kew, and to the officials of the Agricultural and Forestry Departments, East Africa Protectorate, for determining the names of the trees and plants.

997 In conclusion I wish to pay a tribute of the highest praise to the work of the Church Missionary Society in East Africa.

[1] When this was written Merker's book *Die Masai* (Berlin, 1904) had not been published.

PREFACE

Some years ago this body conceived the idea of situating at their central station at Frontiers, near Mombasa, a few of the most promising of their up-country converts. When sufficiently advanced, these boys or men are sent back to their homes and become teachers of the Gospel. Thus, one Ol-omani[1], a member of the Olkeg or Loitokitok Masai, who had spent some years under the able tuition of the Rev. A. R. Steggall at Taveta, was baptised under the name of Justin, and completed his education at the coast. He is now one of the principal supports of the Society in Southern Masailand. To the kindness of the Society in lending me Justin Ol-omani's services, and to the diligence of Justin Ol-omani himself, I am in a large measure indebted for the material contained in this book. Philologists will possibly be interested to hear that there exist Masai (and possibly members of other tribes whose language has ever been a closed book) who are able to correspond with one another in their mother tongue. I have in my possession, for instance, several letters written in Masai.

As a well-wisher of the Masai and one who has known them for a decade, I consider that every support should be given to the Church Missionary Society and to the other Missions engaged in proselytising in their midst, for it is only by the gradual and peaceful civilisation of the tribe that they can be saved from extinction. The encroachments of civilisation are beginning to be felt in East Africa; and the famous Rift Valley and the high plateaux where the fierce, bloodthirsty Masai once reigned supreme, are now becoming colonised by the white settler. It has often been proved in other parts of the globe that the native, on the advent of the white man, alters his habits or ceases to exist, and it is to be hoped that the Masai will choose the first of these alternatives.

A. C. HOLLIS.

Kenya,
East Africa Protectorate,
May, 1904.

[1] Ol-omani means He who is despised. When this name was given him, he was a small, sickly child, and not expected to live.

INTRODUCTION

The present work, by Mr. Stelle, Chief Secretary to the administration of the East Africa Protectorate, treats of the language, traditions and customs of the Masai, one of the most interesting and important tribes of these territories. I am not complacent—and there must be few people in the world who are—to criticise in the light of independent knowledge the mass of material which has been brought together, and will merely attempt briefly to summarise the information about the race which we now possess. Mr. Stelle's previous contributions to anthropology, his opportunities for studying and daily conversing with the Masai, and his linguistic talents, which are well known to every one in East Africa, are a sufficient guarantee for the thoroughness and excellence of his work.

The Masai at present inhabit the inland districts of British and German East Africa from the equator to about 4° S. Few of them are found north of the line except on isolated settlement just south of Lake Rudolf, and they seem to avoid both the sea and the great central lakes. Many smaller groups of tribes, such as Lakes Naivasha and Baringo, are found in their lands, but they neither are Masai nor speak Masai. They are divided at present into two sections, one of which, called Il-Oitoi, is agricultural and settled, while the other, or Masai proper, is entirely pastoral and nomadic. The difference between the two is evidently not ancient, for both speak practically the same language, and it is probable that the agriculturalists of the present time are nomads who have settled down. On the other hand, tradition does not carry the history of the tribe further back than a century at the most*, and it would be rash to assume that the nomad pastoral state is primitive or very ancient. It is quite probable that there was a large agricultural settlement on the Uasin-Gishu plateau from which the more adventurous warriors detached themselves.

In East Africa the Masai are clearly distinguished by their language, customs, and appearance from the Bantu race (although the latter often include them, and have received a certain proportion of Masai blood), and equally clearly

* The genealogy of the medicine men goes back about one years.

[illegible] related to the Bili Fulbes and Fuali Gaulbes.[1] Somewhat more distantly allied to the same stock are the inhabitants of Bali, Kwiwanda or Dalas. These name again show close resemblance to some of the peoples who inhabit the banks of the Southern Nile, such as the Acholi, Bari, Latuka, Dinka, and Shilluk. The whole group are sometimes classed together as Nilotic, and have many peculiarities in common. Their language shows a considerable, though varying, degree of affinity; physically they are tall, lean men, with features which are not uniformly negroid, and are sometimes almost Caucasian; several constituent customs such as the cutting of the nails are and the habit of eating standing on one leg are found among them all. The closest connection seems to be between the Acholi and the Dalas, and between the Bari, Latuka, and Bari. The Bari, Fuali, Latuka, Bali, and Dalas all pass to a more or less developed form a military organization which obliges all the male population, between the ages of about seventeen and forty, to submit to a special discipline and constitute a warrior class. A similar organization does not seem to be recorded among the tribes who dwell along the Nile.[2] These latter are not a homogeneous group, so that the word Nilotic must be used with caution. The Shuli, who occupy a large portion of the country between Lake Albert and Gondokoro and extend well to the east of the river, are linguistically different from their neighbours, and apparently represent an invasion from the west, though in customs they do not seem to differ markedly from the Bari.

[illegible] A glance at the map will show that from the Bili Valley to the Nile there runs in a north-westerly direction a broad belt of non-Nilotic languages more or less allied to one another, Bunu, Fuali, Bali, Dalas, Kwanyu, Latuka, Bari, and Dinka. The Kwanyu appear to be Bantus who have been forced to accept an alien form of speech. This distribution of languages seems clearly to suggest a north-eastward movement from the country between the north of Lake Rudolf and the Nile. The hypothesis is rendered more probable by the fact that in East Africa as elsewhere the tendency of invasions has been mainly from the north to the south. This is certainly

[illegible] The same language is anything. It is really a form of speaking, applied to the complete mention to representation of their own or other tribes (not, apparently, to Bantus). Hence the Latuka are often called Lowiwa Bari. But the name is popularly and officially applied to a tribe nearly allied to the Bari who live to the south of the Dinka range.

[2] Some perhaps similar to something similar among the Latuka whose young men, in days, live for fighting only.

the case with the Cathite, Semitic and Hyamitisms (who are [174]
mainly connecting on the Pelasgoanic) and probably with
the Siliteans. It also seems probable that the physical type
of these races (Blues, Fawn, Turkoma, Under Ms) represents
a mixture between the negro and some other factor. It does
not seem to me possible to make any definite statement as to
what that factor may be, but the neighbourhood of Egypt and
Hyamitic contact almost suggested themselves. Sabin states
that the appearance of the Cathite (who are probably the
Fawn allies of the Blues) points to a Cathite origin, and that
there are Cathite on the east bank of the river (but very few
west-side of Cathite, which they have often invaded). It may
therefore be that the Blues tribes, and possibly also the
Fawns to the west, represent a hybrid of the negro and
Cathite.

There is absolutely nothing to show when the Blues moved [174]
westwards, but the tradition reported by Mr. Sabin is who [175]
they seem to place the earliest history of the world in an
East African setting, and survey an list of an earlier home.
The chief characters in that stories are the Blues, the
Dawks (hunting tribes), and the Bazes (Bedis), and the
principal event does arrangement by which the Blues obtain
a right to all the cattle in the world. This seems to indicate
that they must have been a long time in their present hands,
and have lost all consciousness of their origin. Some of the
proverbs, such as "The wine never change his stripes, and
Bazeldis does not want servants, have a familiar ancient [174]
ring; but it would be useless to speculate how they came
to Bazeland.

A very different view of the past of the Blues is suggested [174]
by Barker's recent work (The Blues, Berlin, 1900). He [174]
regards them as belonging to the same stock as the ancient
Ethiopians, and quotes a great number of traditions regarding
the creation, deluge, and reconstruction, the which resemble
the Biblical and Babylonian versions of primitive history.
A critical examination of these stories is very desirable,
as one cannot help suspecting that they contain elements
borrowed from Christian or Mohammedan sources. On the [174]
other hand, in all questions affecting the origin of East African
races, our only data are the most recent types of physique,
religion, and language, and we search, as in the case of more
civilized nations, go back two or three thousand years with
comparative certainty. We can form no idea of how many
strata of population such a period would represent in Africa,
what mixtures and disruptions of race it would include.

CONCLUSIONS

[F5.6] A tribe mostly from the north like the Wanni, and possibly at one time in touch with more influential by-mixed Tamils, may conceivably represent not an improvement of the primitive Veddas which but a degeneration of some other race. Still, in accords which the have of the Dari and Veddas seems to show the same vague belief in a supreme power, which not incredible have imported or existing among the Wanni, and an absence of traditions respecting the origin of the human race[1].

[F5.7] [F5.8] The history of the Wanni, as far as we know it for the last hundred years, presents as its most important feature a conflict between the pastoral and agricultural sections, ending in the victory of the former and the annihilation of large settlements of the latter. The conflict was disastrous for the men, for the portion which survived depended entirely on cattle and neither for cultivation. The lands suffered severely from plague in the rainfall, and the advent of European and the gradual consolidation of the Pax Britannica could not be otherwise than unfavourable to the pre-eminence of a tribe whose prosperity depended so largely on continually plundering their neighbours. Nevertheless, even as late 1870 to the early eighties the pastoral Wanni were a formidable power to their civilized. They successfully asserted themselves against the Kandyan-Sinhalese, took tribute from all who passed through their country and treated other men, whether Kandyan or not, with the greatest arrogance. About 1870 they raided Vanni, as the crow flies the present Government Station. Thereafter (Through Mount Lavel, 1871) therefore law, in 1873, they entered his camp and ordered about the whole district, including himself, as if they had been masters and the mere lots slave. This period of triumph was succeeded by one of disaster. Rinderpest attacked the cattle and smallpox human beings. The surrounding tribes who had suffered from their raids were not slow to revenge themselves for the oppression and plunder of the past, and a severe famine completed the catalogue of misfortunes. The numbers of the Wanni were substantially greatly reduced, and at present there found in British East Africa only amount to a very modest figure, variously estimated at from 15,000 to 14,000. The latter estimate, which is the latest and perhaps the most correct, is based on the assumption that there are 3,500 in the

[1] See Bikkhuwanse, the Dalada Sarasaya, 1905, p. 48, fn. It is true that some expressions ascribed to the Veddas such as "We do not know—the way man lived," might be interpreted as a consciousness of the law of traditions.

[illegible]

Kalendo province and (you) between Ilkoyo and Kilimo-Kiyoo.

The expedition of the Ivile seems to have come to an end about the middle of the last century. About this time they reached their furthest recorded point in the north and were driven back by the Wagogo and Wahehe. The southward movements of the Galla and Kwafu tribe then took on the ascendant, though as late as the situation they settled on the Tana river. It would appear that about this time the Turkana drove the most westerly branch of the Masai from the west to the south of Lake Rudolf, where they are now settled. Somewhere about the same period—at the time as all was so remarkably unsettled according to the native traditions—the Masai dwelling on the Uasin-Gishu plateau attacked those of Kalenjin, and after defeating them were in their turn thoroughly defeated by a combination of Kalenjin and other Kilimo-Kiyoo. The inhabitants of the Uasin-Gishu were scattered to the four winds; those who escaped their bodiers were assimilated by the Masai, and only a few degenerate remnants survive in Kalenjinly Lumbwa, and the two villages called Great and Little Kalenjin on the south end of Lake Baringo. Another branch called Lelkipsis or Rapsit took refuge in the Kipsaka valley but were wiped out by the Masai and Lumbwa. The Lelkipsis plateau, which Kalenjin occupied like the Uasin-Gishu, was not depopulated in 1890, when Peters crossed it and had many fights with the Masai. According to one story the people of Lelkipsis settled some other Masai near Naivasha about 1850 and carried off their cattle. These cattle were suffering from rinderpest, and the result was that all the stock of the Lelkipsis took the disease and died. This was considered as a judgment on the Lelkipsis for stealing their brethren.

At present the agricultural Masai are found chiefly near Lake Naivasha and south of Mount Meru in German territory. In our Protectorate they are represented only by a few scattered settlements, such as the people of Kajiado, the Dorobogh, and perhaps the people of Sambaru in the Rumbik country. It would appear that the name Wakwavi, often applied to the agriculturists, is merely a Swahili nickname borrowed from the Masai Kwavi or Kwapi, meaning plains. The pastoral section chiefly themselves under five districts, with many subdivisions, namely Kapsiki (Kapsis plains), Ilmatapo (Naivasha), Kisongo (the district south and east of Kilimo-Kiyoo), Uasin-Gishu, and Lelkipsis. The two last districts, as mentioned, have ceased to exist, and those who

[illegible]

[illegible] chiefs to belong to these two divisions. Rather given on the principal divisions these provinces, Kimaya, Lulu, and Ulungu. This is perhaps not according to Bual tradition, but is set forward as a practical description of the present distribution of the tribe. The Lulu and Ulungu, also known as Ulungwe and Fwiko, are both subdivisions of the Kyimbu district, of which the Kimaya occupied importance by refusing to accept the present Lulu, Ulungu and Ukwanga [illegible] the Indian Bankers. Besides these districts, there are four clans, commoners, priestcraft and medical [illegible]: Kiam, Mulgwa, Mukwa, and Mulyiwa. The Kiam seem to enjoy a certain privacy. The medicine men all belong to this clan, which is specially connected with Mwari Fyangu (in the south of Ulungu) also called Ulungu [illegible] the ancestors of the tribe.

According to the social system of the pastoral Bual the male sex is divided into boys, warriors and elders. The first stage continues until circumcision, which may be performed any time between thirteen and seventeen, or sometimes in the case of poor people not till twenty. Those who are circumcised about the same time (see p. [illegible]) for family are said to belong to the same age, and are known collectively by a distinctive name, such as 'the White Swords' or 'the Invincibles'. After circumcision the warriors plait their hair, but, except for a small skin hanging over the shoulders, and their arms and [illegible] which are decorated by the Bulla, go absolutely naked. They sleep entirely on mats, with, and blood, and in particular may not smoke or touch intoxicants. They do not live with the married people, but in separate kraals with the immature unmarried girls, with whom they are allowed to cohabit freely. Tradition* (see p. [illegible]) ascribes this practice to the fear that if girls were kept away from the society of their own warriors, they would let themselves be seduced by the enemy; but the remedy has been worse than the danger it was to avert. The direct physical evil is considerable, and is partly responsible for the distinctively [illegible] of the race. Besides this, female morality after such a girlhood was naturally low, even when the Bual kept to themselves. Now that they have come into contact with civilisation, prostitution and venereal disease have become decidedly frequent. About the age of twenty-seven or thirty, or sooner when raiding is forbidden somewhat earlier, a warrior marries and settles down. If he

* It is said that among the Bulu, Bua, and Bulisi there are similar customs of the kind.

[illegible]

to a man of wealth and importance he may be dressed [illegible] to which man he is responsible for the discipline of the warriors and their appearance when summoned to fight. Though he does not go to the wars himself, he with other [illegible] chiefs [illegible] of warriors seems to be men not unskilled with frankness. Perhaps, by the by, he may [illegible] There he with your foot against a post, then the labour of every man, [illegible] 'Dare give yourself away' is a vivid picture of the Masai peer [illegible] taking his ease in the primitive posture of lying on his back with his foot against a post, while his family do all the work for him.

Masai women, unlike the men, are carefully trained to better prospects for a very and something to see than some [illegible] outstanding [illegible] from home to shave their heads. Before marriage they are circumcised, and signalize their change of state by wearing large circular earrings and necklaces of brass and iron wire. Both girls and women have their legs and arms encased in iron ornaments, so that they can scarcely walk.

The military organization of the Masai ends from a most effective body for destructive military operations, and explains not only the predominant position which they acquired in East Africa, but also the respect which they inspired and the extent to which their customs were imitated by other tribes. On the other hand, it probably also is the reason why they never founded any state or policy analogous to the kingdoms of Uganda and Unyoro. The centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military somewhat and desirous only of military glory. Retirement from this land of warriors as a chief was honourable, but seems to have been recognized as a removal to an inferior sphere of activity. The chiefs managed the details of the raids which the warriors wished to undertake, but their power of compelling them to do anything which they did not wish was very slight.

The nearest approach to a central and superior authority among the Masai is the medicine man of Laikipi (more usually Olorkoni; see p. 304, fn.). They all belong to the Kidongi family of the Ainer clan, and are said to be descended from a personage called Olo-Kwenya, who came down from heaven and was found by the Ainer sitting on the top of Mount Ngong. This was nine generations ago, the genealogy having been preserved. The influence of the

* The chief is elected from the warriors, but leaves their ranks at once and becomes an elder.

The influence of the

[illegible] medicine men is due to his supposed power of prophecy and divination. No explanation is offered of this power, and it is [illegible] that the Lotuma are believed to enjoy the assistance and guidance of definite spiritual beings; but they are feared for fears by such methods as throwing stones out of a hole, impersuing the entrails of slaughtered animals, interpreting dreams, and delivering oracles when possessed with lunar rites. Thus, however, as in this religion, it does not appear that other among the Wanei or the Fanali whom similar institutions prevail, they have ever attempted to assume a position like that of the various small priests of the cult in the bugu to the west of Lake Kanyaru.

[illegible] The most celebrated of these medicine men was Wanlim, the father of the present holder of the office, Lemmy, who died about 1890. He is celebrated for having predicted extinction of cattle plague and smallpox, which had never to years, and also for having foretold the arrival of white people. It is generally said that he bade the Wanei to [illegible] to death, but Mr. Hollis could not find any corroboration of this statement. His death was followed by a disputed succession. There is considerable discrepancy as to the details of the story, but according to the evidence taken down by Mr. Hollis in 1911, Wanlim told his elders on Sundays that on the morrow he would invest him with the insignia of a Lotuma, of which the principal is an iron club. Lemmy, the younger son, overheard, and presented himself before his father very early the next morning. Wanlim, who was very aged and had only one eye, believed much the Great in similar circumstances, and gave his younger son the insignia, saying "Thou shalt be great among thy brethren and among all the people." In any case, Lemmy succeeded, and was accepted as Lotuma by all the Wanei except the Lotu. This caused a division in the tribe, and so is roughly corresponded with the division between British and German territory. Sundays was long regarded as the chief of the German Wanei and Lemmy of the British. But in 1911 Sundays quarrelled with the German administration, made his peace with his brother, and came over to the British Protectorate.

[illegible] The religious ideas of the Wanei, as collected by Mr. Hollis, are vague and unformulated. The commonest word for God is Ragai, which is will be observed is a substantive with a feminine article. Ragai appears to be used either quite indefinitely and impersonally of remarkable natural phenomena

[illegible]

[illegible] rain, the sky and firmament, or the infinitely and [illegible]
personally of superhuman beings. In this latter sense it is
said that there are two Gods (Io-matua-ore), the Black God
and the Red God, of whom the former is kindly, but the latter
malevolent. It is the special function and pleasure of the
Black God to provide rain, but the Red God objects to turning
on the celestial water-tap. Loud thunder is the result of the
Red God trying to get to earth through the Black God's
determined to either or kill man, but the dissent resulting in
the Black God saying to him, 'Do let them alone; don't kill
them.' This happy thing that the good god is ever but
the bad god for which is probably an excellent but due to
the fundamental characteristics of the Maori mind, but
doubtless avoid unduly suffering, for it does away at once
with the necessity for human sacrifices and all similar
methods of propitiating evil powers. Besides the Black
and Red Gods there is a quasi-divine personage called
Tukaro-Ko, who appears to have been, if not the creator,
at least the arranger of the present order of things. A man
called Io-ape appears to have been the principal patriarch,
though there were also Tiroko (hunting tribes) in his time,
so that he was not strictly the first man. Death entered
the world owing to his wilfulness and disobedience (p. 269),
and, by an incident common in stories of this kind, the
younger son became the father of the Maori, while his elder
son lost his birthright, and was the ancestor of the inferior
tribes. [915]

The worship of the Maori, like their beliefs, seems to be [917]
somewhat vague and wanting in ceremonial, but Mr. Butler's [918]
collection shows that they have definite prayers, and that
they petition the deity more frequently and fervently than
the surrounding tribes are known to do. This is confirmed
by Thomson, who speaks of them howling out prayers to
Rangi-ai for hours together. By a custom not without parallel
in other nations, it would appear that the women pray twice
a day, but the men only occasionally and in great circum-
stances. The prayers which are for children, rain, and
victory, are addressed to Rangi-ai as a distinct personality
'who is prayed to and hears.' Remarkable also is the phrase
'the highlands and lowlands of our vast country which
belongs to our God.' On the other hand, the sun and moon,
the morning and evening star, and the mountain clouds are
also invoked, and one song says in two consecutive verses,
'He whom I pray to is God,' and 'He whom I pray to is
Lemana, our medicine man.' It is difficult to say whether [917]

Sc Mallie G-3 (ca. 1956-1964) 1965
FL12 Mami FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of what old culture of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas, in the unwittingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are entirely dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kuomo, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women, a somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, as far as difference of environment and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle teeth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though earlier and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

* It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully enquired.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

made the grammatical system of the Masai language coherent 197
and clear. It has a marked love for lengthy formations, and 193
until the articles, relatives, verbal prefixes and affixes had been separated out it was impossible to discover not only roots, but even the simple forms of nouns and verbs. Much still remains to be done in dividing these forms into their essential parts and formative elements, but the general structure of the language appears to be established beyond doubt.

Except for the length of the words, the phonetics are 194
simple and easy. Difficult groups of consonants and the harsher gutturals are absent, and the utterance seems to be somewhat languid, and in particular the pronunciation of the labials tends to be indistinct. The verb is clearly 193
distinguished from the noun, and shows great luxuriance of formation, but has only moderate powers of expressing the categories of personality and time. A prefix indicates not only the subject but also the pronominal object; but the distinction is not always complete: thus Aasuj means either I follow thee, or they follow me; Kisuj, thou followest me, they follow thee, or we follow him. Only present and past times are clearly and regularly expressed. The future is sporadic. The imperative is not, as in so many languages, the simple verbal root, but a form analogous to the subjunctive. The negative is expressed by *m* or *mi*, but various circumlocutions are also used. There is a great wealth of derivative forms. These comprise an impersonal passive; forms denoting motion to and from the speaker; a form indicating that the action is done in the interests of some one; another indicating the instrument with which or the place in which a thing is done; reflexive, causative, and neuter formations.

Unlike the verb, the noun shows very little power of inflexion, and can only indicate number. The plural is formed by a great variety of suffixes, such as *a*, *i*, *o*, *ra*, *ta*, *tin*, *shi*, *shin*, *ni*, *n*, *k*, &c., but it is noticeable that the singular is often formed from the plural, that is to say, a collective noun is individualized by the addition of a suffix, e.g. Il-Keyu, the Elgeyo tribe, Ol-Keyuni, one man of the tribe; il-akir, stars, but ol-akira, a particular star. Not only are there no case inflexions, but prepositions are almost entirely absent, so that the possibility of indicating case relations in a substantive is very limited. The nominative and accusative are not distinguished except by position, even in pronouns. The genitive is expressed in various ways, usually with the help of the article and a particle of varying form, in which the

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193 letter *l* often occurs. Similar forms, but with *t* in the place of *l*, are used as a local case with the most various meanings, such as in, out, to, from, at, with, &c. These very defective modes of expression are supplemented by the use of the derivative forms of the verb which indicate motion to or from, action in the interest of a person or by means of a thing. After the verb, the vitality of the language appears to be concentrated in the article and the relative. The article (*ol*, masc. sing., *il*, plural; *en*, fem. sing., *in* plural[1]) indicates number and gender. The latter is more analogous to the grammatical genders in German than to the simple distinction between male and female beings, *ol* being used to denote what is big and strong, and *en* what is small and weak, so that side by side with instances of sexual distinction like ol-ashe, a male calf, eng-ashe, a female calf, we also have such pairs as ol-ayōni, a boy, eng-ayōni, a small boy; ol-alem, the sword, eng-alem, the knife. The power of expressing the genitive and locative cases resides principally in the article, and as a rule a noun is unintelligible unless it is accompanied by it, the chief exception being abstract nouns which naturally are not numerous in the stage of mental development which the Masai have reached. It is noticeable that the article is more general in signification than either the definite or indefinite articles of other languages, and merely expresses the existence of individual objects or collective groups as separate entities. But that it is of the nature of an article and not a mere formative prefix is shown by the fact that the demonstrative, interrogative, and some other pronouns can be substituted for it (e.g. ol-tuñgani, the man; ledo-tuñgani, that man; kalo-tuñgani, what man?). Very remarkable is the use of the article with a genitive to form a substantival expression, equivalent to the use of an adjective as a noun in other languages, e.g. ol-lo-'l-masi, the-of-the-mane, that is, the maned one or lion; ol-le-'l-lughunya, the-of-the-head, the brain (cf. ἐγκέφαλος); ol-le-'ng-aina, the-of-the-hand, the handed one, the elephant (cf. Sanscrit hastin, an elephant, from hasta, hand).

The relative which offers many resemblances to the article, consists of the syllables *o*, *oo* in the masculine, and *na*, *naa* in the feminine. By prefixing it almost any part of the verb can be turned into an attribute or relative sentence. This neat and concise usage is an effective compensation for the scarcity of real adjectives and participles. Also the article

[1] Under conditions explained in the Grammar, the article becomes *e*, *i*, *eng*, and *ilg* in the singular, and *i*, *ing*, and *ilg* in the plural.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

and the relative can be used together to form a noun: 193
ol-o-unisho, the-who-sows, that is, the sower.

As far as our limited knowledge of it permits us to judge, 197
Latuka is the language which most resembles Masai. It is spoken to the east of the Nile, about 4° N., rather to the north of Nimule. Unfortunately we have no account of the grammar, but Emin Bey (*Zeitschrift für Ethnologie*, 1882, pp. 174–8), and Baker (*The Albert Nyanza*) have given some contributions towards a vocabulary. About a third of the words known are obviously the same as the Masai equivalents, and of the remainder many look as if they would prove identical when we have a better knowledge of the changes the consonants may undergo and can separate the roots and formative elements more accurately. This is a fair percentage of correspondences, if we consider how quickly unwritten languages change, and how often one member of a pair of related words may not be that in most general use. A traveller's vocabulary of English and German would probably give 'dog' and 'Hund' as corresponding words, and not mention 'hound.' An inspection of the Latuka words suggests that *a*, *e*, and *n* represent an article similar to that in Masai, but that the letter *l* is not used in this connexion. Aker, a male sheep, and naker, a female sheep, corresponding to the Masai ol-kerr and en-gerr, are significant.

The next nearest relative of Masai seems to be Bari[1], spoken to the north-west of Latuka on both banks of the Nile. Friedrich Müller (*Grundriss der Sprachwissenschaft*, Band III, 1884) noticed the resemblance of this language both in grammar and vocabulary to Masai. The vocabulary would appear, however, to contain more than one element, and a considerable proportion of the words are unlike Masai, and perhaps are West African in origin. The grammatical forms are less developed and luxuriant than in Masai, and hence the words are shorter, but the system seems essentially similar. The verb has an active and passive voice, and distinguishes a durative, an aorist, and an imperative. The noun has a singular and plural formed by various affixes as in Masai, and the singular is sometimes the longer form, being derived from the plural by the addition of a syllable indicative of individuality. There are a few prepositions, but not many, though more than in Masai. The pronouns are fairly like those in Masai, and there is an article, masculine *lo*, feminine *na*, plural *ti*, but it is suffixed to the substantive. It is possible, however, that a *k* which is sometimes found at the beginning

[1] Mitterrutzner, *Die Sprache der Bari*, Brixen, 1867.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

197 of words may be the remnant of an article. Compare, for instance, kolong, sun; kare, river; konge, eye; komong, face, with the Masai eng-olong, eng-are, eng-ongu, eng-omom (cf. the vocatives with prefixed *K*, p. 15). A relative prefix like *o-*, *na-* seems not to be known, but we find adjectival phrases like ko kure, thirsty (with thirst), and lo-dit (masculine), na-dit (feminine), small, which recall Masai constructions.

The Dinka[1] language, spoken to the north of Bari, has, as Friedrich Müller points out, considerable resemblance to it. A good number of words can be reasonably compared with Masai forms, but superficially the likeness is not great, as the Dinka words are generally monosyllabic and rarely have more than two syllables. Lem (knife) seems to be the Masai eng-alem; mac (fire), en-gima; ton (man), ol-tuñgani; pey (moon), ol-apa, Bari yapa; kir (water), eng-are, Bari kare. It is not, however, probable that the Dinka forms are primitive, as they are capable of considerable changes which may be explicable by reference to older and fuller forms. For instance, lyeb, the tongue (? Masai ol-ñgejep), can become lyep, lyema, lyem, lip and lib; mac, fire, mañe, mañ, and mêc; tik, a woman, wife (? connected with en-dito, in-doiye), tine, tin, ting, dyar. Except for these changes which affect the plural (e.g. ran, a man, ror, men) and the word on which a genitive depends (tik, wife, tin e beyn did, wife of the great chief), Dinka resembles Bari in its general construction. It would seem that Bari is nearest to the common substratum of these languages, though it has been exposed to foreign influences, and that Masai (with which Latuka should perhaps be included) and Dinka represent modifications in two different directions, Masai having a profusion of formative elements which are heaped one on the other and result in very long words, while Dinka is prone to contraction, which produces irregular inflexions.

Turning to the East African languages I think that when the Nandi-Lumbwa and Suk-Turkana groups have been more fully investigated they will prove to be closely allied to Masai, and therefore to the languages with which the latter is connected. To the best of my belief, our only materials for the study of these tongues are Johnston's and Hobley's vocabularies, and our knowledge of the grammar is very defective. It is clear that there is a resemblance between simple words, particularly those denoting parts of the body (e.g. Eye: Masai, eng-ongu; Nandi, konyak: Suk, koñ; Turkana, ekoñ. Mouth: Masai, en-gutuk; Nandi, kötet;

[1] Mitterrutzner, *Die Dinka Sprache*, Brixen, 1866.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Suk, kōte; Turkana, akotok). I think traces of articles can be detected, and Nandi certainly has many formative elements combined with the essential part of the word, such as *-t* and *-da* to mark the singular, and *k*, *nek*, and *wek* for the plural. When the precise force of these prefixes and affixes is known, the degree of relationship with Masai will be plainer. The verbal forms quoted from Nandi seem very similar to those in Masai. 197

Nandi.	compare	*Masai.*
Aonget ane, I know.		Asuj nanu, I follow.
Inget inye, thou knowest.		Isuj iye, thou followest.
Ingen ni, he knows.		Esuj ninye, he follows.
Kinget acek, we know.		Kisuj iyook, we follow.
Onget akwek, ye know.		Isujusuju 'ndae, you follow.
Inget iceke, they know.		Esuj ninje, they follow.
Maonget, I do not know.		Masuj, I do not follow.
Minget, thou knowest not.		Misuj, thou followest not.
Minget inne, he does not know.		Mesuj, he does not follow.
Mokinget, we do not know.		Mikisuj, we do not follow.
Nenyu mwonget, ye do not know.		Misujusuju, you do not follow.
Menget icek, they do not know.		Mesuj, they do not follow.

In Masai it is not necessary to express the personal pronoun except to avoid ambiguity. Suk, like Masai and Nandi, has *m* as a sign of the negative, but Turkana has *nye*.

It does not appear to me that these languages—Masai, Nandi-Lumbwa, Suk and Turkana—have any clear kinship with Somali and Galla. The coincidences in vocabulary seem explicable as loan words. The grammatical system of all is compatible with the view, if it can be supported by other arguments, that all can be traced back to one stock, that is to say, none of the languages show an essentially different method of forming words and constructing sentences, as does, for instance, the Bantu group. But the similarity consists in the absence of striking differences rather than in points of positive agreement. It may be noted, however, that Somali has an article; that the negative is *ma*; that there are some resemblances with Masai in both the personal and possessive pronouns, and that those verbs which take prefixes offer a general resemblance to the corresponding Masai formations (Somali: *a-qan*, *ta-qan*, *ya-qan*, *na-qan*, *ta-qan-in*, *ya-qan-in*, I know, you know, &c., compare Masai *a-suj*, *i-suj*, *e-suj*, *ki-suj*, *i-sujusuju*, *e-suj*).

It may be of interest as throwing light on the relationships of East African languages to give the numerals of those which have been mentioned, as well as of Ja-luo, Acholi, and Madi. 197 802

1: Hollis G-5 (ca. 1894-1904) 1905

[1] *Endoroj* and *sai*, the latter according to F. Müller, are also used for 9. Of the higher Masai numbers, *Tigidim* (20) seems to be the Galla *digdam*, *artam* (40), and *onom* (50), perhaps the Somali *afartan* and *konton*. *Oson* (30) is the same as the Suk word, and apparently connected with *Semok* (3).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

This list of numbers suggests the following reflections among others: (*a*) Madi is quite different from the other languages, and gives the impression more than Somali of belonging to a different group. (*b*) Somali has lent numbers to Masai, Latuka, Nandi, Turkana, and Suk, but is otherwise distinct. (*c*) The remaining languages had originally separate numerals only up to 5. The higher numerals are expressed in Nandi and Masai by borrowed words or new formations, in the others by compounds which more or less clearly mean 5+1, 5+2, &c. It is remarkable that both in Bari and Dinka, as well as Ja-luo and Acholi, though they do not otherwise correspond in details, 7 and 9 are clearly 5+2 and 5+4, but 8 is not so plainly 5+3. (*d*) The numerals up to 5 show a fair correspondence. 4 is practically the same in all languages, and so is 2, except in Nandi and Suk, where it is replaced by a word which may possibly mean 'pair,' just as *juz* is commonly used for 2 in Arabic dialects. For 5 there are at least two words: *mut* and *imyet* in Nandi and Masai; *kanat* and *ekan* in Bari. Suk uses both. Possibly *wdeds* in Dinka and *abity'* in Ja-luo represent variations of the first root, as may also the *Bu* in the Bari numerals from 6 to 9. 1 shows great variety, which may perhaps be paralleled in other families of languages, for instance, Aryan; but it is strange that there should be so little agreement as to 3. Masai and Turkana use *uni*, Nandi and Suk *somok*. *Jala* in Bari stands alone. Dinka, Ja-luo, and Acholi use some word like *dek*, which perhaps reappears in the Bari for 8, *budōk* (=5+3). The general conclusion to be drawn is that all these languages (except of course Somali and Madi), while forming closer sub-groups among themselves, belong to a common stock, and that the nearest relation of Masai is Latuka, though they have been separated long enough for each to develop special features.

Mr. Hollis's book will appeal chiefly to the scientific world, and perhaps is, with the exception of Sir Harry Johnston and Krapf's works, the most valuable contribution which has yet been made to the anthropology and philology of the British possessions in East Africa. But it will also have, if used as it should be, a very great practical value. Experience gained in many parts of the world has impressed on me the obvious but much neglected truth that if one wishes to be on friendly terms with other races and to avoid misunderstandings, the first essential is to speak their language. There can be no doubt that in East Africa, as elsewhere, natives are delighted

to converse with Europeans, and equally little doubt that disastrous and costly misunderstandings have occurred because no one was capable of giving or receiving explanations when trouble was brewing. Hitherto few of our officers have known any language but a little Swahili, and except for very intrepid spirits the absence or inadequacy of textbooks has made the acquisition of all others a practical impossibility. Of late the languages of Kikuyu and Ukamba have been made more accessible, and the same may now be said of Masai, though Nandi, Suk, and Turkana still await an expositor. It is much to be desired, however, that Government should encourage and somewhat liberally reward proficiency in these languages. In practice, the difficulty is to *insist* on a knowledge of any language but the lingua franca, Swahili, because the others are mostly spoken in comparatively small districts, and it is impossible to restrict an officer's service to one linguistic area, or to require him to learn Masai when he may any day be removed to a Somali-speaking district. But much might be done by offering better recognition, pecuniary and other, of the services rendered by those who are willing to take the trouble of learning the less known tongues. A few hundreds expended in prizes is good economy. There may still be occasions when ability to carry on a discussion in Nandi may avert a punitive expedition costing tens of thousands of pounds.

I agree with the opinion indicated by Mr. Hollis in the last paragraph of his preface—that the only hope for the Masai is that under intelligent guidance they may gradually settle down and adopt a certain measure of civilization. Any plan of leaving them to themselves with their old military and social organization untouched seems to me fraught with grave danger for the prosperity of the tribe as well as for the public peace. But whatever their future may be, I am sure that the author of this book, which I now commend to the attention of officials as well as men of science, has, by putting within the reach of all a knowledge of the language and the customs of the Masai, done much to facilitate a settlement of all questions which may arise between them and our administration.

C. ELIOT.

Nov. 14, 1904.

PART I

EN-GUTUK OO-'L-MAASAE
MASAI GRAMMAR

ALPHABET AND PRONUNCIATION.

Vowels.

194
104

A represents the English *a* in father.
Ē " " *a* in fate.
E " " *e* in benefit.
Ă " " *a* in dare, but longer and more open.
I " " *i* in hit.
Ī " " *i* in ravine.
O " " *o* in not.
Ō " " *o* in mote.
Ô " " *aw* in paw.
U " " *u* in bull.
Ū " " *u* in flute.
Ă " " *u* in but, *o* in tongue.
Ai " " *i* in ice, *ai* in aisle.

Ae is a diphthong similar to *ai*, but formed by a union of the vowels *a* and *e*.

Au represents the English *ow* in how.
Oi " " *oi* in oil.

Ei. These two letters are usually pronounced separately, but they are sometimes slurred over and are scarcely distinguishable from *ei* in eight or *ey* in they.

Whenever *ai* or *oi* are not pronounced as diphthongs, the *i* is marked by a diaeresis, thus, *aï*[1].

Vowels are only doubled when there is a distinct repetition of a single sound. Sometimes, however, sounds which when spoken slowly must be indicated by a double vowel, are contracted into a long single vowel when spoken quickly.

[1] Examples of *aï*, *aï*, and *ae*:—'Ng-aï, the bows; eng-aï, the god; eng-ae, the other.

104

B, *d*, *k* as in English.

G is hard, as in the English word go.

H is used as an aspirate only in a few interjections.

Gh is a *g* followed by an *h* as in log-hut, and resembles the *gh* in Sanskrit. It is not pronounced like the Arabic *ghain*.

J nearly resembles the English *j*, though it is sometimes pronounced like *dy*.

Ch as in church. It, however, is sometimes exchangeable with *j* or *dy*: e. g. ol-chani, the tree, may also be pronounced ol-jani *or* ol-dyani.

Sh, *l*, *m*, *n* as in English.

Ng has two separate sounds, the one hard as in the English word finger, the other as in singer. The latter sound is written *ñg*.

Ny. This sound is similar to *ni* in the English word minion, or *ñ* in Spanish.

P is more explosive than in English.

R is always well pronounced or rolled on the tongue. The Northern Masai sometimes pronounce this sound like a burring *r*.

S, *t*, *w* as in English.

Ẅ. In a few words there appears to be a trace of a *w* which is only partially pronounced even when talking slowly: e. g. ẅōu, come.

Hw represents the sound of *wh* in the Scotch why or wherefore.

B̥, *p̥*, *v̥*, and *w̥* are pronounced in a lazy way by just opening the lips.

Y is a consonant, as in yard.

CHANGES OF LETTERS, AND REMARKS.

The Masai of Nairobi and Naivasha sometimes use *a* for *e*. Thus:

Ang-are (for eng-are), the water.

Before *i*, *aa* changes to an accentuated single *a*. Example:

Á-isuj-i (for aa-isuj-i), I am washed.

A and *o* are occasionally interchangeable. One hears, for instance:

En-aiyasha *or* en-aiposha, the lake.
Afigata *or* ofigota, the plain.
Apa *or* opa, formerly.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

E and *i* when spoken rapidly often sound as if they were the same letter. It is in consequence sometimes difficult to distinguish between such words as a-gel, to choose, and a-gil, to break. 194 104

E is changed to *i* when followed by *a*. Examples:

Ol-figojine, the hyena;	il-figojínia, the hyenas.
A-ure, to fear;	a-t-uri-a, I feared.

The Northern Masai frequently change *i* to *e* when the *i* is joined by a consonant to *a*. Examples:

Aidima *or* aidema, I was able.
Aidipa *or* aidepa, I finished.

When *i* is the first letter of a word it is usually dropped if preceded by another word ending in a vowel.

Aisho 'ndae (for aisho indae), I give you.
Aisho 'l-ayok (for aisho il-ayok), I give the boys.

I is also dropped whenever the sound permits at the beginning of sentences. Thus:

'N-atīnin (for in-atīnin), the stories.
'L-omon (for il-omon), the news.

When *i* is the last letter of a word and is followed by a vowel, *y* is often inserted to join the two vowels together. Examples:

En-gerai-y-ai (for en-gerai ai), my child.

Numerous changes take place in the spelling of verbs which commence with *i*. For a complete list *vide* page 53. It will be sufficient to give here the general rules.

I. The first letter of the verb (*i*) falls out whenever preceded by another *i* and followed by *i*, *l*, *n*, *ñg*, *ny*, *r*, *s*, *u*, *w*, or *y*. Examples:

A-iik, to clean (teeth);	i-'ik, thou cleanest (teeth).
A-ilep, to climb;	i-'lep, thou climbest.
A-inepu, to meet;	i-'nepu, thou meetest.
A-iñgor, to look;	i-'ñgor, thou lookest.
A-inyañg-u, to buy;	i-'nyañg-u, thou buyest.
A-irag, to sleep;	i-'rag, thou sleepest.
A-isēye, to touch;	i-'sēye, thou touchest.
A-iush, to lose;	i-'ush, thou losest.
A-iwō-u, to catch blood in a vessel;	i-'wō-u, thou catchest blood in a vessel.
A-iyam, to marry;	i-'yam, thou marriest.

II. The *i* is changed to *n* whenever it is preceded by another *i* and followed by *d*, *g*, *k*, *t*, and *sh*. As will be shown shortly, the letters

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

194
104

k, *t*, and *sh* cannot follow *n*; these letters therefore change at the same time to *g*, *d*, and *j* respectively. Examples:

A-idim, to be able;	i-ndim, thou art able.
A-igany, to fill;	i-ngany, thou fillest.
A-iken, to count;	i-ngen, thou countest.
A-itobir, to prepare;	i-ndobir, thou preparest.
A-ishop, to wear;	i-njop, thou wearest.

III. The *i* is changed to *m* whenever it is preceded by another *i* and followed by *b*, *p*, *ṗ*, or *ṭ*. It will be shown presently that *p*, *ṗ*, and *ṭ* are interchangeable and cannot follow *n*; these letters are consequently changed at the same time to *b*. Examples:

A-ibelekeny, to turn over;	i-mbelekeny, thou turnest over.
A-ipot, *or* A-iṭot, *or* A-iṭot, to call;	i-mbot, thou callest.

I and *y* are interchangeable when followed by *e* or *a*. The Northern Masai generally use the former, the Southern the latter. Examples:

En-gewárie *or* en-gewárye, the night.
Tolíkio *or* tolíkyo, tell.

Ye sometimes becomes *ie* after *n*. Examples:

A-toníe (for a-tónye), to sit on.
A-iminíe (for a-imínye), to lose.

O becomes *u* when joined by a consonant to *a*. Examples:

A-iko, to do;	a-iku-na, I did.
A-iñgor, to look;	a-iñgur-a, I looked.

The Northern Masai sometimes pronounce *u* like *o*, or like the German ö. Examples:

A-idor (for a-idur), to move. A-söj (for a-suj), to follow.

B and *k* are sometimes interchangeable. Examples:

En-garikōbo *or* en-garibōbo, the mongoose.
Kinōkop *or* Kinōbop, a district near Naivasha known to Europeans as Kinangop.

Gh and *k* are interchangeable. The former sound is more used by the Southern Masai than by the Northern, and the women of Nairobi and Naivasha employ it more frequently than the men.

Both *gh* and *k* change to *g* when following *n*:

Enna-kerai *or* enna-gherai, this child; en-gerai, the child.
Ol-kujita *or* en-gujita, the blade of grass.
A-iko *or* a-igho, to do; i-ngo, thou dost; i-ngōko *or* i-ngōgho, you do.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

P, ꝑ, and ꝓ are interchangeable. The Northern Masai generally use *p*, the Southern ꝑ or ꝓ. Examples: 194 104

Ol-poros, ol-ꝑoror, *or* ol-ꝓoror, the generation, age.
Pôkin, ꝑôkin, *or* ꝓôkin, all.

K is occasionally interchangeable with *p*, ꝑ, and ꝓ.

For instance, ol-pukuri (*or* ol-ꝑukuri *or* ol-ꝓukuri), the (large) gourd, is also sometimes expressed ol-kupuri (pl. il-pukurto *or* il-kupurto).

Before *p*, ꝑ, and ꝓ, *n* becomes *m*, and the *p*, ꝑ, or ꝓ changes to *b*. Examples:

Ol-pukuri (*or* ol-ꝑukuri *or* ol-ꝓukuri), the (large) gourd.
Em-bukuri, the (small) gourd.
I-mbiri, thou fliest, (from a-ipiri, to fly).

When *k* is the last letter of a verb, the root undergoes various changes in the formation of the past tense. For a complete list *vide* p. 56.

It will be sufficient to state here that the *k* is dropped unless the letter which precedes it is *i* or *u*. Examples:

A-lak, to unfasten; a-ta-la-a, I unfastened.
A-mok, to become accustomed to; a-ta-mo-o, I became accustomed to.

But A-rik, to take (a person); a-to-rik-o, I took (a person).
A-nunuk, to fold; a-tu-nunuk-o, I folded.

The Northern Masai also frequently omit *k* both at the end and in the body of a word. Examples:

Il-tufiganа (for il-tufiganak), the men.
Il-figanaiyo (for il-figanaiyok), the fruit.
Kitua (for kituak), big (pl.).
A-ikweniye (for a-ikwenikye), to laugh at.
Arai (for araki), or.

Sh can only be used after a vowel or at the commencement of a word. Examples:

A-isho, to give.
Shoo, the grazing ground.
Elle-shani *or* enna-shani, this tree.
Le-shoruet, na-shoruet, O (the) friend!

After *l*, *sh* becomes *ch*, and after *n*, *j*. Examples:

I-njo, thou givest.
Ol-chani *or* en-jani, the tree.
Ol-choruet *or* en-joruet, the friend.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

194 *Ch* can only be used after *l*.

104 *J* occasionally changes to *t* in the formation of past tenses of verbs. Examples:

A-ji-ōyo, not to return; a-ti-ōyo, I have not returned.
A-j-ōki, to say to; a-ti-aka, I said to.

The *l* of the masculine article (*vide* p. 10) is dropped before words beginning with *e*, *i*, *r*, *s*, and *y*. Examples:

O-engat (for ol-engat), the male wildebeest.
O-iarata (for ol-iarata), the valley.
O-rorei (for ol-rorei), the word.
O-sarge (for ol-sarge), the blood.
O-yōyai (for ol-yōyai), the porcupine.

It has been stated that before *r* and *s* the *l* of the masculine article is assimilated as in Arabic, and that the double consonant is heard. This is, however, not the case. When the syllables are spoken separately, the singular article is clearly pronounced *o*, not *or* or *os*; and in the plural the article drops out altogether, unless it follows a word ending in a consonant, when an *i* is used, not *ir* or *is*.

Gh, *k*, *t*, and *sh* change to *g*, *g*, *d*, and *j* respectively after *n*. Examples:

En-gīyo (for en-ghīyo), the daughter.
'N-gīshu (for 'n-kīshu), the cattle.
I-ngilikwan-u (for i-nkilikwan-u), ask!
En-dim (for en-tim), the wood.
I-ndash-o (for i-ntash-o), stand!
En-jōni (for en-shōni), the piece of hide.
I-njop-o (for i-nshop-o), wear!

The *n* of the feminine article (*vide* p. 10) falls out before nouns commencing with one of the following letters: *e*, *i*, *m*, *ñg*, *ny*, *r*, *s*, *u*, *w*, and *y*. Examples:

E-engat (for en-engat), the female wildebeest.
E-ilata (for en-ilata), the oil.
E-mōti (for en-mōti), the cooking pot.
E-ñgorōyōni (for en-ñgorōyōni), the woman.
E-nyalata (for en-nyalata), the cud.
E-rug (for en-rug), the hump.
E-siangiki (for en-siangiki), the young woman.
E-ūlūlu (for en-ūlūlu), the pit.
E-wargas (for en-wargas), the female Grant's gazelle.
E-yä (for en-yä), the male.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Before *b*, *n* becomes *m*, and before *p*, *ṭ*, or *ṭ*, *n* becomes *m*, and the *p*, *ṭ*, or *ṭ* changes to *b*: 194 104

Em-bae (for en-bae), the arrow.
I-mbelekeny-a (for i-nbelekeny-a), turn over!
Em-ḃoût (for en-poût, *or* en-ṭoût, *or* en-ṭoût), the trench.
I-mḃot-o (for i-npot-o, *or* i-nṭot-o, *or* i-nṭot-o), call!

Before substantives commencing with *l*, the *n* of the feminine article is assimilated, the double consonant being distinctly pronounced. Examples:

El-lusye (for en-lusye), the hole in the wall.
El-loñgo (for en-loñgo), the shield.

R must always be preceded by a vowel or another *r*. Examples:

Ol-orora, the crowd. 'N-gera, the children. 'N-gurra, the sheep.

R is sometimes omitted in the body of a noun to form diminutives, or is changed to *l* or *y*. Examples:

E-ñgorōyōni, the woman;	e-ñgooyōni, the female (used in a deprecatory sense).
En-gerai, the child;	en-gelai, the little child.
Ol-ōwaru, the beast of prey;	eng-ōwayu, the small beast of prey.

U and *w*, when followed by a vowel, are interchangeable, the former being used by the Northern, the latter by the Southern Masai. Examples:

Atua *or* atwa, I died *or* within.
Ol-móruo *or* ol-morwo, the old man.

Hw is occasionally substituted for *u* or *w*, otherwise it is not used. Examples:

E-hwēji (for e-wēji), the place.
E-hwaso (for e-uaso), the river.
Ol-osōhwan (for ol-osōwan), the buffalo.

THE ACCENT.

In most words all syllables are accentuated alike, a very slight stress being perhaps laid on the penultimate. This is more particularly noticeable when the last syllable but one contains a long vowel, e. g. ol-ayóni, 'n-joníto. 194

Should the accent fall on any other syllable but the penultimate, it is specially marked, thus: ol-móruo, kewária.

These words are sometimes, and probably correctly, pronounced ol-morwo, kewarye; but owing possibly to the difficulty of making

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

194 *w* or *y* follow *r*, without stopping in the middle of the word, the *w* and *y* are generally changed to *u* and *i*.

194 193 The accent, such as it is, does not fall on the penultimate in the following cases:

I. When the subject of a verb is the first person plural, the last syllable is always slightly accentuated. Examples:

Ki-s�j, we follow (him). Ki-tu-suj-á, we have followed (him).

Ki-suj means either, thou followest me, *or* he *or* they follow thee; and ki-tu-suj-a, thou hast followed me, *or* he *or* they have followed thee.

II. Whenever one of two *a*'s falls out before *i* in verbs commencing with the latter letter, the remaining *a* is rather more strongly sounded than the other syllables:

Á-isuj-a (for aa-isuj-a), I washed thee, *or* he *or* they washed me.
E-figas á-isuj (for e-figas aa-isuj), they begin to wash (him).
E-iyōlo á-isuj-a (for e-iyōlo aa-isuj-a), they know how to wash (him).

Some confusion is at times caused by the subject or object not being expressed when it is a personal pronoun. For instance, the woman said to him, *and* he said to the woman, are both translated by e-ti-aka e-figorōyōni. The difference is marked by raising or lowering the voice at the end of the substantive, and the following rule is invariable.

If the subject is the substantive, the voice is raised as in asking a question; if the subject is the pronoun, the voice is lowered as when finishing a sentence:

Thus: E-ti-aka e-figorōyō^{ni} means, the woman said to him.
Whilst, E-ti-aka e-figorōyō$_{ni}$ means, he, she, *or* they said to the woman.

In the same way the difference between, for instance, I followed thee, *and* he, she, *or* they followed me, is marked by raising or lowering the voice at the end of the word, e.g.:

Aa^{suj}, he, she, *or* they follow me. Aa$_{suj}$, I follow thee.
Aa-tu-suj^{a}, he, she, *or* they followed me. Aa-tu-suj-$_{a}$, I followed thee.
Á-isuj-^{a}, he, she, *or* they washed me. Á-isuj-$_{a}$, I washed thee.

The same forms are used for the simple relative, whether it is employed as the subject or the object of the verb. When the

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

relative is the subject, however, the voice is raised at the end of the verb; when the object, it is lowered. 194 193*

Ol-tufigani ô-tu-suj-$_A$, the man who followed him.
Ol-tufigani ô-tu-suj-$_B$, the man whom he followed.

GENDER AND NUMBER.

The Masai language distinguishes by the article two genders or classes answering approximately to masculine and feminine. As a general rule the former signifies big, strong, and masculine; whilst the latter may be taken to mean something of a weak or feminine nature, and also of a diminutive or affectionate character. There are, it is true, exceptions to this rule, for whereas ol-origha, a small three-legged stool, il-kiyo, tears, and ol-kimôjino, the finger or toe, are masculine, eng-aina, the arm or hand, en-geju, the leg or foot, e-muny, a rhinoceros, and en-gukuu or en-dyemasi, a devil or fantastic wild beast, which takes the place of the dragon in English fairy tales, are feminine. But on the whole it will be found to be correct, and the following list of examples will help to prove the theory: 193*

Masculine.	Feminine.
Ol-tufigani, the man.	En-dufigani, the little man.
Ol-ayôni, the boy.	Eng-ayôni, the little boy.
Ol-dia, the dog.	En-dia, the bitch *or* pup.
O-sanja, the male lover.	E-sanja, the female lover.
Ol-karsia, the rich man.	En-garsia, the rich woman.
Ol-sabe, the bull calf.	Eng-sabe, the cow calf.
Ol-alem, the sword.	Eng-alem, the knife.
Il-kujit, the long, coarse grass.	'N-gujit, the short grass *or* turf.
Ol-kerr, the ram.	En-gerr, the ewe.
Ol-aputani, the father *or* son-in-law.	Eng-aputani, the mother *or* daughter-in-law.

One word, e-wtji, the place, although to all appearances feminine, might perhaps be classed by itself, as the demonstrative pronoun and some other parts of speech assume unusual forms when agreeing with it.

There are two numbers, singular and plural, which are marked by variations in the termination of nouns. In verbs and pronouns there are some indications of reduplication being used to indicate plurality. Nouns are not susceptible to any inflexions to mark the cases, or, with few exceptions, to mark the gender. In the following words the spelling of the nouns is slightly changed to denote something of a weak or diminutive nature.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193

Masculine.	Feminine.
Ol-oiboni, the medicine-man.	En-aiboni, the medicine.
Ol-oirien, the wild olive-tree.	Eng-oirien, the small wild olive-tree.
Ol-ówaru, the beast of prey, the snatcher.	Eng-ówayu, the small beast of prey.
Ol-ówaru, the man with a piece cut off the ear.	E-wara, the ox with a piece cut off the ear. E-waya, the child with a piece cut off the ear.
Ol-alashe, the brother.	Eng-anashe[1], the sister.
Ol-ioo, the man.	E-yó, the male (used in a deprecatory sense).
Ol-arus, the black and white bull.	Eng-ayus, the black and white cow.

There are also a few instances of a diminutive form being made from feminine words. This is done by omitting or altering a consonant in the body of the noun.

E-ngurówtai, the woman.	E-ngoyówai, the female (used in a deprecatory sense).
En-gerai, the child.	En-gulai[2], the small child.
Enna-iolgo, this shield.	Enna-olgo[3], this small or bad shield.
Enna-tito, this girl.	Enna-ito[4], this little girl.

THE ARTICLE.

The masculine article is *ol* in the singular, *il* in the plural; the feminine article is *en* in the singular[5], *in* in the plural. When preceded by a word ending in a vowel, or at the commencement of sentences if followed by a word beginning with a vowel, the *i* of the plural article is dropped. The *i* of the plural feminine article is also dropped at the commencement of sentences, when followed by a word beginning with a consonant. It is possibly partly due to this omission

[1] In this word the change of *i* to *a* to distinguish between the masculine and feminine genders appears to go beyond the article.

[2] This form is rarely used except in the vocative case.

[3] These words are not employed with the article in the nominative case.

[4] There is a tendency amongst Bantu natives when talking Masai to omit the *e* of the singular feminine article, and to say, for instance, ndito for en-dito, ngare for eng-are. This mispronunciation of the word is often imitated by Europeans.

1: Hollis. G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

of the vowel in certain cases that the masculine plural form is sometimes, but incorrectly, written *el*, which sound is, however, never used in this sense.

The article is separable from the substantive, and in certain cases is not employed; but whenever it is joined to its noun, the two words are spoken as one, and were it to be omitted, the speaker would not be understood. The various changes of letters given on pages 6 and 7 take effect at the beginning of a word after the consonant of the article.

Before *e*, *i*, *r*, *s*, and *y*, the *l* of the masculine article is dropped: e.g. o-engat, the (male) wildebeest; o-inoti, the foster-son; o-rēgie, the (broad) path; o-soit, the (large) stone; o-yōyai, the (male) porcupine.

When the masculine article is prefixed to a word beginning with *sh*, this sound changes to *ch*: e.g. elle-shōkut, this herdsman; el-chōkut, the herdsman.

The *n* of the feminine article falls out before nouns commencing with *e*, *i*, *m*, *ñg*, *ny*, *r*, *s*, *u*, *w*, and *y*: e.g. e-engat, the (female) wildebeest; e-inoti, the foster-daughter; e-mootyan, the quiver; e-ñgwēsi, the wild animal; e-nyawa, the udder; e-rēgie, the (narrow) path; e-soit, the (small) stone; e-uaso, the river; e-wēji, the place; e-yōyai, the (female) porcupine.

When the first letter of the substantive is *a* or *o*, the feminine article generally becomes *eng*: e.g. eng-aji, the hut; eng-oñgu, the eye. There are, however, some exceptions, for instance: en-amughe, the sandal; en-oret, the palate. In one or two cases the *g* may be added or not as the speaker wishes: e.g. en-atīni *or* eng-atīni, the story. In a few words the *n* is dropped: e.g. e-or, the dry plot of land; e-oret, the sign; e-arai, the murder.

The feminine article becomes *eñg* before substantives commencing with *go*: e.g. eñg-gōlon, the power; eñg-goro, the anger; eñg-gōgoñgi, the evil.

With substantives commencing with *l* the *n* of the feminine article is assimilated, the double consonant being distinctly pronounced: e.g. el-lughunya, the head; el-lejare, the lie.

Before *b* the *n* becomes *m*, and also before *p*, *ṭ*, and *ṭ̣*, these letters at the same time changing to *b̥*: e.g. em-bene, the bag; em-bata, the bank; em-b̥olos, the loin, the middle (enna-polos, *or* enna-ṭolos, *or* enna-ṭ̣olos, this loin); em-b̥idiñg, the nape of the neck (enna-pidiñg, *or* enna-ṭidiñg, *or* enna-ṭ̣idiñg, this nape of the neck).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 Substantives commencing with *gh*, *k*, *t*, and *sh*, change these letters when following the feminine article to *g*, *g*, *d*, and *j* respectively; e.g. enna-ghiyo, this damsel; en-giyo, the damsel; kitok, big; en-gitok, the big woman, the wife; enna-tomes, this camel; en-domes, the camel; enna-shōkut, this herdswoman; en-jōkut, the herdswoman.

Although as a rule a noun is unintelligible without the article, the place of the article can be taken by a demonstrative pronoun; by the indefinite pronouns likae, &c., other, and pōki, each; by the interrogative pronoun kal, &c., which?; and by the numeral ōbo, &c., one. Examples:

Ledo-tuñgani, that man. Likae-tuñgani, another man.
Pōki-tuñgani, each man. Kal-tuñgani? which man?
Ōbo-tuñgani, one man.

The other cases in which the article is not used are as follows:

1. When the meaning is motion to *or* from, *or* resting at, a kraal *or* hut (similar to our phrases to *or* from town, *or* at home, or the German nach *or* zu Hause), no possessive case being used. Examples:

A-lo añg, I am going to the kraal (lit. I go kraal).
A-iñgu-a añg, I come from the kraal (lit. I leave thither kraal).
A-tii añg, I am in the kraal (lit. I am there kraal).

But

A-lo eng-añg ai, I am going to my kraal.
A-iñgu-a eng-añg ai, I come from my kraal.
A-tii eng-añg e-yōyo, I am in mother's kraal.

2. When the time of day is expressed in such sentences as, 'When it became evening,' Ore p' e-akū teipa (not en-deipa), and 'Now in the morning he went away,' Ore tadēkenya n-e-lo (not en-dadēkenya).

3. When the substantive is used in a general or abstract sense. Examples:

A-dol tōki (not en-dōki).	I see something.
Mira shata (not ol-ohata) ōmut en-gima.	You are not firewood that the fire burns (Proverb No. 62).
Menyanyuk puan o kīa (not em-puan o en-gīa).	Life and death are not alike (Proverb No. 47).
Erisyo laikin o kīa (not 'l-laikin o en-gīa).	Defeat and death are similar (Proverb No. 14).
Ol-ōbore ayok (not 'l-ayok).	He who has many sons (Proverb No. 64).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

4. When the substantive is used as an adverb or in an adverbial sense. Examples: 193*

A-tii keper (not en-geper).	I am above.
A-lo wēji (not e-wēji).	I am going somewhere.
E-tii atwa (not en-atwa).	He is within.

5. In the singular of a few compound words. Examples:

Kutuk-aji, the door (lit. mouth-hut).
Tasat-aina, the man with the withered arm (lit. thin-arm).

In the plural, however, the article is always employed. Example:

'N-gutukie-co-'ng-ajijik, the doors (lit. the-mouths-of-the-huts).

A few substantives never take the article. Such are:

Ñgania, so-and-so, such-a-one.
Añgata, the plain.
Kulle (in compound words, alle), milk.
Shoo, the grazing ground.
Kishōmi[1], the gate.
Kishwaini[2], the coast (Mombasa).
Kitala, the refuge.

The words *father* and *mother* are also used without the article. Papa and yēyo[3] are employed when talking of one's own parents, and manye and ñgoto when referring to other people's.

The article, as has been stated, must in ordinary cases be prefixed to the noun; and an adjective, when used as an attribute, follows the noun without the article. Thus:

Ol-tuñgani kitok, the big man.
'N-dōkitin kumok, the many things.

It is, however, sometimes permissible to insert the adjective between the article and the substantive, and one may say:

Ol-kitok-tuñgani, the big man.
'N-gumok-tōkitin, the many things.

The article is frequently used in compound words without any substantive, and practically takes the place of affixes used in Aryan languages to form derivatives.

[1] En-gishōmi, i.e. kishōmi preceded by the article, means the clan or family.

[2] Kishwaini is doubtless a corruption of Kisauni, the Swahili name for Frere Town.

[3] Mame is also occasionally used for mother.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Examples:

*193

Ol-le-'ng-aina (the-of-the-hand [1]), the elephant.
Ol-lo-'l-masi (the-of-the-mane), the lion.
Ol-le-'l-lughunya (the-of-the-head), the brain.
Ol-le-yēyo / En-e-yēyo (the-of-mother), the brother. / the sister.
En-e-'n-dambu (the-of-the-dappled-grey), the dappled grey's calf.
Ki-ndér ol-le-'modai, pe ki-ndō-kí ol-le-'figēno (we begin the-of-the-foolishness, and we do again the-of-the-wisdom), we become wise by experience (Proverb No. 29).
E-nyanyuk ol-o-ipot-ōki o ol-ō-ēno openy (they resemble the-who-was-called and the-who-came-alone), there is no difference between the man who was called and he who came alone (Proverb No. 8).
Ol-le-'figae? (the-of-who), whose?
Ol-le-imyet (the-of-five), the fifth.

CASES.

Nouns in Masai are not susceptible of any inflexions to mark the cases; but the article has special forms to denote the nominative, vocative, and genitive. The accusative case is the same as the nominative. A local case which also sometimes affects the article is equivalent to the English prepositions *at, by, for, from, in, off, on, out, to,* and *with.*

The Vocative.

The vocative case only affects the article. The masculine article becomes, in both the singular and plural, *li* before substantives commencing with *a* and *o*, and *le* before other letters.

Li-oiboni! O (the) medicine-man!
Le-soit! O (the) stone!
Le-lewa! O (the) men!

The vocative of the feminine article is *na* in both numbers.

Na-kerai! O (the) child!
Na-kera! O (the) children!
Na-Aï! O (the) God!

When followed by the possessive pronoun the article rarely takes the vocative form. Example:

Ol-oiboni lai! O (the) my medicine-man!

It is, however, permissible to say Li-oiboni lai!
It is also possible to use the nominative for the vocative when there

[1] Cp. the Sanskrit hasta, a hand; hastin (?), an elephant.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

is no possessive pronoun, especially if the substantive is not the first word in the sentence: 193*

Aaŏmon, eng-Al! I pray to thee, O God!

In the word tito (ol-tito, the son; en-dito, the daughter, or the girl), the first *t* is dropped in the feminine vocative case:

Na-ito! O (the) girl!

In one or two rare instances, when the feminine article is *eng*, the vocative case is expressed by *k*:

K-ŏgho! O (the) grandmother! (eng-ŏgho, the grandmother).
K-onyek! O (the) eyes! ('ng-onyek, the eyes).

The commonest way of addressing an equal is by the use of the word E-iro in the masculine and Na-iro in the feminine. This can best be translated by Friend. 'L-oiye and Na-toiye, *or* Na-figorŏyok, are used in the plural. 193* 576

A superior is addressed by the words Le-paiyan! O (the elder)! Le-móruo! O (the) old man! *or* Papa-i! Father-thou! if a man; and by Na-kitok! O (the) big woman! *or* Yŏyo! mother! if a woman.

The Genitive.

There are three methods of forming the genitive case in Masai. 193*

The first is employed when the governed word is a substantive (not preceded by the article), a pronoun, or other part of speech; the other two are in connexion with the article.

1. In the first or regular form the word governed follows the governing substantive, being joined to it by the particle *le*, if the nominative is masculine (*li* before *a* and *o*), and *e*, if feminine. This particle does not vary in number. Examples:

Ol-alem le-papa, father's sword.
Eng-aji e-yŏyo, mother's hut.
'L-alema le-papa, father's swords.
'Ng-ajijik e-yŏyo, mother's huts.
Ol-chore le-pôkin, the friend of all.
E-mŏti e-kulle, the milk-pot.
'L-omon li-opa, the news of formerly (i. e. of former times).
'L-omon li-akenya, the news of presently (i. e. of the future).

2. The possessive case in conjunction with the article is usually formed in the following manner:

The substantive in the genitive case follows the governing word, the article of the former drops its vowel, and a particle is interposed

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 between the nominative and genitive. The form of the particle is determined by both nouns, but it is in the same number as the governed noun. When the nominative and genitive are both masculine, *lo* is used as the possessive sign in the singular, and *loo* in the plural; when the nominative is feminine and the genitive masculine, *o* is employed in the singular, and *oo* in the plural; when both nouns are feminine, the singular possessive particle is *e*, and the plural *oo*; and when the nominative is masculine and the genitive feminine, *lo* is the singular form, and *loo* the plural.

There appears to be some connexion between this form of the genitive and the conjunction *and*, which is *o* when followed by a singular substantive, and *oo* when followed by a plural.

In the following table the similarity between the two forms is shown:

The bone of the boy, Ol-oïto lo-'l-ayōni.	The bone and the boy, Ol-oïto o ol-ayōni.
The bones of the boy, 'L-oik lo-'l-ayōni.	The bones and the boy, 'L-oik o ol-ayōni.
The bone of the boys, Ol-oïto loo-'l-ayok.	The bone and the boys, Ol-oïto oo 'l-ayok.
The bones of the boys, 'L-oik loo-'l-ayok.	The bones and the boys, 'L-oik oo 'l-ayok.
The thing of the boy, En-dōki o-'l-ayōni.	The thing and the boy, En-dōki o ol-ayōni.
The things of the boy, 'N-dōkitin o-'l-ayōni.	The things and the boy, 'N-dōkitin o ol-ayōni.
The thing of the boys, En-dōki oo-'l-ayok.	The thing and the boys, En-doki oo 'l-ayok.
The things of the boys, 'N-dōkitin oo-'l-ayok.	The things and the boys, 'N-dōkitin oo 'l-ayok.
The thing of the child, En-dōki e-'n-gerai.	The thing and the child, En-dōki o en-gerai.
The things of the child, 'N-dōkitin e-'n-gerai.	The things and the child, 'N-dōkitin o en-gerai.
The thing of the children, En-dōki oo-'n-gera.	The thing and the children, En-dōki oo 'n-gera.
The things of the children, 'N-dōkitin oo-'n-gera.	The things and the children, 'N-dōkitin oo 'n-gera.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

The bone of the child,
Ol-oïto le-'n-gerai.
The bones of the child,
'L-oïk le-'n-gerai.
The bone of the children,
Ol-oïto loo-'n-gera.
The bones of the children,
'L-oik loo-'n-gera.

The bone and the child,
Ol-oïto o en-gerai.
The bones and the child,
'L-oik o en-gerai.
The bone and the children,
Ol-oïto oo 'n-gera.
The bones and the children,
'L-oik oo 'n-gera.

3. The second way of forming the possessive case in conjunction with the article is to place the governing word after the governed, the article of the former being at the same time twice expressed, once before the genitive particle, and once connected with its substantive. This form is mostly used when it is wished to put special stress on the genitive. If no ambiguity is likely to occur, the governing word may be omitted, the first article, however, being retained.

The following example is taken from the story of the ostrich chicks: N-ē-urē-yu 'l-aigwenak pôkin ē-jo 'n-e-'sidai 'n-gera, -ē-jo 'n-o-'l-ſgatuny. And the counsellors all fear to say the-of-the-ostrich the children, and they say the-of-the-lion. [539]

The Local Case.

There are two ways of forming the local case, which is used where a preposition is required in English.

The first is employed with substantives not joined to the article, and with pronouns and other parts of speech; the second is used in connexion with the article.

1. The regular method of forming the local case is by prefixing the particle *te* (*ti* before words commencing with *a* or *o*) to the governed word. This particle is invariable:

E-ita-u-o te-kulle, he took it out of the milk.
E-ton ti-aulo (he is sitting down in outside-the-kraal) } he is sitting down outside.
or
E-ton te-boo (he is sitting down in outside-the-hut)
E-tē-niſg-o ti-atwa a-jo e-tu-puk-u-o eſg-gōlon te-ninye, he felt in himself that his strength departed from him.
E-ti-aka ōbo te-lello a-jo, one of (*or* from) these (men) told him that.

2. The particle indicating the local case used in conjunction with the article is formed like the genitive masculine particle, the only difference being that *t* is employed for *l*.

In other words, *o* is added to *t* when the word governed is masculine singular, *e* when feminine singular, and *oo* when masculine or feminine plural.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193

Examples:

E-ton to-'l-ayōni, he sits by the boy.
Te-'m-bolos e-'n-gewárie, in the middle of the night.
E-ta-do-iye too-'soito, he fell on the stones.
E-pwōnu too-'ng-álōli pôkin, they come from all sides.

SUBSTANTIVES.

Many substantives are derived from verbal roots. The most usual method of forming nouns from verbs is by prefixing *oi*, *a*, or *k* to the root, if the latter commences with any letter except *i*, and by prefixing *a* or *k* if it begins with *i*. Various letters or syllables are also generally added, *ni* being frequently affixed when the sense is active, *t* or *ti* when passive. Examples:

Ol-oiboni, the medicine-man, derived from -bon, to make medicine.
Ol-areshōni, the trapper, derived from -resh, to trap.
Ol-kuret, the coward, derived from -ure, to fear.
Ol-aidetidetani, the dreamer or prophet, derived from -idetidet, to dream.
En-gias, the work, derived from -ias, to do.
En-girukoto, the reply, derived from -iruk, to reply.

Substantives are also sometimes formed by simply affixing letters to the verbal root. Examples:

Em-barnore, the shaving,
Ol-barnoti, the young warrior, i. e. the shaved one[1],
Em-barnat, the stone house,
} derived from -barn, to shave.
El-lejare, the lie, derived from -lej, to deceive.
E-sidanishu, beauty, derived from -sidanu, to be beautiful.
En-jiñgata, the entrance, derived from -jiñg, to enter.

The Plural of Substantives.

Perhaps the most complicated part of the Masai language is the formation of the plural of substantives.

For convenience sake substantives are divided into six classes in this grammar. The two largest groups are those substantives which form the plural by affixing *i* or *n* to the singular. The general rule is that *i* is added to singulars terminating in a consonant, and *n* to those terminating in a vowel. The third class consists of words which add *k* to the singular, or change the last two or three letters into *k*, *ak*, *ek*, &c. In the fourth and fifth classes the singular appears to be formed from the plural by affixing *i* or *ni*, and *a* or *o*. In the sixth class there is no change.

[1] The shaver or barber is Ol-abarnōni.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

The plural of papa and menye, father, and of yēyo and ñgoto, mother, are formed by prefixing *loo* and *noo* to the singular.

Loopapa lainei, my fathers.	Nooyēyo ainei, my mothers.
Loomenye, the fathers.	Noonñgoto, the mothers.

Class I.

Examples of substantives which end in a consonant and form their plural by affixing *i* to the singular:

Singular.	Plural.	English.
E-mulug	I-mulugi[1]	The hollowed out place.
Ol-kuruk	Il-kuruki	The crow.
En-gijipuruk	In-gijipuruki	The reed-buck.
En-diol	In-dioli	The gun.
E-sipil	I-sipili	The blade, barb.
En-dim	In-dimi	The wood.
Ol-kurum	Il-kurumi	The lower part of the back.
Ol-osōwan	Il-osōwani	The buffalo.
Eñg-gōlon	Iñg-gōloni	The power, authority.
Eng-olonñg	Ing-olonñgi	The day, sun.
En-gidonñg	In-gidonñgi	The quiver, honey-box, medicine-man's horn.
En-dasing	In-dasingi	The sneeze.
E-muny	I-munyi	The rhinoceros.
Ol-oip	Il-oipi	The shade, shadow, picture, or photograph.
En-dap	In-dapi	The palm of the hand.
Ol-poror	Il-porori	The generation, age.
Ol-korikor	Il-korikori	The hartebeest.
Em-bolos	Im-bolosi	The loin, the middle.
Ol-perangash	Il-perangashi	The upper arm.
En-dabash	In-dabashi	The bedstead (lit. the breadth).
E-makat	I-makati	The salt.

Exceptions—Class I.

A.

Some substantives ending in a consonant, and especially those which have *s* as the final letter, form their plural by adding *in* to the singular.

[1] The plural article has been purposely given in its full form, though in many places the vowel would fall out in conversation; thus, the hollows would be pronounced Mulugi, not I-mulugi, unless the word preceding it terminated in a consonant.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 Examples:

Singular.	Plural.	English.
Ol-wargas	Il-wargasin	The Grant's gazelle.
Ol-kaldes	Il-kaldesin	The ape.
En-domes	Il-domesin	The camel.
En-gias	In-giasin	The work.
Ol-kinos	Il-kinosin	The crocodile.
Ol-kinyañg	Il-kinyañgin	
E-semingor	I-semingorin	The serval cat.
En-derash	In-derashin	The jackal.
O-engat	I-engatin	The wildebeest.
E-ruat	I-ruatin	The bed.
Ol-kirisiet	Il-kirisietin	The hammer.

B.

Many substantives which end in *t* form their plural by adding *a* to the singular. In the following lists examples are given of substantives which form their plurals regularly by adding *i* and irregularly by adding *a*.

Substantives forming their plural by adding *i*:

Eng-anyit	Ing-anyiti	The honour, punishment.
Em-barnat	Im-barnati	The stone house.
Em-boūt [1]	Im-boūti	The trench.
Ol-chōkut	Il-chōkuti	The herdsman.
En-giañget	In-giañgeti	The breath.
En-gininyeret	In-gininyereti	The drop of perspiration.
En-gīoget	In-gīogeti	The hiccough.
En-giroget	In-girogeti	The cough.
Ol-kerenget	Il-kerengeti	The fort, trap.
Ol-kōkwet	Il-kōkweti	The furnace.
Ol-kulet	Il-kuleti	The bladder.
Ol-kuret	Il-kureti	The coward.
E-makat	I-makati	The salt.
O-sumbat	I-sumbati	The invalid.
Ol-tasat	Il-tasati	The old (thin) man.

Substantives forming their plural by adding *a*:

En-aret	In-areta	The weapon.
Ol-choruet [2]	Il-chorueta	The friend.
Ol-kitepet	Il-kitepeta	The top edge of the ear.
Ol-kigharet	Il-kighareta	The thorn.
Ol-lañget	Il-lañgeta	The bridge.
Ol-lepet	Il-lepeta	The armlet.
E-nyirt	I-nyirta	The gum in front of the mouth.
Ol-oreshet	Il-oreshets	The calf of the leg.

[1] This word is now used to mean boat. [2] Also Ol-chore, Il-chereta.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

Singular.	Plural.	English.
E-oret	I-oreta	The sign.
E-repilet	I-repileta	The axe.
O-reiet	I-reieta	The river.
E-remet	I-remeta	The spear.
E-seret	I-sereta	The chalk painted on the body.
E-sisinet	I-sisineta	The bundle of grass, mattress.
Ol-tulet	Il-tuleta	The bottle-shaped gourd.

A few substantives which end in *t* also form their plural by adding *o* to the singular, and in one instance *it* is changed to *o*:

En-derit	In-derito	The dust.
E-murt	I-murto	The neck.
O-soit	I-soito	The stone.
En-dōlit	In-dōlo	The marrow.

C.

Some substantives other than those ending in *t* form their plural by adding *a* or *o*. Examples:

Ol-alem	Il-alema	The sword.
En-gerr	In-gerra	The sheep.
E-rug	I-ruga	The hump.
Ol-ñgejep	Il-ñgejepa	The tongue.
Ol-bitir	Il-bitiro	The pig.
Ol-kekun	Il-kekuno	The bank of a river.
E-ñgony	I-ñgonyo	The artery.
Ol-ñgatuny	Il-ñgatunyo	The lion
Ol-gos	Il-goso	The throat.

CLASS II.

Examples of substantives which terminate in a vowel and form their plural by adding *n* to the singular:

O-singa	I-singan	The slave.
En-gurma	In-gurman	The plantation, flour.
E-munge	I-mungen	The anklet.
Ol-orere	Il-oreren	The people, tribe.
Ol-ari	Il-arin	The year.
E-siangiki	I-siangikin	The young woman.
Ol-toilo	Il-toilon	The voice.
Ol-oshо	Il-oshon	The country, tribe.
Ol-arau	Il-araun	The broom.
Ol-kumbau	Il-kumbaun	The tobacco.

A number of animals and a few birds also belong to this class and

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 form their plural in the regular manner. The following list gives some instances:

Singular.	Plural.	English.
Em-bárie	Im-bárien	The wild cat.
Em-barta	Im-bartan	The horse.
Ol-bua	Il-buan	The oribi.
En-dua	In-duan	The frog[1].
En-gitōjo	In-gitōjon	The hare.
En-gōmani	In-gōmanin	The Kirk's gazelle.
En-gurlee	In-gurleen	The partridge.
Ol-kipulege	Il-kipulegen	The water-buck.
Ol-kondi	Il-kondin	The hartebeest.
Ol-koroi	Il-koroin	The Colobus monkey.
Ol-maalo	Il-maalon	The greater kudu.
Ol-makau	Il-makaun[2]	The hippopotamus.
E-nyau	I-nyaun	The cat.
Ol-oilii	Il-oiliin	The Thomson's gazelle.
E-rongo	I-rongon	The reed-buck.
O-yōyai	I-yōyain	The porcupine.

EXCEPTIONS—CLASS II.

A.

Some substantives which terminate in a vowel (other than *i*) form their plural by adding *i* to the singular, or more frequently still *ni*, whilst a few add *in*.

Examples of substantives which terminate in a vowel and add *i*:

O-sírua	I-síruai	The eland antelope.
E-rēgie	I-rēgiei	The path.
Ol-aro	Il-aroi	The ox with the crumpled horn, buffalo.
En-joro	In-joroi	The spring.
El-loñgo	Il-loñgoi	The shield.
Eng-ōgho	Ing-ōghoi	The grandmother, old woman.
Ol-oro	Il-oroi	The he-goat.
O-sero	I-seroi	The forest.

Examples of substantives which terminate in a vowel and add *ni* to the singular:

En-aiposha	In-aiposhani	The lake.
Ol-gilisho	Il-gilishōni	The armlet.
Ol-kelesure	Il-kelesureni	The guinea fowl.
Ol-kila	Il-kilani	The garment, cloth.
Ol-kimasaja	Il-kimasajani	The hornbill.
Ol-mesera	Il-meserani	The baobab.
Ol-oirirua	Il-oiriruani	The spirit, mad-person.

[1] En-dua also means the pregnant woman. [2] Also il-makain.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

Singular.	Plural.	English.
Ol-orora	Il-ororani	The crowd.
O-sararua	I-sararuani	The navel.
E-ūlūlu	I-ūlūluni	The pit.

A few words introduced from Bantu languages form their plural in the same way:

En-giondōni	In-giondōni	The basket.
El-lukungu	Il-lukunguni	The fowl.
E-mugonda	I-mugondani	The flour.
Ol-musalala	Il-musalalani	The banana plant.

Examples of substantives which terminate in a vowel and add *in* to the singular:

Ol-dia	Il-diain	The dog.
E-mwa	I-mwain	The sort, kind.
Ol-limwa	Il-limwain	The whirlwind.

B.

A few substantives which have *i* as the final letter form the plural by changing *i* into *a*, and in one instance *i* is changed into *ai*:

E-sunii	I-sunin	The madoqua.
E-sidai	I-sidan	The ostrich.
O-sōyai	I-sōyan	The brass or copper wire.
Ol-tarakwai	Il-tarakwan	The juniper tree.
E-musetai	I-musetani	The bead.

C.

Some substantives terminating in a vowel, and particularly those ending in *i*, form their plural by adding *o* or *to* to the singular, or by changing the last letter into *o*, &c. Examples:

Ol-mōti	Il-mōtio	The tobacco pipe.
E-mōti	I-mōtio	The cooking pot.
Ol-kunōni	Il-kunōno	The smith.
Ol-chōni	Il-chonīto[1]	The ox hide.
En-jōni	In-jonīto	The piece of hide.
Ol-pukuri	Il-pukurto	The gourd.
Ol-kipiei	Il-kipio	The lung.
Ol-ashe	Il-asho	The calf.
Eng-oje	Ing-ojio	The animal which has just given birth.
En-dōlu	In-dōluo	The axe.

D.

Substantives with the terminal letter *e* not infrequently form their plural by adding *a* preceded by a consonant or by changing the *e* to *a* or *a* joined to another letter.

[1] Or more commonly il-onīto.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 Examples:

Singular.	Plural.	English.
Ol-alashe	Il-alashera	The brother.
Eng-anashe	Ing-anashera	The sister[1].
E-figape	I-figapeta	The post.
O-sarge	I-sargeta	The blood.
Ol-bae	Il-baa	The matter, action.
Em-bae	Im-baa	The arrow.
En-amughe	In-amughe	The sandal.
Ol-figojine	Il-figojinia	The hyena.
Ol-bene	Il-benia	The hog.
En-gäne	In-gäneta	The cord (made of skin).
Ol-lee	Il-lewa	The male.

To this list may be added some verbal nouns terminating in *are*[2]. Examples:

El-lejare	Il-lejária	The lie.
El-lidare	Il-lidária	The knotting together, the harvest.

A few substantives ending in other vowels form their plural in the same way. Examples:

Ol-oikulu	Il-oikulia	The breast of a dead ox, the happiness.
En-dauwo	In-dauwa	The heifer.
Ol-asurai	Il-asuria	The snake.
Ol-marei	Il-mareita	The family.

A few nouns belonging to the first two classes form their plural by adding *ite*[3] to the singular. Examples:

Eng-aňg	Ing-aňgite	The kraal.
Eng-omom	Ing-omomite	The face.
Em-boo	Im-booite	The herd.
En-gima	In-gimaite	The fire.
Ol-moňgo	Il-moňgoite	The scrap, broken piece.
E-nyawa	I-nyawaite	The udder.

Others which terminate in *n* form their plural by adding *ito*. Examples:

Ol-oirien	Il-oirienito	The wild olive-tree, the log of wood, the heart of a tree.
Ol-tiren	Il-tirenito	The place outside the fire.
Ol-piron[4]	Il-pironito	The hard stick used for producing fire.

[1] My sister is Eng-anaishi ai; my sisters, Ing-anashera ainei.

[2] Most verbal nouns terminating in *are* form their plural regularly by adding *n*, e.g. En-gurare; pl. In-gurareu, the grave.

[3] This sound is sometimes pronounced itye, e.g. Ing-aňgitye.

[4] Not to be confounded with ol-piro (pl. il-piron), the hyphæne palm.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

A certain number of substantives form their plural by adding *ishi*, *ishi*, *sin*, and *shin* to the singular. Examples: 193*

Singular.	Plural.	English.
Ol-oitigo	Il-oitigōshi	The zebra.
Ol-amuye	Il-amuyeishi	The male donkey.
E-morlo	I-morloishi	The sinew.
E-mwinyua	I-mwinyuaishi	The liver.
Ol-oikuma	Il-oikumaishi	The tortoise
Ol-origha	Il-orighaishi	The stool.
E-mala	I-malasin	The gourd.
Ol-kiu	Il-kiushin	The ant-hill.
Ol-turle	Il-turleshin	The green parrot. (*Poicephalus massaicus*, Finch. and Reichen.)

Some substantives form their plural by adding *tin* or *itin* to the singular. Examples:

Eng-ai	Ing-aitin	The god, rain, sky.
En-dōki	In-dōkitin	The thing.
En-gewárie	In-gewariętin	The night.
E-wēji	I-wējitin	The place.
Ol-amēyu	Il-amēyuitin	The famine, hunger.
Ol-apa	Il-apaitin	The moon, the month[1].
En-gūa	In-gūaitin	The disease, death.
En-gata	In-gataitin	The time.
En-gigwena	In-gigwenaitin	The consultation.
En-gijape	In-gijapeitin	The cold, wind.
En-gīyo	In-gīyōitin	The little girl.
O-sina	I-sinaitin	The trouble.
O-singólio	I-singōliōitin	The dance, song.

Several substantives make their plural in two different ways, both forms having apparently precisely the same meaning. Examples:

O-sagīm	I-sagīmi *or* I-sagāmin	The bridge.
Eng-orioŋg	Ing-orioŋgi *or* Ing-orioŋgite	The back.
En-gulale	In-gulalen *or* In-gulaletin	The wooden ear-ring.
En-jore	In-jorin *or* In-joreitin	The raid, war.
Ol-goo	Il-goon[2] *or* Il-goite	The breast.
E-sagarua	I-sagaruani *or* I-sagaruaitin	The lobe of the ear.
En-dōkōya	In-dōkōyani *or* In-dōkōyaitin	The head.
Em-ḍaruo	Im-ḍurūshi *or* Im-buruōitin	The smoke.
Ol-tōme	Il-tōmen *or* Il-tōmia	The elephant.
En-gishōmi	In-gishōmin *or* In-jomīto	The clan.
En-guma	In-gumeshi *or* In-gumeshin	The nose, nostril.
E-muro	I-murōshi *or* I-murōshin	The hind-leg.

[1] The Mushroom is ol-ṣpa (pl. Il-apai).

[2] This word is perhaps the origin of Mount Elgon, which is called by the Masai ol-doinyo loo-'l-goon, the mountain of breasts.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Class III.

*193 This group consists of substantives which form their plural in *k*. In some instances *k* is simply added to the singular, in others it is preceded by a vowel, and in others again the last two or three letters of the singular are changed into *ak*, *ek*, or *k*. This class includes words indicating (*a*) states or callings, (*b*) parts of the body. A few other words also form their plural in the same manner. Examples of the first division:

Singular.	Plural.	English.
Ol-tuñgani	Il-tuñganak	The man.
Ol-móruo	Il-móruak	The old man, the husband.
E-ñgorōyōni	I-ñgorōyok	The woman, wife.
Ol-akwi	Il-akwiak	The grandfather *or* grandson.
En-gitok	En-gituak	The wife.
Ol-aputani	Il-aputak	The father *or* son-in-law.
Ol-aitoriani	Il-aitóriak	The chief.
Ol-aigwenani	Il-aigwenak	The counsellor, spokesman.
Ol-oiboni	Il-oibonok	The medicine-man.
Ol-aōmonōni	Il-aōmonok	The beggar.
Ol-apurōni	Il-apurok	The thief.
Ol-aigwetani	Il-aigwetak	The carpenter.
Ol-abarnōni	Il-abarnok	The barber.
Ol-aisinani	Il-aisinak	The poor man.
Ol-asakutōni	Il-asakutok	The wizard.
Ol-asirani	Il-asirak	The decorator, writer.
Ol-airitani	Il-airitak	The herdsman.
Ol-areshōni	Il-areshok	The trapper.
E-mōdooni	I-mōdook	The blind person.
Ol-agilani	Il-agilak	The destroyer, breaker.
Ol-aidetidetani	Il-aidetidetak	The dreamer, prophet.
Eng-apyani	Ing-apyak	The widow.
En-dōmōno	In-dōmōnok	The offspring.

Examples of the second division:

Ol-kimōjīno	Il-kimōjik	The finger, toe[1].
Eng-aina	Ing-aik	The arm, hand.
En-geju	In-gejek	The leg, foot.
(Ol-keju	Il-kejek	The river.)
Ol-oito	Il-oik	The bone.
E-mōuo	I-mōwarak	The horn.
Eng-oñgu	Ing-onyek	The eye.

[192] [1] The thumb is called Ol-kimōjīno kitok, ol-kimōjīno sapuk, *or* ol-móruo kitok (the big, *or* fat, finger; *or* the big old-man); the first finger, Ol-asakutōni *or* Sagutishoi (the wizard); the middle finger, Ol-kereti (the ring of goat's skin which is worn on this finger); the third finger, Ñgoto-Kineniya (Kineniya's mother); the little finger, Ol-kimōjīno oti (the small finger), Kineniya *or* En-gilinda (proper names).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

Singular.	Plural.	English.
Ol-oisoto	Il-oisotok	The nail, claw.
Ol-oidolōki	Il-oidolok	The elbow.
El-lenywa	Il-lenyok	The long hairs of the tail of a wildebeest or zebra, &c.; the fan made of these hairs.

Examples of other words:

Ol-oiñgōni	Il-oiñgok	The bull, the strong man.
Eng-aji	Ing-ajijik	The family, hut.
Em-beneiyo	Im-benek	The leaf.
Ol-figanaiyoi	Il-figanaiyok	The fruit.
Ol-ōwaru	Il-ōwarak	The beast of prey.
E-mōdioi	I-mōdiok	The cow's dung.
Eng-are	Ing-áriak	The water.
Ol-mwoilaa	Il-mwoilak	The beetle.

Class IV.

According to another rule which applies fairly regularly to a large class of substantives, the singular appears to be formed from the plural by adding *i* or *ni*[1]. Comprised in this group are the names of tribes, a few communities of people, most insects, some birds and small animals, and a number of words which were probably first known in their collective form. Examples of names of tribes: 193* 552

Plural.	Singular.	English.
Il-Ashumba	Ol-Ashumbai	The Swahili.
Il-Teñgwal	Ol-Teñgwali	The Nandi.
Il-Kōyu	Ol-Kōyuni	The Elgeyo.
Il-Uasin-gīshu	Ol-Uasin-gīshui	The Gwas Ngishu Masai.
Il-Kume	Ol-Kumei	The Turkana.
Il-Turkana	Ol-Turkanai	
Il-Kamasya	Ol-Kamasyai	The Kamasia.
Il-Kakesan	Ol-Kakesani	The Lumbwa[2].
Il-Lumbwa	Ol-Lumbwani	
Il-Oikop	Ol-Oikopani	The Lumbwa Masai[3].
Il-Lumbwa	Ol-Lumbwani	

[1] This construction is by no means peculiar to the Masai. In Persian, for instance, *i* is added to a word to mean one individual, e.g. zan, woman, zani, one particular woman; bacha, a child, bachai, one particular child; bar, time, bari, one time, once. [197]

[2] A tribe living near the Lake Victoria, whose real name is Kip-sikisi.

[3] The Lumbwa Masai, who call themselves 'l-Oikop, and who are often referred to by the Masai proper as 'l-Oogol-ala (the hard teeth), live in German East Africa extending as far south as Mpapua. Their language is almost identical with that of the Masai in British territory, the chief difference being the pronunciation of one or two letters, *k* being spoken like *gh*, *p* being pronounced *p* or *φ*, and the vowels being softened. There is also a tribe of people called 'l-Oikop (Leukop or Lukob) living at the south end of Lake Rudolf who apparently speak Masai. They were met by Teleki and Höhnel (*The Discovery of Lakes Rudolf and Stephanie*) and by Wellby (*Twixt Sirdar and Menelik*). [101] [197]

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193
[552]

Plural.	Singular.	English.
Il-Kapirondo	Ol-Kapirondoi	The Kavirondo.
Il-Kōkōyo	Ol-Kōkōyoi	The Kikuyu.
Il-Tupeita	Ol-Tupeitai	The Taveta.
Il-Mosiro	Ol-Mosiroi	The Chaga[1].
I-Suk	O-Suki	The Suk.
Il-Torōbo	Ol-Torōbōni	The Dorobo[2].

Examples of names of communities of people:

In-gera	En-gerai	The child.
I-sipōlio	O-sipōlioi	The recluse, i.e. a boy who has recently been circumcised.
Il-barnot	Ol-barnoti	The shaved one, i.e. the warrior who has not yet grown pig-tails.
Il-muran	Ol-murani	The warrior.
Il-meek	Ol-meeki	The native, the savage, applied to all Bantu tribes.
Il-omon	Ol-omoni	The stranger.
I-sunguro	O-sunguroi	The hypocrite.
Il-tamweiya	Ol-tamweiyai	The sick.
Il-Aimer	Ol-Aimeri	The Aimer age[3].
Il-Aiser	Ol-Aiseri	The Aiser clan (of Masai)[4].

Examples of names of insects, small animals, and birds:

Ing-alao[5]	Eng-alaōni	The very small ant.
In-darget	En-dargeti	The grasshopper.
In-daritik	En-daritiki	The small bird.
In-diamorgus	En-diamorgusi	The marabou stork.
In-dero	En-derōni	The rat.
Il-kuru	Ol-kurui	The maggot, worm.
Il-lashe	El-lashei	The louse.
Il-masher	Ol-masheri	The tick.
Il-ōtorok	Ol-ōtoroki	The bee.
Il-maat	Ol-maati	The locust.
Il-oiriir	Ol-oiriiri	The lizard.
Il-oisusu	Ol-oisusui	The flea.

[1] Each tribe of the Chaga people (the inhabitants of Kilima Njaro) has a special name; thus, Il-Kilema (sing. Ol-Kilemai), the Kilema.

[2] Some writers prefer Andorobo and even Wandorobo. The *D* has been retained at the commencement of the word, as Torobo would not be easily recognized. En-dorōbōni (pl. 'N-dorōbo) is the Masai for the tsetse fly. These words have probably no connexion with dorop, short, as has been occasionally stated. [3] *Vide* p. 261. [4] *Vide* p. 260.

[5] Also rarely Ing-alack. It is perhaps of interest to note that en-dirange, the large reddish-brown ant, called siafu by the coast people, which bites fiercely, is not included in this group, and forms its plural by adding *ni* to the singular.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

Plural.	Singular.	English.
Il-ojoŋga	Ol-ojoŋgani	The fly.
Ing-ojoŋga	Eng-ojoŋgani	The mosquito.
I-samburumbur	O-samburumburi	The butterfly.
I-sarambalan	E-sarambalani	The bat, swallow, swift.

Examples of other words which belong to this class:

Il-airakuj	Ol-airakuji	The kidney.
Il-ala	Ol-alai	The tooth, tusk.
Ing-atambo	Eng-atamboi	The cloud.
Il-til	Ol-till	The spark, stain.
In-garara	En-gararai	The quill.
In-giporo	En-giporoi	The scar.
In-gurnon	En-gurnoni	The ash.
Il-keko	Ol-kekoi	The thorn, thorny place.
Il-kidoŋgo	Ol-kidoŋgoi	The tail.
Il-kililesg	Ol-kililesgi	The sheep's dung.
Il-kiyo	Ol-kiyoi	The tear.
Il-mao	Ol-maoi[1]	The twins.
Il-menesga	Ol-menesgani	The corpse, spirit.
I-mōsor	E-mōsori	The egg[2].
I-ŋgok	E-ŋgoki	The sin[3].
Il-ōkidoŋgo	Ol-ōkidoŋgoi	The mud.
Il-paak	Ol-paaki	The grain or cob of maize.
Il-pisya	Ol-pisyai	The chain.
I-seghera	O-segherai	The cowry.
I-seghenge	E-seghengai	The iron wire.
I-suut	E-suuti	The dust.
I-senya	O-senyai	The sand.
Il-tian	Ol-tiani	The bamboo.
Il-tuduta	Ol-tudutai	The boil, abscess.

EXCEPTIONS.

There are only a few exceptions to this rule. They are as follows:

Il-Maasse	Ol-Maasani	The Masai[4].
Il-Aisungun	Ol-Aisungui	The European[5].
Il-Musungu	Ol-Musungui	The European[5].

[552]

[1] Ol-maoi means a child who has a twin brother or sister.

[845]

[2] A large egg-shaped cask used for beer, &c., is Ol-mōsori, pl. Il-mōsorin.

[915]

[3] An unlucky child, or a dwarf, is E-ŋgoki, pl. I-ŋgokin.

[4] The original name of the Masai is said to have been Il-Mas (sing. Ol-Mai), and one even now occasionally hears old people using this word, especially when relating stories of former times. According to tradition the present form dates from the introduction by the Swahili traders of a certain kind of bead called 'Bae or 'Baen (sing. O-Baeni).

[101]
[79]

[5] Europeans, or white people, were formerly called 'L-ōjuju, the hairy ones. This appellation was afterwards changed to 'L-Aisungun, a corruption of the Swahili word Mzungu, which in its turn gave way to the present forms.

[186]

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 [552]

Plural.	Singular.	English.
Il-Chumari	Ol-Chumari	The finmall.
I-Sigiriaishi	O-Sigiriaishi	
I-suyan	O-suyai	The wild dog.
Il-manyo	Ol-manyai	The beard.

CLASS V.

In this class, like the preceding one, the singular of substantives appears to be formed from the plural. This is done by the affix *a* or *o*.

A large number of words belonging to this class are formed by simply adding *at* or *et* in the plural and *ata* or *eto* in the singular to the roots of verbs not commencing with *i*. With verbs commencing with *i* the same affixes are made, and *h* is also prefixed. Other substantives which form the singular by affixing *a* or *o* to the plural were probably first known in their collective state.

Examples of substantives made from the roots of verbs not commencing with *i*:

Plural.	Singular.	Verbal root.	English.
In-duat	En-duata	-dol, -dua	The witness.
In-jitgat	En-jitgata	-jitg	The entrance.
Il-ladgat	El-ladgata	-ladg	The ford.
Il-limot	El-limoto	-lim	The news.
Il-lotot	El-lototo	-lot	The place to creep through.
I-manyat	E-manyata	-many	The warrior's kraal.
I-nyalat	E-nyalata	-nyal	The mouthful of food, the end.
I-riahat	E-riahata	-riah	The boundary.
I-rorust	E-rorusta	-rorn	The foot-print.
I-sirat	E-sirata	-sir	The markings, stripes.
I-sirat	O-sirata		The letter, bill.
In-demat	En-demata	-dem	The measure.
In-donat	En-donata	-don	The seat, root.
Il-turot	Ol-turoto	-tur	The pond, puddle.
In-durot	En-duroto		The chalk.
In-nadgat	En-nadgata	-nadg	The place struck by a club thrown from a distance, the bruise.

Examples of substantives made from the roots of verbs which commence with *i*:

In-gidimat	En-gidimata	-idim	The being able.
In-gikurukurot	En-gikurukuroto[1]	-ikurukur	The thunder.
In-gitgayat	En-gitgayata	-itgaya	The astonishment.
In-giragat	En-giragata	-irag	The sleeping place, the hospitality.

[1] Also en-gikurukur.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

Plural.	Singular.	Verbal root.	English.
Ia-giruhot	En-giruhoto	-druk	The reply, the belief.
Ia-giniat	En-giniata	-iala	The glory.
Ia-gieudorot	En-gieudoroto	-iaudoo	The secret.
Ia-gienjat	En-gienjata	-ienj	The cleaning.
Ia-gitagat	En-gitagata	-itag	The hut in which the elders meet.
Ia-gitanyanyakat	En-gitanyanyakato	-itanyanyak	The parable (lit. the making similar).
Ia-giterat	En-giterata	-iter	The beginning.
Ia-giteruuot	En-giteruuoto	-iteru	The beginning.
Ia-giitiigat	En-giitiigato	-iitiig	The end.
Ia-gityamat	En-gityamata	-ityam	The jumping.

Examples of substantives which form their singular by adding *a* or *o* to the plural:

Plural.	Singular.	English.
Il-abur	Ol-abura	The froth.
Il-akir	Ol-akira	The star.
Aligat	Aligata	The plain, wilderness.
Ing-aru	Eng-aruo	The name.
Ia-bat	En-bata	The bank of a river.
Ia-ijit	En-ijito	The sinew, tendon, bow-string.
Il-chatgit	Ol-chatgito	The wild animal.
Ia-jatgit	En-jatgito	'A what-d'you-call-it.'
Ia-daghol	En-daghola	The cheek.
Ia-dapan	En-dapana	The skin of a goat, sheep, or calf.
Ia-dadanyi	En-dadanyo	The heel.
Il-karsah	Ol-karsaha	The cotton cloth.
Il-kujit	Ol-kujita	The long, coarse grass.
Ia-gujit	En-gujita	The turf.
Il-kurt	Ol-kurto	The caterpillar.
Il-inghanyi	El-inghanyo	The head.
Ing-ipir	Eng-ipiro	The small feather.
Ing-ipit	Eng-ipito	The cord (made from the bark of a tree).
Ing-oru	Eng-oruo	The butter.
Il-papit	Ol-papita	The hair.

EXCEPTIONS.

Plural.	Singular	Verbal root.	English.
Ia-andat	En-andato	-ad	The hole.
I-ila	El-ilata	-il	The oil.
Il-itiat	El-itiato	-iatio	The journey, march.
Ia-gutig	En-gutigu		The knee.
Il-ki	Ol-kina		The test.
Ia-guku	En-gukuo		The charcoal, soot.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Class VI.

*193 There are a few substantives which are unchangeable and have the same form in the singular and plural. Examples:

Singular.	Plural.	English.
Ol-aijolojola	Il-aijolojola	The hartebeest.
Ol-doinyo	Il-doinyo	The mountain.
Ol-kesen	Il-kesen	The cloth for carrying a baby in.
Eng-oitoi	Ing-oitoi	The road.
O-riri	I-riri	The termite.
O-rorei	I-rorei	The word.
Ol-tuli	Il-tuli	The buttock.

Substantives with Singular Form only.

Some substantives have no plural. Examples:

En-aimin, the darkness.
Ol-aro, the shame.
En-giopo, the adultery.
En-gisiusiu, the wind.
En-gishon, the life, age.
En-gitoo, the kingdom, wealth, greatness, age.
En-gure, the thirst.
Ol-kirōbi, / Ol-oirōbi, } the fever.
Eng-oilēlio, the dew.
Ol-oijilili, the drop.
Ol-oireriu, the dirt, rust.

To these may be added words ending in *-ishu*. Examples:
E-sidanishu, the beauty. En-garsisishu, the kingdom, the riches. En-guretishu, the fear.

Substantives with Plural Form only.

A few substantives have no form for the singular. Examples:

In-dare[1], the flock.
In-gulak, the urine.
Ing-amulak, the saliva.
Kulle (in compound words, alle), milk.
I-mōtori, soup.

Irregular Plurals.

A certain number of substantives form their plural irregularly. In a few instances different words are apparently used, in others different terminations from those already discussed.

Examples in which different words are used:

Singular.	Plural.
En-gitefig, the ox, cow[2];	In-gishu, the cattle, oxen, cows.
Ol-kitefig, the bullock;	Il-mofigi, the bullocks.
O-sighiria, the donkey;	I-sirkon, the donkeys.
En-dito, the daughter, young girl;	In-doiye, the daughters, girls.

[1] En-darei is rarely used for a single goat.
[2] The cow is usually termed en-gitefig lepofig, i. e. the female ox.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Singular.	Plural.
En-gop, the land, country;	In-gwapi, the lands, countries.
Ol-chani, Ol-chata, } the tree, firewood;	Il-käk, the trees, firewood.
En-jani, En-jata, } the small tree, stake;	In-gäk, the small trees, twigs.

193*

Examples in which unusual terminations are used:

Singular.	Plural.	English.
En-aisho	In-aishi	The honey.
En-aibon	In-aibonoreitin	The medicine, charm.
Eng-álo	Ing-álōli	The direction, place.
Eng-áuo	Ing-ai	The bow.
Ol-buñgae	Il-buñgaiko[1]	The young bull.
En-daa	In-daiki	The food.
En-gine	In-gineji	The goat.
En-giriñgo	In-giri	The animal, the meat.
En-giyok	In-giyas	The ear.
En-gubis	In-gubisir	The thigh.
En-gutuk	In-gutukie	The mouth.
Ol-kilikwai	Il-kiliko	The messenger, message.
Ol-mañgatinda	Il-mañgati	The enemy.
E-masaita	I-masaa	The wealth.
E-ñgikitoi	I-ñgik	The human excrement, word of abuse.
E-ñgwenitoi	I-ñgweni	Word of abuse.
E-ñgudi	I-ñgusidin (rarely I-ñgudisin)	The stick.
Eng-oshoghe	Ing-oshua	The belly.
Ol-tau	Il-tauja	The heart, mind, spirit, soul.
Ol-tidu	Il-tidii	The needle.

Plural of Compound Words.

Compound words are commonly employed in Masai. They are made either by joining two substantives or a substantive and another part of speech together, or by prefixing the article to the relative connected with the verb. Though the articles and genitive particles are sometimes omitted in the singular, they are all employed in the formation of the plural.

Examples of the First Division.

Kutuk-aji (Mouth-hut)	'N-gutukie-oo-'ng-ajijik (The-mouths-of-the-huts)	The door.
Tasat-aina (Thin-arm)	Il-tasati-'ng-aik (The-thin-the-arms)	The person with a deformed arm.

[1] Sometimes pronounced Il-buñgaikop.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193

Singular.	Plural.	English.
Ol-ō-urō-kutuk (The-who-cuts-mouth)	'L-oo-urō-kutukie (The-who-cut-mouths)	The man with the teeth knocked out or with the lips cut.
Ol-ō-duñg-ō-aina (The-whom-cut-is-arm)	'L-oo-duñg-ō-'ng-aik (The-whom-cut-are-the-arms)	The one-armed person.
En-na-iba-o-sina (The-which-hates-the-trouble)	'N-na-iba-'sinaltin (The-which-hate-the-troubles)	The moth.
Ol-ōwaru-keri (The-beast-of-prey-spotted)	'L-ōwarak-kerin (The-beasts-of-prey-spotted)	The leopard.
Ol-ōwaru-kitok (The-beast-of-prey-big)	'L-ōwarak-kituak (The-beasts-of-prey-big)	The lion.
Ol-lo-'l-masi (The-of-the-mane)	Il-loo-'l-masin (The-of-the-manes)	The lion.
En-na-rok-kutuk (The-which-is-black-mouth)	'N-naa-rook-kutukie (The-which-are-black-mouths)	The monkey[1].
En-gidas-in-dare (The-sucker-the-flocks)	'N-gidas-in-dare (The-suckers-the-flocks)	The mongoose.
Ol-ō-ado-kiragata (The-who-is-long-sleeping-place)	'L-oo-ado-kiragat (The-who-are-long-sleeping-place)	The giraffe.
Ol-o-ibor-kidoñgoi (The-which-is-white-tail)	'L-oo-ibor-kidoñgo (The-which-are-white-tails)	The wild dog.
Ol-la-'l-lughunya (The-of-the-head)	Il-loo-'l-lughuny (The-of-the-heads)	The brain.
Ol-le-'ng-aina (The-of-the-arm)	Il-loo-'ng-aik (The-of-the-arms)	The elephant.
Ol-o-ñgui (The-who-stinks)	'L-oo-ñgu (The-who-stink)	The Kamba[2].

EXAMPLES OF THE SECOND DIVISION.

Ol-ō-ton-ie-ki (The-which-sat-upon-is)	'L-oo-ton-ie-ki (The-which-sat-upon-are)	The seat, the buttocks.
Ol-ō-un-isho (The-who-sows)	'L-oo-un-isho (The-who-sow)	The sower.
Ol-ō-rip-isho (The-who-sews)	'L-oo-rip-isho (The-who-sew)	The tailor.
Ol-ō-ī-u (The-who-begets)	'L-oo-ī-u (The-who-beget)	The father.
Ol-ō-lubo (The-which-is-not-satisfied)	'L-oo-lubo (The-which-are-not-satisfied)	The impalla antelope.

[1] *Cercopithecus Griseo-Viridis.* [2] A tribe of people.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

ADJECTIVES.

There are three classes of words which can be used as adjectives in Masai. The first appears to consist of true adjectives, which were possibly originally all independent substantives, and substantives used in an adjectival sense. They do not indicate gender or class, and agree with the substantive they qualify in number only. 193*

The second class consists of words formed by verbs joined to the relative. When simple neuter verbs are thus employed, the termination in the plural does not alter, the sole change taking place in the relative, which agrees in gender and number with the substantive. With irregular verbs or derivatives the plural termination varies according to the class of verb.

The third class consists of a few words to which is prefixed the genitive particle. They are unchangeable, but the particle agrees in gender with the substantive.

Class I.

The same rules for the formation of the plural of adjectives belonging to this class are followed as with substantives, and though the adjective agrees in number with the substantive it qualifies, it does not necessarily take the same plural termination.

When used as an attribute the adjective generally follows the substantive, but it is sometimes inserted between the substantive and the article. Examples:

Ol-ashe sumbat *or* o-sumbat-ashe, the sickly calf.
'L-asho sumbati *or* 'sumbati-asho, the sickly calves.
En-giteñg uas, the striped ox.
'N-gishu uasin *or* 'n-uasin-gishu, the striped cattle.
Ol-ñgatuny lepoñg, the female lion (lioness).
Il-ñgatunyo lepoñga, the lionesses.
Ol-ayōni bōtor, the big boy.
'L-ayok bōtoro, the big boys.
Ol-keju (*or* e-uaso) ñgiro, the brown river.
Il-kejek (*or* 'uason) ñgiroin, the brown rivers.
En-dito sidai, the beautiful girl.
'N-doiye sidan, the beautiful girls.
Ol-kerr ñgojine, the lame ram.
Il-kerra ñgojínia, the lame rams.
Ol-omoni torono, the bad stranger.
'L-omon torok, the bad strangers, the bad news.
Ol-kila musana, the old garment.
Il-kilani musan, the old garments.
Ol-murani bioto, the healthy warrior.
Il-muran biot, the healthy warriors.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 The following are irregular:

Singular. Masc.	Singular. Fem.	Plural. Masc.	Plural. Fem.	English.
Dorop		Doropu		Short.
Rongai		Rongerna		Thin, narrow (inanimate objects).
Oti	Kiti	Ooti[1]	Kutiti	Small.
		Kuti		Few.
Ado *or* ō-ado	Nado	Adoru		High, long.

Examples:

Il-tuñganak doropu, the short men.
'Ng-áriak rongerna, the narrow streams.
Ol-tuñgani oti, the small man.
Il-tuñganak ooti, the small men.
E-ñgorōyōni kiti, the small woman.
'Ñgorōyok kutiti, the small women.
'Ng-oloñgi kuti, the few days.

When the adjective is used predicatively, it precedes the substantive and article[2]:

Torono ol-tuñgani, the man is bad.
Torok il-tuñganak, the men are bad.

Class II.

The adjectives belonging to the second class—in reality relatives compounded with verbal forms—follow the substantives they qualify, and agree with them in gender and number:

Ol-murani ō-gol, the warrior who is strong *or* the strong warrior.
Il-muran oo-gol, the strong warriors.
E-ñgorōyōni na-nana, the gentle woman.
'Ñgorōyok naa-nana, the gentle women.
E-wēji ne-wañg, the open place.
'Wājitin nee-wañg, the open places.
Ol-tuñgani o-ibor, the white man.
Il-tuñganak oo-ibor, the white men.
Eng-are na-irōua, the hot water.
'Ng-áriak ná-irōua, the hot waters.
E-wēji ne-irōbi, the cold place.
'Wājitin nee-irōbi, the cold places.

In some cases the verbal part as well as the relative takes plural inflexions:

Ol-doinyo o-rok, the black mountain.
Il-doinyo oo-rook, the black mountains.

[1] Ooti cannot be used predicatively, and kutiti is employed instead: e.g. kutiti 'l-airakuj, the kidneys are small (*vide* p. 139).

[2] In sentences of this kind the demonstrative pronoun generally takes the place of the article: e.g. torono elle-tuñgani, this man is bad.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

En-giteñg na-tua, the dead ox.
'N-gishu naa-tuata, the dead oxen.
En-giriñgo na-tuñgwa, the rotten meat.
'N-giri naa-tuñgwaita, the rotten meats.
Ol-kila ō-tarueiye, the spoilt garment.
Il-kilani oo-tarueitye, the spoilt garments.
E-wēji ne-nyokye, the red place.
'Wājitin nee-nyokyo, the red places.
Ol-chani ō-toyo, the dry tree.
Il-kīk oo-tōito, the dry trees.

In a few instances the adjective is inserted between the substantive and the article:

En-na-ibor-tuli (the white buttock), the Thomson's gazelle.
'L-oo-do-kilani, the blood-red garments (name of a district).
'L-oo-do-kīshu, the blood-red cattle (name of two clans, *vide* p. 260).

Class III.

The words belonging to this class are merely genitives used as attributes (similar to such expressions as *days of old*, *homme de bien*, &c.). They follow the substantive they qualify:

Eng-aina e-tatēne, the right hand.
Eng-oitoi e-kedyanye, the left road.
'L-omon li-opa, the former news.
'L-omon li-akenya, the future news.
Il-chañgit le-'n-dim, the wild animals (lit. of the wood).

All adjectives can be used as substantives by prefixing the article. Examples:

Ol-oti, the small one, the younger.
Ol-bōtor, the big one, the elder.
Ol-o-rok, the black man.
En-na-rok, the black woman.
En-e-tatēne, the right (hand).

Two or more adjectives can follow a substantive:

Ol-kiteñg orok sinyati li-opa, the former black healthy bullock.

If there are two adjectives of the first class qualifying a substantive, one is usually inserted between the article and the substantive, and the other follows the substantive:

Ol-kitok-tuñgani sapuk, the big, fat man.

When a noun is qualified by an adjective, and followed by a genitive, the genitive precedes the adjective. Examples:

Eng-anashe o-'l-murani kiti (the sister of the warrior small), the warrior's small sister.
'Ng-abōbok o-'l-chani naudo (the barks of the tree nine), nine strips of bark of the tree.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

The Comparison of Adjectives.

*193

There are not, properly speaking, any degrees of comparison in Masai.

The comparative is represented in several ways.

1. By the use of a-lafig, to cross (a river) *or* to surpass:

E-melok e-lafig en-aisho (it is sweet, it surpasses honey), it is sweeter than honey.

Sidai enna-tōki a-lafig eng-ae (beautiful this thing to surpass the other), this thing is more beautiful than the other.

E-tii ol-kitok ō-lafig (he is there the big one who surpasses him), there is some one greater than he.

2. By the use of a-lus-oo, to pass thither *or* to surpass, followed by the local case:

Sidai enna-tōki a-lus-oo te-'ng-ae (beautiful this thing to pass by the other), this thing is more beautiful than the other.

3. By the use of peno, a little more:

I-'ya-u en-dōki kiti peno, bring something a little smaller.

4. By the use of ol-pisyai, the chain, and in this sense possibly, the rest:

E-ata 'n-gīshu tomon o ol-pisyai (he has ten cows and the chain), he has more than ten cows.

Á-isho-o 'rupiani ip o ol-pisyai (he gave me 100 rupees and the chain), he gave me over 100 rupees.

More can be translated by likae, &c., other (which see, p. 46), by a-pon, to increase, *or* by a-itu-lus-oo, to cause to pass:

To-pon-a kulle, i-'ya-u kulye-alle inōno, increase the milk, bring more of thy milk.

E-itu-lus-ori 'ndae (it is made to pass to you), more shall be given you.

The superlative is generally denoted by the use of the adjective in its simple form:

Kiafigae supat? } Who (*or* Which) is the best?
Kalo supat? }

It can also be translated by an adjectival substantive followed by the local case:

Ninye ol-oti too-'l-muran pōkin (he the small from the warriors all), he is the smallest of all the warriors.

Like the comparative, the superlative can also be expressed by a-lus-oo, followed by the local case, *or* by a-lafig, particularly by the former:

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Supat elle, e-lus-oo te-pôkin (good this one, he passes by all), this one is the best of all. 193*

Supat ledo, kake elle ô-lus-oo te-'supatishu (good that one, but this one who surpasses in goodness), that man is good, but this one is the best.

Supat elle a-lafig pôkin (good this one to surpass all), this one is the best of all.

THE NUMERALS.

193* 802

Masculine.	Feminine.	English.
Ôbo	Nabo[1]	One.
Aare	Are	Two.
Ôkuni	Uni	Three.
Oofigwan	Ofigwan	Four.
Imyet[2]		Five.
Ille[2]		Six.
Oopishana	Naapishana	Seven.
Isyet[2]		Eight.
Ôudo	Naudo	Nine[3].
Tomon		Ten.
Tomon o ôbo	Tomon o nabo	Eleven.
Tomon o aare[4]	Tomon o are	Twelve.
Tomon o ôkuni	Tomon o uni	Thirteen.
Tomon o oofigwan	Tomon o ofigwan	Fourteen.
Tomon o imyet		Fifteen.
Tomon o ille		Sixteen.
Tomon o oopishana	Tomon oo naapishana	Seventeen.
Tomon o isyet		Eighteen.
Tomon o ôudo	Tomon oo naudo	Nineteen.
Tigităm		Twenty.
Tigităm o ôbo	Tigităm o nabo	Twenty-one.
Onom *or* 'N-domoni uni		Thirty.
Artam *or* 'N-domoni ofigwan		Forty.
Onom *or* 'N-domoni 'myet		Fifty.
Onom oo tomon *or* 'N-domoni 'lle		Sixty[5].
Onom oo tigităm *or* 'N-domoni naapishana		Seventy.
Onom oo 'n-domoni uni *or* 'N-domoni 'syet		Eighty.
Onom o artam *or* 'N-domoni naudo		Ninety.

[1] 1 when used with e-wăji, the place, is nôbo.

[2] The (is sometimes omitted when these words follow a vowel.

[3] Enderoj is occasionally used for nine.

[4] When two numerals are joined by the conjunction *and*, the double o of the plural is only pronounced if followed by a consonant.

[5] Often everything above fifty is simply styled ip. If it is desired to express a very large number, ip-ip, one thousand, *or* le-me-iken-ayu, countless, are used.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193
802

Masculine.	Feminine.	English.
	Ip	Hundred.
	Ip o ōbo	One hundred and one.
	Ip o onom	One hundred and fifty.
	Ip onom	Five hundred.
	Ip-Ip *or* 'N-domoni ip	One thousand.
	Ip-Ip kata-'myet	Five thousand.

With the exception of 1, the number always follows the substantive:

Il-tuñganak aare, two men.

When 1 is placed before the substantive, the article is omitted; when it follows, the article is retained:

Ōbo-tuñgani *or* Ol-tuñgani ōbo, one man.
Nabo-oloñg *or* Eng-oloñg nabo, one day.

The ordinal numbers are expressed by the use of the genitive particle with or without the article:

Ol-tuñgani li-ooñgwan, the fourth man.
Eng-aji e-oñgwan, the fourth hut.
Tapala 'l-tuñganak aare, toriku ol-li-ōkuni (leave two men alone, bring the third), bring the third man.

First and *last* can both be expressed by Ol-le-bata, the-of-side. *First* is, however, more usually translated by one of the following:

Ol-le-lughunya, the-of-head.
Ol-o-iturak, the-who-precedes.
Ol-ō-lus-oo, the-who-passes-by.

Last is translated by Ol-le-kurum, the-of-behind, *or* Ol-o-iñgopu, the-who-is-behind.

Once, Twice, &c., are denoted by the use of en-gata, the time:

Nabo-kata[1], once, the first time.
Kat'-are, twice.
'N-gataitin are, the second time.
'N-gataitin aja? how many times?
'N-gataitin kumok, often.

First of all is translated by a-ñgas a-iter, to commence to begin, or simply by a-ñgas, to commence:

I-ñgas a-iter en-gias, pe ilo, } you must first of all do the work,
I-ñgas en-gias, pe ilo, } then you may go.

802 The Masai have various finger signs to denote the numerals.

1. The first finger of the right hand is held up and the rest of the fist closed. The hand must be kept still.

[1] The first time can also be rendered by eng-aiter.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

2. The outstretched first-and second fingers are rubbed rapidly one against the other. 802

3. The first finger is rested on the thumb and the first joint of the middle finger is placed against the side of the middle joint of the first finger, the other two fingers remaining closed.

4. The fingers are outstretched, the first and middle ones being crossed.

5. The fist is closed with the thumb placed between the first and second fingers.

6. The nail of one of the fingers—generally the ring finger—is clicked three or four times by the thumb nail.

7. The tip of the thumb is rubbed rapidly against the tip of one of the fingers, generally the middle finger, the hand remaining open.

8. The hand is opened and the fingers are either all pressed together or all kept apart. A rapid movement with the hand in this position is then performed, first in a downward and then in an upward direction. This movement is made by the hand only, the wrist acting as lever.

9. The first finger is bent so that the tip touches the tip of the thumb, the other fingers being at the same time opened.

10. The closed fist is thrown out and opened, the nail of the middle finger being at the same time clicked against the tip of the thumb.

20. The open fist is closed and opened two or three times.

30. The fingers are placed in the same position as when representing 1, i. e. the first finger is held up while the rest of the hand is closed. When in this position the hand is shaken slightly from the wrist.

40. The hand is opened, and the first and middle fingers are pressed together, as are also the ring and little fingers, a gap thus existing between the middle and ring fingers. When in this position the hand is shaken.

50. The tip of the thumb is placed between the ends of the first and middle fingers. The other fingers can be opened or closed at the same time.

60. For ip, that is to say anything above fifty, the closed fist is jerked out from the body, the fingers being at the same time opened.

PRONOUNS.

The full forms of the personal pronouns are: 193*

Singular.		Plural.	
I	Nanu	We	Iyook.
Thou	Iye	You	Indae.
He, she, *or* it	Ninye	They	Ninje.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 The second person singular is often contracted into 'ye and occasionally into *i*. Iyook and Indae become 'yook and 'ndae when following a vowel, or at the commencement of sentences. Unless the subject has been previously mentioned, the demonstrative pronouns are generally used for he, she, it, and they.

The objective cases, me, thee, him, &c., can be expressed by the same forms as those given above for the nominative case, I, thou, &c.

The possessive case, of me, &c., is expressed by the possessive pronouns, or, rarely, by the particle *le* or *e* inserted between the substantive and the personal pronoun.

The local case is expressed by the particle *te* prefixed to the personal pronoun, e. g. e-gol te-ninje, it is hard for them.

The position of the personal pronoun with regard to the verb is given on p. 49.

The personal pronouns when combined with a verb as subject or object are indicated by special prefixes. See p. 48.

POSSESSIVE PRONOUNS.

The possessive pronouns are always placed after the substantive denoting the thing possessed, and vary according to gender and number. They are:

	Singular.		Plural.	
	Masc.	*Fem.*	*Masc.*	*Fem.*
My	Lai	Ai	Lainei	Ainei.
Thy	Lino	Ino	Linōno	Inōno.
His, her, *or* its	Lenye	Enye	Lenyena	Enyena.
Our	Lafig	Afig	Lafig	Afig.
Your	Linyi	Inyi	Linyi	Inyi.
Their	Lenye	Enye	Lenye	Enye.

Ol-alem lai, my sword. 'L-alema lainei, my swords.
Eng-alem ai, my knife. 'Ng-alema ainei, my knives.

The words *mine, thine, &c.*, used predicatively or absolutely, take the article. Various prefixes are also added, and changes made, in some of the words, as is shown in the following table:

Mine	Ol-lalai	En-ai	Il-kulainei	In-gunainei.
Thine	Ol-lino	En-ino	Il-kulōnōno	In-gunōnōno.
His, hers, *or* its	Ol-lenye	En-enye	Il-kulenyena	In-gunenyena.
Ours	Ol-lalafig	En-afig	Il-kulalafig	In-gunafig.
Yours	Ol-linyi	En-inyi	Il-kulinyi	In-guninyi.
Theirs	Ol-lenye	En-enye	Il-kulenye	In-gunenye.

'L-alema lenye kullo, kodee 'l-kulōnōno? these are their swords, where are thine?

Mi-ar il-asurai, 'l-kulalafig, do not kill the snakes, they are ours.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

I-ata 'n-glahu inōno; e-ata aii ol-oiboni 'n-gunenyena, thou hast thy cattle; the medicine-man also has his. 193*
Sidai en-dōki enye a-lafig en-ai, his thing is better than mine.

There is a short enclitic form of the Possessive Pronoun of the second and third persons, which is used with the words *father* and *mother*:

Singular.	Plural.
Minyo, thy *or* your father;	Loominyi, thy *or* your fathers.
Menye, his, her, *or* their father;	Loomenye, his, her, *or* their fathers.
Ñgutunyi, thy *or* your mother;	Nooñgutunyi, thy *or* your mothers.
Ñgotonye, his, her, *or* their mother;	Nooñgotonye, his, her, *or* their mothers.

The personal pronouns may be added to the possessive pronoun to give emphasis. The word o-sesen, the body, is also sometimes used in this sense:

Eng-alem ai nanu,
Eng-alem o-'sesen lai, } my own knife.

DEMONSTRATIVE PRONOUNS.

There are four classes of demonstrative pronouns. The first denotes objects near at hand; the second, objects at a distance; and the third and fourth, objects previously mentioned. They each have forms for the masculine and feminine, and the word e-wēji, the place, requires a special form to be used with it.

Class I.

This *or* these, of objects at no great distance:

Masculine.	*Feminine.*	*Used with the word e-wēji.*	English.
Elle	Enna	Enne	This.
Kullo	Kunna	Kunne *or* Kunnen	These.

Class II.

That *or* those *or* yonder, referring to things at a distance:

Ledo *or* elde	Enda	Ende	That.
Kuldo	Kunda	Kunde *or* Kunden	Those.

Class III.

This *or* these, mentioned before:

Illo	Inna	Inne	This.
Lello	Nenna	Nenne	These.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Class IV.

*193 That *or* those *or* yonder, mentioned before:

Masculine.	*Feminine.*	*Used with the word e-wēji.*	English.
Lido	Idya	Idye	That.
Lekwa	Nekwa	Nekwe	Those.

When the demonstrative pronoun is joined to a substantive, it takes the place of the article:

Ledo-tuñgani, that man. Enna-kerai, this child.

When used predicatively, the article is retained, and the demonstrative follows the substantive:

Ol-tuñgani ledo, that is the man.
En-gerai enna, this is the child.

In the genitive and local cases the first letter of the demonstrative is omitted if an *e*:

Ol-origha le-'lle-tuñgani, the stool of this man.
E-gol te-'lle-tuñgani, it is hard for this man.

If it is desired to lay stress on the demonstrative pronoun, the syllable nya, nye, *or* nyo is prefixed to it. When the demonstrative has taken this form and is joined to a substantive, the article is retained:

Nyelle ol-tuñgani, this man here, this very man.
Nyoolo 'l-tuñganak, these men here.
Nyanna e-ñgorōyōni, this woman here.
Nyonna 'ñgorōyok, these women here.
Nyenne e-wēji, just this place.

REFLEXIVE PRONOUNS.

Most verbs have a special reflexive form which is much used.

When this form does not exist or is employed for the neuter or quasi-passive, the word *kewan* is affixed to the verb in the singular and *aate* in the plural:

A-duñg kewan, I cut (*or* shall cut) myself.
Ki-dúñg aate, we cut (*or* shall cut) ourselves.

Self is also occasionally translated by ol-tau, the heart:

E-nyor ol-tau lenye (he loves his heart), he loves himself.

When *self* is added to a pronoun to express emphasis, it is rendered in Masai by open in the singular, and oopen in the plural:

Ol-tuñgani open, the man himself.
Il-tuñganak oopen, the men themselves.
Nanu open, I myself.
'Yook oopen, we ourselves.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

The word *owner* is translated by open preceded by the article. It is followed by the nominative and not by the genitive as in English: 193*

Ol-open eng-aji, } the owner of the hut.
En-open eng-aji, }
'L-oopen ing-ajijik, } the owners of the huts.
'N-oopen ing-ajijik, }

By myself, by ourselves, &c., are also rendered by open, oopen:

Nanu open, by myself; 'Yook oopen, by ourselves.

RELATIVE PRONOUNS.

The relative pronouns have forms appropriate for the masculine and feminine of both numbers. There is also a special form for the word e-wēji, the place:

Singular.			Plural.			
Masc.	*Fem.*	*Used with the word e-wēji.*	*Masc.*	*Fem.*	*Used with the word e-wēji.*	English.
O[1]	Na	Ne	Oo	Naa[2]	Nee	Who, whom, *or* which.

Ol-tuñgani o-ra[3] sapuk, the man who is big.
E-ñgorōyōni na-ra sapuk, the woman who is big.
E-wēji ne-ra sapuk, the place which is big.
Il-tuñganak oo-ra sapuki, the men who are big.
'Ñgorōyok naa-ra sapuki, the women who are big.
'Wējitin nee-ra sapuki, the places which are big.

When the negative is combined with the relative, le-me is used for the masculine, and ne-me for the feminine and for the word e-wēji. These forms do not change in the plural:

Ol-tuñgani le-me-ra sapuk, the man who is not big.
E-ñgorōyōni ne-me-ra sapuk, the woman who is not big.
Il-tuñganak le-me-ra sapuki, the men who are not big.
'Ñgorōyok ne-me-ra sapuki, the women who are not big.

The affirmative form of the relative is not divisible from the verb, but the negative form can stand alone; thus, whilst ol-tuñgani o sapuk[4] would be meaningless, ol-tuñgani le-me sapuk is as correct as ol-tuñgani le-me-ra sapuk.

To distinguish between the simple relative as subject or object the voice is raised or lowered at the end of the verb. When the relative is the subject, the voice is raised, when the object, it is lowered.

Various changes take place in the form of the relative when it is

[1] The masculine singular relative is generally a long o, thus ō.
[2] Naa becomes ná before verbs commencing with *i*.
[3] A-a, to be (*vide* p. 87).
[4] Ol-tuñgani ō-sapuk-u means, the man will be big (*vide* p. 87).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 the subject, and the object is the first or second person singular (except when the subject is the first person plural); also when it is the object, and the subject is the first or second person singular. These alterations are shown on pp. 50–3.

The possessive form of the relative can be translated by ọpen preceded by the article:

Ol-tuñgani ol-ọpeny in-gīshu, the man whose cattle they are.

INDEFINITE PRONOUNS.

There are two indefinite pronouns. The first, likae, &c., is equivalent to other, another, the one . . . the other, *and* else; the second pôki, &c., to each, every, all, whosoever, *and* whatsoever, and in compound words to both, all three, &c.

Likae, &c., other, has different forms for the masculine and feminine, singular and plural. It invariably precedes the substantive, and can be used with or without the article according to the meaning:

Singular.		Plural.	
Masc.	*Fem.*	*Masc.*	*Fem.*
Likae	Ae	Kulikae	Kulye

Examples:

Likae-tuñgani, another man.
Kulye-ñgorōyok, other women.
Ol-likae-tuñgani, the other man.
'N-gulye-ñgorōyok, the other women.
I-mḃot-o ol-likae, call the other one (masculine).

The one . . . the other, is translated by likae . . . likae, ae . . . ae, &c.:

E-tō-īshe eng-ae-ñgorōyōni, na olupi eng-ae, the one woman bore and the other was barren.
E-ṗwo kulikae, e-ṗwōnu kulikae, some go and others come.

Else, when joined to *somebody*, *something*, or *somewhere*, is translated by likae, ae, &c.:

E-ēuo likae-tuñgani, somebody else came.
A-shōmo ae-wēji, I went somewhere else.
A-itobir-a ae-tōki, I did something else.

Other is also used for the comparative of adjectives (which see, p. 38).

Each, *every*, *whosoever*, and *whatsoever*, are translated by pôki. When used in this sense, pôki precedes the substantive, and the article is omitted:

E-ēuo pôki-tuñgani, each man came.
E-ēuo pôki-tuñganak, every man came.

I: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

E-ēṭuo te-pôki-wēji, they came from each place.
Ten e-lōtu pôki-tuñgani, ti-aki m-e-shōmo, whosoever (*or* whatsoever man) comes, tell him to go away.

All is rendered by pôki in the singular, and pôkin in the plural[1]. When employed thus, the article is retained, and pôki follows the substantive:

E-ishir-a eng-aji pôki, all the hut wept.
E-ēṭuo 'l-tuñganak pôkin, all the people came.

Both, all three, &c., are translated as follows:

Masculine.	Feminine.	English.
Pokiraare	Pokirare	Both
Pokirōkuni	Pokirauni	All three.
Pokiroofigwan	Pokirōñgwan	All four.
Pokiraimyet		All five.

E-ēṭuo 'l-tuñganak pokiraare, both men came.
E-ēṭuo 'ñgorōyok pokirauni, all three women came.

INTERROGATIVES.

There are two interrogative pronouns that are declinable, (Ki)[2] añgae, Who? and (K) alo, Which? and one which is indeclinable, (K) ainyô[3], What?

Who? is declined as follows:

Singular. Masc.	Singular. Fem.	Plural. Masc.	Plural. Fem.	English.
(Ki) añgae		(K) aloo-'ñgae	(K) anoo-'ñgae	Who? Whom?
(K) ol-le-'ñgae	(K) en-e-'ñgae	(K) alkul-le-'ñgae	(K) angun-e-'ñgae	Whose?

Which? What? or *What sort of?* are rendered as follows:

(K) alo (K) aa (K) akwa.

If the interrogative pronoun is the subject, the verb requires a relative with it; if it is followed by a demonstrative, the verb *to be* is implied. When Which? is joined to a substantive, the article is omitted:

(Ki) añgae ō-tii kishōmi? } (Who [is it] who is there gate?) Who is
(Ki) añgae na-tii kishōmi? } at the gate?
(K) aloo-'ñgae oo-tii kishōmi? } Who are at the gate?
(K) anoo-'ñgae naa-tii kishōmi? }
(Ki) añgae i-'yēu? Whom do you want?
(K) ol-le-'ñgae elle-alem? Whose sword is this?
(K) en-e-'ñgae enna-alem? Whose knife is this?

[1] Pôkin may also be used with a singular substantive: e-ishir-a eng-aji pôkin, all the hut wept.
[2] *K* or *Ki* are often placed before an interrogative.
[3] Ainyô, when it stands alone, is generally contracted into 'nyô *or* 'ya.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 (K) alkul-le-'ñgae kullo-alema? Whose swords are these?
(K) angun-e-'ñgae kunna-alema? Whose knives are these?
(K) alo-tuñgani ō-tii? Which (*or* what sort of) man is there?
(K) alo-tuñgani elle? What man is this?
(K) aa enna? What is this?
(K) ainyô na-tii? What is there?
(K) ainyô ki-tûm? What (shall) we get?
(K) ainyô e-ata kuldo? (What have those?) What is the matter with them?

VERBS.

Verbs in Masai fall into two classes: (*a*) roots beginning with *i* or *e*[1], (*b*) all other roots. There are also numerous derivative forms which may be assumed by most Masai verbs where in English either another verb or some compound expression must be used.

The principal difference between verbs commencing with *i* or *e* and those commencing with any other letter is to be found in the past tense and tenses constructed from the past. In the former a vowel only is affixed, and in the latter *t* and a vowel are also prefixed to the root. Examples:

A-suj, to follow.	A-tu-suj-a, I followed.
A-isuj, to wash.	A-isuj-a, I washed.

When conjugating the verb special prefixes are used to mark the subject. With the exception of the first person plural these prefixes change when the object is the first or second person singular.

When the subject is—

I and the object him, her, us, you, them, &c., *or* when there is no object, the prefix is A.

I and the object thee, the prefix is Aa[2].

Thou and the object him, her, us, them, &c., *or* when there is no object, the prefix is I.

Thou and the object me, the prefix is Ki.

He, she, *or* it, and the object him, her, us, you, them, &c., *or* when there is no object, the prefix is E.

He, she, *or* it, and the object me, the prefix is Aa[2].

He, she, *or* it, and the object thee, the prefix is Ki.

We and the object thee, him, her, you, them, &c., *or* when there is no object, the prefix is Ki.

[1] There appear to be only two verbs which, with their derivatives, commence with *e*: a-el, to anoint, and a-eñg, to breathe.

[2] *Aa* is used for all verbs except those commencing with *i*, when a slightly accentuated *á* is employed instead.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

You and the object him, her, us, them, &c., *or* when there is no object, the prefix is I. 193*

You and the object me, the prefix is Ki.

They and the object him, her, us, you, them, &c., *or* when there is no object, the prefix is E.

They and the object me, the prefix is Aa[1].

They and the object thee, the prefix is Ki.

The following examples will illustrate the use of these prefixes:

Singular.	Plural.
A-suj, I follow him, &c.	Ki-sŭj, we follow thee, him, &c.
Aa-suj, I follow thee.	
I-suj, thou followest him, &c.	I-suj-usuju, you follow him, &c.
Ki-suj, thou followest me.	Ki-suj-usuju, you follow me.
E-suj, he *or* she follows him, &c.	E-suj, they follow him, &c.
Aa-suj, he *or* she follows me.	Aa-suj, they follow me.
Ki-suj, he *or* she follows thee.	Ki-suj, they follow thee.

In the active voice the personal pronoun is often added for emphasis or to prevent ambiguity. It always follows the verb, and is perhaps more frequently used in the objective than in the subjective case. If both are used, the latter precedes the former, except in the use of auxiliary or compound verbs. Examples:

A-ar nanu 'ndae te-'ñgudi, ē-ar ledo 'ndae to-'l-kuma (I-you-strike I you with-the-stick, he-you-strikes that-one you with-the-club), I strike you with the stick, he strikes you with the club.

A-ar nanu 'ndae te-'ñgudi, e-lōtu a-ar indae ledo to-'l-kuma (I-you-strike I you with-the-stick, he-you-comes to-strike you that-one with-the-club), I strike you with the stick, he comes to strike you (*or* he will strike you) with the club.

If the personal pronoun is used as the indirect object, it precedes the direct object. Example:

A-isho-o 'ndae 'l-alema, I have given you the swords.

When the first person plural is the subject, the last syllable of the verb is slightly accentuated. The objective personal pronoun is also usually added:

Ki-tu-suj-á 'ye pôkin, we have all followed thee.
Ki-tu-suj-a pôkin, all have followed thee.

There is no difference in pronunciation between Thou hast followed me, He *or* She has followed thee, and They have followed thee. When however the prefix is *aa*, i. e. when the subject is I and the

[1] *Aa* is used for all verbs except those commencing with *i*, when a slightly accentuated *á* is employed instead.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 object thee, and when the subject is he, she, *or* they and the object me, a difference in pronunciation is noticeable. In the first case the voice is lowered at the end of the word; in the latter it is raised.

There is an impersonal form which corresponds to the passive in English. This form is only conjugated in the third person singular, and is generally followed by a personal pronoun:

Aa-suj-i nanu, it is followed to me *or* I am followed.
A-iyōlo-i aa-tu-suj nanu, it is known to be followed to me *or* I know how to be followed.

The objective prefix is used when anything about the person or thing is about to be stated:

Aa-tu-duŋg-o ol-kimōjino (he-me-has-cut the-finger), he has cut off my finger.
Ki-ān ing-aik te-kurum (they-thee-bind the-hands at-behind), they will bind thy hands behind thee.

The Relative.

The relative, as explained above (p. 45), is inseparable from the verb. When it is used, it takes the place of the personal prefixes, and can be employed with the present tenses, with the past, and with the future. It is also used with the passive voice.

If the subject and object are expressed, the former precedes, and the latter follows, the relative and verb. Examples:

Nanu o-nyor ol-tuŋgani, (it is) I who love the man.
Nanu o-nyor-ita ol-tuŋgani, (it is) I who am loving the man.
Nanu ō-to-nyor-a ol-tuŋgani, (it was) I who loved the man.
Nanu o-nyor-u ol-tuŋgani, (it is) I who will love the man.
Ol-tuŋgani o-nyor-i, the man who is loved.
Ol-tuŋgani o-nyor-ita-i, the man who is being loved.
Ol-tuŋgani ō-to-nyor-a-ki, the man who was loved.
Ol-tuŋgani o-nyor-u-ni, the man who will be loved.

The form of the relative changes when it is the subject and the object is the personal pronoun of the first and second person singular (except when the subject is the first person plural), *l* and *n* (*li* and *ni* before *ā* [1]) joined to the personal prefixes being substituted for *a* or *aa* and *na* or *naa*:

Masculine.	Feminine.	English.
Ō-suj	Na-suj	I who follow him, her, you, the thing, &c.
Laa-suj	Naa-suj	I who follow thee.
Ō-suj	Na-suj	Thou who followest him, her, us, &c.
Liki-suj	Niki-suj	Thou who followest me, &c.

[1] *li* and *ni* are also sometimes used before *ō*.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193

Masculine.	Feminine.	English.
Ó-ej	Na-ej	He who follows him, her, us, &c.
Laa-ej	Naa-ej	He who follows me.
Liki-ej	Niki-ej	He who follows thee.
Oo-ej	Naa-ej	We who follow thee, him, you, them, &c.
Oo-ej	Naa-ej	You who follow him, her, us, &c.
Liki-ej-ueuju	Niki-ej-ueuju	You who follow me.
Oo-ej	Naa-ej	They who follow him, her, us, &c.
Laa-ej	Naa-ej	They who follow me.
Liki-ej	Niki-ej	They who follow thee.

When the relative is the object of the verb, *l* and *n* joined to the personal prefixes are employed in place of *o* or *oo* and *na* or *naa* if the subject is the first and second person singular or plural:

Ol-tuñgani la-ej, the man whom I follow.
Ol-tuñgani li-ej, the man whom thou followest.
Ol-tuñgani ó-ej, the man whom he *or* she follows.
Ol-tuñgani liki-ej, the man whom we follow.
Ol-tuñgani li-ej-ueuju, the man whom you follow.
Ol-tuñgani ó-ej, the man whom they follow.

When, however, there is an indirect object of the first or second person singular, the objective relative in the third person also changes to *l* or *n* joined to the personal prefixes.

The following examples show the changes in the relative when there is an indirect object:

Ol-alem la-iabo, the sword which I give to him, &c.
Ol-alem lá-iabo[1], the sword which I give to thee.
Ol-alem li-ejo[2], the sword which thou givest to him, &c.
Ol-alem liki-ejo, the sword which thou givest to me.
Ol-alem lá-iabo[1], the sword which he, she, *or* they give to me.
Ol-alem liki-ejo, the sword which he, she, *or* they give to thee.
Ol-alem o-iabo, the sword which he, she, *or* they give to him, &c.
Ol-alem liki-ejó, the sword which we give to thee, him, &c.
Ol-alem li-ejó-abo, the sword which you give to him, &c.
Ol-alem liki-ejó-abo, the sword which you give to me.

When there is no antecedent, the article is prefixed to the relative:

	Singular.	
Masculine.	Feminine.	English.
Ol-ó-ej	En-na-ej	He who follows him, her, us, &c.
Ol-laa-ej	En-naa-ej	He who follows me.
Ol-liki-ej	En-niki-ej	He who follows thee.

[1] The *lá* would be *ian* before a verb beginning with any other letter.
[2] Certain changes take place in the spelling of verbs commencing with *e* (vide pp. 52-53).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

	Plural.	
Masculine.	Feminine.	English.
'L-oo-ej	'N-taa-ej	They who follow him, her, us, &c.
Il-laa-ej	'N-taa-ej	They who follow us.
Il-lili-ej	'N-tiki-ej	They who follow thee.

Examples:

Ol-o-ayor-i, the (man) who is loved.
En-na-ayor-i, the (woman) who is loved.
E-tua ol-lili-ta-ar-a, he who struck thee is dead.
E-till 'l-oo-petuo oo 'l-oo-pwo (they are there those who come and those who go), people come and go.
E-lenkg-a ol-antye ninye oo 'l-oo-loit-are, hunger seized him and those who were with him.
A-ning ol-tolio lo-'l-o-ishir, I hear the voice of some one crying.
E-ta-a e-ilgwetyini en-na-irita 'nirkon, the woman became one who herds donkeys.

Whoever is also often translated by this form of the relative:

E-ar-i ol-o-jo-ki ale-tuilgani, } whoever tells this man, will be
E-ar-i en-na-jo-ki ale-tuilgani, } beaten.

Adverbs of time or place are treated as relative particles, the letter a being simply added to the personal prefixes. When the antecedent is omitted, the feminine article precedes the word.

The words what or that which, whatever, wherever, and whenever, can be translated in the same way:

A-ie-e-wiji a-i-'kgua, I am going to the place whence thou comest.
A-ie-en-a-i-ie, I go whither (or when) thou goest.
A-iytie naan en-a-e-ike, I know what he will do.
A-iytie en-ditki a-e-ike, I know the thing that he will do.
En-a-i-'yo-a-a a-e-iako[1], whatever you will wish I shall give you.
En-a-e-ti-jilg-a pa a-ton, wherever I entered I stayed.
En-a-e-iyo-a a-e-ie[1], a-e-ie, whenever (or wherever) he wishes to go, I will go.

The relative is often used in Masai where it is not employed in English. Examples:

Aikgua o-ie! } (Who who is going?) Who is going!
Aikgua ne-ie! }
Kakwa-tuilgenak en-ekitua! Which men have gone!
E-tuilgenak ajo en-ekitua! How many men have gone!
M-e-till ol-tuilgani o-pik ol-emurua kpipik atwa 'l-enturin nanan (it is not there the man who puts the new wine into the make old), no man putteth new wine into old wine-skins.

[1] The narrative tense (which see, p. 39) follows the verb a-iyo-a, to wish.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

Pôki-tufigani ô-lôtu, whoever may come.
Ol-doinyo o-ibor, the white mountain (Kilima Njaro).
A-ata eng-are na-ok, I have some drinking water.
I-'ya-u ol-origha la-ton-ie, bring me a chair to sit on.

The relative combined with the negative (le-me and ne-me) likewise undergoes changes which are somewhat similar to those already enumerated. Except before *mi*, when *le* and *ne* become *li* and *ni*, the changes only affect the particle *me*.

Examples when the relative is the subject:

Masculine.	Feminine.	English.
Le-me-suj	Ne-me-suj	I who do not follow him, her, &c.
Le-maa-suj	Ne-maa-suj	I who do not follow thee.
Le-me-suj	Ne-me-suj	Thou who dost not follow him, &c.
Li-miki-suj	Ni-miki-suj	Thou who dost not follow me.

Examples when the relative is the object:

Ol-tufigani le-ma-suj, the man whom I do not follow.
Ol-tufigani li-mi-suj, the man whom thou dost not follow.
Ol-tufigani le-me-suj, the man whom he *or* she does not follow.

Examples when an indirect object is employed:

Ol-alem le-ma-isho, the sword which I do not give to him, &c.
Ol-alem le-má-isho, the sword which I do not give to thee.
Ol-alem li-mi-njo, the sword which thou dost not give to him, &c.
Ol-alem li-miki-njo, the sword which thou dost not give to me.
Ol-alem le-má-isho, the sword which he does not give to me.
Ol-alem li-miki-njo, the sword which he does not give to thee.
Ol-alem le-me-isho, the sword which he does not give to him, &c.

When the antecedent is not expressed, the article precedes the particles *le* and *ne*:

Ol-le-me-ata, he who has not.	En-ne-me-ata, she who has not.
E-wtji ne-me-tii 'l-tufiganak, / En-ne-me-tii 'l-tufiganak,	a place where there are no people (a desert place).

Changes of Letters.

Various changes take place in many verbs which commence with *i*.

I. The *i* is omitted whenever it is preceded by another *i* and followed by *i*, *l*, *n*, *ng*, *ny*, *r*, *s*, *u*, *w*, or *y*. It is also omitted after *e* in the plural of the imperative affirmative. In other words, the *i* of the root drops out in the second person singular, and first and second persons plural of all tenses (except in the first person plural of the subjunctive), both affirmative and negative of the active voice,

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 and in the second person singular of all tenses of the passive voice. Examples:

A-ii, I sharpen (it).	Ki-'i, we sharpen (it).
I-'i, thou sharpenest (it).	I-'i-i, you sharpen (it).
E-ii, he *or* she sharpens (it).	E-ii, they sharpen (it).
I-'i-o, sharpen (it).	E-'i-o, sharpen ye (it).
A-iñli, I hang (it) up.	I-'iñli-li, you hang (it) up.
A-ininiñg, I listen.	I-'ninin̄g-iñgi, you listen.
A-iñgol, I stir (it).	I-'ñgol-iñgola, you stir (it).
A-inyorinyor, I taste (it).	I-'nyorinyor-oro, you taste (it).
A-iriran, I annoy (him).	I-'riran-ana, you annoy (him).
A-isalaash, I spread (it) out.	I-'salaash-asha, you spread (it) out.
A-iuañg, I get out of the way.	I-'uañg-uañga, you get out of the way.
A-iwō-u, I catch (blood in a gourd).	I-'wō-u-u, you catch (blood in a gourd).
A-iyop, I cover (him).	I-'yop-ōyopo, you cover (him).

If, however, there are two verbs, the one commencing with *i* and the other with another letter, the roots of which are identical except for the first letter, the *i* is not omitted in the present tense or the tenses formed from it. Thus: a-nyal, to chew[9]; a-inyal, to tease; a-ruk, to thread; a-iruk, to reply to; a-suj, to follow; a-isuj, to wash. Examples:

A-inyal, I tease (him).	Ki-inyál, we tease (him).
I-inyal, thou teasest (him).	I-inyal-inyala, you tease (him).
E-inyal, he *or* she teases (him).	E-inyal, they tease (him).
A-inyal-a, I teased (him).	Ki-'nyal-á, we teased (him).
I-'nyal-a, thou teasedst (him).	I-'nyal-a, you teased (him).
E-inyal-a, he *or* she teased (him).	E-inyal-a, they teased (him).

II. The *i* is changed to *n* whenever it is preceded by another *i* and followed by *d*, *g*, *k*, *t*, and *sh*. The same change also takes place in the plural of the imperative affirmative.

As the letters *k*, *t*, and *sh* cannot follow *n*, they are at the same time altered to *g*, *d*, and *j* respectively. Examples:

A-idim, I am able.	Ki-ndim, we are able.
I-ndim, thou art able.	I-ndim-idimi, you are able.
E-idim, he *or* she is able.	E-idim, they are able.
I-ndim-a, be able.	E-ndim-a, be ye able.

[9] A-nyal, to chew, is sometimes also pronounced a-nyal.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

A-iguran, I play.	I-nguran-ana, you play.
A-ikilikwan, I ask (him).	I-ngilikwan-ana, you ask (him).
A-ityam, I jump.	I-ndyam-ityama, you jump.
A-isho, I give (him).	I-njō-sho, you give (him).

III. The *i* is changed to *m* whenever it is preceded by another *i* and followed by *b*, or *p*, *ṇ*, or *ṇ*. As *p*, *ṇ*, and *ṇ* cannot follow *m* they are at the same time altered to *ḥ*. The plural of the imperative affirmative changes in a like manner. Examples:

A-ibuñg, I seize (him).	Ki-mbúñg, we seize (him).
I-mbuñg[1], thou seizest (him).	I-mbuñg-ubuñgu, you seize (him).
E-ibuñg, he *or* she seizes (him).	E-ibuñg, they seize (him).
I-mbuñg-a, seize (him).	E-mbuñg-a, seize ye (him).
A-ipuñg, *or* a-iṇuñg, *or* a-iṇuñg. I go out.	Ki-mḥúñg, we go out.
I-mḥuñg, thou goest out.	I-mḥuñg-upuñgu, *or* i-mḥuñg-uṇuñgu, *or* i-mḥuñg-uṇuñgu, you go out.
E-ipuñg, *or* e-iṇuñg, *or* e-iṇuñg, he *or* she goes out.	E-ipuñg, *or* e-iṇuñg, *or* e-iṇuñg, they go out.
I-mḥuñg-o, go out.	E-mḥuñg-o, go ye out.

There are a few exceptions to these rules. In the verbs a-inos, to eat, and a-inok, to light, for instance, the *i* is retained in the present tenses. Examples:

A-inos, I eat (it).	I-inos-inosa, you eat (it).
A-inos-a, I ate (it).	I-'nos-a, you ate (it).

In the verbs a-itu, to return hither, and a-ito, to return thither, the *i* is not changed to *m*:

A-itu, I return hither.	I-itu-tu, you return hither.

If the last vowel of the root is *o*, that letter is generally changed to *u* when joined by a consonant to *a*. Examples:

A-iko, to do.	A-iku-na, I did.
A-iñgor, to look.	A-iñgur-a, I looked.
A-iñgur-aa, to look thither.	A-iñgur-aiye, I looked thither.
(But A-iñgor-a, to look hither.	A-iñgor-ua, I looked hither.)

Exceptions:

A-bor, to tear.	A-ta-bor-a, I tore (it).
A-ibor-a, to be white.	A-ibor-a, I was white.

[1] One also occasionally hears i-imbuñg, ki-imbuñg, &c.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 If the verbal root terminates in *e*, that letter changes to *i* when followed by *a*. Example:

A-ure, to fear.	A-t-uri-a, I feared (him).

If the last letter of the root is *k*, preceded by *a*, the *k* is omitted in the formation of the past tense. Examples:

A-bak, to mend (surgically).	A-ta-ba-a, I have mended.
A-diak, to make a mistake.	A-ta-dia, I made a mistake.
A-ipak, to enjoy.	A-ipa-a, I enjoyed (it).
A-ishiak, to find.	A-ishia, I found (it).

If the last letter of the root is *k* preceded by *o*, the *k* is omitted in the formation of the past tense when followed by *o*. Examples:

A-mok, to become accustomed to.	A-ta-mo-o, I became accustomed to.
A-yook, to go early in the morning.	A-ta-yoo, I went early in the morning.
A-ibok, to hinder.	A-ibo-o, I hindered (it).

If the last letter of the root is *k* preceded by *o*, the *o* is changed to *u* and the *k* is omitted when followed by *a*. Examples:

A-lok, to bend, fold.	A-ta-lu-a, I bended, folded (it).
A-nyok, to give oneself trouble, make an effort.	A-to-nyu-a, I made an effort.
A-irok, to cough.	A-iru-a, I coughed.
A-inok, to kindle, light.	A-inu-a, I kindled (it).

In one instance the same changes occur with a verb terminating in *l*:

A-dol, to see.	A-ta-du-a, I saw (him).
A-ita-dol, to make to see, to show.	A-ita-du-a, I showed (him).

If the last letter of the root is *k* preceded by *e*, the *e* is changed to *i* and the *k* is omitted when followed by *a*. Examples:

A-dek, to insult.	A-te-di-a, I insulted (him).
A-rek, to throw down.	A-te-ri-a, I have thrown (him) down.

In a few neuter verbs when the last letter of the root is *k*, that letter is changed to *n* in the formation of the past tense:

A-melok, to be sweet.	A-ta-melōn-o, I was sweet.
A-munyak, to have luck.	A-ta-munyan-a, I had luck.
A-piak, to be greedy.	A-ta-pian-a, I was greedy.

FL12 Masai FL12

193*

FORMATION OF TENSES.

SIMPLE VERBS.

Active Voice.

Indicative Tenses.

Present.

In simple verbs there are two present tenses, one indefinite (I follow), and one imperfect and progressive (I am following). With the exception of the second person plural, the indefinite present is formed by merely adding the personal prefixes to the root. In the second person plural[1] the root is doubled, if of only one syllable, the reduplication being usually preceded and followed by a vowel. If of more than one syllable, the last syllable only is doubled. The imperfect and progressive present is formed by affixing *ita* or *ito*, and the last syllable is doubled in the second person plural:

A-suj (nanu ninye), I follow (him).	Ki-súj (iyook ninye), we follow (him).
I-suj (iye ninye), thou followest (him).	I-suj-usuju ('ndae ninye), you follow (him).
E-suj (ninye ninye), he *or* she follows (him).	E-suj (ninje ninye), they follow (him).
A-polos, I tear (him).	I-polos-oso, you tear (him).
A-suj-ita, I am following (him).	Ki-suj-itá, we are following (him).
I-suj-ita, thou art following (him).	I-suj-ita-ta, you are following (him).
E-suj-ita, he *or* she is following (him).	E-suj-ita, they are following (him).
A-isuj, I wash (him).	Ki-isúj, we wash (him).
I-isuj, thou washest (him).	I-isuj-usuju, you wash (him).
E-isuj, he *or* she washes (him).	E-isuj, they wash (him).
A-idetidet, I dream (it).	I-ndetidet-eti, you dream (it).
A-isuj-ita, I am washing (him).	Ki-isuj-itá, we are washing (him).
I-isuj-ita, thou art washing (him).	I-isuj-ita-ta, you are washing (him).
E-isuj-ita, he *or* she is washing (him).	E-isuj-ita, they are washing (him).

[1] The third person singular followed by the objective personal pronoun is occasionally used in place of the second person plural. Example: e-mut indae el-amŝyu, it finishes to you the hunger *or* you are dying of hunger.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 Still *or* yet is indicated by eton, which means literally he sits *or* stays, prefixed to the present tenses:

Eton a-suj, I still follow (him).
Eton a-suj-ita, I am still following (him).
Eton a-isuj, I still wash (him).
Eton a-isuj-ita, I am still washing (him).

Past.

The past tense of simple verbs not commencing with *i* or *e* is formed by inserting between the root and the personal prefixes a *t* and a vowel (generally the same as the root vowel) and affixing *a* or *o*. Verbs commencing with *i* or *e* form the past tense by simply affixing *a* or *o*. No change takes place in the formation of the plural. Examples:

A-ta-figas-a, I began (it).
A-te-yer-a, I boiled (it).
A-ti-gil-a, I broke (it).
A-tō-niñg-o, I heard (it).
A-tu-suj-a, I followed (it).
A-iyam-a, I married (her).
A-iken-a, I counted (it).
A-ilfli-o, I hung (it) up.
A-inos-a, I ate (it).
A-isuj-a, I washed (it).

When a verbal root commences with a vowel (other than *i* or *e*), the prefix is often simply *t*:

A-t-än-a, I bound (it).

When the root ends in two vowels, the affix is generally omitted:

A-ta-rua, I kicked (it).

When the root ends in a single vowel, the affix *a* or *o* is sometimes preceded by an *n* or *r*:

A-ba, to get, reach. A-ta-ba-na, I got, reached.
A-iro, to say. A-iro-ro, I said.

A-tu-suj-a, I followed *or* have followed (him).
I-tu-suj-a, thou followedst *or* hast followed (him).
E-tu-suj-a, he *or* she followed *or* has followed (him).
Ki-tu-suj-á, we followed *or* have followed (him).
I-tu-suj-a, you followed *or* have followed (him).
E-tu-suj-a, they followed *or* have followed (him).

A-isuj-a, I washed *or* have washed (him).
I-'suj-a, thou washedst *or* hast washed (him).
E-isuj-a, he *or* she washed *or* has washed (him).
Ki-'suj-á, we washed *or* have washed (him).
I-'suj-a, you washed *or* have washed (him).
E-isuj-a, they washed *or* have washed (him).

1; Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Future.

A future tense is only occasionally found in simple verbs, the present indefinite with or without the word adde, afterwards, *or* ahenya, presently, being generally used instead. 193*

If a future exists, it is formed by affixing *u* to the root, and in the second person plural by doubling the last syllable. Examples:

A-nyor-u, I shall love (him). I-nyor-u-ru, you will love (him).
A-idim-u, I shall be able. I-ndim-u-mu, you will be able.

When a verb has a regular future, all the tenses which in other verbs are formed from the present can be, and usually are, formed from the future.

Another form of the future is made by the present tense of the verb *to go* or *to come* and the infinitive.

A-lo a-suj, I go to follow (him)
A-lōtu a-suj, I come to follow (him) } *or* I shall follow (him).

THE NARRATIVE TENSE.

In telling a story it is usual to begin with one verb in the past tense (or, in the event of a verb having no past, with the indefinite present and the word opa, formerly), and to put all the verbs that follow in a tense made by the letter *n* (*na* before *ma*; *ni* before *k*, *mi*, or *in*; and *ne* before *me*) prefixed to the indefinite present or present imperfect. If the verb has a future, the *n* is prefixed to this tense instead of to the indefinite present. The past tense is only rarely used in this manner.

After the verb *to wish* all verbs are put in the narrative tense. Example:

A-ata opa en-gitefig, n-a-iyō-u n-a-yefig, n-e-iyōlō-u, n-e-ipiri (I have formerly an ox, and I shall wish and I slaughter it, and it will know and it runs away), I had formerly an ox. I wished to slaughter it. It knew and it ran away.

Both a-iyō-u, to wish, and a-iyōlō-u to know, have a future form which is here used.

The narrative tense is often employed for the imperative when the latter is the second verb in the sentence:

Ten e-lōtu, ni-i-suj (if he comes, and you follow him), if he comes, follow him.

CONDITIONAL TENSES.

Present.

There are two present conditional tenses in simple verbs which are formed by prefixing tini, tin, *or* ten to the two present indicative tenses.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

#193 Tini is used before *k*, *mi*, or *in*; tin before *i* except when followed by *n*; and ten before other letters:

Ten a-suj, if *or* when I follow (him).	Tini ki-sú̧j, if *or* when we follow (him).
Ten a-suj-ita, if *or* when I am following (him).	Tini ki-suj-itá, if *or* when we are following (him).
Ten a-isuj, if *or* when I wash (him).	Tini ki-isú̧j, if *or* when we wash (him).
Ten a-isuj-ita, if *or* when I am washing (him).	Tini ki-isuj-itá, if *or* when we are washing (him).

If the conditional tense is the second verb in the sentence, the prefix is sometimes omitted. This is more particularly the case when it is desired to lay stress on the condition:

A-dol a-suj, I (shall) see him *if* I follow him.

The meaning here might be taken to be, I wish to see him but I have no desire to follow him.

Past.

The past conditional tenses are formed by prefixing ore pe[1] (ore pa before words beginning with *a*) and ore to the present indefinite tense. The former signifies that the action is finished; the latter that it is incomplete:

Ore pa a-suj, when I followed (him).	Ore pe ki-sú̧j, when we followed (him).
Ore a-suj, when I was following (him).	Ore ki-sú̧j, when we were following (him).
Ore p' a-isuj, when I washed (him).	Ore pe ki-isú̧j, when we washed (him).
Ore a-isuj, when I was washing (him).	Ore ki-isú̧j, when we were washing (him).

A past conditional tense can also be formed by prefixing ten, &c., to the past tense:

Ten a-tu-suj-a, ana'-'ata aa-ta-ar-aki, if I had followed him, I should have been beaten.

Ore pe *or* ore pa can be prefixed to the past tense in sentences like the following:

Ore p' aa-tu-suj-a a-jo mi-ki-ar-i, now I followed thee so that thou shouldst not be beaten.

Another form of the conditional tense, which is used in conjunction

[1] Ore means now, and pe and. When pa and pe are followed by a word beginning with two vowels the *a* and *e* are dropped.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

with the narrative tense, is made by the verb *to say* followed by the imperative: 193*

N-a-jo tu-suj-a, and I say follow (him) *or* and when I follow (him).

N-i-jo tu-suj-a, and thou sayest follow (him) *or* and when thou followest (him).

N-ē-jo tu-suj-a, and he or she says follow (him) *or* and when he or she follows (him).

Ni-ki-jó en-du-suj, and we say follow ye (him) *or* and when we follow (him).

N-i-jō-jo en-du-suj, and you say follow ye (him) *or* and when you follow (him).

N-ē-jo en-du-suj, and they say follow ye (him) *or* and when they follow (him).

The passive form is often employed in the third person plural if the subject consists of more than two or three persons or things:

N-ē-ji en-du-suj, and it is said follow ye (him) *or* and when they follow (him).

The Contingent Tenses.

The present and past contingent tenses are formed by prefixing ana, if, and a-ata, to have, to the indefinite present or past tenses:

Ana'-'ata a-suj, I should *or* if I did follow (him).

Ana'-'ata a-tu-suj-a, I should have *or* had I followed (him).

Ana'-'ata a-isuj, I should *or* if I did wash (him).

Ana'-'ata a-isuj-a, I should have *or* had I washed (him).

Ana'-'ata ki-súj, we should *or* if we did follow (him).

Ana'-'ata ki-tu-suj-á, we should have *or* had we followed (him).

Ana'-'ata ki-isúj, we should *or* if we did wash (him).

Ana'-'ata ki-'suj-á, we should have *or* had we washed (him).

Imperative.

Simple verbs not commencing with *i* or *e* form the singular of the imperative like the past tense by prefixing *t* and a vowel to the root and affixing *a* or *o*. The plural is formed by prefixing *en* to the singular and dropping the affix:

Tu-suj-a, follow thou (him).

En-du-suj, follow ye (him).

The imperative of verbs commencing with *i* or *e* is formed like the past tense by affixing *a* or *e* to the root. In the singular *i* is prefixed; in the plural *e*. The affix is not dropped in the plural:

I-'suj-a, wash (him).

E-'suj-a, wash ye (him).

When the object of the imperative is the first person singular, *ki* is affixed:

Tu-suj-a-ki, follow me.

I-'suj-a-ki, wash me.

En-du-suj-a-ki, follow ye me.

E-'suj-a-ki, wash ye me.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 The first and third persons of the subjunctive may be used as an imperative or jussive:

M-a-tu-suj-a, let me follow (him). M-e-tu-suj-a, let him follow (him).
M-a-isuj-a, let me wash (him). M-e-isuj-a, let him wash (him).

Another form of the imperative is made by the imperative of the verb *to give*, followed by the subjunctive. Example:

I-njo-o m-e-tu-suj-a, give him that he follows (him) or let him follow (him).

Subjunctive.

The subjunctive is formed much like the imperative. In the first and third persons singular *ma* and *me* are prefixed to the singular of the imperative, the imperative itself is used for the second person singular and plural, and the first person plural is formed by changing the *en* or *e* of the imperative into *man*[1] or *má*. The third person plural is similar to the third person singular:

M-a-tu-suj-a, that I may follow (him).	M-aa-tu-sú̧j, that we may follow (him).
Tu-suj-a, that thou mayest follow (him).	En-du-suj, that you may follow (him).
M-e-tu-suj-a, that he or she may follow (him).	M-e-tu-suj-a, that they may follow (him).
M-a-isuj-a, that I may wash (him).	M-á-isuj-á, that we may wash (him).
I-'suj-a, that thou mayest wash (him).	E-'suj-a, that you may wash (him).
M-e-isuj-a, that he or she may wash (him).	M-e-isuj-a, that they may wash (him).

Some instances of the use of the subjunctive are given in the following examples:

Tu-'ɪ̃g-ai m-e-irag-a, leave him alone so that he may sleep.
Ti-aki m-aa-tu-suj-a (tell him that he may follow me), tell him to follow me.
E-ti-aka 'ndae en-du-suj (he told you that you may follow him), he told you to follow him.
E-isho m-e-shōm-o (he gives him that he may go), he gives him permission to go.
E-ton ol-ayōni ti-aulo m-e-ta-am-a en-gijape (the boy sits outside that the cold may eat him), the boy sits outside to get cold.
E-ta-ar-a ol-murani ol-ayōni, m-e-tua (the warrior struck the boy that he may die), the warrior struck the boy and killed him.

[1] One form of the present tense of the verb *to be* is *a* in the singular, as in the plural (*vide* p. 89).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

E-lo akiti oo m-e-ta-ba-i (he goes slowly and that he may reach it), he goes slowly till he reaches it. 193*

M-e-ta-any-u m-e-tu-bul-u oo m-e-ta-a bōtor (let him wait for it he may grow and he may become big), let him wait for it until he grows and becomes big.

E-pal te-'n-netii m-e-ta-ba-na n-e-mut-a (he leaves it at where it is that it may get and it becomes finished), he will leave it where it is until it is finished.

Mi-ki-ta-ar-a eng-Ai, may God strike you.

Participles.

There are no participles in Masai. The English present participle in -ing may sometimes be represented by a present tense: e.g. e-ta-ar-a e-suj or e-ta-ar-a e-suj-ita, he struck (him) following (him). When the past participle in English is used as a verbal adjective, it is rendered in Masai by the verbal forms combined with the relative: e.g. e-iputukuny en-gima en-gerai na-ta-pej-ō-ki, a burnt child dreads the fire.

Infinitives.

There are two infinitives in Masai, one of which is formed by prefixing *a* to the root[1] in the singular, and *aa* (or *á* before verbs commencing with *i*) in the plural; and the other by prefixing the same letters to the past tense[2].

Singular.		Plural.	
A-suj, A-tu-suj-a,	to follow.	Aa-suj, Aa-tu-suj,	to follow.
A-isuj, A-isuj-a,	to wash.	Á-isuj, Á-isuj-a,	to wash.

The infinitive formed like the past tense is only used after certain verbs, which are given on page 96.

Except for the reduplication or accentuation of the prefix in the plural, the infinitives are invariable, and any changes which may be caused owing to the first and second persons singular being the object, affect the personal prefixes of the governing verb only. Thus:

Ki-ñgas a-suj, thou me beginnest to follow *or* thou beginnest to follow me.

[1] Whenever a verb has a special form for the future, the letters *a*, &c., are generally prefixed to this tense instead of to the root: e.g. a-nyor-u, to love. It is, however, permissible to say a-nyor.

[2] Verbs commencing with any letter except *i* or *e* drop the affix of the past tense in the plural, as is done in the imperative and subjunctive.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 Aa-ñgas aa-suj, they me begin to follow *or* they begin to follow me.
Ki-'yōlo a-tu-suj-a, thou me knowest to follow *or* thou knowest how to follow me.
Á-iyōlo aa-tu-suj, they me know to follow *or* they know how to follow me.

The use of the infinitives is shown in the following examples:

E-ton ol-tuñgani a-boit-are e-ñgorōyōni, the man is sitting (to be) together with the woman.
E-itō-ki a-ar (he him does again to beat), he will beat him again.
E-pwo aa-ñgas á-iñgor-u ol-tuñgani (they go to begin to look hither a man), they first of all search for a man.
E-ētuò 'l-ñgojínia aa-dum-aa ol-meneñgani áinos, the hyenas came to take away the corpse to eat it.
I-ndim a-ta-ar-a? Canst thou kill him?
I-ndim-idimi aa-ta-ar? Can you kill him?
E-noto a-itobir-a en-gias, he has succeeded in doing the work.
E-noto á-itobir-a en-gias, they have succeeded in doing the work.

The Negative Conjugation—Active Voice.

Present.

The negative present of all verbs is formed by prefixing *m* (*mi* before *in* and *k*) to the affirmative present:

M-a-suj, I follow (him) not.	Mi-ki-sú́j, we follow (him) not.
M-a-suj-ita, I am not following (him).	Mi-ki-suj-itá, we are not following (him).
M-a-isuj, I wash (him) not.	Mi-ki-isú́j, we wash (him) not.
M-a-isuj-ita, I am not washing (him).	Mi-ki-isuj-itá, we are not washing (him).

Past.

There is one negative form referring to past time generally. It is made by prefixing to the affirmative indefinite present the word eitu, which is the third person singular of the present tense of the verb a-itu, to return hither, but which has come to mean not *or* not yet:

Eitu a-suj, I did not follow (him) *or* have not followed (him).
Eitu ki-sú́j, we did not follow (him) *or* have not followed (him).
Eitu a-isuj, I did not wash (him) *or* have not washed (him).
Eitu ki-isú́j, we did not wash (him) *or* have not washed (him).

Not yet is expressed by prefixing eton (he sits *or* still) to the negative past:

Eton eitu a-suj, I have not yet followed (him).
Eton eitu a-isuj, I have not yet washed (him).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Future.

The negative form of verbs which have a future is made by prefixing m (*mi* before *k*) to the affirmative future: 193*

M-a-nyor-u, I shall not love (him).
M-a-idim-u, I shall not be able.
Mi-ki-nyor-ú, we shall not love (him).
Mi-ki-ndim-ú, we shall not be able.

THE NARRATIVE TENSE.

The negative narrative tense is formed by inserting *m* (*mi* before *k*) between the prefixes *na*, *ni*, and *ne*, and the personal prefixes:

Na-m-a-suj, and I follow (him) not.
Ni-m-i-suj, and thou followest (him) not.
Ne-m-e-suj, and he *or* she follows (him) not.
Na-m-a-isuj, and I wash (him) not.
Ni-mi-ki-súj, and we follow (him) not.
Ni-m-i-suj-usuju, and you follow (him) not.
Ne-m-e-suj, and they follow (him) not.
Ni-mi-ki-isúj, and we wash (him) not.

CONDITIONAL TENSES.

Present.

To form the present conditional tenses the prefixes teni *or* tini are placed before the present negative tenses. Tini is used before *mi*, teni before all other letters:

Teni m-a-suj, if *or* when I do not follow (him).
Teni m-a-suj-ita, if *or* when I am not following (him).
Teni m-a-isuj, if *or* when I do not wash (him).
Teni m-a-isuj-ita, if *or* when I am not washing (him).
Tini mi-ki-súj, if *or* when we do not follow (him).
Tini mi-ki-suj-itá, if *or* when we are not following (him).
Tini mi-ki-isúj, if *or* when we do not wash (him).
Tini mi-ki-isuj-itá, if *or* when we are not washing (him).

Past.

The negative past conditional tenses are formed by prefixing ten to the negative of the past indicative, or by prefixing ore pe *or* ore to the negative of the present indefinite:

Ten eitu a-suj, if I did not follow (him).
Ore pe m-a-suj, when I did not follow (him).
Ore m-a-suj, when I was not following (him).
Ten eitu a-isuj, if I did not wash (him).
Ore pe m-a-isuj, when I did not wash (him).
Ore m-a-isuj, when I was not washing (him).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

The Contingent Tenses.

*193 The negative present and past contingent tenses are formed by prefixing anaa and a-ata to the negative present and past indicative:

Ana'-'ata m-a-suj, I should not follow (him).
Ana'-'ata eitu a-suj, I should not have followed (him).
Ana'-'ata m-a-isuj, I should not wash (him).
Ana'-'ata eitu a-isuj, I should not have washed (him).

Imperative.

The negative imperative is formed by prefixing to the root *mi* in the singular, and *e-mi* in the plural:

Mi-suj, follow (him) not.
Mi-isuj, wash (him) not.
E-mi-suj, follow ye (him) not.
E-mi-isuj, wash ye (him) not.

When the object of the imperative is the first person singular, *ki* is inserted between the prefix and the root:

Mi-ki-suj, follow me not.
Mi-ki-isuj, wash me not.
E-mi-ki-suj, follow ye me not.
E-mi-ki-isuj, wash ye me not.

Another method of forming the negative imperative, and one which is very frequently used, is by the negative imperative of the verb *to give* followed by the present indicative.

Mi-ki-njo a-suj, do not give me that I follow (him) *or* do not let me follow (him).
Mi-njo e-suj, do not give him that he follows (him) *or* do not let him follow (him).

Negative Subjunctive.

The first and third persons singular and plural of the negative subjunctive are the same as the negative indefinite present; the second persons are the same as the negative imperative:

M-a-suj, that I may not follow (him).
Mi-suj, that thou mayest not follow (him).
M-e-suj, that he *or* she may not follow (him).
Mi-ki-sújj, that we may not follow (him).
E-mi-suj, that you may not follow (him).
M-e-suj, that they may not follow (him).

M-a-isuj, that I may not wash (him).
Mi-isuj, that thou mayest not wash (him).
M-e-isuj, that he may not wash (him).
Mi-ki-isújj, that we may not wash (him).
E-mi-isuj, that you may not wash (him).
M-e-isuj, that they may not wash (him).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

The Impersonal Form or Passive Voice.

There is an impersonal form which corresponds to the passive voice in English. This form is only used in the third person singular, and the indirect object (the subject in English) is generally added.

Present.

The present tense is formed from the active by affixing *i*:

As-suj-i nanu, it is followed to me *or* I am followed.

Ki-suj-i 'ye, it is followed to thee *or* thou art followed.

E-suj-i ninye, it is followed to him *or* he is followed.

E-suj-i 'yook, it is followed to us *or* we are followed.

E-suj-i 'ndae, it is followed to you *or* you are followed.

E-suj-i ninje, it is followed to them *or* they are followed.

As-suj-ita-i nanu, it is being followed to me *or* I am being followed.

E-suj-ita-i 'yook, it is being followed to us *or* we are being followed.

Á-isuj-i nanu, it is washed to me *or* I am washed.

E-isuj-i 'yook, it is washed to us *or* we are washed.

Á-isuj-ita-i nanu, it is being washed to me *or* I am being washed.

E-isuj-ita-i 'yook, it is being washed to us *or* we are being washed.

Past.

The past tense is made by affixing *ki* to the active:

As-tu-suj-a-ki nanu, it has been followed to me *or* I have been followed.

Ki-tu-suj-a-ki 'ye, it has been followed to thee *or* thou hast been followed.

E-tu-suj-a-ki ninye, it has been followed to him *or* he has been followed.

E-tu-suj-a-ki 'yook, it has been followed to us *or* we have been followed.

E-tu-suj-a-ki 'ndae, it has been followed to you *or* you have been followed.

E-tu-suj-a-ki ninje, it has been followed to them *or* they have been followed.

Á-isuj-a-ki nanu, it has been washed to me *or* I have been washed.

E-isuj-a-ki 'yook, it has been washed to us *or* we have been washed.

Future.

Those verbs which have a future form the passive by affixing *ni* to the active:

As-nyor-u-ni nanu, it will be loved to me *or* I shall be loved.

E-nyor-u-ni 'yook, it will be loved to us *or* we shall be loved.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 A common way of forming the future of other verbs is by the present passive of the verbs *to go* or *to come* followed by the infinitive:

Aa-pwei aa-suj nanu, it is gone to me to be followed *or* I am gone to be followed *or* I shall be followed.

Aa-pwōnu-ni aa-suj nanu, it is come to me to be followed *or* I am come to be followed *or* I shall be followed.

E-pwei aa-suj iyook, it is gone to us to be followed *or* we are gone to be followed *or* we shall be followed.

E-pwōnu-ni aa-suj iyook, it is come to us to be followed *or* we are come to be followed *or* we shall be followed.

The narrative, conditional, and contingent tenses are formed by affixing the same words or letters as in the active voice:

The Narrative Tense.

N-aa-suj-i nanu, and it is followed to me *or* and I am followed.

N-e-suj-i 'yook, and it is followed to us *or* and we are followed.

Conditional Tenses.

Ten aa-suj-i nanu, if it is followed to me *or* if I am followed.

Ten aa-suj-ita-i nanu, if it is being followed to me *or* if I am being followed.

Ore p' aa-suj-i nanu, when it was followed to me *or* when I was followed.

Ore aa-suj-i nanu, when it was being followed to me *or* when I was being followed.

Ten e-suj-i 'yook, if it is followed to us *or* if we are followed.

Ten e-suj-ita-i 'yook, if it is being followed to us *or* if we are being followed.

Ore pe e-suj-i 'yook, when it was followed to us *or* when we were followed.

Ore e-suj-i 'yook, when it was being followed to us *or* when we were being followed.

The Contingent Tenses.

Ana'-'ata aa-suj-i nanu, it would be followed to me *or* I should be followed.

Ana'-'ata aa-tu-suj-a-ki nanu, it would have been followed to me *or* I should have been followed.

Ana'-'ata á-isuj-a-ki nanu, it would have been washed to me *or* I should have been washed.

Ana'-'ata e-suj-i 'yook, it would be followed to us *or* we should be followed.

Ana'-'ata e-tu-suj-a-ki 'yook, it would have been followed to us *or* we should have been followed.

Ana'-'ata e-isuj-a-ki 'yook, it would have been washed to us *or* we should have been washed.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Imperative.

There is no form for the passive imperative, and either the second persons of the passive subjunctive, or the imperative affirmative of the verb *to give* followed by the present indicative passive, is used instead: 193*

Mi-ki-tu-suj-i 'ye, that it may be followed to thee *or* be followed.
Mi-ki-isuj-i 'ye, that it may be washed to thee *or* be washed.
I-njo-o ki-suj-i 'ye, give that it is followed to thee *or* be followed.
I-njo-o ki-isuj-i 'ye, give that it is washed to thee *or* be washed.

Subjunctive.

The passive subjunctive is formed like the active subjunctive, the affix and the personal prefixes alone being changed:

M-aa-tu-suj-i nanu, that it may be followed to me *or* that I may be followed.
Mi-ki-tu-suj-i 'ye, that it may be followed to thee *or* that thou mayest be followed.
M-e-tu-suj-i ninye, that it may be followed to him *or* that he may be followed.

M-e-tu-suj-i 'yook, that it may be followed to us *or* that we may be followed.
M-e-tu-suj-i 'ndae, that it may be followed to you *or* that you may be followed.
M-e-tu-suj-i ninje, that it may be followed to them *or* that they may be followed.

M-á-isuj-i nanu, that it may be washed to me *or* that I may be washed.

M-e-isuj-i 'yook, that it may be washed to us *or* that we may be washed.

Infinitives.

The infinitives of the passive voice are similar to the plural of the infinitives of the active voice and are invariable:

Singular.	Plural.
Aa-suj, Aa-tu-suj, } to be followed.	Á-isuj, Á-isuj-a, } to be washed.

Examples:

Ki-figaa-i aa-suj iye, it is begun to thee to be followed *or* thou beginnest to be followed.
Ki-'yölo-i aa-tu-suj iye, it is known to thee to be followed *or* thou knowest how to be followed.

E-figaa-i aa-suj iyook, it is begun to us to be followed *or* we begin to be followed.
E-iyölo-i aa-tu-suj iyook, it is known to us to be followed *or* we know how to be followed.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

The Negative Passive.

*193 The negative passive is formed in the same way as the negative active:

Present.

M-aa-suj-i nanu, it is not followed to me *or* I am not followed.

M-aa-suj-ita-i nanu, it is not being followed to me *or* I am not being followed.

M-á-isuj-i nanu, it is not washed to me *or* I am not washed.

M-á-isuj-ita-i nanu, it is not being washed to me *or* I am not being washed.

M-e-suj-i 'yook, it is not followed to us *or* we are not followed.

M-e-suj-ita-i 'yook, it is not being followed to us *or* we are not being followed.

M-e-isuj-i 'yook, it is not washed to us *or* we are not washed.

M-e-isuj-ita-i 'yook, it is not being washed to us *or* we are not being washed.

Past.

Eitu aa-suj-i nanu, it has not been followed to me *or* I have not been followed.

Eitu á-isuj-i nanu, it has not been washed to me *or* I have not been washed.

Eitu e-suj-i 'yook, it has not been followed to us *or* we have not been followed.

Eitu e-isuj-i 'yook, it has not been washed to us *or* we have not been washed.

Future.

M-aa-nyor-u-ni nanu, it will not be loved to me *or* I shall not be loved.

M-e-nyor-u-ni 'yook, it will not be loved to us *or* we shall not be loved.

The Narrative Tense.

Na-m-aa-suj-i nanu, and it is not followed to me *or* and I am not followed.

Na-m-á-isuj-i nanu, and it is not washed to me *or* and I am not washed.

Ne-me-suj-i 'yook, and it is not followed to us *or* and we are not followed.

Ne-m-e-isuj-i 'yook, and it is not washed to us *or* and we are not washed.

Conditional Tenses.

Teni m-aa-suj-i nanu, if it is not followed to me *or* if I am not followed.

Teni m-aa-suj-ita-i nanu, if it is not being followed to me *or* if I am not being followed.

Ten eitu aa-suj-i nanu, if it was not followed to me *or* if I was not followed.

Teni m-e-suj-i 'yook, if it is not followed to us *or* if we are not followed.

Teni m-e-suj-ita-i 'yook, if it is not being followed to us *or* if we are not being followed.

Ten eitu e-suj-i 'yook, if it was not followed to us *or* if we were not followed.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Ore pe m-aa-suj-i nanu, when it was not followed to me *or* when I was not followed.

Ore pe m-e-suj-i 'yook, when it was not followed to us *or* when we were not followed. 193*

Ore m-aa-suj-i nanu, when it was not being followed to me *or* when I was not being followed.

Ore m-e-suj-i 'yook, when it was not being followed to us *or* when we were not being followed.

CONTINGENT TENSES.

Ana'-'ata m-aa-suj-i nanu, it would not be followed to me *or* I should not be followed.

Ana'-'ata m-e-suj-i 'yook, it would not be followed to us *or* we should not be followed.

Ana'-'ata eitu aa-suj-i nanu, it would not have been followed to me *or* I should not have been followed.

Ana'-'ata eitu e-suj-i 'yook, it would not have been followed to us *or* we should not have been followed.

M-aa-suj-i nanu, that it may not be followed to me *or* that I may not be followed.

M-e-suj-i 'yook, that it may not be followed to us *or* that we may not be followed.

M-á-isuj-i nanu, that it may not be washed to me *or* that I may not be washed.

M-e-isuj-i 'yook, that it may not be washed to us *or* that we may not be washed.

DERIVATIVE VERBS.

VERBS DENOTING MOTION TOWARDS THE SPEAKER.

Verbs denoting motion towards the speaker take the affix u.

ACTIVE VOICE.

Present.

Derivatives have only one present tense. In the second person plural the last syllable is doubled[1]:

A-suj-u, I follow *or* am following him hither *or* I come towards.

I-suj-u-ju, you follow *or* are following him hither *or* you come towards.

A-dô-u, I descend hither.

I-dô-u-u, you descend hither.

A few verbs which have no simple form are conjugated in the same way[2]:

A-inep-u, I meet (him).

I-'nep-u-pu, you meet (him).

[1] An exception to this rule is given on p. 74.

[2] A few intransitive verbs are also conjugated in this way. (For the usual method of forming intransitive verbs *vide* p. 81.) Examples: a-ikilikwan-u, to ask (intr.), from a-ikilikwan, to ask (tr.); a-idetidet-u, to dream (intr.), from a-idetidet, to dream (tr.).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Past.

#193 The singular of the past tense is formed as in simple verbs. In the plural the affixes are *ten* or *tan*:

A-te-enj-e-e, I followed (him) hither.	Ki-te-enj-e-ten, we followed (him) hither.
A-te-di-e-e, I descended hither.	Ki-te-di-e-ten, we descended hither.
A-iep-e-e, I met (him).	Ki-'iep-e-ten, we met (him).

Future.

The future tense, when it exists, is made by inserting a *y* between the root and the affix *e*. The last syllable is doubled in the second person plural:

A-ite-y-e, I shall put out hither.	I-ede-y-e-ye, you will put out hither.

NARRATIVE, CONDITIONAL, AND CONTINGENT TENSES.

The narrative, conditional, and contingent tenses of all derivatives are formed as in simple verbs. Examples:

N-e-enj-e, and I follow (him) hither.	Ni-ki-enj-ê, and we follow (him) hither.
Ten e-enj-e, *if or* when I follow (him) hither.	Tini ki-enj-ê, *if or* when we follow (him) hither.
Ana'-'ata e-enj-e, I should follow (him) hither.	Ana'-'ata ki-enj-ê, we should follow (him) hither.
Ana'-'ata e-te-enj-e-e, I should have followed (him) hither.	Ana'-'ata ki-te-enj-e-ten, we should have followed (him) hither.

IMPERATIVE AND SUBJUNCTIVE.

In the imperative and subjunctive the affix *e or a* of simple verbs is omitted[1]:

IMPERATIVE.

Te-enj-e, follow (him) hither.	Ke-de-enj-e, follow ye (him) hither.
I-'iep-e, meet (him).	E-'iep-e, meet ye (him).

When the object of the imperative is the first person singular, *ali* is affixed:

Te-enj-e-ali, follow me hither.	Ke-de-enj-e-ali, follow ye me hither.

[1] In a few verbs *ne* is affixed to form the plural of the imperative, e.g. e-ede-e-ne, put ye out hither.

1:Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193

Subjunctive.

Ne-te-enj-e, that I may follow (him) hither.
Te-enj-e, that thou mayest follow (him) hither.
Ne-te-enj-e, that he or she may follow (him) hither.

Ma-te-enj-é, that we may follow (him) hither.
Ee-te-enj-e, that you may follow (him) hither.
Ne-te-enj-e, that they may follow (him) hither.

Ne-inep-e, that I may meet (him).
I-'nep-e, that thou mayest meet (him).
Ne-inep-e, that he or she may meet (him).

Ma-inep-é, that we may meet (him).
E-'nep-e, that you may meet (him).
Ne-inep-e, that they may meet (him).

Infinitives.

The infinitive formed like the past tense drops the affix *a* or *e* of simple verbs:

Singular.	Plural.
A-enj-e, A-te-enj-e, } to follow hither.	A-enj-e, A-te-enj-e, } to follow hither.
A-inep-e, to meet.	A-inep-e, to meet.

Passive Voice.

The present and future of the passive voice are formed by affixing *ai* to the active voice:

Present.

A-enj-e-ai nanu, it is followed to me hither *or* I am followed hither.
A-inep-e-ai nanu, it is met to me *or* I am met.

E-enj-e-ai 'yuk, it is followed to us hither, *or* we are followed hither.
E-inep-e-ai 'yuk, it is met to us *or* we are met.

Future.

A-ite-p-e-ai nanu, it will be put out to me hither *or* I shall be put out hither.

E-ite-p-e-ai 'yuk, it will be put out to us hither *or* we shall be put out hither.

Past.

The past tense is formed as in simple verbs by affixing *ki* to the past tense of the active voice:

A-te-enj-e-e-ki nanu, it has been followed to me hither *or* I have been followed hither.
A-inep-e-e-ki nanu, it has been met to me *or* I have been met.

E-te-enj-e-e-ki 'yuk, it has been followed to us hither, *or* we have been followed hither.
E-inep-e-e-ki 'yuk, it has been met to us *or* we have been met.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

SUBJUNCTIVE.

*193 The passive subjunctive takes the same affix as the present indicative:

M-aa-tu-suj-a-ai naan, that it may be followed to me hither *or* that I may be followed hither.	M-a-tu-suj-a-ai 'yook, that it may be followed to us hither *or* that we may be followed hither.

IMPERATIVES.

Aa-suj-a,
Aa-tu-suj-a, } to be followed hither.

VERBS DENOTING MOTION FROM THE SPEAKER.

ACTIVE VOICE.

Present.

The present tense is formed by affixing ya or yo[1], aa or oo to the root. The two former are employed when the root terminates in a vowel, the latter when in a consonant. When the affix is ya or yo, the last syllable is doubled in the second person plural, otherwise no change is made:

A-suj-aa, I follow *or* am following (him) thither.	I-suj-aa, you follow (him) thither.
A-dô-yo, I descend thither.	I-dô-yô-yo, you descend thither.
A-ibugh-oo, I pour (it) away.	I-mbugh-oo, you pour (it) away.

Past.

The affixes of the past tense are iya, eiye, or oiye in the singular, and iiye, eiiye, or ôiye in the plural:

A-tu-suj-eiye, I followed (him) thither.	Ki-tu-suj-eiiyé, we followed (him) thither.
A-ta-do-iye, I descended thither.	Ki-ta-dô-iiyé, we descended thither.
A-ibugh-oiye, I poured (it) away.	Ki-mbugh-ôiyé, we poured (it) away.

IMPERATIVE AND SUBJUNCTIVE.

The affixes of the imperative and subjunctive are ai, oi, or i:

IMPERATIVE.

Tu-suj-ai, follow (him) thither.	En-du-suj-ai, follow ye (him) thither.
Tu-do-i, descend thither.	En-da-do-i, descend ye thither.
I-mbugh-oi, pour (it) away.	E-mbugh-oi, pour ye (it) away.

[1] The affixes ya or yo are sometimes pronounced iya or iyo.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

When the object of the imperative is the first person singular, *ytki* is also affixed: 193*

To-enj-ai-ytki, follow me thither.	En-da-enj-ai-ytki, follow ye me thither.

SUBJUNCTIVE.

Ma-ta-enj-ai, that I may follow (him) thither.	Maa-ta-enj-ai, that we may follow (him) thither.
Ta-enj-ai, that thou mayest follow (him) thither.	En-da-enj-ai, that you may follow (him) thither.
Ma-ta-enj-ai, that he *or* she may follow (him) thither.	Ma-ta-enj-ai, that they may follow (him) thither.
Ma-lingh-ai, that I may pour (it) away.	Ma-lingh-ai, that we may pour (it) away.
I-mingh-ai, that thou mayest pour (it) away.	E-mingh-ai, that you may pour (it) away.
Ma-lingh-ai, that he may pour (it) away.	Ma-lingh-ai, that they may pour (it) away.

INFINITIVE.

In the infinitive formed by prefixing *a* and *aa* (or *á*) to the root the affix employed is the same as in the present indicative. The affix of the infinitive formed like the past tense is *ai*, *oi*, or *i*, as in the imperative and subjunctive:

Singular.		Plural.	
A-enj-aa, A-ta-enj-ai,	to follow thither.	Aa-enj-aa, Aa-ta-enj-ai,	to follow thither.
A-di-yo, A-ta-di-i,	to descend thither.	Aa-di-yo, Aa-ta-di-i,	to descend thither.
A-lingh-oo, A-lingh-oi,	to pour away.	Á-lingh-oo, Á-lingh-oi,	to pour away.

PASSIVE VOICE.

Present.

The present tense of the passive voice is formed by adding *ri* to the present active. When the latter ends in *aa* or *oo*, one of the vowels is often omitted:

Aa-enj-ari naaa, it is followed to me thither *or* I am followed thither.	E-enj-ari 'yook, it is followed to us thither, *or* we are followed thither.

Past.

The past tense is formed by affixing *ai-ytki*, *oi-ytki*, *or i-ytki* to the root:

Aa-ta-enj-ai-ytki naaa, it has been followed to me thither *or* I have been followed thither.	E-ta-enj-ai-ytki 'yook, it has been followed to us thither *or* we have been followed thither.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Subjunctive.

* 193 In the subjunctive the same affixes are used as in the present indicative:

M-aa-tu-enj-ari naan, that it may be followed to me thither or that I may be followed thither.	M-e-tu-enj-ari 'yook, that it may be followed to us thither or that we may be followed thither.

Infinitives.

Aa-enj-aa,
Aa-tu-enj-ai, } to be followed thither.

THE DATIVE FORM.

The dative form is used where in English a preposition is required to connect the verb with its object, and intimates that the action of the verb is performed for or against a person or thing. A few verbs which take no preposition in English also belong to this class.

The simple form of verbs followed by the local case can often be substituted for the dative form. Example:

E-itiîg-ikityo 'l-omon enne,
E-itiîg-e 'l-omon te-'nne, } the news ended (at) here.

Active Voice.

Present.

The present tense is formed by adding *aki*, *iki*, or *iki* to the root. In the second person plural the last syllable is doubled:

A-enj-aki, I follow for (him) or I follow (him) to.	I-enj-aki-ki, you follow for (him).
A-ia-iki, I arrive at (it) or I reach (it).	I-ia-iki-ki, you arrive at (it).
A-mit-iki, I forbid (him).	I-mit-iki-ki, you forbid (him).
A-iro-etiki[1], I greet (him).	I-'ro-etiki-ki, you greet (him).

Past.

The past tense is formed by the affixes *aka*, *iika*, *iiki*[2], or *iki* in the singular; and *akityo*, *iikityo*, *iikityo*, or *iikityo* in the plural:

A-ta-enj-aka, I followed for (him).	Ki-ta-enj-akityo, we followed for (him).

[1] When the last letter of the root is a vowel, *n* or *r* is sometimes joined to the affix.

[2] *Iiki* and *iiki* are frequently pronounced *iiyo* and *iiyo*.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

A-ta-ba-ikia, I arrived at (it). Ki-ta-ba-ikityá, we arrived at (it). 193*
A-tō-mit-ikio, I forbade (him). Ki-tō-mit-ikityó, we forbade (him).
A-iro-rōko, I greeted (him). Ki-'ro-rōkityó, we greeted (him).

Imperative, Subjunctive, and Infinitives.

The same affixes are used in the imperative, subjunctive, and infinitives as in the present:

Imperative.

Ta-suj-aki, follow for (him). En-du-suj-aki, follow ye for (him).
Ta-ba-iki, arrive at (it). En-da-ba-iki, arrive ye at (it).
Tō-mit-iki, forbid (him). En-dō-mit-iki, forbid ye (him).
I-'ro-rōki, greet (him). E-'ro-rōki, greet ye (him).

When the first person singular is the object of the imperative the affixes change to *akaki*, *ikiaki*, *ōkōki*, or *ākōki*:

Ta-suj-akaki, follow for me. En-du-suj-akaki, follow ye for me.
Ta-ba-ikiaki, reach me. En-da-ba-ikiaki, reach ye me.
Tō-mit-ōkōki, forbid me. En-dō-mit-ōkōki, forbid ye me.
I-'ro-rōkōki, greet me. E-'ro-rōkōki, greet ye me.

Subjunctive.

Ma-ta-suj-aki, that I may follow for (him). Maa-ta-suj-aki, that we may follow for (him).
Ma-iro-rōki, that I may greet (him). Má-iro-rōki, that we may greet (him).

There is a second form for the plural of the imperative and subjunctive, which is employed when there are two objects. This form is made by adding *ti* to the affix. Examples:

En-du-suj-aki ol-tuñgani, follow ye the man for him.
En-du-suj-aki-ti ol-tuñgani añg, follow ye the man for him to the kraal.
En-du-suj-aka-ki ol-tuñgani, follow ye the man for me.
En-du-suj-aka-ki-ti ol-tuñgani añg, follow ye the man for me to the kraal.
Ti-aki kuldo m-e-tu-suj-aki ol-tuñgani, tell them to follow the man for him.
Ti-aki kuldo m-e-tu-suj-aki-ti ol-tuñgani añg, tell them to follow the man to the kraal for him.

Infinitives.

Singular.	Plural.
A-suj-aki, A-ta-suj-aki, } to follow for.	Aa-suj-aki, Aa-ta-suj-aki, } to follow for.
A-iro-rōki, to greet.	Á-iro-rōki, to greet.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

The Passive Voice.

Present.

*193 The present tense of the passive is formed by adding *ni* to the active:

Aa-suj-aki-ni nanu, it is followed for me *or* I am followed for.

Á-iro-rōki-ni nanu, it is greeted to me *or* I am greeted.

E-suj-aki-ni 'yook, it is followed for us *or* we are followed for.

E-iro-rōki-ni 'yook, it is greeted to us *or* we are greeted.

Past.

The past tense is formed by adding *akaki*, *ikiaki*, *ikōki*, or *ōkōki* to the root:

Aa-tu-suj-akaki nanu, it has been followed to me *or* I have been followed.

A-iro-rōkōki nanu, it has been greeted to me *or* I have been greeted.

E-tu-suj-akaki 'yook, it has been followed to us *or* we have been followed.

E-iro-rōkōki 'yook, it has been greeted to us *or* we have been greeted.

THE APPLIED FORM.

When in English a preposition connected with a verb can stand by itself at the end of a sentence, special forms must be used in Masai. If the verb is in the active voice and transitive, *ye* (*ie* after *r*) is affixed, if intransitive, *iahore* or *are*. The passive voice is formed by affixing *ki* to the active. The relative is also employed:

I-'ya-u ol-murunya la-barn-ye ol-munyei, bring the razor for me to shave the beard with.

I-'ya-u ol-murunya la-barn-iahore, bring the razor for me to shave with.

A-ata eng-are na-isuj-ye ol-tudutai, I have water for washing the boil in.

A-ata eng-are na-isuj-are, I have water for washing in.

I-njo-o-ki eng-alem na-duñg-ye 'n-giri, give me the knife to cut meat with.

I-njo-o-ki eng-alem na-duñg-iahore, give me the knife to cut with.

E-wtji nē-yeñg-ye 'l-tuñgunak en-giteñg, the place where men slaughter the ox in.

E-wtji nē-yeñg-iahore 'l-tuñgunak, the place where men slaughter in.

E-wtji nē-yeñg-ye-ki en-giteñg, the place where the ox is slaughtered in.

E-wtji nē-yeñg-iahore-ki, the place where it is (habitually) slaughtered in.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

In derivative verbs *n* or *r* is inserted between the verbal roots and the affixes: 193*

E-wēji ne-puk-u-nye, a place to go out at.
E-wēji ne-puk-u-nye-ki, a place to be gone out at.
E-wēji ne-isud-ó-rie, a place to hide in.
E-wēji ne-isud-o-rié-ki, a place to be hidden in.

THE REFLEXIVE AND THE NEUTER OR QUASI-PASSIVE FORM[1].

Most simple verbs have either a reflexive or a neuter or quasi-passive form. Certain verbs are only used as reflexives.

Present.

The present tense is formed by the affix *a* or *o*. In the second person plural the last syllable is doubled:

A-gor-o, I am angry *or* I anger myself.	I-gor-o-ro, you are angry.
A-isuj-a, I bathe.	I-isuj-a-ja, you bathe.

Past.

The singular of the past tense is formed by affixing *e* to the root, the plural by *ate* or *ōte*:

A-ta-gor-e, I have been angry.	Ki-ta-gor-ōté, we have been angry.
A-isuj-e, I bathed.	Ki-'suj-até, we bathed.

Future.

A future exists and is formed by adding *yu* to the present tense. In the second person plural the last syllable is doubled:

A-gor-ō-yu, I shall be angry.	I-gor-ō-yu-yu, you will be angry.
A-isuj-a-yu, I shall bathe.	I-isuj-a-yu-yu, you will bathe.

Imperative and Subjunctive.

The singular affixes of the imperative and subjunctive are the same as those employed in the future, viz. *ayu* or *ōyu*. These affixes are changed in the plural to *ata* or *oto*:

Imperative.

Ta-gor-ōyu, be angry.	En-da-gor-oto, be ye angry.
I-'suj-ayu, bathe thyself.	E-'suj-ata, bathe yourselves.

[1] The following examples will show what is meant by the neuter or quasi-passive: ten e-ídip-ayu 'ng-oloñgi are, nalōtu, when two days are (*or* become) finished, I will come; a-suj elle, kake m-e-suj-ayu elde, I (will) follow this one, but that one will not be (*or* become) followed.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

SUBJUNCTIVE.

*193 Ma-ta-gor-ɔyu, that I may be angry. Maa-ta-gor-otó, that we may be angry.
Ma-isuj-ayu, that I may bathe. Má-isuj-atá, that we may bathe.

INFINITIVES.

The affixes of the infinitives are the same as those used in the present or in the imperative and subjunctive.

Singular.	Plural.
A-gor-o, A-ta-gor-ɔyu, } to be angry.	Aa-gor-o, Aa-ta-gor-oto, } to be angry.
A-isuj-a, A-isuj-ayu, } to bathe.	Á-isuj-a, Á-isuj-ata, } to bathe.

THE REFLEXIVE FORM OF DERIVATIVES.

Derivatives denoting motion towards the speaker form the reflexive and neuter or quasi-passive by affixing *nyi* to the simple verb. This affix is invariable, except in the second person plural of the present tense, when the last syllable is doubled:

A-shuk-u-nyi, to return (oneself) hither, *from* a-shuk-u, to return (something) hither:

A-shuk-u-nyi, I return *or* shall return (myself) hither. I-shuk-u-nyi-nyi, you return (yourself) hither.
A-tu-shuk-u-nyi, I returned (myself) hither. I-tu-shuk-u-nyi, you returned (yourself) hither.

A-sul-u-nyi, to fall (oneself) from a height hither, *from* a-sul-u, to throw down hither, e.g. fruit from a tree:

A-sul-u-nyi, I fall, am falling *or* shall fall (myself) from a height hither. I-sul-u-nyi-nyi, you fall, are falling *or* will fall (yourself) from a height hither.
A-tu-sul-u-nyi, I fell (myself) from a height hither. I-tu-sul-u-nyi, you fell (yourself) from a height hither.

Derivatives denoting motion from the speaker form the reflexive and neuter or quasi-passive by changing the affix of the simple verb (*oo*, *aa*, *aiye*, *aïtye*, &c.) into *ori* or *eri*. This affix is invariable, except in the second person plural of the present tense, when the last syllable is doubled:

A-isud-ori, to hide (oneself), *from* a-isud-oo, to hide away:

A-isud-ori, I hide, am hiding, *or* shall hide (myself). I-'sud-ori-ri, you hide *or* will hide (yourself).
A-isud-ori, I hid (myself). I-'sud-ori, you hid (yourself).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

A-sul-ari, to fall (oneself) from a height thither, *from* a-sul-aa, to throw down thither: 193*

A-sul-ari, I fall, am falling, *or* shall fall (myself) from a height thither.
I-sul-ari-ri, you fall *or* will fall (yourself) from a height thither.
A-ta-sul-ari, I fell (myself) from a height thither.
I-ta-sul-ari, you fell (yourself) from a height thither.

DATIVE VERBS USED AS REFLEXIVES AND NEUTER OR QUASI-PASSIVES.

When dative verbs are used as reflexives, the affixes are variable as in simple reflexive verbs:

Present.

A-rikī-no, I forget (it).
I-rikī-nō-no, you forget (it).
A-igar-akī-no, I lean upon (him).
I-ngar-akī-nō-no, you lean upon (him).

Past.

A-to-rikī-ne, I forgot (it).
I-to-rikī-nōte, you forgot (it).
A-igar-akī-ne, I leant upon (him).
I-ngar-akī-nōte, you leant upon (him).

Future.

A-rikī-nō-yu, I shall forget (it).
I-rikī-nō-yu-yu, you will forget (it).
A-igar-akī-nō-yu, I shall lean upon (him).
I-ngar-akī-nō-yu-yu, you will lean upon (him).

INTRANSITIVE VERBS.

By affixing *-ah*, *-ish*, or *-osh* to the root, most transitive verbs can be used intransitively. Intransitive verbs take the same terminal letters in the present and past tenses as reflexive verbs. A few intransitive verbs, simple forms of which do not exist, are also conjugated in the same manner:

Present.

A-rap-osh-o, I have enough to eat.
I-rap-osh-ō-sho, you have enough to eat.
A-isuj-ish-o, I wash.
I-'suj-ish-ō-sho, you wash.

Past.

A-ta-rap-osh-e, I had enough to eat.
I-ta-rap-osh-ōte, you had enough to eat.
A-isuj-ish-e, I washed.
I-'suj-ish-ōte, you washed.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Future.

*193 A few verbs possess a future tense which is formed by affixing *yu* to the present:

A-on-ish-ó-yu, I shall bite or sting.

I-on-ish-ó-yu-yu, you will bite or sting.

IMPERATIVE, SUBJUNCTIVE, AND INFINITIVES.

The affixes employed in the formation of the imperative, subjunctive, and infinitives are similar to those used in the present tense:

IMPERATIVE.

Ta-rap-ash-o, have enough to eat.

En-da-rap-ash-o, have ye enough to eat.

I-'suj-ish-o, wash.

E-'suj-ish-o, wash ye.

SUBJUNCTIVE.

Ma-ta-rap-ash-o, that I may have enough to eat.

Maa-ta-rap-ash-ó, that we may have enough to eat.

Ma-isuj-ish-o, that I may wash.

Má-isuj-ish-ó, that we may wash.

INFINITIVES.

Singular.	Plural.
A-rap-ash-o, A-ta-rap-ash-o, } to have enough to eat.	Aa-rap-ash-o, Aa-ta-rap-ash-o, } to have enough to eat.
A-isuj-ish-o, to wash.	A-isuj-ish-o, to wash.

THE RECIPROCAL FORM.

The reciprocal form in Masai, which denotes doing something with some one else, is made by affixing *are* or *ore* to the root of simple verbs and *nare* or *nore* to derivatives. The affix is invariable, except in the second person plural of the present tense, when the last syllable is doubled.

When the meaning denotes doing something with each other the reflexive form is used. Examples of the reciprocal form of simple verbs:

A-suj-are, I follow together with some one.

I-suj-are-re, you follow together with some one.

A-tu-suj-are, I followed together with some one.

I-tu-suj-are, you followed together with some one.

Ki-suj-á, we follow each other.

I-suj-a-ja, you follow each other.

Ki-tu-suj-até, we followed each other.

I-tu-suj-ate, you followed each other.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

A-igwen-are, I consult together with some one.	I-ngwen-are-re, you consult together with some one.
A-igwen-are, I consulted together with some one.	I-ngwen-are, you consulted together with some one.
Ki-ngwen-á, we consult each other.	I-ngwen-a-na, you consult each other.
Ki-ngwen-até, we consulted each other.	I-ngwen-ate, you consulted each other.

193*

Examples of the reciprocal forms of derivatives:

A-boit-u-nore, I arrive here together with some one.	I-boit-u-nore-re, you arrive here together with some one.
A-ta-boit-u-nore, I arrived here together with some one.	I-ta-boit-u-nore, you arrived here together with some one.
Ki-boit-u-nyí, we arrive here with each other.	I-boit-u-nyi-nyi, you arrive here with each other.
Ki-ta-boit-u-nyí, we arrived here with each other.	I-ta-boit-u-nyi, you arrived here with each other.
A-ishi-aki-nore, I am opposite to some one.	I-nji-aki-nore-re, you are opposite to some one.
A-ishi-aki-nore, I was opposite to some one.	I-nji-aki-nore, you were opposite to some one.
Ki-nji-aki-nó, we are opposite to one another.	I-nji-aki-no-no, you are opposite to one another.
Ki-nji-aki-nōté, we were opposite to one another.	I-nji-aki-nōte, you were opposite to one another.

In a few verbs the reciprocal form is made by affixing *ye* (*ie* after *r*). This form is invariable, except in the second person plural of the present tense, when the last syllable is doubled. Examples:

A-ñgár-ie, I eat together with some one.	I-ñgar-ié-ye, you eat together with some one.
A-ta-ñgár-ie, I ate together with some one.	I-ta-ñgár-ie, you ate together with some one.
A-iró-rie, I speak with some one.	I-'ro-rié-ye, you speak with some one.
A-iró-rie, I spoke with some one.	I-'ró-rie, you spoke with some one.
A-isē-ye, I touch (together with) something.	I-'sē-yē-ye, you touch (together with) something.
A-isē-ye, I touched (together with) something.	I-'sē-ye, you touched (together with) something.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 A-inyanyuk-ye, I have resemblance with some one or I resemble some one. I-'nyanyuk-yé-ye, you resemble some one.

A-inyanyuk-ye, I resembled some one. I-'nyanyuk-ye, you resembled some one.

CAUSATIVES.

The rule for the formation of causatives is that all verbs which commence with any letter except *i* or *e* take the prefix *it* followed by a vowel, and are conjugated like the verbs from which they are derived. All simple verbs commencing with *i* or *e* take the affix *ye*, while derivatives take *nye* or *rie*. This affix is invariable, except in the second person plural of the present indicative, when the last syllable is doubled. Examples of verbs not commencing with *i* or *e*:

A-suj, to follow.	A-itu-suj, to cause to follow.
A-suj-u, to follow hither, to come towards.	A-itu-suj-u, to cause to follow hither.
A-suj-aa, to follow thither.	A-itu-suj-aa, to cause to follow thither.
A-suj-aki, to follow for.	A-itu-suj-aki, to cause to follow for.
A-gor-o, to be angry.	A-ita-gor-o, to cause to be angry.
A-rap-osh-o, to have enough to eat.	A-ita-rap-osh-o, to cause to have enough to eat.
A-suj-are, to follow together with some one.	A-itu-suj-are, to cause to follow together with some one.

Examples of verbs commencing with *i* or *e*:

A-isuj, to wash (tr.).	A-isuj-ye, to cause to wash (tr.).
A-el, to anoint.	A-el-ye, to cause to anoint, to rub on.
A-ishi-u, to recover.	A-ishi-u-nye, to cause to recover, to cure.
A-isud-oo, to hide.	A-isud-ó-rie, to cause to hide.
A-iro-rúki, to greet.	A-iro-rúki-nye, to cause to greet.
A-isuj-a, to bathe.	A-isuj-á-rie, to cause to bathe.
A-isuj-ish-o, to wash (intr.).	A-isuj-ish-ó-ye, to cause to wash (intr.).
A-igwen-are, to consult together with some one.	A-igwen-árie, to cause to consult together with some one.

As causatives of the first class commence with *i*, they take no prefix in the past tense. The affixes employed in conjugating these verbs are

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

the same as the affixes of the simple verb from which the causative is derived: 193*

A-itu-suj, I cause (him) to follow.	I-ndu-suj-uju, you cause (him) to follow.
A-itu-suj-a, I caused (him) to follow.	I-ndu-suj-a, you caused (him) to follow.
A-itu-suj-u, I cause (him) to follow hither.	I-ndu-suj-u-ju, you cause (him) to follow hither.
A-itu-suj-u-a, I caused (him) to follow hither.	I-ndu-suj-u-tua, you caused (him) to follow hither.
A-itu-suj-aa, I cause (him) to follow thither.	I-ndu-suj-aa, you cause (him) to follow thither.
A-itu-suj-aiye, I caused (him) to follow thither.	I-ndu-suj-aitye, you caused (him) to follow thither.
A-itu-suj-aki, I cause (him) to follow for.	I-ndu-suj-aki-ki, you cause (him) to follow for.
A-itu-suj-aka, I caused (him) to follow for.	I-ndu-suj-akitya, you caused (him) to follow for.
A-ita-gor-o, I cause (him) to be angry.	I-nda-gor-o-ro, you cause (him) to be angry.
A-ita-gor-e, I caused (him) to be angry.	I-nda-gor-ôte, you caused him to be angry.
A-ita-rap-ash-o, I cause (him) to have enough to eat.	I-nda-rap-ash-ô-aho, you cause (him) to have enough to eat.
A-ita-rap-ash-e, I caused (him) to have enough to eat.	I-nda-rap-ash-ôte, you caused (him) to have enough to eat.
A-itu-suj-are, I cause (him) to follow together with some one.	I-ndu-suj-are-re, you cause (him) to follow together with some one.
A-itu-suj-are, I caused (him) to follow together with some one.	I-ndu-suj-are, you caused (him) to follow together with some one.

As stated above, the second class is invariable, except in the second person plural of the present indicative, when the last syllable is doubled:

A-isuj-ye, I cause (him) to wash (him).	I-'suj-ye-ye, you cause (him) to wash (him).
A-isuj-ye, I caused (him) to wash (him).	I-'suj-ye, you caused (him) to wash (him).
A-ishi-u-nye, I cure (him).	I-nji-u-nyê-ye, you cure (him).
A-ishi-u-nye, I cured (him).	I-nji-u-nye, you cured (him).
A-isuj-ish-o-nye, I cause (him) to wash.	I-'suj-ish-o-nyê-ye, you cause (him) to wash.
A-isuj-ish-o-nye, I caused (him) to wash.	I-'suj-ish-o-nye, you caused (him) to wash.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 A-igwen-árie, I cause (him) to consult together with some one.

A-igwen-árie, I caused (him) to consult together with some one.

I-ngwen-arié-ye, you cause (him) to consult together with some one.

I-ngwen-árie, you caused (him) to consult together with some one.

The Passive Voice.

Causative verbs of the first class form their passives in the usual manner according to the verbs from which they are derived, the affix for the present tense being *i*, *ni*, or *ri*, and for the past tense *eki*, *nieki*[1], or *rieki*:

Á-itu-suj-i nanu, it is caused to me to follow *or* I am caused to follow.

Á-itu-suj-u-ni nanu, it is caused to me to follow hither *or* I am caused to follow hither.

Á-itu-suj-eki nanu, it was caused to me to follow *or* I was caused to follow.

Á-itu-suj-u-nieki, it was caused to me to follow hither *or* I was caused to follow hither.

Causative verbs of the second class form the passive by affixing *ki* to the active voice. This form is unchangeable for all tenses:

Á-isuj-ye-ki nanu, it is *or* was caused to me to wash *or* I am *or* was caused to wash (it).

Á-isud-o-rie-ki nanu, it is *or* was caused to me to hide *or* I am *or* was caused to hide (it).

The Dative Form of Causatives.

The dative form of causative verbs of the first class is made by the affix *ye* (in derivatives *nye* or *rie*):

A-itu-suj, to cause to follow.

A-itu-suj-ye, to cause to follow to (a place).

A-itu-suj-u, to cause to follow hither.

A-itu-suj-u-nye, to cause to follow hither to (a place).

A-itu-suj-aa, to cause to follow thither.

A-itu-suj-árie, to cause to follow thither to (a place).

A-itu-suj-aki, to cause to follow for.

A-itu-suj-aki-nye, to cause to follow for (some one) to (a place).

A-ita-gor-o, to cause to be angry.

A-ita-gór-ie, to cause to be angry with.

A-ita-rap-ash-o, to cause to have enough to eat.

A-ita-rap-ash-ó-ye, to cause to have enough to eat for.

A-itu-suj-are, to cause to follow together with some one.

A-itu-suj-árie, to cause to follow together with some one for.

[1] Nyuki is frequently used for nieki.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Causative verbs of the second class make their dative forms by inserting *i* before the final *ie* or *ye*: 193*

A-isuj-ye, to cause to wash.
A-isud-ó-rie, to cause to hide.
A-irur-á-rie, to cause to lie down.
A-iruk-ish-ye, to cause to reply.

A-isuj-iye, to cause to wash for.
A-isud-o-riye, to cause to hide for.
A-irur-a-riye, to cause to lie down with.
A-iruk-ish-iye, to cause to reply for.

The passive voice of the dative form of causative ve[illegible] made by affixing *ki* to the active:

Á-itu-suj-ye-ki nanu, it is *or* was caused [illegible] follow to (a place) *or* I am *or* was caused to foll[illegible] place).
Á-isuj-iye-ki nanu, it is *or* was caused to me to wash for (some one) *or* I am *or* was caused to wash for (some one).

NEUTER VERBS.

Most neuter verbs, and particularly those which in English must be translated by an adjective or adverb and the verb *to be* or *to become*, form a class to themselves. With perhaps one exception (a-itashe, to stand), all these verbs possess a future, but in many instances there is no present, the present tense of the verb *to be* with an adjective being used instead. Example:

A-ra sidai, I am beautiful. A-ti-sida-na, I was beautiful.
A-sida-nu, I shall be beautiful.

When a neuter verb terminates in a vowel, the affixes of all the tenses are generally joined to the root by *j*, *n*, or *r*:

Present.

When the present exists, it is formed as in simple verbs by adding the personal prefixes to the root, and in the second person plural by doubling the last syllable:

A-gol, I am strong, hard, difficult, &c.
A-irōua, I am hot.

I-gol-igolo, you are strong.
I-'rōua-ua, you are hot.

Past.

The singular affix of the past tense is *a* or *o*; the plural *ita* or *ito*, and in one or two instances *tie*:

A-ta-gol-o, I was strong.
A-irōua-ja, I was hot.
A-ti-lili-a, I stank.

Ki-ta-gol-itó, we were strong.
Ki-'rōua-jitá, we were hot.
Ki-ti-lili-tiá, we stank.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Future.

*193 The future affix is u. In the second person plural the last syllable is doubled:

A-gol-u, I shall be strong. I-gol-u-lu, you will be strong.
A-irōua-ju, I shall be hot. I-'rōua-ju-ju, you will be hot.

IMPERATIVE AND SUBJUNCTIVE.

The affixes of the imperative and subjunctive are similar to those of the past tense. When the root ends in a consonant, the plural affix is added to the singular affix:

IMPERATIVE.

Ta-gol-o, be strong. En-da-gol-ōito, be ye strong.
I-'rōua-ja, be hot. E-'rōua-jita, be ye hot.

SUBJUNCTIVE.

Ma-ta-gol-o, that I may be strong. Maa-ta-gol-ōité, that we may be strong.
Ma-irōua-ja, that I may be hot. Mé-irōua-jité, that we may be hot.

INFINITIVES.

The affixes of the future[1] or of the imperative and subjunctive are used in the formation of the infinitive.

A-gol-u, A-ta-gol-o, } to be strong. Aa-gol-u, Aa-ta-gol-ōito, } to be strong.
A-irōua-ju, A-irōua-ja, } to be hot. A-irōua-ja, A-irōua-jita, } to be hot.

The causative form of neuter verbs is made in the usual manner:

A-ita-gol-u, to make strong. A-ita-gol-ye, to make strong for.
A-irōua-ju-nye, to make hot. A-irōua-ju-niye, to make hot for.

A few transitive verbs are conjugated like neuter verbs:

Present.

A-ure, I fear (him). I-ure-re, you fear (him).

Past.

A-t-uri-a, I feared (him). I-t-uri-aita or I-t-ure-ita, } you feared (him).

Future.

A-ure-ju, I shall fear (him). I-ure-ju-ju, you will fear (him).

The intransitive form of these verbs is made in the regular manner by affixing -ak to the stem:

A-ure-ak-o, I fear. I-ure-ak-ō-ako, you fear.
A-t-ure-ak-o, I feared. I-t-ure-ak-ōta, you feared.

[1] The root is sometimes employed instead of the future: e.g. a-gol, to be strong.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

AUXILIARY AND IRREGULAR VERBS.

As many of the auxiliary verbs are also irregular, it will be well to speak of their irregularities first, and afterwards of their use in making compound verbs. 193*

There exist a few verbs which, although they commence with letters other than *i* or *e*, form their past tense without the aid of the prefix *i* and a vowel. Such are:

A-kwet, to run.	A-kwet-a, I ran.
A-to-yu, to be dry.	A-to-yu, I was dry.
A-lit-yu, to be visible.	A-lio, I was visible.
A-kany-a, to rise (of the sun).	E-kany-a-a, it rose.
A-ô-ku, to ripen.	A-o, I ripened.

There are also a few verbs which commence with *i* and take the prefix *i* and a vowel:

A-ias, to do.	A-ta-'as-a, I did.
A-i-a, to bear.	A-tô-i-a-o, I bore.
A-igh, to hang up.	A-ti-igh-a, I hung up.
A-ij-ayu, to swell.	A-te-ij-a, I swelled.
A-ij-oo, to swallow.	A-tô-ij-oiya, I swallowed.
A-ilgu-a, to come from, leave thither.	A-ta-'ilgw-aiya, I came from.
A-iytôt-a, to know.	A-ta-iytôa, I knew.
A-iyô-a, to wish.	A-ta-iyô-a-a, I wished.

The following verbs are irregular:

A-a, to be.	A-wô-yu, to bleed, to leak.
A-aku, to become.	A-iha-yu, to hate.
A-ô, to die.	A-ilgu-a, to come from, leave thither.
A-ata, to have.	A-iny-ôôta, to awake.
A-ia, to go.	A-ita, to return hither.
A-itta, to come.	A-iya, to take, take away.
A-aya, to eat.	A-iya-a, to bring.
A-ayakyô-au, to be red.	A-iyô-a, to wish.
A-ook-a, to be black.	A-iytôt-a, to know.
A-tam, to sit, stay.	

A-tam, to get, to obtain, to see, to meet.

The verbs a-a, to be, and a-aku, to become, have several peculiarities. The former may be said to have two present tenses, and the latter one, whilst both verbs have the same form for the past tense. The letter *a* may be used for all persons of the singular, and as for the plural of the verb *to be* when not followed by a substantive or adjective:

A iye ô-ta-a enna-bae? Is it thou who d[illegible] the matter?
Aa 'yook, lalle, it is we (those).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 When followed by a substantive or adjective, the form used for the present tense is *-ra* joined to the prefix appropriate to the subject. The last syllable is doubled in the second person plural:

A-ra, I am *or* I shall be. I-ra-ra, you are *or* you will be.
A-ra ol-aisinani *or* a-ra aisinani, I am poor.

The present tense of *to become* is formed regularly:

A-aku, I become *or* I shall become. I-aku-ku, you become *or* you will become.

The past tense of *to be* and *to become* is as follows:

A-ta-a, I was *or* became. Ki-ta-á, we were *or* became.
I-ta-a, thou wast *or* becamest. I-ta-a, you were *or* became.
E-ta-a, he *or* she was *or* became. E-ta-a, they were *or* became.
A-ta-a ol-aisinani, I was *or* I became poor.

The narrative and conditional tenses are formed by the usual prefixes

N-a *or* n-a-ra, and I am. N-aa *or* ni-ki-rá, and we are.
N-a-aku, and I become. Ni-ki-akú, and we become.

The imperative and subjunctive are formed from the past tense:

Ta-a, be *or* become. En-da-a, be ye *or* become ye.
Ma-ta-a, that I may be *or* become. Maa-ta-á, that we may be *or* become

The causative form is a-ita-a, to make to become or to appoint:

A-ita-a o-singa, I make *or* I shall make *or* I have made him (my) slave.

Where the verb *to be* is used in English as the copula, it is frequently omitted in Masai:

Sidai elle-tuñgani, this man (is) beautiful.
Añgae ol-kitok linyi? who (is) your chief?
Nanu ol-kitok, I (am) the chief.

When the verb *to be* is used in English to denote existence in place or time, the verb a-tii, which is best translated by *to be there*, is employed in Masai:

E-tii enne, he is here.
E-tii aág, he is at home.
E-tii epa ol-tuñgani, there was once a man.
Kaji a-tii? where am I?
Añgae ó-tii eng-aji? who is in the hut?

The present indicative is often used to translate the past tense in English:

E-tuo a-ra ol-kitok, he came when I was the chief.
A-tii enne ol-epa ibo, I have been here one month.

1: Hollis G-5 (ca. 1894-1904) 1905

193*.

A-lo, to go.

Present.

A-lo, I go, am going, or shall go. Ki-pwó, we go.
I-lo, thou goest. I-pwó-pwo, you go.
E-lo, he or she goes. E-pwo, they go.

Past.

A-ólóm-o, I went. Ki-ólóm-ó, we went.

IMPERATIVE.

Ma-ólóm-o, let me go. Maa-pe, let us go (if of a few only).
E-maa-pe or maa-pe-iti, let us go (if of several).
Ólóm-o or i-ano, go. E-ejem, go ye.

SUBJUNCTIVE.

Ma-ólóm-o, that I may go. Maa-ólóm, that we may go.

INFINITIVES.

A-lo, A-ólóm-o, } to go. Aa-pwo, Aa-ólóm, } to go.

PASSIVE[1].

Present.

Aa-pwei naau, it is gone to me. E-pwei 'yook, it is gone to us.

Past.

Aa-ólóm-ó-ki naau, it was gone to me. E-ólóm-ó-ki 'yook, it was gone to us.

A-lótu, to come.

Present.

A-lót-u, I come, am coming, or shall come. Ki-pwtu-ó, we come.
I-lót-u, thou comest. I-pwtu-u-uu, you come.
E-lót-u, he or she comes. E-pwtu-u, they come.

Past.

A-ó-uo, I came. Ki-ó-tuó, we came.

IMPERATIVE.

Ó-u, come. Ó-tu, come ye.

SUBJUNCTIVE.

Ma-ó-u, that I may come or let me come. Maa-ó-tó, that we may come or let us come.

INFINITIVES.

A-lótu, A-ó-u, } to come. Aa-pwtuo, Aa-ó-tu, } to come.

[1] Only used as an auxiliary.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

PASSIVE[1].

Present.

193 An-gwito-o-ai nare, it is come to me. E-gwito-o-ai 'yook, it is come to us.

Past.

An-tiat-ki nare, it was come to me. E-tiat-ki 'yook, it was come to us.

A-tun, to sit, stay, live.

Present.

A-tun, I sit.	Ki-tun-i, we sit.
I-tun, thou sittest.	I-tun-i-ai, you sit.
E-tun, he sits.	E-tun-i, they sit.
A-tun-ita, I am sitting.	I-tun-ita-ta, you are sitting.

Past.

A-to-tun-o, I sat.	Ki-to-tun-ki, we sat.

IMPERATIVE.

To-tun-o, sit.	Ee-do-tun-i, sit ye.

SUBJUNCTIVE.

Ma-to-tun-o, that I may sit.	Ma-to-tun-i, that we may sit.
To-tun-o, that thou mayest sit.	Ee-do-tun-i, that you may sit.
Ma-to-tun-o, that he may sit.	Ma-to-tun-i, that they may sit.

INFINITIVES.

A-tun, A-to-tun-o, } to sit. An-tun-i, An-to-tun-i, } to sit.

PASSIVE.

Present.

An-tun-ii nare, I am seated. E-tun-ii 'yook, we are seated.

Past.

An-tun-aki nare, I was seated. E-tun-aki 'yook, we were seated.

A-ite, to return hither (late.).

A-ite, I return hither.	Ki-iti, we return hither.
I-ite, thou returnest hither.	I-ite-ta, you return hither.
E-ite, he or she returns hither.	E-ite, they return hither.

A-ite, to return thither (late.), is conjugated in a similar way:

A-ite, I return thither.	I-iti-ta, you return thither.

There is no past tense, and the past tenses of a-inyiak-a and a-inyie-ye, to return hither and thither (transitive), are commonly used instead:

The dative form of these verbs followed by the infinitive or the narrative tense is used to express repetition of an action.

A-iti-ki ale, A-iti-ki n-a-ie, } I go again. A-inyie-ka a-ie, A-inyie-ka n-a-ie, } I went again.

[1] Only used as an auxiliary.

Present, not Sing.	Present, and Plural.	Past, not Sing.	Past, and Plural.	Future, not Sing.	Future, and Plural.	English.
A-ā	I-ā-ā	A-ten	I-tenin	Wanting.		To die.
A-ein	I-ein-ein	Wanting.		Wanting.		To leave.

A-iyta-a	I-'yta-a-a	A-ta-iyta-a-a	I-ta-iyta-a-ma	A-iyta-a	I-'yta-a-a	To wish[4].
A-iytia	I-'ytiti-ia	A-ta-iytia	I-ta-iytiti-ita	A-iytia-a	I-'ytiti-a-a	To know.
	I-'ytia-a-a-a		I-ta-iytia-a-a	Wanting.		To know one another.

[1] The affix of the first and third persons plural of the present are the same as the second person.

[2] A-ta-'ilgwaiya is also used.

[3] The first letter of the root falls out in the third person of all tenses. Examples: a-'ya, he, she, or they take; a-'ya-a, he, she, or they bring. There are two forms for the imperative of a-iya-a, to bring: I-'ya-a or a-a and a-'ya-a-ta or a-ta. The imperative of a-iya is 'ya-ma in the singular, 'ya-ma-ita in the plural.

[4] The past tense is rarely used, the present followed by aya, formerly, being generally employed instead. In the third person plural of the present and future the last letter is doubled as in the second person plural: a-iyta-a-a and a-iyta-a-a.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Auxiliary Verbs.

*193 The verbs used as auxiliaries are:

A-aku, to become.
A-ata, to have.
A-iabo, to give.
A-io, to go.
A-lôtu, to come.
A-idim, to be able.
A-idip, to finish.
A-iyôlô-u, to know.
A-itô-u, to venture.
A-tum, to get, to obtain, &c.
A-ri-ki-no, to forget.
A-urt-yu, to fear.
A-ang, to refuse.
A-dol, to see.
A-ia-ikî-no, to be unable, to come conquered.
A-ita, to return hither.
A-tum, to sit, stay.

Can, may, and *might* are represented by the appropriate tenses of a-idim, to be able. *Must* is expressed by the third person singular of the negative present of a-ata, to have, joined to injera, that, and followed by another negative:

M-e-ata 'njera m-a-io,
M-e-ata 'njera ainu a-io, } I must go.

Ought and *should* are translated by the third person singular of the present or past tenses of a-nare, to please, or a-nyur, to love. After the former the simple present is generally used and after the latter the narrative tense.

E-nare alo,
E-nyur n-a-io, } I ought to go.

E-ta-nare a-io,
E-to-nyur-a n-a-io, } I ought to have gone.

A-aku, to become.

The third person singular of the present tense of a-aku, to become, is used to strengthen the conditional tenses and to assist in the formation of several other tenses:

Ten e-aku a-suj, if it comes to pass that I follow him.
Ten e-aku a-suj-ita, if it comes to pass that I am following him.
Ore p'e-aku a-suj, now and it comes to pass I follow him *or* while I was following him.
Ore p'e-aku a-ta-suj-a, I having followed him.
Ore p'e-aku a-idip-a a-ta-suj-a, I having already followed him.
E-aku a-suj, I shall be in the act of following him.
E-aku a-ta-suj-a, I shall have followed him.
E-aku a-idip-a a-ta-suj-a, I shall have already followed him.

The third person singular of the past tense of a-aku, to become, followed by the relative adverb of time, is used to translate such phrases as about to, on the point of, shortly, &c.:

E-ta-a an-a-alo (it became when I go), I am *or* was about to start.
E-ta-a an-a-e-dit-yo eng-ainig (it became when it descends thither the sun), the sun is *or* was on the point of setting.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

E-ta-a ee-o-a-dolig-o ol-tulgani ol-tau (it became when he cuts himself the man the spirit), the man is *or* was on the point of death.

A-ata, to have.

A-ata, to have, is used as an auxiliary in the present and past contingent tenses:

Ana'-'ata a-eij, I should follow him.

Ana'-'ata a-ta-eij-a, I should have followed him.

A-iaho, to give, to give permission, to allow.

The imperative of the verb a-iaho, to give, followed by the infinitive *or* subjunctive is much used as a substitute for the simple imperative:

I-ajo-o a-eij *or* I-ajo-o ee-a-ta-eij-a, let him follow him.

Mi-ki-aje a-eij, do not let me follow him.

With some verbs the imperative negative is never used without the help of a-iaho, to give:

Mi-aje ki-ri-ki-ne (do not give that it forgets to thee), do not forget.

A-iaho is frequently employed to translate *to do something*:

Ilaho 'l-Masaae, the Masai do as follows.

E-a-iaho a-irur-a ong-ae, and she does this whilst the other is sleeping.

A-ie, to go, and a-itte, to come.

These verbs followed by the infinitive are much used as a substitute for the future, which is often wanting:

A-ie a-eij, I go to follow (him) *or* I shall follow (him).

Ki-pwi aa-eij, we go to follow (him) *or* we shall follow (him).

Aa-pwi aa-eij naare, it is gone to me to be followed *or* I shall be followed.

E-pwi aa-eij iyook, it is gone to us to be followed *or* we shall be followed.

Aa-ahtati-ki aa-eij naare, it was gone to me to be followed *or* I shall have been followed.

E-ahtati-ki aa-eij iyook, it was gone to us to be followed *or* we shall have been followed.

A-itte a-eij-a, I come to follow (him) hither *or* I shall follow (him) hither.

Ki-pwtad aa-eij-a, we come to follow (him) hither *or* we shall follow (him) hither.

Aa-pwtaa-ai aa-eij-a naare, it is come to me to be followed hither *or* I shall be followed hither.

E-pwtaa-ai aa-eij-a 'yook, it is come to us to be followed hither *or* we shall be followed hither.

Aa-ttati-ki aa-eij-a naare, it was come to me to be followed hither *or* I shall have been followed hither.

E-ttati-ki aa-eij-a 'yook, it was come to us to be followed hither *or* we shall have been followed hither.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

#193 A-ilim, to be able, a-ilip, to finish, a-iyiti-a, to know, and a-iti-a, to venture.

The infinitive formed like the past tense is invariably used after these four verbs:

E-ilim-a E-ilip E-iyiti-a E-iti-a	a-ta-enj-a,	he will be able to follow (him). he (will) finish following (him). he will know how to follow (him). he (will) venture to follow (him).

A-ilip may often be translated by already, and a-ilip-aya by ready.

E-ilip-a a-ehimo, he has already gone.
E-ilip-a a-tua, he is already dead.
K-a-ilip-ate 'a-giri? is the meat ready?

A-tum, to get, to obtain, to see, to succeed, to meet.

This verb is usually followed by the infinitive formed like the past tense:

A-tum a-ta-enj-a, I succeed in following him.
A-ntu a-ta-enj-a, I succeeded in following him.

If, however, emphasis is laid on any special word, the present tense may be used instead:

I-tum i-enj, thou gettest him (f) thou followest him.

A-ri-kt-un, to forget, a-urt-ya, to fear, a-ang, to refuse, a-dol, to see, a-la-ikt-un, to be unable.

These verbs can be followed by the infinitive formed like the past tense or by the present indicative:

E-ri-kt-un-ya E-urt-ya E-ang E-dol E-la-ikt-un	a-enj, or a-ta-enj-a,	he will forget he will fear he refuses he (will) see he is unable	to follow him.

A-ita, to return hither.

The third person singular of a-ita, to return hither, is employed in the formation of the past negative tense:

Eita a-enj, I did not follow him.

A-tun, to sit, stay, live.

The third person singular of the present tense of a-tun, to sit, is used to express yet and still, and, combined with a-ita, not yet. In derivative verbs this form is frequently used as a substitute for the imperfect and progressive present:

Etun a-enj, I still follow (him).
Etun a-enj-ita, I am still following (him).
Etun a-enj-un, I am following (him) thither.
Etun eita a-enj, I have not yet followed (him).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

REDUPLICATION.

Doubling a verb often gives an idea of thoroughness: 193*

A-ikum, A-ityum, } to jump.	A-ikum-ikum, A-ityum-ityum, } to jump about.
A-dalg, to eat.	A-dalg-adalg, to eat up.
A-irub, to join.	A-irub-arub, to join thoroughly.
E-ikgur-e, to look hither, to seek.	A-ikgur-ikgur-e, to seek everywhere.

In some verbs, however, the meaning is changed when the root is doubled:

A-lep, to climb.	A-lep-lep, to make a noise.
A-lep, to milk.	A-lep-alep, to play with a cow's udder preparatory to milking.
A-ai, to pray.	A-ai-ai, to be on the point of giving birth.

A few verbs are only used in the redupliated form:

A-idelidel, to dream.	A-ikirikir-e, to tremble.
A-ilelilel, to shake.	A-ikilikil, to tickle.
A-iririr, to dribble.	

ADVERBS.

With the exception of interrogatives all adverbs in Masai follow the verbs they qualify:

I'w-ro akiti, speak slowly.	A-ekimo dee alg, I want a short while ago to the kraal.
Ki-tam-i pum, we (will) wait a little.	A-le tasia, I am going now.
Ki-ir aiturie, we (shall) divide it equally.	Aa-ta-ar-aki pumu, I have been beaten for nothing.

Substantives without the article may be used as adverbs, and verbs with or without the relatives are commonly employed in an adverbial sense:

Kojor, elsewhere, above.	Ekaana, (it is near, or where it is near) near or soon.
Ahori, below.	Ei-ekaana,
Wiji, somewhere.	Aaitiki, aaitiku, aaityo, sometimes, (to do) quickly.
Kwapi, abroad.	Aitiki, (to do) again.
Lenjiteya, before.	
Kuron, behind.	
Ekdwa, (it is far, or where it is far) far.	
Ee-ekdwa,	

Adjectives can also be used as adverbs:

Kiti, little.	Tuwan, ill.
Kitak, much.	Ilolai, expert, well.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

#193 Many English adverbs may be translated by naleng[1], very:

Kwet-a naleng, run fast.
I-ago naleng, hold tight.
I-'siniig-o naleng, listen well.
Te-ar-a naleng, strike hard.

Naleng is also employed for the comparison of adverbs:

I-'re-re akiti naleng, speak very slowly.
E-itohir-a aidai naleng, he did it most beautifully.

The following is a list of the principal adverbs:

Adverbs of Time.

Tasia, to-day *or* now.
Dun, now, lately, *or* a short while ago.
Akanya, adda, presently, afterwards.
Opa, formerly.
Opa moita, long since.
Pano, eligir-pano, soon.
Taisura, to-morrow.
Ngaia, yesterday.
Sii, again.
Tasia 'ngi, instantly.
Oshii, ashi-aka, always.

Compound words are frequently used as adverbs of time:

Kanna-eladgi (these-days), nowadays.
Idya-ee-eladg (that-other-day), the day before yesterday, the day after to-morrow.
Kat'-are (time-two), again.
Katattia kumok (times-many), often.
'Ng-eladgi-pikin (the-days-all), always.

There are no true adverbs of place. Sentences beginning in English with wherever, where, and whence, are expressed by verbal forms combined with the relative; substantives without the article take the place of such words as above, abroad, beneath, &c.; and here and there are expressed by the demonstratives enne *or* inne and ende *or* idye, or, *if joined to the verb to be*, by a-ili.

A-iytie ee-a-i-in,
A-iytie a-wiji a-i-in, } I know where you are going.
A-in wiji, I am going somewhere.
E-ili atwa (he is there interior), he is inside.
A-ta-dua a-ili enne (I saw him he is there this), I saw him here.
E-ta-ili-ilio idye, he fell there.

The principal adverbs of manner are:

Ngia, iaji, thus.
Aka, only.
Naleng, very, &c.
Mana, on.
Ilita, not, not yet.
Ee, yes.
Kanakai, kanakaiye, altogether, indeed.

[1] The Purtiness Masai often use the full form of this word, which is the feminine relative of the verb a-leng, to be good, viz. a-leng, ee-leng, ee-leng ana-leng.

1:Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

The principal adverbs of interrogation are:

(K) 'aji ? } how ?
K ? Ka ? or Kaa ? }
Kade ? or Korse ? where ?
(K) aji ? where ? whence ? wither ?
(K) anu ? when ?

Ansa anu ? how long ago ?
(K) aji e-tiu pe ? } why ?
(K) ana i-jo ? }
(K) ainyó pe ?
(K) aja ? how much ? how many ?

Adverbs of interrogation are placed at the commencement of the sentence.

How ?

(I) aji a-iko enna ? how (shall) I do this ?

Ka, en-dóki ai anake en-ino ? } (how, the thing mine or the thine ?) is this thing mine or thine ?
Ken-dóki ai anake en-ino ?

How ? is sometimes expressed by affixing a to a verb or other part of speech, or by the use of the verb a-be-ya, to arrive thither:

Ka-jó-ki-a 'ndae ? how (shall) I tell you ?
Ke-be-ya-a te-'ng-adoro ? (it arrives thither how with the length ?) how long (*or* tall) is it ?
Ion-ya-a te-'ng-itoo ? (thou arrivest thither how with the age ?) how old art thou ?
Ke-be-ya-a eng-olóig ? (it arrives thither how the sun ?) } what o'clock is it ?
(I) aji e-tii eng-olóig ? (where it is there the sun ?)
Ik-ai enna-tóki, en-ino 'njeri-a ? this thing is mine, what *or* how is thine ?
Ing-anyit enye 'njeri-a ? (how is his honour ?) what honour is due to him ?

Where ?

Kdee ol-tuñgani ? where (is) the man ?
Kdee ninye ? (where he ?) } where is he ?
(I) aji e-tii ? [2] (where he is there ?)
(I) aji i-lo ? where art thou going ?
(I) aji i-'ñgu-a ? whence comest thou ?

The applied form is used after (k) aji ? followed by a verb:

(I) aji i-lo a-inoe-ye en-daa ? where art thou going to eat thy food ?
(I) aji i-lo a-lilit-are ? where art thou going to walk ?

When ?

(I) anu i-lo ? when art thou going ?

How long ago ?

Ansa anu etii ? (how long ago he is there ?) how long has he been there ?

[1] *K* is frequently prefixed to words as a sign of interrogation.
[2] E-tii aji means, he is at home (lit. he is there hut).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193 Why?

(K) aji e-tin pe i-ndobir enna? (how is it like and thou preparest this?) why dost thou prepare this?

(K) ana i-jo i-ndobir enna? (if thou sayest and thou preparest this?) why dost thou prepare this?

(K) ainyó pe[1] i-ndobir enna? (what and thou preparest this?) why dost thou prepare this?

How much? how many?

Kaja? how much? how many?

When aja? is treated as an adjective, it follows the substantive it qualifies. If followed by a verb, it requires a relative with it:

Il-tuñganak aja oo-inos en-daa? how many men will eat food?

The Masai have a word for *to buy* (a-inyaŋg-u), but they have no word for *to sell*. When asking the price of anything, the Swahili words *pesa* and *rupia* followed by aja? are the terms generally employed nowadays:

'M-besa' aja? how many pice
'Rupiani'[2] aja? how many rupees } (does it cost)?

Other forms, which can be used for both purchasing and selling, are shown in the following examples:

(K) ainyó i-inos-ye enna-tóki? (what you cause to eat this thing?) what will you sell this thing for? *or* what will you pay for this thing?

(K) ainyó i-mir? (what you drive it away?) what will you sell it for?

(K) ainyó i-nda-kwet-ye enna-tóki? (what do you make to run to this thing?) what will you pay for this thing?

(K) ainyó i-nda-wal-ye enna-tóki? (what you cause to change to this thing?) what will you exchange this thing for?

CONJUNCTIONS.

Conjunctions are often dispensed with by the use of the narrative or conditional tenses. *And, but,* or other mere connective is translated by the former; *if, when,* and other conjunctions introducing a state, by one of the latter.

The principal conjunctions are:

O[3], and, with.	Arahi, anaka, ana, *or* aho, or.
Ore, now, and.	Ana, for.
Pe, and, in order that, so that.	Kaba, but.

[1] Ainyó pe is often abbreviated into o pe.

[2] 'Eg-ukula, copper, lead, is sometimes used for 'Rupiani.

[3] When followed by a plural substantive o becomes oo (side p. 18). Oo is also frequently used for o when followed by a singular substantive ear

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

Sii, again, also.
Nsa, then.
Ónaa *or* taa, well, and so, accordingly, and then, &c.
Eitu, before, ere.
Injere[1], provided that.
Ajo (pl. aajo), that.
Anaa, like.
Ómaa-amu, since, because.
Nəji,
Nəji-amu,
Ti-araki (pl. endi-araki),
} because.

PREPOSITIONS.

There appear to be no real prepositions in Masai. Simple prepositions such as *at*, *by*, *for*, *from*, *in*, *on*, *out*, *to*, and *with*, &c., are expressed by the local case; and compound prepositions are rendered by compound phrases. Examples:

Ten eidipayu (when it shall become finished), after.
Leme *or* neme (and it is not), except.
Te-lughunya, ahead.
Te-kurum, behind.
Te-polos, between, through.
Te-idye, beyond.
Ti-álo, in the direction of, beside.
Ti-aulo, outside (the kraal).
Te-boo, outside (the hut).
Ti-atwa, within *or* inside.

As with adverbs, substantives without the article may sometimes be used as prepositions:

E-tii atwa aji, he is in the hut. E-tii álo aji, he is beside the hut.

INTERJECTIONS.

There are a large number of interjections, many of which are very difficult to express in writing as they are often only half-articulate sounds.

The most usual interjections are given in the following list:

	Singular.		Plural.	
	Masc.	*Fem.*	*Masc.*	*Fem.*
Of address:	e-iro	na-iro na-ito[2]	'l-oiye	na-toiye.

A man replies oi, ɔ̄oi, oe, *or* oo; a woman, ɛn. (*Vide* pp. 15 and 284.)

Of greeting: sɔ̄pai takwenya endasɔ̄pai endakwenya.

The reply is hɔ̄pa *or* ighó (*vide* p. 284).

[1] Injere becomes injeri when followed by a, e.g. injeri-a? how? (*vide* p. 95).

[2] Old men only may use na-ito.

*193 Of abhorrence, contempt, disgust: pasa! or ih!—ugh!
Of astonishment: oi! ho! hoe! hae! yua! or eiji!—oh!
ai! or aigua!—what!
adoshi! or ai! ai! eng-ai!—lo and behold!
Of assent: aiya! or ewai!—all right!
Of compliment: pasinai!—please or thanks.
Of defiance: orid!
Of grief: oiya-kake!—woe is me!
yeyo-ai!—oh my mother!
Of joy: hoi!
Of fear: iyope!

Imperatives are frequently used as interjections:

Ingo! catch hold!
Tigirayu (pl. endigirata)! silence!
I'ngurai! behold!
I'ainiigo! listen!
I'ngirio! } make way!
I'ainiigo! }
Tapula! don't touch! leave it alone!

Pse! peiye! and such-like sounds are often used to attract attention and might be translated by I say! or you there!

THE STORY OF THE HARE AND THE ELEPHANTS.

A hare that lived near a river one day saw some elephants going to the kraals of their fathers-in-law. He said to the biggest one, who was carrying a bag of honey: 'Father, ferry me across, for I am a poor person.'

The elephant told him to get on his back, and when he had climbed up, they started.

While they were crossing the river, the hare ate the honey, and as he was eating it, he let some of the juice fall on to the elephant's back. On being asked what he was dropping, he replied that he was weeping, and that it was the tears of a poor child that were falling. When they reached the opposite bank, the hare asked the elephants to give him some stones to throw at the birds.

He was given some stones, and he put them into the honey bag. He then asked to be set down, and as soon as he was on the ground again he told the elephants to be off.

They continued their journey until they reached the kraal of the big one's father-in-law, where they opened the honey bag. When they found that the stones had been substituted for the honey, they jumped up and returned to search for the hare, whom they found hiding. As they approached, however, the hare saw them, and entered a hole. The elephants followed him, and the biggest one thrust his trunk into the hole, and seized him by the leg, whereupon the hare said: 'I think you have caught hold of a root.' On hearing this the elephant let go his leg and seized a root. The hare then cried out: 'You have broken me, you have broken me,' which made the elephant pull all the harder until at length he became tired.

1: Hollis G-5 (ca. 1894-1904) 905
FL12 Masai FL12

539 While the elephant was pulling at the root, the hare slipped out of the hole and ran away. As he ran, he met some baboons, and called out to them to help him. They inquired why he was running so fast, and he replied that he was being chased by a great big person. The baboons told him to go and sit down, and promised not to give him up. The hare entered the baboons' hole whilst they sat down outside and waited. Presently the elephant arrived, and asked if the hare had passed that way. The baboons inquired whether he would give them anything if they pointed out the hare's hiding-place. The elephant said he would give them whatever they asked for, and when they said they wanted a cup full of his blood, he consented to give it them, after satisfying himself that the cup was small. The baboons then shot an arrow into his neck, and the blood gushed forth.

After the elephant had lost a considerable quantity of blood, he inquired if the cup was not full. But the baboons had made a hole in the bottom, and when the elephant looked at it, he saw that it was still half empty. The baboons jeered at him, and said he had no courage, so he told them to fill the cup.

They continued to bleed him, but still the cup would not fill, and at length he sank exhausted to the ground and died.

The hare having nothing more to fear was then able to leave his hiding-place.

THE STORY OF THE WARRIORS AND THE DEVIL.

Two young brothers once lived together with their parents. In course of time they grew up, were circumcised, and became warriors.

One day their father gave them a bullock, and told them to go and slaughter it; but they decided that they could only slaughter it in a place where there was no man, or animal, or bird, or insect, or anything living. They therefore took their spears, shields, swords, and clubs, and went to look for such a place.

After searching unsuccessfully for five months they entered a big forest where there was no living creature. They waited for a few days, and then, as they could not find anything that had life, they built a slaughter-house, and slaughtered their bullock.

After they had killed the animal, the elder one gave his brother the stomach, and told him to go and draw some water. The younger one went to the river, but when he drew the water, it cried out: 'He has drawn me, he has drawn me.' He was much frightened and ran away, and as he ran, the forest laughed. He related what had occurred to his brother, who told him to spit as he was a coward. The elder one took the stomach of the ox himself, and went to the river, when the water called out as before: 'He has drawn me, he has drawn me.' He replied: 'Yes, I have drawn you on purpose,' and took the water back with him.

The younger brother was then sent to cut wood, but when he took hold of the tree, the firewood cried out: 'He has broken me, he has broken me.' Again much alarmed he returned to the slaughter-house, and told his brother that the firewood had rebuked him. His brother did the same as on the other occasion: he called the younger warrior a coward, and told him to spit; he then took his sword, and went to cut the firewood. The firewood cried out when he cut it, but the warrior replied that he was cutting it on purpose, and took it back with him.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*539 On his arrival he told his brother to go and cut some skewers. When he cut them, however, the skewers cried out: 'He has cut us, he has cut us.' He left them and ran back to the kraal to tell his brother, who again called him a coward, and told him to spit, while he went himself to cut the skewers. The same thing happened as before. The skewers cried out on being cut, but the warrior told them he had done it on purpose, and returned with them to the slaughter-house.

The warriors then roasted some meat and had a meal, after which they went to sleep.

During the night a devil came and put out their fire. He then lit his eye, which resembled a fire, and lay down. Later on the elder warrior woke up his brother, and told him to make up the fire. The younger one got up and seized the devil's eye, thinking it was a brand. The devil thereupon swallowed him, and went away, while the elder warrior cried after him: 'Go now, but to-morrow I will look for you.'

At dawn he started off in pursuit, and when he found the devil, he noticed that he had nine heads and a very big toe.

The devil told the warrior to go away, and said he did not wish to hurt him as he was brave. The warrior refused, however, and told the devil he wanted to fight. The devil rushed at him, and tried to kick him, but the warrior caught the kick on his shield, and cut off one of his adversary's heads. The devil then fled, and the warrior called out to him that he would return on the morrow, after which he went back to the slaughter-house, and rested.

The next day he followed up the devil, and in the fight which ensued cut off another head. The devil ran away again, and the warrior told him that he would return the following morning to kill him.

When he came to the spot the next day, he found the devil very weak from losing two of his heads, and he easily disposed him, after which he cut off the big toe. Every kind of animal came out from the toe, and last of all came the warrior's brother.

The two returned to their slaughter-house and rested for three days, at the end of which the younger warrior asked his brother to take him home, as he was afraid to remain there any longer.

THE STORY OF THE WARRIOR AND HIS SISTERS, OR WHY FREE LOVE IS PERMITTED AMONG THE MASAI

There once lived an old man who had two daughters and a son. In course of time the children grew up, and the boy became a warrior. War then broke out between the old man's people and a neighboring

* How did you know. * The plural of Ngatu, the nation, is ndigatu.

FL12 Masai FL12

tribe, with the result that the former feared to take their cattle to the salt-lick, as they were accustomed to do once or twice a month. The cattle suffered in consequence, and gave no milk. 539P

When the old man's son saw that his cattle were falling ill, he made up his mind to take them to the salt-lick, and to die with them if necessary. His elder sister accompanied him, and as he was leaving the paternal *ewal*, he told his younger sister that if she saw smoke issuing from the winning-place, she might know that he was safe.

On his arrival at the salt-lick he erected his kraal, and encircled it with a hedge of thorns. The next morning he took his cattle out to graze, leaving his sister to look after the kraal. For some days the enemy did not come near them, but one morning they suddenly appeared. The girl was alone at the time, and they made love to her, after which they departed.

On the warrior's return in the evening he noticed the footmarks, but said nothing to his sister. The next morning he drove his cattle out to graze as usual, and when he had taken them to a safe distance, he returned and hid himself near the kraal. The enemy came again and made love to the girl. When they were about to leave, the warrior heard his sister say to them: 'If you come this evening, I will sing when my brother milks the big cow. You can then take me away and the cattle too.'

The warrior went back to his cattle, and in the evening, when he had returned to the kraal, he placed his weapons in readiness, and proceeded to milk the big cow. His sister at once commenced to sing, so he left the cow, and seized his weapons. Almost at the same time one of the enemy jumped over the thorn hedge only to be killed by the warrior. Five others met with the same fate, and the remainder fled. The warrior then sallied forth, and collected a lot of firewood with which he lit a fire and burnt the bodies.

It had been raining, and the women of the old man's kraal were repairing the damage done to their huts by plastering them with a mixture of cow-dung and clay. The warrior's younger sister was on the roof of the hut, and when she saw the smoke issuing from the salt-lick, she cried out: 'My brother is safe!' She was asked how she knew, and she told everybody what her brother had said to her when he left them.

The next morning all the people of the old man's kraal moved to the salt-lick, and their cattle speedily recovered. The warrior related what his sister had done, and her father sought out a man to marry her.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*539 Before this event it was not customary for the young girls to go to the warriors' kraals, and they remained at home till they were married; but when the story of the girl's treachery was known, it was considered safer to let them go, and sing, and dance, and live with the warriors. And this custom has been observed ever since.

[illegible] [illegible] [illegible] [illegible]
with the water, and he puts down the quiver.

[illegible] [illegible] [illegible] [illegible]
And he sees the devil, and he finds children, and he finds

[illegible] [illegible] [illegible]
not they are there milk, and he says: 'The ancestors (or spirits)

[illegible] [illegible] [illegible] [illegible]
of the land (or family) of mother which have drunk milk!

[illegible] [illegible] [illegible]
I go in the morning to hang (or strength) myself.'

[illegible] [illegible] [illegible] [illegible]
And he goes, and he gets in the cave the shed (or lodge),

[illegible] [illegible] [illegible] [illegible]
and he sees bed, and he lights the fire.

[illegible] [illegible] [illegible] [illegible] [illegible] [illegible]
Now he is lights he is there the bed outside the hut for

[illegible] [illegible]
he is hang rope.

[illegible] [illegible] [illegible] [illegible]
Now he is lights, and he is the back he is lights [illegible]

[illegible] [illegible] [illegible] [illegible]
and he says see the boy the shed (or village) he does,

[illegible]
and he knights.

[illegible] [illegible] [illegible] [illegible]
And he says the devil: 'The ancestors (or spirits) of the land (or family)

[illegible] [illegible]
of mother which we knight we?'

[illegible]
And he says ([illegible]).

[illegible] [illegible] [illegible] [illegible]
Now morning and he goes with bow will the [illegible]

[illegible] [illegible] [illegible]
and he hangs himself, and he dies.

* And when the boy sees what he is doing

THE STORY OF THE DEVIL CALLED SAB-KIDONGOI* AND THE CHILDREN.

There was once upon a time an old man who had two wives. One of his wives gave birth to a son and a daughter, and then died, leaving her little children to be looked after by their step-mother. But both their step-mother and their father disliked them and treated them badly.

One day the inhabitants of the kraal moved with their cattle to another grazing ground. The two children, however, remained behind in the deserted hole to see if they could pick up any food which might have been left there. They stayed all night, and started off the next morning to follow the cattle trail. But on the road they crossed another trail, that of the devil called Sab-Kidongoi, and they followed this one by mistake, arriving eventually at the devil's kraal. He was out at the time herding his cattle, so the children set to work to sweep out his hut, and then drank his milk.

In the evening when the cattle returned to the kraal, the children hid themselves in the devil's bed, i.e. they covered themselves with

* The devil called The tail of small beads.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

#539

the grass which had been thrown in the corner of the hut. When the devil arrived, and saw that the place had been swept clean, and his milk drunk, he wept, and said, 'Ah! Have the spirits of my mother's hut visited me? I will hang myself to-morrow morning.'

The children remained silent in the hut while the devil was talking; but when he went to milk his cows, the boy got up and said: 'I must go and get some milk.' His sister tried to dissuade him, and reminded him that if the devil saw him he would eat them both. He went, nevertheless, and when the devil left his cows for a few minutes, the boy seized a gourd, and brought it into the hut, where he emptied it with his sister, after which he put it back in the place where he had found it. On the devil's return, he said: 'Ah! Have the spirits of my mother's hut come to drink my milk? I will hang myself to-morrow morning.'

Having put the calves in their shed, the devil entered the hut, and lit a fire at the entrance. He toil was so long that he was unable to put it in the hut, so he left it outside, and fanned the fire with it, and blew the sparks into a flame with his back. When the boy saw what the devil was doing, he laughed, and the devil said: 'Ah! the spirits of my mother's hut are laughing at me.'

The next morning, the devil fastened a cord round his neck, and hanged himself. When he was dead, the boy cut off the long tail, and took it away with him. The children then started off to retrace their steps of the day before, driving the devil's cattle before them.

They had not gone far before they met a number of lionesses who asked the boy whose cattle he was travelling with. On hearing that it was Ilon-Kilongoi's, they were much alarmed, and asked whether the devil would overtake them if they were to run away. The boy told them that if they were to run for four days they would escape, but to show that the devil was not far off, he pointed to some dust which was rising up behind the cattle, and told them that that was Ilon-Kilongoi's tail. The lionesses at once fled, and the children pursued their way without further molestation.

When they stopped for the night, they were visited by some lions, who asked them whom the cattle belonged to. The boy answered: 'They belong to nobody, you had better eat them; but if you do, you will never hunt again.'

The lions were surprised at this reply, and said: 'Why should we never hunt again? Is there anything that we fear except Ilon-Kilongoi?'

BAR-KIDONGOI AND THE CHILDREN

The boy then asked them: "Don't you believe these cattle are Bar-Kidongoi's?"

The lions were incredulous, and told him to show them the devil. The boy replied: "He is asleep." But he went to where a calf was lying, and tied one end of the devil's tail to it. The tail was so long that when one stood at the other end it was impossible to see that it had been fastened to the calf. The boy then returned to the lions and called them. One of them went with him, but when he saw Bar-Kidongoi's tail he fled and the others followed him.

The next morning the boy followed the cattle trail until he reached his father's kraal. He made his own kraal, and then went and killed his father and step-mother, after which he considered and kept the two herds.

Both he and his sister became adults, when certain ceremonies were performed. They then married and lived happily ever afterwards.

THE STORY OF THE WARRIORS AND THE MONKEYS.

Some warriors once wished to go and raid, so they consulted a medicine-man before starting, and were told that if they killed any monkeys on the road, the expedition would prove a failure.

One of the warriors was a coward, and when he heard what had been predicted, he made up his mind if a chance presented itself to kill a monkey.

On the road the warriors saw two monkeys and called one another's attention to them. The coward also saw them, and stayed behind on the pretext of having broken his sandal. He waited until his companions had passed on, and then killed one of the monkeys which being ill was unable to run away. He afterwards rejoined the other warriors, and they continued their journey.

In the meantime the monkey which had escaped returned to its dead comrade and lamented its loss. 'O! my brother,' it said, 'I tried to persuade you to run away, and you said you were not able. Then the cursed one came and killed you. O! my brother.'

When the warriors reached the country they intended to attack, they saw one of the inhabitants sitting under a stone trapping rock-rabbits. They crept up to him and threw a club at him. Although the club hit its mark, the man only complained of the flies that bit him. Another club was thrown with a like result. The man then turned round, and seeing the warriors, sprang at them, and although unarmed put them to flight.

The warriors at once knew that the coward had killed the monkey contrary to the medicine-man's advice, and they put him to death on the spot.

9 [539] One of the men, a particularly handsome and well-built fellow, went away with three sisters. On leaving, he asked the girls where they would like to go, and they told him they wished to accompany him to his kraal. He said that it was a long way off, but they replied that that did not matter.

They started off, and after walking some distance they approached the kraal. The girls noticed some white things scattered about on the ground, and asked the warrior what they were. He said that they were his sheep and goats; but when they reached their destination, they saw that they were human bones. They entered the warrior's hut, and the girls were surprised to find that he had quite alone.

It transpired later that this warrior was in reality a devil who ate people; but it was not known, as he concealed his tail under his garments. He had even eaten his mother, and had thrown her bones into the heap of grass which formed the hut.

Shortly after their arrival at the hut, the warrior went outside, leaving the girls alone. A voice, which came from the hut, startled them by asking them who had brought them there. They replied that the warrior had brought them, whereupon the voice told them to open the mattress. The girls threw off the top layer of grass exposing the bones to view. The voice, which came from the bones, then related that she had been the warrior's mother, and that he had become a demon; and eaten her. The girls asked the bones what they should do, and the voice spoke as follows: "The warrior will soon presently and bring you a sheep. Accept it. He will then go outside again, and, having shut the door, sit down there. Make a hole in the wall and pass out. If you are asked what the knocking is, say that you are killing the sheep."

Everything took place as the voice had predicted, and the girls

and in probability of contact data; but as the reality on the part of the man is authentic, it would be impossible for a Masai warrior to hide his tail, if he had one, under his cloth or skin.

[Amongst the Hindu tribes it is a common practice for women to wear a tail of storage behind (Baker, *The Albert Nyanza*, vol. i, pp. 40, 109, &c., and Johnston, *The Uganda Protectorate*, p. 780, &c.), and amongst the peoples visited by Schweinfurth, and described in *The Heart of Africa* (vol. i, pp. 70, 198, &c.) we find that the Dyoor men wore tails of calf skin, and the Bongo "tails like black horses' tails, composed of the hair of the Sassaribs." The Bongo men and their neighbours, the Mittos, the Kyam-Kyam, and the Kredy, "all wear an apron of some sort of skin." These people are, or were, cannibals. (Schweinfurth, *Junker*, and *Journal of the African Society*, No. 10, April, 1902.)]

In Hollin G-9 (ca. 1896-1904) 1905

made a hole in the wall of the hut through which they passed and escaped. When they reached the road, however, one of them suddenly remembered that she had left her beads behind. The sisters told her to go and fetch them while they waited for her. She returned to the hut, but met the warrior, who asked her if he should not live or make her his wife. She thanked him for giving her the choice, and said she preferred the latter.

They lived together for a considerable period, and after a time the women presented the dance with a son whom they named Koyyek. From the day of his birth Koyyek accompanied his father on his journeys to the forest in quest of people to devour; and while the men and the boy ate human beings, they took home with them for the women gents and sheep to eat and cows to milk.

One day one of the women's sisters came to the forest to visit her. As Koyyek and his father were both absent when she arrived, the two women sat and talked until it was time for the visitor to depart. The mother looked threatening as she rose to take her leave, and Koyyek's mother cried out to her not to go to the tree in the middle of the plain, should it rain, for it was her husband's and my's custom to rest there on their way home. But the woman hurried away without paying attention to her sister's warning, and when it came on to rain a little later, she ran to the tree in question, which was a baobab, and climbed up into it. She had not been there long before Koyyek and his father arrived upon the scene, and stood underneath the tree to get shelter from the rain. Their appearance recalled to the woman her sister's words, and she was greatly alarmed.

Koyyek gazed up into the tree, and remarked that there was something peculiar about it, but his father said it was only because it was raining hard. Shortly afterwards, however, Koyyek saw the woman, and called out: "There is my aunt." The woman was forced to descend, and she gave birth to twins. Koyyek picked up the children, and said: "I will take these kidneys to mother to roast for me."

When it stopped raining the two returned home, and Koyyek asked his mother to roast his kidneys for him. But the woman knew at once that her sister had been put to death, and she hid the children in a hole in the earth, roasting instead two rats. When they were ready, Koyyek went to the fire, picked them up off the stones, and ate them, grumbling at the mere that because they were so small. His mother pretended to be very annoyed at this, and turning to her

F 539 husband, complained of what their son had said. The old man told her not to mind the boy as he was a liar.

The woman fed and tended the children, who were both boys, and gradually they grew. One day she asked her husband to bring her an ox, which, she said, she wished to slaughter and eat. Kenyek on hearing this request at once pricked up his ears, and remarked: 'It really seems as to hear of a woman who wants to eat an ox all by herself. I think these kidneys of mine have something to do with this matter.' However, the two men searched for an ox which they procured and brought back with them. They slaughtered the animal, and left the meat with the women, after which they went for a walk in the forest.

As soon as they had departed, the women let the children come out of their hole and gave them the ox to eat. They ate till sunset, when she sent them back again to their hiding-place.

Kenyek and his father returned shortly afterwards, and the former being very sharp at once noticed the small footmarks on the ground. 'I wonder,' he said, 'what these small and numerous footmarks are. They are certainly not mine.' His mother, however, shortly insisted on the marks having been made by herself or by the two men, and in this she received her husband's support. Being annoyed with Kenyek on account of the way he treated his mother, the old man killed him and ate him. But he immediately came to life again, and cried out: 'There, I have come back again.'

As time passed on the children grew up, and their aunt asked them one day if they knew that the people who lived in the same kraal with them were in reality demons and cannibals. She also inquired if, in the event of her being able to obtain weapons from her husband, they could put Kenyek and his father to death. The boys replied that they could, but asked the woman what she would say if her husband wanted to know why she required the weapons. She told them that she would say she wanted them to protect herself against any enemies who might come.

When Kenyek and his father next returned home, the woman asked her husband if he would procure two spears, two shields, and two swords for her, 'for,' she said, 'I am always here alone, and if any enemies come, I wish to be able to fight with them.' Kenyek remarked that he had never before heard of a woman who wanted men's weapons, and said he thought that those kidneys which he had brought his mother to roast for him must have something to do with

1: Hollis C-5 (ca. 1894-1904) 1905
FL12 Masai FL12

this request. Notwithstanding Konyek's protest the old man obtained 539*
for him with the weapons she required. When he had given them to her, she fetched an ox-hide, and asked the two men to lie down on the ground while she stretched the hide over them and pegged it down. She told them that when she was ready she would cry out and see if the enemy came, in which case they would assist her. She pegged the ox-hide down securely, and asked them if they could get out. Konyek found a hole and began to crawl out, but his mother told him to get in again, and she pegged it down once more. She then raised her voice, and called to the children, who came from their hiding-place, and killed Konyek and his father.

As Konyek was dying, he said to his parent: 'Did I not tell you so, and you said I lied?'

The boys, after killing the two devils, took their meat away to their father's kraal.

THE STORY OF THE OLD MAN AND HIS KNEE.

There was once an old man who was unmarried and lived alone in his hut.

One night he went to sleep, and when he awoke in the morning, he found his knee was greatly swollen. There was nobody to attend to him, so he kept quiet as he thought he only had a boil. After remaining thus for six months, he asked himself how it was the boil did not come to a head so as to enable him to lance it. He waited two months more, and as it had not come to a head, he said to himself: 'Even if it kills me, I will lance it.' He therefore took his knife, and lanced it; and out came two children.

He looked after the children and fed them, and when they were old enough, he told them to sit by the door of the cave, while he went to look for food, and not to open to people they did not know.

On his return he sang:

'It is now soft, but not yet burst,
My children of the knee[1].
Go, my little one, let me in,
Open the door to me.'

The children opened the door to him, and he entered, and gave them their food.

[1] The boil on his knee is probably alluded to here.

I: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

* 539

One day some of the old man's enemies came to the cave, and said to the children: 'Open the door, children.' But as the children refused, they decided to wait until the sun should set to see if the owner arrived.

The old man returned in the evening, and sang the usual song, whereupon the door was opened.

The enemies then elected to sleep where they were, and to go the next evening to sing the same song, and to kidnap the children. So the next evening they went to the cave and sang:

'It is now soft, but not yet burst,
My children of the knee.
Go, my little one, let me in,
Open the door to me.'

As the voice, however, did not resemble their father's, the children refused to open the door.

The men then returned to their own country and consulted a medicine-man. They told him they wanted to make their voices resemble an old man's in order that they could kidnap some children they had seen in the forest.

The medicine-man told them to go back to where the children were, and to eat nothing on the road.

But before they reached the cave, they had eaten a lizard and an ant[1] which they found, thinking that these small things would not matter. On their arrival they sang the song, but the children did not recognize their father's voice, and refused to open the door. The enemies then returned to the medicine-man's kraal, and, on being asked what they had eaten on the road, replied: 'A lizard and an ant.'

They were told to go again to the cave, and to pick up nothing whatever on the way, not even a small ant.

They did as they were told, and when they reached the cave they sang the song. The children, thinking it was their father, opened the door, whereupon the men entered and carried them off to their kraal.

In the evening the old man returned to the cave, and sang, but as

[262]

[1] No Masai ever touches ants or lizards. All the Nilotic tribes, however, are very fond of white ants (Johnston, *The Uganda Protectorate*, p. 776), whilst the Bongo and Nyam-Nyam, visited by Schweinfurth, 'reckon as game everything that creeps and crawls,' and eat caterpillars, worms, snakes, and crocodiles (*The Heart of Africa*, vol. i, pp. 55 and 121).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

he received no answer, he looked for the children. When he did not find them, he wept, and started off to search in the neighbouring kraals. 539*

He arrived at one kraal and sang, but received no reply. He then went on to the next one, and sang again, and the children recognized his voice, and wept. When their father heard them, he went outside, and shouted loudly. The people told him to stop, and said a spell had been put on the town, and that no stranger might enter without eating a certain medicine. They then put a stone in the fire, and when it was hot, told the old man to open his mouth and swallow the medicine. The old man opened his mouth, and the stone was thrown in, and killed him. After this the children of the knee remained in the kraal.

THE STORY OF THE GREED OF THE OLD MAN AND HIS WIFE.

There was once upon a time an old man who lived in a kraal with his neighbours. And this old man had a wife and a small child, and he possessed a very fine ox.

One day he said to himself: 'How shall I slaughter my ox?' and he said aloud to his wife: 'My child! I will call the men and tell them that I am going to move. We can then slaughter our ox all by ourselves.'

His wife agreed, and in the evening the old man blew his horn as a signal to his friends that he had something to tell them. His neighbours collected together, and he told them that he wished to move as the air did not agree with him. The others consented, and

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*539 in the morning he saddled his donkeys, separated his cattle from the rest, and started off, accompanied by his wife, who was carrying the child.

When they had gone some distance, they halted and erected their kraal, after which they rested.

At dawn the next day the old man called his wife, and asked her why they had not yet slaughtered their ox. The woman replied: 'My husband! How shall we manage to slaughter the ox? There are two things to be considered, the first is that we have no herdsman, and the second, that I am carrying the baby.' The old man then said: 'Oh, I know what we will do. I will stab the ox in the neck, then I will leave you to skin it, and I will carry the child to the grazing ground. But when you have skinned the animal, roast some meat so that it will be ready on my return.'

The old man then killed the ox, after which he picked up his bow and quiver, put the child on his back, and drove the cattle to the grazing ground, where he herded them.

In the afternoon, as the child was asleep, the old man put it down in the grass, and went to drive back the cattle, for they had wandered far. But when he returned to the spot where he had left the child, he was unable to find it, so he decided to set light to the grass, 'for,' he thought, 'when the fire reaches the child, it will cry, and I will run to the place and pick it up before it is burnt.' He made a fire with his fire-sticks, and the fire travelled to where the child was. He ran to the spot, but when he reached it, he found that the child was dead.

The old man had left his wife in the morning skinning the ox. And while she was skinning it—she had just reached the dewlap—the knife slipped, and she stabbed herself in the eye. She went and lay down, and the birds came and finished the meat.

After the child was burnt, the old man drove the cattle to the kraal, and when they were opposite to the gate, he heard his wife weeping, and saying: 'Oh, my eye!' He therefore asked her who had told her the news.

'What news?' she inquired.

'The child has been burnt,' he replied.

The woman exclaimed: 'Oh, my child!'

The old man then asked where his meat was, and his wife informed him that the birds had eaten it, whereupon he cried out: 'Oh, my meat!'

I: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

They both wept, the old man crying: 'Oh, my maat!' and the woman: 'Oh, my child! Oh, my eye!' 539*

Look well at these people. It was for their greed that they were punished; they lost their child and their ox, the woman lost her eye, and they had to return in shame to their former home.

THE STORY OF THE WOMAN AND THE CHILDREN OF THE SYCAMORE TREE.

There was once a woman who had no husband, and she lived for many days in trouble. One day she said to herself: 'Why do I always feel so troubled? It is because I have neither children nor husband. I will go to the medicine-man and get some children.'

She went to the medicine-man and told him she was unhappy owing to the fact that although she had now grown old she had neither husband nor children. The medicine-man asked her which she wanted, husband or children; and she told him she wanted children.

[1] And she is unable to again descend from the tree.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

She was instructed to take some cooking-pots—three or as many as she could carry—and to search for a fruit-bearing sycamore, to fill the pots with the fruit, to put them in her hut, and to go for a walk. 539*

The woman followed out these instructions implicitly. She gathered the fruit, filled the pōts, placed them in her hut, and went for a walk till the evening.

On arriving near the kraal, she heard the sound of voices and asked herself: 'Why does one hear the voices of children in the kraal?' She approached nearer, and found her hut filled with children, all her work finished, the boys herding the cattle, the hut swept clean by the girls, the warriors singing and dancing on the common, and the little children waiting to greet her. She thus became a rich woman, and lived happily with her children for many days.

One day, however, she scolded the children, and reproached them with being children of the tree. They remained silent and did not speak to her; then, when she went to see her friends in the other kraals, they returned to the sycamore tree, and became fruit again. On her return to her own kraal, the woman wept bitterly when she found it empty, and paid another visit to the medicine-man, whom she taxed with having spirited away her children.

The medicine-man told her that he did not know what she should do now, and when she proposed to go and look at the sycamore tree, he recommended her to try.

She took her cooking-pots to the tree and climbed up into it. But when she reached the fruit they all put forth eyes and stared at her. This so startled her that she was unable to descend, and her friends had to come and help her down.

She did not go to the tree again to search for children.

THE STORY OF THE FATHER OF MAROGO.

*539 There was once upon a time an old man called 'The Father of Marogo' who was a great glutton. He had only one daughter, Marogo, but he disliked the child very much as he had to provide food for her.

After a while his wife gave birth to a second child, and about the same time Marogo was married, and moved to her husband's kraal. The old man then lived alone with his wife and baby.

One day Marogo sent a messenger to invite her parents to come on the morrow to her husband's kraal as they intended to slaughter a bullock. When the messenger arrived, Marogo's father was away from home attending to his cattle, so the message was delivered to his wife, who replied that they accepted.

The cattle returned in the evening, and the woman said to her husband: 'Father of Marogo, Marogo has sent us a message.'

He replied, 'What did the hag say?'

The woman rebuked him for calling their daughter names, and told him that their son-in-law was going to slaughter a bullock the next day, and that Marogo had bidden them to the feast.

Marogo's father was delighted, and cried out: 'Ah! my dear Marogo. Anybody could see that she is my daughter.'

The next morning they started for their son-in-law's kraal, and on the road came to a big river. The woman, who had been carrying the baby, called out to her husband to help her. The old man told her to bring him the child and he would take it across; at the same time he gave his wife his clay pot, which he had exchanged for a goat, and instructed her not to let the water sweep it away.

He then entered the river, but before he reached the middle, he let go the child and the current carried it away. The woman burst into tears, but her husband told her to be quiet as the child would be picked up lower down the stream. He called out to some imaginary people, and when the sound ceased echoing among the trees, he said: 'Seize this child.' The echo came back to them, and he asked his wife if she heard the reply, after which he proposed that they should go on.

As they were leaving the bank, the woman asked him where the men were who had picked up the child. Marogo's father replied: 'You women are such fools! Even if this child is lost, won't you bear another?'

They continued their journey, and when they arrived near Marogo's

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

kraal, the old man saw the people slaughtering the bullock. As his wife was some way behind, he beckoned to her with his club in order to point out to her that the feast had commenced. He thought he was only beckoning to her, but as his wife came up to him, he hit her on the head with the club, and made the blood gush forth. 539*

He was sorry for what he had done, and picked up some earth which he plastered on the wound. He told his wife not to let the people they were visiting know that he had hit her; 'and,' he added, 'if you are offered plenty of meat, don't refuse. Put it on one side, and give it to me afterwards, for I shall not get enough to eat. Now that you have no child, you can take home whatever you don't eat.'

They stayed in their daughter's kraal until it was time to return, and the woman took away some of the meat that was left over for her husband to eat at home.

THE STORY OF THE TWO WIVES AND THE TWINS.

There was once upon a time a man who had two wives. By one wife he had no family, but by the other he had several children.

The latter on one occasion gave birth to twins, and great was her joy when she heard that both the children were boys. The barren woman, however, was so jealous that she made up her mind to do something that would turn her husband's love for the happy mother to hatred. She took the babies while their mother was sleeping, and cut their fingers, after which she rubbed some of the blood on their mother's mouth. She then put the children into a drum, which she threw into the river, and called to the other inhabitants of the kraal to come and look at the woman who had eaten her offspring. The men came, and, seeing the blood, believed the story, especially as the children were nowhere to be found. The old man was at first uncertain what to do with the supposed murderess; but after a while he called her to him and told her that as a punishment she should herd donkeys for the rest of her days.

The drum in which the woman had put the children was carried along by the current to another country, and some old men who were sitting on the bank of the river outside their kraal saw it as it was floating down the stream. The one who saw it first claimed it as his, whilst one of the others claimed the contents, whatever they might be. The drum was fished out of the water, and when it was opened the two babies were brought to light. The old man who had claimed the contents of the drum took the children to his hut, and fed them, and brought them up as his own sons.

In course of time the boys grew up, were circumcised, and became warriors. They had received the nickname 'Sons-of-the-drum' from their playmates and fellow warriors, and as they did not understand the meaning, they asked the older people why it had been given them. On hearing the story of their being found in a drum in the river, they

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*539 decided to pay a visit to the country of their birth; and so as not to arrive empty-handed, they thought it would be well to first of all undertake a raid, and capture some cattle. They shortly afterwards started off on a raiding expedition, and succeeded in lifting a herd of cattle. They then passed through a forest, arriving eventually in another country where signs of habitation soon became evident. They had not proceeded far before they came upon a woman herding donkeys outside a kraal. That a woman should undertake so menial a task surprised them to such an extent that they went up to her and accosted her. 'How is it,' they asked, 'that you are herding the donkeys? Is this not the children's work?'

The woman replied: 'It is painful to me to explain to you, my children, why I do this work.' She, however, proceeded to tell them the pathetic story of her life. She related how her husband had had two wives, and whilst the other one was barren, she herself gave birth to several children. She spoke of her twins, and described how the other woman had come to her while she was asleep, cut her babies' fingers, and smeared the blood on her mouth. She went on to say that the children were put into a drum by the other wife, and thrown into the river; and she dwelt on the punishment to which she had been sentenced.

The warriors on hearing this account said to the woman: 'We are your children, look at our fingers,' and they related to her the story which had been told them of their being found in the drum.

The woman at once recognized her sons, and, at their request, left the donkeys and milked their cows. The donkeys went back to the kraal by themselves in the evening, and the people asked one another where 'the donkey-woman' was, this being the name which had been given to the herdswoman.

On the morrow she was seen dressed in new clothes, and the inhabitants of the kraal asked if 'the donkey-woman' had found the sons she had eaten. When her husband saw her, he wished to beat her; but he was deterred by the two warriors, who requested him to call a meeting of the men of the kraals so that they might talk with them.

The men came, and it was found that the warriors were the old man's sons.

The old man then wished to kill his barren wife, but his sons told him to give her the same work to do which he had formerly given to their mother. This he did, and the guilty woman was sentenced to herd donkeys for the rest of her life.

THE STORY OF THE CATERPILLAR AND THE WILD ANIMALS.

* 539

Once upon a time a caterpillar entered a hare's house when the owner was absent. On his return the hare noticed the marks on the ground, and cried out: 'Who is in my house!' The caterpillar replied in a loud voice: 'I am the warrior-son of the long one, whose anklets have become unfastened in the fight in the Kurtiale country. I crush the rhinoceros to the earth, and make cow's dung of the elephant! I am invincible!'

The hare went away saying: 'What can a small animal like myself do with a person who tramples an elephant under foot like cow's dung!' On the road he met the jackal, and asked him to return with him and talk with the big man who had taken possession of his house. The jackal agreed, and when they reached the place, he barked loudly, and said: 'Who is in the house of my friend the hare!'

The caterpillar replied: 'I am the warrior-son of the long one, whose anklets have become unfastened in the fight in the Kurtiale country. I crush the rhinoceros to the earth, and make cow's dung of the elephant! I am invincible!' On hearing this the jackal said: 'I can do nothing against such a man,' and left.

The hare then fetched the leopard, whom he begged to go and talk with the person in his house. The leopard, on reaching the spot, grunted out: 'Who is in the house of my friend the hare!' The caterpillar replied in the same manner as he had done to the jackal, and the leopard said: 'If he crushes the elephant and the rhinoceros, he will do the same to me.'

They went away again, and the hare sought out the rhinoceros. The latter, on arriving at the hare's house, asked who was inside, but when he heard the caterpillar's reply, he said: 'What, he can crush me to the earth! I had better go away then.'

The hare next tried the elephant, and asked him to come to his assistance, but on hearing what the caterpillar had to say, the elephant remarked that he had no wish to be trampled under foot like cow's dung, and departed.

A frog was passing at the time, and the hare asked him if he could make the man who had conquered all the animals leave his house. The frog went to the door and asked who was inside. He received the same reply as had been given to the others, but instead of leaving

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

he went nearer, and said: 'I, who am strong and a leaper, have come. My buttocks are like the post, and God has made me vile.' 539*

When the caterpillar heard this, he trembled, and as he saw the frog coming nearer, he said: 'I am only the caterpillar.'

The animals who had collected near seized him, and dragged him out; and they all laughed at the trouble he had given.

THE STORY OF THE WARRIOR AND THE LUMBWA[1]. 539*

Once whilst the Masai warriors were slaughtering a bullock in the woods, their enemies, the Lumbwa, suddenly appeared at the kraal, and drove off the cattle that were grazing near at hand, killing at the same time the boy who was herding them.

A young girl, the sister of the owner of the cattle, on hearing the news, ran to the slaughter-house to call her brother. On her arrival she cried to the warriors: 'O ye who are feasting! The dust rises in the direction of Lumbwa; the black and white cow is on the point of giving birth; the small calves have blotches on the sides of their heads; the bulls' humps move to and fro; and the child's body lies by the wayside. Ye who are wearing your goat-skin aprons, and are ready for the fray, come!'

The warriors told her that her brother was not there, and advised her to go some distance further to a spot where others were also slaughtering. She started off again, and after a time found her brother, who treated the matter very lightly. On hearing what had occurred he called to his servant, Rindi, and told him to bring his sandals and spear.

Now this warrior was such a giant that his servant was unable to lift his weapons or sandals, and was obliged to roll them over and over until he reached the spot where his master was waiting. Some days elapsed after the theft of the cattle before the warrior was ready to start off in pursuit of the enemy, and then he was only accompanied by his servant.

After proceeding a short distance they arrived at a spot where the cow had cast its calf, and some way further on they reached a pond, near which some milk had been spilt. The warrior told his servant to taste this milk in order that he might know how far ahead of them the enemy was. Rindi tried the milk, and said it had been there two days. They continued their journey, and later on came to a lake where they found some more milk. Rindi tasted this too, and said it had been there since the preceding day.

The next morning they again saw some milk by the road, and this Rindi declared to have been spilt the night before.

On they went again, and during the course of the day came upon some more milk, which they found to be quite fresh. Rindi on tasting

*539 it asked the warrior if he could not see the Lumbwa as they could only be a short distance in front of them.

Shortly after this they came up with the enemy, and after a fight the warrior killed them all, and recovered his cattle, which he drove back to his kraal.

THE STORY OF THE BOY AND HIS BROTHER AND THEIR SONG.

There once lived an old man who had two wives, and by each wife he had a son. One of the wives died, and the old man told the other one to look after both children. 539*

The boys loved one another very much, and always went together to herd their father's cattle. They had their own pet cow, which they called the Dapple-grey, and when they wanted to milk her they only had to sing the following song:

'Child of my father, brother dear,
She yields her milk, our Dapple-grey,
She yields it though no calf is near,
This song of mine she can't gainsay.

'Into my mouth I milk thee not[1],
Dear Dapple-grey, there's nought to fear,
No gourd or calabash I've got,
I only, whom thou lov'st, am here.'

After a time the woman took a great dislike to her step-son, and made up her mind to get rid of him so that her own son might have all the milk. She therefore dug a hole in the floor of the hut, and said to the boy: 'You whom God gave me, come from the grazing ground at midday, and have your head shaved.'

When the child arrived, his step-mother told him to go into the hut, and bring the bag containing her razor from under the bed. He entered the hut, and not seeing the hole which had been dug in the floor, fell into it. The woman immediately covered in the hole by dropping a big stone into it.

In the evening the other boy returned with the cattle to the kraal, and asked his mother where his brother was. The woman replied that she had shaved him a short while before, and that he had returned to the grazing ground. When she was told that he had not been seen, she wept and cried out: 'My child is lost.'

As nothing was heard of the boy that evening, it was assumed that he was dead. His brother was much distressed, and during the greater part of the next day whilst herding the cattle he wept and sang their every-day song.

[1] It is a common practice amongst Masai herdsmen to milk their cows direct into their mouths. [234]

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*539 In the evening he drove the cattle back to the kraal, singing as he went, and when he was outside his mother's hut, he heard his brother singing as well. He listened, and went to the door of the hut, where he sang again. His brother replied, and he heard the voice distinctly. He entered the hut, took away the stone, and rescued the boy.

The mother was looking after the calves at the time, and letting them go to the cows one at a time to be fed. On her return to the hut she was greatly surprised to see her step-son, and asked where the child came from. Her son answered: 'He has come from the forest.'

The next morning the boy sharpened a sword, and when his mother left her hut, he cut her throat. His half-brother, who had been put in the pit for nothing, was thus avenged, whilst the woman paid for her sin with her life.

THE STORY OF THE OSTRICH CHICKS[1].

There was once upon a time an ostrich, which, having laid some eggs, hatched them, and reared the chicks.

One day a lion came, and took the chicks away, and hid them. The mother bird followed the thief, and demanded her young ones; but the lion refused to give them up, and drove her away. She appealed to the counsellors, but they were afraid of the lion, and decided that the chicks were his. The ostrich then went to call a meeting of all the animals. When she arrived at the place where the mongoose lived, he told her to go and dig a hole under an ant-hill with two exits. This she did, and then collected all the animals at this spot. Like the counsellors, however, they feared the lion, and said the chicks were his. When it came to the mongoose's turn to be asked, he cried out: 'We have never seen hairs beget feathers. Think what you are saying. The chicks are the ostrich's.' And having said that, he jumped down the hole under the ant-hill, and escaped at the other end. The lion jumped after him, and not knowing of the second exit, waited for him to come out of the hole by which he had entered. As time wore on, the lion became hungry, but he still kept watch, for he thought that if he went to search for food the mongoose would get away. At length he died, and the ostrich recovered her chicks.

THE STORY OF THE CROW WHO MARRIED A WOMAN.

There was once upon a time a crow who made love to a woman. When he had given the woman's father the customary present, viz. three heifers and two young bulls, and brewed some honey-wine, he

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*539 was allowed to marry her. He took his wife away with him, and went to live in a wood.

At the end of a year the woman asked the crow where his kraal was, but he refused to tell her, nor would he vouchsafe a reply when she asked him, as she did daily, when they were going to his home.

One day the crow told her to climb up a tree, and to wait for him there while he went to cut some firewood for her. She did as she was bid, and when she reached the top, she sang and wept.

Just at this time the woman's former lover, who with her brothers was returning from a raid, passed near the tree. The lover recognized the singing, and told his friends that he heard their sister's voice. They laughed at him, and said they supposed the loss of their sister had turned his head. However, when they listened, they admitted that it was their sister's voice that they heard, and they started off to search for her. They found her in the tree, and asked her who had put her there. She replied that she had been sold to the crow who was at that moment collecting firewood. They told her not to come down when the crow returned, and then went away and hid.

Shortly afterwards the crow came back with the firewood, and called out to his wife to descend. She refused, however, even though he threatened to fetch her down.

While the two were disputing, the woman's brothers and lover emerged from their hiding place, and fought with the crow, whom they succeeded in putting to death. They then escorted her back to their kraal.

THE STORY OF THE HARE AND THE HYENA AND THE LIONESS'S CAVE.

The hare once met the hyena, and proposed that they should go for a walk. They went for a walk together, and then separated, after which the hare went to the lioness's cave, and found it closed. She cried out: 'Stone, open,' and the stone rolled away from the mouth of the cave. She entered and said: 'Stone, close,' and the stone returned to its place. She then proceeded to the room where the lioness stored her fat, after which she went to the room where the meat was kept, and having had enough to eat, she returned to the

1: Hollis Gr5 (ca. 1894-1904) 1905
FL12 Masai FL12

539*

entrance, told the stone to open, and when she had passed out, to close once more.

Feeling hungry again later she returned to the cave. On the road she met the hyena, who asked her where she came from, and why her mouth was oily. The hare denied that her mouth was oily, but as the hyena persisted in his statement, she told him to rub ashes on his mouth, and it would become as beautiful as hers. The hyena did as he was recommended, but no change took place in his appearance. The hare next suggested washing it with water, and afterwards with urine; but although the hyena tried both, his mouth remained as dry as before. The hyena then said: 'Please tell me where you go and feed.' At first the hare refused to comply with his request, and said: 'You are so foolish whenever you go anywhere, and are sure to be caught.' But as the hyena would take no refusal, she consented to allow him to accompany her, and told him about the lioness's cave. 'There are,' she said, 'five rooms. In the first the ashes are kept; in the next, the bones; in the third, the tough meat; in the fourth, the tender meat; and in the last, the fat.' The hyena cried: 'Get out of the way, take me there,' and off they started.

When they arrived at the cave, the hare told the hyena that when he wanted the cave to open he must say: 'Stone, open,' and when he wanted it to shut: 'Stone, close.' The hyena cried out: 'Stone, open,' and the stone rolled aside. When they were inside, the hare said: 'Stone, close,' and it closed again.

The hyena at once started on the ashes, while the hare went to the room where the fat was kept. When the latter had had enough to eat, she returned to the entrance, and said she was going away. The hyena remonstrated with her as he was not nearly satisfied. After telling him how to get out of the cave, the hare went up to the stone, and said: 'Stone, open,' and again, when she was outside: 'Stone, close.'

When the hyena was alone, he went to the place where the bones were kept, after which he proceeded to the next room, where the tough meat was stored, and ate until he was satisfied. He then returned to the entrance, and said to the stone: 'Stone, close,' instead of 'Stone, open.' He repeated the words 'Stone, close,' several times, and could not understand why nothing happened.

At this juncture the lioness, the owner of the cave, returned, and said: 'Stone, open.' When the hyena heard her, he cried: 'Ah!

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

* 539 woe is me! That is what I wanted to say. Poor fellow that I am! Stone, open! Stone, open!'

The lioness entered, and said: 'Shall I eat you, or shall I make you my servant?'

The hyena asked to be made her servant, and was told to look after the lioness's cub. He was also given a bone, and instructed to break it when the lioness had crossed four rivers. The hyena counted the lioness's footsteps, and when he calculated that she had crossed the four rivers, broke the bone. A chip flew at the cub's head fracturing its skull. Fearing that the lioness would kill him on her return, he searched for some hornets, and stuffed one up each of the cub's nostrils so that it might be supposed that it had been stung to death.

The lioness returned to her cave a short while afterwards, and called to the hyena to bring her cub. The hyena prevaricated for some time, and invented several excuses for not doing as he was told; but the lioness was firm, and the hyena had to pick up the cub and bring it to its mother. The lioness at once saw that it was dead, and told the hyena to take it outside. While he was doing this, he ate one of the cub's legs.

A little later he was again ordered to bring the cub to its mother, and then to take it away once more. He devoured another leg while carrying it away, and when the lioness called out to him a third time to bring the cub to her, he said the birds had eaten two of its legs. He then ate up the cub.

The lioness intended to punish the hyena for his misdeeds, and after tying him to a tree, went to get some sticks with which to beat him. As he was standing there, bound to the tree, some other hyenas bent on a raiding expedition passed close by, and one of them seeing him, asked him why he had been tied up in this manner. He replied that he was being punished for having refused to drink some oil which had some flies in it. The other hyena suggested that they should exchange places, and after untying the knots, he allowed himself to be bound to the tree instead, while the first hyena followed in the wake of the raiding party.

After a time the lioness returned, and commenced to flog the hyena, who cried out: 'Stop, I will drink it now.'

'Drink what?' said the lioness, and she commenced to flog him again.

'Oh! oh!' the hyena cried, 'I will drink the oil with the flies in it.'

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

The lioness then saw that this was not the hyena that had killed her cub. 539*

The next morning the hyenas on their way back from their raid passed the cave, and the one that had killed the cub saw on the ground some strips of bark, which the lioness had spread out in the sun to resemble meat. 'I will go to my master's kraal,' quoth he, 'for I see there has been a kill.' On reaching the spot, however, he was seized by the lioness, who bound him to the tree once more, and then beat him to death.

After this the lioness returned to her cave, and said: 'Stone, open.' When the stone had rolled aside, and she had entered, she said: 'Stone, close,' and it closed again.

THE STORY OF THE DEMON WHO ATE PEOPLE, AND THE CHILD[2].

There was once upon a time a demon who was greatly dreaded by the inhabitants of the country in which he lived owing to his principal food being human beings.

[1] So that I can go and return him.
[2] A Taveta Tale. The people of Taveta are nearly allied to the Masai,

[101]

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*539 On one occasion he devoured a large number of people and cattle—so many, in fact, that he thought he had exterminated the whole tribe. One woman, however, succeeded in hiding herself with her child in a pit, and after the demon had taken his departure she returned to the kraal and collected together all the food that had been left there.

The child was brought up in the pit, and when he was old enough to understand, his mother told him the story of the demon. For some time he did not venture away from the hiding-place, but after a while he made a bow and some arrows, and went for a walk. He shot a small bird, which he took back with him to the pit, and asked his mother if that was the demon. On being told that it was not, he went out again and shot another bird, and after that a Thomson's gazelle. He continued his search for a long time, and shot all kinds of things in the hope of killing the demon, but when he showed them to his mother, he found that he had not been successful.

The woman repeatedly urged her son not to leave the pit as they were the sole survivors of the tribe, but the boy was determined if possible to shoot the demon. One day he searched for a number of arrows and spears which he took to the top of a tree. He then climbed with his mother into the tree and lit a fire in the branches to attract the demon's attention. When the demon saw the smoke, he was greatly surprised, as he thought he had eaten all the inhabitants of the country. Having procured some axes, he went to the spot, and called out to the child and his mother to descend. As they refused to comply with his order, he commenced to cut down the tree. The boy shot him twice with his arrows, but the demon only thought he was being bitten by gadflies. As the arrows continued to hit him, however, he had to give up his intention of cutting down the tree, and shortly afterwards he lay down to die.

When he felt that his end was approaching, he said to the child: 'When I am dead, cut off my little finger, and your cattle will be restored to you. Then, cut off my thumb, and you will get back your people. After that cut open my face, and one man will come out.'

Having said this, he died, and the boy descended from the tree and

[101] [13] many of them being actually descended from that race. An account of their history and customs, by the author, was published in the *Journal of the African Society*, No. 1, October, 1901.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

cut off his fingers and thumb, from the stumps of which all the people and cattle that had been eaten emerged. The face was then cut open, and one man appeared. 539*

The people returned with their cattle to their former kraals, and held a consultation at which it was decided to appoint the boy chief.

After some time had elapsed, the man who had been taken from the devil's face asked the chief to put him back again. The others argued with him, and told him that he was much better off now that he had been liberated, but their arguments availed nothing, and the chief, seeing that the man would take no refusal, asked to be given a month in which to consider the matter.

Knowing that the discontented man was very fond of tobacco, the chief planted some, and when it ripened, he went to watch it. As he expected, the man saw the tobacco, and picked a leaf. The chief called out to him to return it to the plant, but as the thief was unable to do this, he was taken to the kraal, where a meeting was held. Matters having been explained to those present, the thief was again called upon to replace the leaf. When he admitted his inability to do as he was required, the chief remarked that he too was unable to put him back in the demon's face.

Everybody appreciated the wisdom of the argument, and they all lived happily together ever afterwards, respecting their chief and loving one another.

THE STORY OF THE TWO DOROBO[1].

Two Dorobo brothers once went out hunting together, and came upon a large herd of buffaloes. The elder one told his brother to conceal himself whilst he went to drive the animals. The drive was successful, and the buffaloes passed so close to the younger Dorobo that he was able to shoot three of them.

The elder brother then told the other one to go and drive the herd whilst he hid himself. The buffaloes came past the spot again, but although the hunter shot at them, he failed to hit them. The animals were by this time so scared that they fled.

The three buffaloes which had been killed were quickly skinned, and the meat carried off to the kraal. When this task was finished, the hunters started off again.

On arriving at a forest, the elder brother said he would go on

[1] He intends to kill me. [2] He was on the point of shooting me.
[3] This note a, p. 28.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

ahead as he knew the way. They proceeded in this manner until near their destination, when the elder one held aside a tree which bent down on to the road, telling his brother at the same time to pass. The latter feared that the tree might slip and hit him in the eye; but as his brother assured him that he would not let it go, he passed. His fears were, however, not groundless, for his brother let the tree swing back as he approached; it caught him in the face, and put out his eye. He said nothing, but he thought to himself: 'I know the reason why my brother has put out my eye. It is on account of the buffaloes which I shot; and because of them he does not wish me to shoot again. But there is One who will avenge me.' 539*

They reached the place where the buffaloes were, and the elder Dorobo said to his brother: 'Since you can no longer see, go and drive the buffaloes here for me to shoot.'

The younger one did as he was told, and drove the herd to where his brother lay hid. The latter shot at them as they passed, but missed them. The younger one then expressed a wish to have the buffaloes driven for him in order to see if he could still shoot. At this proposal the elder one laughed, and said: 'How can you with your one eye expect to hit them when I, who have both eyes, miss?' Nevertheless he went and drove the herd towards his one-eyed brother who succeeded in shooting four.

The elder Dorobo was so annoyed at this that he decided to kill his brother, and to carry off all the meat for his own children. He thought the best plan would be for his brother to sleep alone, when he could visit him during the night and shoot him. So after they had skinned the animals, he said: 'Since there is such a great quantity of meat, we had better divide it up now, and then each build his own hut; otherwise we might quarrel over it to-morrow.'

They divided the meat into equal shares; each hunter built his own hut; and they went to lie down. But the younger one was mistrustful of his brother, and suspected foul play. Instead therefore of going to sleep, he took one of the buffalo legs, wrapped his garment round it, and laid it on the grass which he had cut for a bed, while he went to lie down on the bare ground.

In the middle of the night the elder Dorobo came stealthily into the hut, and seeing the leg in the bed, thought it was his brother. He sat down, took careful aim, let fly his arrow, and shot the leg.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*539 The younger hunter had been watching him all the time, and thought to himself: 'If my brother shoots at the leg, I shall know that he really intends to kill me.' As soon as he saw the arrow leave his brother's bow, and hit the leg, he shot his brother, and killed him.

He then picked up all the meat and took it home.

THE STORY OF THE DOROBO AND THE GIRAFFE.

A Dorobo once went a-hunting, and saw a giraffe eating a small acacia tree. Other people had been unsuccessful in their attempts to kill this giraffe on former occasions, so the hunter thought it would be wise to have some one to help him. He therefore fetched a friend; but when he returned to the spot where he had left the giraffe, he found the animal had gone to the water to drink. The two men then thought out a plan of attack. It was agreed that the one who had first seen the animal should climb into a big acacia tree, and when it returned from the stream, jump on its back, and stab it in the neck. The other one was to hide himself near at hand in order to render any assistance that might be required.

The first Dorobo took his friend's knife, and climbed into the acacia. He remained there till midday, when the giraffe went to stand in the shade of the tree. As soon as it was near enough to him, the hunter jumped on its back, and clung to its neck, shouting at the same time to his friend, whom he called Le-pambito, to shoot the

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

* 539

animal, and not to let it pass. The giraffe, much alarmed, dashed off at full speed, and Le-pambito was so amused at the sight of the animal with a man on its back that he roared with laughter. In fact he laughed so much that he fell down in a fit.

The giraffe continued its onward course, and the Dorobo in his excitement forgot that he had a knife in his belt until they had gone a considerable distance. When he remembered it, he unsheathed it, and stabbed the animal in the nape of the neck, thereby killing it.

He quickly skinned a portion of the beast, and took out the fat of the kidneys, with which he returned to look for his companion. He eventually found Le-pambito, and was surprised to see that he was dead, as he thought. He made a fire, roasted some of the fat, and put it near his friend's nostrils, in order to try and bring him back to life again. It had the desired effect, for Le-pambito came to himself, and cried out: 'Do not finish it alone.'

The two went to skin the dead giraffe, and when they had finished, they roasted a little of the meat, which they ate. The one who killed the giraffe then said to his friend: 'I shall not let you have any of this meat for you did not help me to kill it.' On hearing this, Le-pambito returned to the kraal.

When he arrived there, he met his companion's wife, who asked him if he had seen her husband. He replied: 'No, but I hear that he has killed a giraffe. I also hear,' he added, 'that he is very angry with you, and when he returns, he is going to beat you.'

The woman, thinking doubtless that it would be more prudent to go and stop with her friends until her husband's anger was appeased, left her hut. As soon as Le-pambito saw her depart, he entered the hut and waited for the other one to bring home his meat.

In the morning the Dorobo who had killed the giraffe arrived at the kraal with his first load of meat, which he passed into his hut through a hole in the wall at the back. To make sure that his wife was in the hut he called out to her, and Le-pambito replied, altering his voice to resemble a woman's. Satisfied that his meat was in safe hands, the Dorobo went back to the place where he had killed the giraffe, to fetch another load; and while he was absent his late companion carried off the meat to his own hut, after which he returned to wait for the rest. When several loads of meat had been thus brought to the hut, and afterwards taken by Le-pambito, and deposited in his own hut, the latter went to the woman whom he had frightened away by telling her that her husband was going to beat

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

her, and told her that she might now go home as her husband was no longer angry with her. 539*

She returned to her hut, and shortly afterwards her spouse came back to the kraal with the last load of meat. He called out to his wife to bring him a stool, that he might rest himself, and to fetch the snuff. After he had refreshed himself by taking some snuff, he told the woman to go and call his neighbours.

When they had arrived, the Dorobo inquired if the meat was ready. His wife was much perplexed at this request, and asked him what meat he alluded to. He replied: 'Why, all the meat—the whole giraffe—which I have brought here.' The woman, to his astonishment, said that she had not seen it.

Much exasperated he rose from his seat and flogged her, after which she told him between her tears what Le-pambito had done.

The Dorobo then realized that he had lost his whole giraffe owing to his selfishness.

No. 33. Inotye nanotye Ol-le-'n-gipika
You-have-got which-he-got The-of-En-gipika
te-'nilgusi.
in-the-deserted-kraal.

You have got what the son of En-gipika got in to deserted kraal, i.e. you are in a fix.

[The story told of the son of En-gipika is as follows. One day he was eating meat in the slaughter-house when the place was suddenly attacked by the enemy. He managed to escape with his life and meat, but without his weapons, and he fled hotly pursued by the enemy. He outstripped them, however, and after running some distance, entered a deserted kraal where he proposed to hide. But he soon discovered that he was not the only occupant, and a lion growled savagely at being disturbed. Thinking it more prudent under the circumstances to leave the deserted kraal, the son of En-gipika turned round to continue his flight, when he was horrified to see an enormous serpent coiled round the post of the gate, which was the only exit, darting out its head and tongue in his direction. In the distance too he could see the enemy rapidly approaching his hiding-place. It is not related how the son of En-gipika escaped from the dilemma in which he found himself.]

No. 34. Ire ŋgun anaa Lenyek.
You-are clever (*or* sharp) like Lenyek.

You are as clever as Kenyek.

[Kenyek's biography was briefly sketched in to story entitled 'L-enoni le-Kenyek ee Menye-Kenyek. The Masai ordinarily of referring to him whenever anything 'slim' or of a cunning or clever nature has been performed. The constructor of the Uganda Railway, for instance, has been referred to as being on a par with him.]

No. 35. Ire ŋgidot anaa ol-dia le-'nanyuki ee-'l-murran.
You-are proud like the-dog of-the-kraal of-the-warriors.

[The dogs that live in the warriors' kraals have much happier existence than those that act as scavengers in to other kraals. Owing to the warriors' food consisting entirely cream and milk, many bones and scraps are thrown to the dogs.]

[231]

No. 52. Melany el-kintijno ilo el-ladal.
It-breaks-not the-finger one the-lion.

One finger will not kill a lion.

[The necessity for joint action. The Swahili have a similar proverb: 'Kidole kimoja hakivunji ch'ewa.']

No. 53. Meisi el-tuligani el-ilkula eisuila.
He-sees-not the-man (the-breast-of-a-dead-ox) (or happiness) he-is-eating-it.

A man does not know when he is well off; it is only when he is poor that he remembers the days of plenty.

['O fortunatos nimium, sua si bona norint.'—Vergil, G. II. 458.]

No. 54. Meipur el-oligtai too-'ntrusa' ara.
It-believes-not the-bull in-the-deserted-kraals two.

A bull cannot bellow in two places at once.

No. 55. Meishea 'nolugi' en-dap.
It-enters-not the-bargain the-palm-of-the-hand.

A bargain cannot be held in the palm of the hand.

Also: Meishea el-lejare en-dap.
It-enters-not the-lie the-palm-of-the-hand.

A lie cannot fill the palm.

[One hollow cannot fill another.]

No. 56. Meiako 'l-limet, ia-gulye ebaya.
They-give-not the-news (pl.), the-others they-arrive-thither.

When an event occurs, only a part of the truth is sent abroad, the rest is kept back.

No. 57. Meiaya el-arabai e-ayana.
It-will-not-put-out the-quarrel the-udder-of-a-cow.

It does not take as long to settle a quarrel as it takes a cow's udder to fill with milk after she has been uncurled.

[The combatants either fight until one is beaten, or the matter is settled amicably at once.]

No. 58. Meiulolekgaya eng-oligiton.
It-will-not-make-itself-complete the-bravery.

Bravery is not everything, and however brave a man may be, two brave men are better.

['Dieu est toujours pour les gros bataillons.'—Voltaire.]

[1] E-ainkrua is really the spot on which a kraal formerly stood, or the site of a deserted kraal, e-oligani is the deserted kraal itself.

[2] The plural of e-ending, the hollowed out place, is often used in this sense

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

No. 59. Meiterujoniye ang-ukuglie ooili en-gorai. 539*
It-will-not-swell-itself the-belly it-is-not-there the-child.

The belly does not swell if a woman is not pregnant.
['There is no smoke without a fire.']

No. 60. Meiterik en-gumu.
It-pounds-not the-nose.

The nose does not pounds the rest of the body.
[This expression is often used after a misfortune has befallen one, the idea being that if it were possible to send on one's nose ahead, one could have foreseen the danger that was being threatened and made preparations accordingly.]

No. 61. Meiyupu el-dwaru el-kajiin.
It-never-hide-away the-beast-of-prey the-green.

[A beast of prey (or a thief) can hide for a while, but in course of time it will be captured or killed. 'Murder will out.']

No. 62. Meiddy ie-gidoo el-dgid le-kidoinai.
They-cross-not the-cattle the-who-is-strong of-sins (or gate).

No matter how young or weak a child may be on his father's death, he is strong in his own kraal, for his friends will see that he inherits the cattle. [Ed]

[There is some play on the word *kidoinai*. The cattle will not pass the gate because the child's sins is strong.]

No. 63. Meiddy el-ooiin en-ngiptin.
He-passes-not the-lonster the-valley.

The lonster will not cross the valley.
['Pride goes before a fall.']

No. 64. Mele en-gojo ooloo 'nnanan.
It-goes-not the-leg one the-meetings-of-the-warriors.

Warriors and cripples remain apart.
['Birds of a feather flock together.']

No. 65. Meigumutiye el-kaan
It-will-not-begin-itself the-cloth-for-carrying-a-child-in

ooiiye en-gorai.
it-is-not-yet-come the-child.

Don't make a cloth for carrying a child in before the child is born.
['Don't count your chicks before they are hatched.' Pide also the Swahili proverb: 'Kutinda k'uzaa mwana hujeryawa' (to cut out the tunic before the child is born).]

539

No. 46. Kenyanyuk ainkiye o ainkiyuka
They-resemble-not to-shoot and to-do-by-force.

Shooting and doing something by force are not the same.

[If a man has suffered wrong, he had better try and come to an arrangement with his aggressor instead of going to complain to the chief, for his enemy will not forget, and will avenge himself later.]

No. 47. Kenyanyuk ngume o kiu.
They-resemble-not life and death.

Life and death are not alike.

No. 48. Kidki o-kanti 'n-gigo
It-is-not-drunk the-beer-we (or the cows) the-[illegible]-women

ol-Oiniyenyo ake.
the-who-was-without-friendship only.

What does it matter whether a person is one's own child or somebody else's so long as he does his duty?

[The Swahili have a somewhat similar proverb: 'Kheri Kafir akukaye kulko Islam asiyekuko.' (It is better to have a Kafir who pleases you than a Mahommedan who displeases you).]

No. 49. Kiuru 'n-tali o ne-gop
They-separate-not the-bottocks and the-ground.

The bottocks and the ground do not remain long apart.

[One explanation of this proverb is that a man must sit down, and though he may walk about or lie down, he will sit on the ground again later. Another theory is that it has in some way reference to the disposal of the dead. With the exception, however, of the medicine-men and rich people, who are buried in shallow trenches, burial is unknown amongst the Masai. But it is perhaps a remarkable coincidence that the Turkana[1], who are closely allied to the Masai, and the Suri, Dizim, and Mali[2], who live nearly 1,000 miles away, and not very far from the country whence the ancestors of the Masai are believed to have hailed, bury their dead in a sitting posture.]

[1] [illegible]

[2] [illegible]

539 M

No. 80. Mapsi ol-oligo 'ainé.
He-does-not-leave the-zebra the-stripes.

The zebra cannot do away with his stripes.

['Can the Ethiopian change his skin, or the leopard his spots?'—Jer. xiii. 23.]

No. 81. Mapere 'l-ilmi ta'a-gpy ayo.
They-go-not the-kinsmen from-the-country their.

Kinsmen do not go far from the place of their birth.

[Similarly with people, they may pay a visit to another country (and incidentally lift their neighbour's cattle), but they will afterwards return home. 'Cuelum non extorum mutant qui trans mare currunt.' —Hor. *Epp.*, I. xi. 27.]

No. 82. Mayu eng-ishiki o-'l-ainé ilaw-ainé.
It-sticks-not the-bark of-the-tree other-tree.

The bark of one tree will not adhere to another tree.

[People of one tribe cannot assimilate the customs of another.]

No. 83. Mariayo o-ropaki o o-ariani.
It-is-not-similar the-having-enough-to-eat and the-safety.

Having enough to eat and being in safety are two very different things, especially after a raid.

No. 84. Mariayo 'ayuni ee 'a-gilinani.
They-are-not-similar the-persevering and the-being-able,

ayuni la-gumuki.
persevering the-many.

A double reminder.

Persevering to accomplish an end, and being able to do a thing are not the same: it is greater to persevere.

['Tis not in mortals to command success,
But we'll do more, Sempronius, we'll deserve it.'—
Addison, *Cato*, i. 2.]

And: Persevering to accomplish an end, and being able to do a thing are not the same: many persevere.

['Many are called, but few chosen.'—Matt. xxii. 14.]

No. 85. Matii oilipu, ol-doiyo ake
He-is-not-there who-has-finished, the-mountain only

oilipu. Ituoikitoo o-wiji
which-has-finished which-has-planted (*or* created)-itself the-place

Do-not-repair the-hole-in-the-fence of-other, and-you-leave
ol-lino.
yours.

Do not repair another man's fence until you have seen to your own.

['Charity begins at home.']

No. 59. Milo' aligata minta ol-le-'ewama.
Do-not-go plain you-have-not the-of-the-dust-in-the-eye.

Don't go to the plain without somebody to take the dust out of your eye.

[The necessity of joint action.]

No. 60. Mindadei ol-kilil eng-dao, naipiri.
Show-not the-hawk the-bow, that-he-flies-not-away.

Do not show the hawk your bow, or he will fly away.

['Surely in vain the net is spread in the sight of any bird.'—Prov. i. 17.]

No. 61. Mindyamityam amu natjo en-gityamityam
Do-not-jump-about for it-says-not the-jumping-about
tóki.
thing.

Do not jump about, for there is no use in jumping about.

['More haste less speed.']

No. 62. Mira ahata ilmut en-gima.
You-are-not wood which-finishes the-fire.

You are not like firewood which is burnt, you are always there.

[Said of a person whose presence has become a nuisance.]

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

No. 63. Mi'ro 'uwi ninuno 'l-kaji. 539*
Do-not-talk the-words which-get-thousands the-grass.
Or: Mi'ro 'uwi nana 'l-kaji.
Do-not-talk the-words like the-grass.
Do not talk a great deal.
['In the multitude of words there lacketh not sin.'—Prov. x. 19.]

No. 64. Mirere e-ligape nana ol-mirua
Do-not-tread-on the-post like the-old-man
there ayok.
who-has-many boys.
Don't tread on the post, i.e. don't be proud, like the father of many sons.
[A man with a large family may lie on his back all day long with his feet up against a post, and trouble about nothing. His wife and daughters see to the food and milk the cows, whilst his sons guard the cattle and sheep.] [394]

No. 65. Mintyo nana inaure.
Do-not-hasten-thither for you-tire-yourself.
['More haste less speed.']

No. 66. Na-Ai! injuki ol-oip nanu ol-le-'l-chani.
O-the-God! give-me the-shade and-not the-of-the-tree.
[Originally a prayer for a child, but now used for anything that is ardently desired.
When the sun is hot, a mother protects her infant's head by covering it with the 'kanu,' or garment for tying the child on to her back. No woman wears this garment unless she has a baby, hence her prayer for shade.] [154] [392]

No. 67. Namolele nanu te-'ng-ulunda nanyu
Namolele and-not from-the-milkless whom-throws-down
e-ndiiyi ang-aji te-'nual.
the-bird the-hut (or family) with-the-dewlap (or weight).
She is like Namolele (nickname given to a weak woman), but not because she has no milk: her child is so badly fed that it is knocked over by the weight of a bird.
[This is a term of reproach used to a woman if she does not look after and feed her children properly.]

No. 68. Nanirirki 'ngisi.
Who-separates the-pulse (or character, climate, or nature).
He who separates the pulse, &c.
[A common expression for the Almighty.]

#539 No. 69. Naitito[1] o-ŋgope enee en-ŋingi
Who-is-treading the-post like the-outcast
en-'l-en-ŋiwai.
of-the-who-have-the-teeth-extracted.

She is treading against the post like one who is not allowed in the warriors' kraals.

[Unless a girl is well dressed, according to Masai ideas, and anoints her body from time to time with oil, she is not admitted into the warriors' kraals, and becomes a social outcast. She has nothing left her to do but lie on her back and put her feet up against a post. Unlike the old man who has many sons, however (vide proverb No. 64), this is considered an undignified position for a maiden.]

[699] [626]

No. 70. O-eina Ilk'ya en-ŋuda,
The-poverty (*or* trouble) which-takes-you where-it-is-long,
dorop el-oikula.
short the-breast-of-a-dead-ox (*or* happiness).

It is better to be poor and live long than rich and die young.

No. 71. Papa eide eiyia, en-giteig ejo
Father that who-wishes the-cow which-has-just-borne
ŋwenium ene ewakai 'n-gijak o-'l-ada
and-he-does-not-get-it because weak the-legs of-the-calf
le-'n-dito enye.
of-the-daughter his.

The old man cannot get milk from the cow that has recently borne, because his daughter has not looked after the calf whose legs are consequently weak.

[A saying applied by women to one of their number who is notoriously lazy.]

No. 72. Paskyaakat enee en-gorai enili eng-ai
Pride like the-child who-is-there the-last
o-ŋgkai[2] enye.
of-the-grandmother his.

He is as proud as a child living at its grandmother's.

[603] [Grandmothers are apt to spoil their grandchildren, and a naughty boy is more so likely to be whipped at his grandmother's as at home.]

[1] Old or pastoral form for en-nawitito.
[2] E-ŋgkai is here used for eng-ŋgkai.

[P. 260]

PART IV

'OBOT OO-L-MAASAE

DIVISIONS OF THE MASAI PEOPLE

619 101 The Masai race is divided into two sections, the one entirely pastoral and the other partially agricultural. The pastoral Masai call themselves Il-Maasae, whilst their brethren are known as 'L-Oikop or Il-Loaibwa.

101 614 634 The Masai are further divided genealogically into clans and families, and geographically into districts and sub-districts, as shown in the following tables:

Clans.	Families[1].
'L-Aiser.	'N-Oldotigi (the medicine-man's horse), Il-Parkonti (the cowshave ?), Il-Laghumas, Il-partimaro.
Il-Molignan.	'L-Aitayok, 'Elele (the designs ?), Il-Marenas (the priests), Il-Makuperia (the fish on the rifle).
Il-Mokonon.	Il-Mokonon-sata, Il-Parakuia (the long-sighted one), Il-Tartharo, Il-Kiparon (the snare ?)[2], Il-Tunop-tuwa (the lion-killers).
Il-Mitelyan.	Il-Mitelyan-sata, Il-Mamaita, Il-Pajas, Il-Kipayini, Il-Moalitan, Il-Mamilgan, Il-Mokowe.

Whenever representatives of the four clans take part in a raid, it is usual to refer to the Aiser and Molignan clans as 'L-ensiu-kitoto (the blood-red cattle), and the Mokonon and Mitelyan clans as 'L-ensuk-kitoto (the black cattle).

101 634

Districts.	Sub-Districts.
Kaputiei or Kaptiei.	'L-ensiu-kitoto (the blood-red cattle), Matapato, Il-kilenyokye (the red trees ?), Il-dalo-la-kanak (the fat talkers).
Ee-ainoko (the lake).	Parkia, Kisikop (the burning country ?), Il-dumat, 'L-ulia.
Kisongo.	Molpo (the Pangani River), 'M-kumbi (the valley), 'E-nenyokye (the red milk), Ee-ingiboi (name of a tree[3] and light yellow), Il-kenyi (the whistler).

[1] Some of these families are again divided into smaller sub-sections.

[2] The members of the family called Il-Kiparon are said to be sub-chieftains and sub-leaders.

[3] Suitable ethnobotanical data, Ole.

[4] Translation up.

1:Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Dialects. Sub-Dialects.

'Mirwarsk (the horse), Le-'iakonot (of the cassia tree), Kilepu (watering-place), Ol-oiro (the which is decorated), Naikipuya-twarsk (which astonishes the beasts of prey), Kipulal (place of many springs), 'E-gujuka (the one handles), Ol-ilpolete (the plain between two hills), Sighiroi, 'L-oito, 'Eg-aiyiaiaiai (the small stools), Ol-olokitok (the bubbling spring), Il-Kunolio, Kiwiro, Il-kuto-'ai-kaiua, Sabal.

'L-ooiu-gidoi' (the striped cattle). 'L-ooiu-gidoi ooronk (the black striped cattle), 'L-ooiu-gidoi ooupukyo (the red striped cattle).

'L-kilippah *. Kinoi (pursuers), Mariktai, Il-moruak-'a-dara (those who are not thrown down by cattle), Sokia, Le-'i-purkal (of the lowland), Le-mulior (of the white thing), Il-ooumpitia, 'L-ulikimai, 'L-mulior-ulipah (the white bulls), Loo-ditwarara, Il-moruan, Le-'iakolua, 'L-uingua, Eng-aky o-Lemu (Lemu's kraal), Il-kaiju, 'L-aial.

When the article forms a part of the above names, the vowel is omitted, if it follows a word ending in a vowel. 143 552

Ale 'E-aipuka — I go to Ai-puka.
Ale 'L-ulikilitok — I go to Lulikilitok.

The Masai reckon time by 'apus' or periods of about seven and a half years. The following account of the Masai apus is given in the words of the Masai themselves. 561 [606]

Eata 'I-Masaiu 'I-parai laiya.

The Masai have what they call apus. 561 554

Kainarai 'a-gara ta-'aiji ulio. Ilidaky ulioa 'I-parai, ainaidali ulioa ol-parai ilio, ainu naidapuya pikia; ainarai 'I-kitook, aapali 'I-aili matabola.

Children are not all circumcised together: they are divided up into apus, for they are not all alike in point of years. First of all the big ones are circumcised, and the small ones wait until they grow up (i.e. until they reach the age of puberty). [571]

Ore ldrwa kitook ainarai aapali a-aiyaria a-kaiilio, ainarai aiji a-aiyaria a-kaiilio, ainarai aiji a-aiyaria a-kaiilio, ainarai aiji

right-hand circumcision, and that is one age. The proper ones with and are circumcised later. They also become members of this age.

When the next circumcision festivals are held, the circumcised belong to what is called the left-hand circumcision, of that is the next age. The proper ones with as before, and whatever are circumcised they likewise in this age.

Now, two ages are considered equivalent to one generation.

Each age has five divisions, first, those known as "Le big outside Sections," secondly, two called "The Infants," and thirdly those known as "Our first remove".

CZ | 805 | Il-parari loo-l-Masaai ...ainiki ...ainia. Masai ages with are now remembered.

Il-ainyata e-kulua (Right-hand circumcision)	Il-ainyata e-kalyanya (Left-hand circumcision)	Approximate date.
Il-Kisyiya		
	Il-Tapani	[illegible] } ...e generation.
Il-Kiplirya		[illegible]
	Il-Kimolo (the people of the plain)	[illegible] } ...e generation.
Il-Kapai (the white swords)		[illegible]
	Il-Kimbidian (those who drive away)	[illegible] } ...e generation.

CZ | 806 | * When permission has been granted to hold the circumcision festivals (ol-...), one feast is held in each sub-district among its five part-...ainyata, and all those circumcised during those five years, in the "right-hand" circumcision, are initiated at about three and a half years from ceremonies before another festival is held. All youths circumcised during the next four years belong to the left-hand circumcision. As an illustration, a man born in 1890 would either belong to "Our first remove" of the Il-Kiplirya age or to "The big outside Sections" of the Il-Kiplirya age, i.e. he was circumcised in 1887 or 1888. Boys as a rule are circumcised when they are between thirteen and seventeen years old. Orphans and the children of poor parents frequently wait until they are twenty.

805

Ramatia e-lalume (Right-hand circumcision).	Ramatia e-kaiyanya (Left-hand circumcision).	Approximate date.	
Il-Kijare (those who do not give back)		1836	one generation.
	Il-Kisko (the long-bladed spears)	1844	
Il-Chorusya (those who fight openly or by day) or Il-Kiddie (the pulters up)		1851	one generation.
	Il-Tweil (the rich cows) or Il-Mirishori (those who are not driven away)	1855	
Il-Tyalgwi (those who capture for themselves)		1866	one generation.
	Il-Morisho or Il-sinon (the pur-suers)	1874	
Il-Ngarkwi (the glut-tons) or Il-Kidesure (the robbers)		1881	one generation.
	Il-Kiptai or Il-Chongos (those who increase)	1884*	
Il-Kidum (the lions) or Tiaura (the lucky cows) or Il-Kitaig		1894*	one generation.
	Il-Mishorisi (those who are not con-quered)	March 1904*	

* When Krapf wrote his *Vocabulary of the Dialects of Kiduka* in 1850, he mentioned (p. 14) that those cows which were able to remove were called Kisiko (Il-Kisko), and that the old cows were known as Kikijare or Kikiarisiko. This account entirely agrees with the above table of dates.

* Lemiro and Kaiyanya (see note on p. 248) belong to this age. Shortly after it commenced the great cattle plague broke out (1890).

* In Tweil the corresponding age, Tiaura, was commenced on May 1, 1890, a few months after it had been started in Mombasa. Each Tweil age covers a period of about fifteen years, i.e. there is no left-hand circumcision. *Vide* the *Journal of the African Society*, No. 1, October, 1901.

* The circumcision festivities were commenced in September, 1904.

Kalanyiapukiwan pukiwan, ainje ang-at nanyokye: 'Ane kulu-nakgunak linkapakipuak.'

The story of the gods.

There are two gods, a black one and a red one. The black god is good, and the red god malicious.

One day the black god said to the red one: 'Let us give the people some water for they are dying of hunger.'

The red god agreed, and told the other one to turn on the water. This he did, and it rained heavily.

After a time the red god told the black one to stop the water as sufficient rain had fallen.

The black god was, however, of opinion that the people had not had enough, so he refused.

Both remained silent after this, and the rain continued till the next morning, when the red god again said that enough had fallen. The black god then turned off the water.

A few days later the black god proposed that they should give the people some more water as the grass was very dry.

The red god, however, was resolute and refused to allow the water to be turned on again.

They disputed for some time, and at length the red god threatened to kill the people, whom he said the black god was spoiling.

Eiju ee-nanok: 'Maai ɔ-ɔdɔgɔnok laiɔni.' Nanok ang-ai nanok ɔɔri ɔ-ɔdɔgɔnok ɔnɔ ɔlɔye ɔɔlɔlye ɔɔ-'ɔɔɔ-ɔɔɔɔɔ, ɔɔ ɔɔ-ɔɔɔyɔkye ɔɔlɔlye ɔɔ-ɔɔɔɔ.

At this the black god said: 'I shall not allow my people to be killed,' and he has been able to protect them, for he lives near at hand, whilst the red god is above him. 539*

When one hears the thunder rumbling in the heavens it is the red god who is trying to come to the earth to kill human beings; and when one hears the distant rumbling, it is the black god who is saying: 'Leave them alone, do not kill them.'

The beginner of the earth.

We were told by the elders that when God came to prepare the world he found three things in the land, a Dorobo[2], an elephant[3], and a serpent, all of whom lived together.

After a time the Dorobo obtained a son.

One day the Dorobo said to the serpent: "Friend, why does my body always itch so that I have to scratch whenever you blow on me?"

The serpent replied: "Oh, my father, I do not blow my bad breath on you on purpose."

At this the Dorobo remained silent, but that same evening he picked up his club, and struck the serpent on the head, and killed it.

On the morrow the elephant called

Eijo oo-gurai: 'Alingoo the Dorobo where the thin one was.

The Dorobo replied that he did not know, but the elephant was aware that he had killed it and that he refused to admit his guilt.

During the night it rained heavily, and the Dorobo was able to take his cow to graze, and he watered it at the puddles of rain.

They remained there many days, and at length the elephant gave birth to a young one.

After a time all the puddles became dry except in one place.

Now the elephant used to go and eat grass, and when she had had enough to eat, she would return to drink at the puddle, lying down in the water and stirring it up so that when the Dorobo drove his cow to water he found it muddy.

One day the Dorobo made an arrow, and shot the elephant, and killed it.

The young elephant then went to another country. 'The Dorobo is bad,' it said, 'I will not stay with him any longer. He first of all killed the snake and now he has killed mother. I will go away and not live with him again.'

On its arrival at another country the young elephant met a Masai, who asked it where it came from.

The young elephant replied: 'I

come from the Dorobo's kraal. He is living in yonder forest and he has killed the serpent and my mother.'

The Masai inquired: 'Is it true that there is a Dorobo there who has killed your mother and the serpent?'

When he had received a reply in the affirmative, he said: 'Let us go there. I should like to see him.'

They went and found the Dorobo's hut, which God had turned upside down, and the door of which looked towards the sky.

God then called the Dorobo and said to him: 'I wish you to come to-morrow morning for I have something to tell you.'

The Masai heard this, and in the morning he went and said to God: 'I have come.' God told him to take an axe, and to build a big kraal in three days. When it was ready, he was to go and search for a thin calf, which he would find in the forest. This he was to bring to the kraal and slaughter. The meat was to be tied up in the hide and not to be eaten. The hide was to be fastened outside the door of the hut, firewood was to be fetched, and a big fire lit, into which the meat was to be thrown. He was then to hide himself in the hut, and not to be startled when he heard a great noise outside resembling thunder.

The Masai did as he was bid. He searched for a calf, which he found, and when he had slaughtered it he tied up the flesh in the hide. He

Ainiwat ewa forward, lit a big fire, threw in the meat, and entered the hut, leaving the fire burning outside.

God then caused a strip of hide to descend from heaven, which was suspended over the calf-skin.

Cattle at once commenced to descend one by one by the strip of hide until the whole of the kraal was filled, when the animals began to press against one another, and to knock down the hut where the Masai was.

The Masai was startled, and uttered an exclamation of astonishment. He then went outside the hut, and found that the strip of hide had been cut, after which no more cattle came down from heaven.

God asked him whether the cattle that were there were sufficient, 'for,' He said, 'you will receive no more owing to your being surprised.'

The Masai then went away, and attended to the animals which had been given him.

The Dorobo lost the cattle, and has had to shoot game for his food ever since.

Nowadays, if cattle are seen in the possession of Dorobo tribes, it is presumed that they have been stolen or found, and the Masai say: 'These are our animals, let us go and take them, for God in olden days gave us all the cattle upon the earth.'

The beginner of the earth.

The thing which is called Naitero-kop is a god, but not as great as the black god[1].

This is the story which was told us by the elders:

The Kaasi were formerly Dorobo, and had no cattle: it was the Dorobo who possessed the cattle.

Naitero-kop came one day and said to a Dorobo: 'Come early to-morrow morning, I have something to tell you.'

The Dorobo replied: 'Very well,' and went to sleep.

A Kaasi named Le-ayo, having heard what had been said to the Dorobo, arose during the night, and waited near the spot where Naitero-kop was.

When it dawned he went to Naitero-kop, who said to him: 'Who are you?'

On Le-ayo telling him his name, Naitero-kop asked where the Dorobo was. Le-ayo replied that he did not know.

Naitero-kop then dropped one end of a piece of hide from the heavens, and let cattle down one by one until the Kaasi told him to stop.

[1] Related by Ruparanki, an elder of the Aiser clan (Sightless sub-district).

[115] [2] Kempf in his Dorobo and Wakwavi labours in that africa written (p. 48) 'These nomadic savages (the Kaasi and Wakwavi) have a tradition that Engai—heaven or rain—placed a man named Naitero-kop on Mount Kenya. He was a kind of demi-god, for he was exalted above man and yet not equal to Engai.'

The origin of the Masai and the Dorobo people.

When Le-ayo grew old, he called his children to him and said to them: 'My children, I am now very old, I wish to bid you good-bye.'

He then asked his elder son what he wanted out of all his wealth.

He son replied: 'I wish something of everything upon the earth.'

'Since you want something of everything,' the old man said, 'take a few head of cattle, a dog, grain and sheep, and some of the food of the earth, for there will be a large number of things.'

The elder son replied: 'Very well.'

Le-ayo then asked his younger son, and asked him what he wanted.

'I should like, Father,' the younger son said, 'the fire which you carry suspended from your arm.'

His father replied: 'My child, because you have chosen this fire God will give you wealth, and you will be great amongst your brother's people.'

The story of the sun and the moon.

We have been told that the sun were married the moon.

One day they fought, and the moon struck the sun on the head; the sun, for, damaged the moon.

When they had done fighting, the sun was ashamed that human beings should see that his face had been battered, so he becomes dazzingly bright, and people are unable to regard him without first half closing their eyes.

The moon however is not ashamed, and human beings can look at her face, and see that her mouth is cut and that one of her eyes is missing.

Now the sun and the moon travel in the same direction for many days, the moon leading.

After a time the moon gets tired, and the sun catches her up and carries her.

She is carried thus for two days, and on the third day she is left at the sun's setting place.

At the expiration of these three days, i.e. on the fourth day, the

donkeys see the moon reappear, and bray at her.

But it is not until the fifth day that men and cattle see her again.

When a Masai sees the new moon, he throws a twig or stone at it with his left hand, and says, "Give me long life," or "Give me strength"; and when a pregnant woman sees the new moon, she walks some milk into a small gourd which she covers with green grass, and then pours away in the direction of the moon. At the same time she says: "Moon, give me my child safely."

The eclipse of the moon.

When the moon dies (i.e. when there is an eclipse), all the old men and women, the warriors and children come out of their huts and collect together outside. One man then sings in a loud voice deploring the loss of the moon, and everybody present joins in the chorus.

They continue singing in this manner until the moon begins to reappear, when they all shout together as loud as they can:

"Moon, come to life again!
Moon, come to life again!"

When they see that the moon has returned to her normal state, they enter their huts and go to sleep.

They do the same thing when there is an eclipse of the sun, the

The stars.

There are three groups of stars with which the Masai are acquainted.

They know whether it will rain or not according to the appearance or non-appearance of the six stars, called 'The Pleiades', which follow after one another like cattle.

When the month which the Masai call 'Of the Pleiades' arrives, and the Pleiades are no longer visible, they know that the rains are over. For the Pleiades set in that month and are not seen again until the season of showers has come to an end*; it is then that they reappear.

There are three other stars, which follow one another like the cattle, called 'The old man', and again

* The Pleiades are seven stars (six of which are visible to the naked eye) situated in the constellation Taurus. They are above the horizon from September till about May 17. The Masai people say: Ilkiyoto ilkiyanoo ivo ilo ainoiko ivoo ninu, ilkiyanoo ivoo ilmiro ainoiko ivoo jiro, when the Pleiades set in one (among months), they rise in rain; when they set in six, they rise in one.

The rainbow.

There is something which the Masai call The rainbow, and if one is seen in the heavens whilst rain is falling, it is a sign that the rain will shortly cease.

Children call a rainbow 'Father's garment' on account of its many colours, one part being red, another white, and a third variegated. They also say: 'I will give it to father for he will like it.'

Comets.

When the Masai see a comet, they know that a great trouble will befall them, the cattle will die, there will be a famine, and their people will join the enemies [1].

It is said that a comet was once seen before the Europeans arrived, and as some Masai children were watering the cattle at a pool after herding them, a creature resembling an ox but green in colour issued from the water. The children were frightened, and killed it. They then disembowelled it, and found that its body was full of cattle instead of blood. On returning to the kraal they related what had occurred.

When the medicine-man heard the story, he said: 'If we see another comet, people who are green in colour

[1] Ol, the sign of the tail.
[2] The Masai have a similar tradition (Kershaw, Ambiwayo, p. xxii).

will come out of the water and visit our country. Should they be killed, mud-fat instead of blood will be seen issuing from their bodies.'

Shortly after the appearance of the mud, comet, the Europeans arrived. It was formerly believed that they had no blood, and that their bodies were full of mud-fat.

Sheet Lightning.

If during the months of Iungar[2] sheet lightning is seen in the west, the Masai say that there is a big bird of the heavens beating the water with its wings, and that what one sees flashing is the water.

The story of the frogs and the rain and the sun.

When it rains, the gnats say: "The enemy have beaten us," and they run away and hide themselves; but the sheep say: "Rather let wind us," and they remain out in the rain.

When the sun burns fiercely, the sheep say: "The enemy have beaten us," and go and hide themselves in the shade; but the gnats say: "Rather let wind us," and stay in the sun.

The story of the night and day.

According to tradition the night is a man and the day his wife.

[1] See the text.

Volcanoes and steam jets.

If smoke or steam issues from the earth, as for instance at the active volcano Ilmeyo Engai or at the steam jets near the Gilgil river, the Masai say that there is a large deposit of shells lying beneath the surface and what we see is that.

[1] When the Masai feel a shock of earthquake they believe that the mountains are fighting (Kerikerio, Ambiremgen, p. 19), and the Kisii say that all earthquakes originate from a prominent ridge of hills in their country (Dorothy Kenyatta, Masai, p. 3).

Ceiwa[2].—The story of the cave in the mountain of smoke.

There is a cave in the mountain of smoke, or as it is otherwise called Dongo Kishi, in which Masai live. If you stand near its mouth you hear the voices of people calling one another and also the lowing of cattle.

Women go to pray at this cave, and take with them gourds full of milk and honey and butter, which they leave there. The inhabitants of the cave come during the night and eat these things.

Darem women, however, do not go to the cave as their offerings are not accepted.

If strangers who do not know about the cave and a true cave it Masai is seen to leave from the cave.

rings, called il-giao[1]. They also have chain bracelets.

No Masai elder may wear the earrings called 'eurutya unless he has children who have been circumcised and become warriors and women; but he who has grown up children may wear 'eurutya.

There is another thing, an arm-ring called ol-masangua, which is cut out of a buffalo horn or an elephant's tusk, and made to look beautiful.

No elder may wear this unless he has large herds of cattle and many children.

He who is well known to possess many head of cattle and also many children may wear this arm-ring as a sign of his wealth.

There is also an arm-clamp called e-rap, which the warriors wear, but they only put this on as an ornament[2].

Then, if it is desired to ask the news of the country from whence the people come, they are asked: 'Do you bring good tidings?' or 'Do you relate good news?' 5%

They reply: 'Only the things which are good,' or simply, 'Good news only.'

When Masai warriors meet old men, the latter start the greetings. If there are many warriors, the old man call to them and say: 'Friends.'

To this the warriors reply: 'Yes.'

The elders then say: 'Endaatpai.'

And the warriors answer all together: 'Hepa.'

When warriors come from a distant country and see some elders outside a kraal, they go up to them, and take their hands, at the same time thrusting their spears into the earth. The elders then say to them: 'Greeting.'

When they have dropped one another's hands, the elders say to the warriors: 'Friends,' and the warriors answer: 'Yes.' The elders then give the usual salutation: 'Endaatpai,' to which the warriors reply all together: 'Hepa.'

Nowadays, however, the warriors do not wait to be greeted by the elders, and call out 'Endaatpai, O ye fathers!' At any rate the so-called El-burgon Masai do this. When the warriors of the Kisongo Masai greet the elders first, they say: 'Endaatpai, O elders!' or 'Endaatpai, O old people!' [198]

When old people meet one an-

ether, they say: "Enkanipai, O ye elders!" or "Enkanipai, O ye kraalmate!"

No warrior or boy would dare to say: "Enkanipai, O kraalmate!" for he would be told he is wanting in respect.

When warriors meet married women, they say: "Enkakwenya, O old ladies!" to which the women reply, "Iglot."

No warrior would dare to say to married women: "Enkakwenya, O wives!" for it would be said that he was wanting in respect.

It is only the old men who may say to their wives: "Enkakwenya, O wives!"

When married women greet warriors or boys, they say: "Enkakwenya, O children!" And the warrior or boy replies: "Iglot."

When warriors greet married women of their own class, they say: "Enkakwenya, O great ladies!"

To this the women reply: "Iglot."

Warriors greet girls by saying: "Enkanipai, O girls!"

The girls reply, "Itepa."

The same words are spoken when girls greet warriors.

A girl does not say "Itepai," to her brother, nor does a warrior greet his sister in this fashion; they say "Takwenya." Some also kiss one another.

[1] It has been repeatedly stated that the greeting takwenya (pl. enkakwenya) means length. Length is, however, strictly speaking, takwenia (pl. enkakwenia).
[2] Iglot is meaningless in Masai, but igit in Bari means go away (Imp.).

Now cattle feed on grass, and the Masai love grass on this account. [124]

Whenever there is a drought, the women folks grass on to their clothes, and go and offer up prayers to God. [125]

If a warrior hunts a lion on the grazing ground, the lion tears up some grass, and when the warrior sees that the child has grass in his hand, he stops hunting him.

Again, if the Masai fight with an enemy, and wish to make peace, they hold out some grass as a sign. [126]

Whenever warriors return from a raid, and it is desired to praise them, who have killed some of the enemy, a girl takes a small gourd of milk, and having covered it with green grass, sprinkles it over them. [127]

Then, if people move from one kraal to another, they tie grass on to the gourds.

Should one man ask forgiveness of another with grass in his hand and his request be not attended to, it is said that the man who refuses to listen to his prayer is a Dorobo, and that he does not know about cattle. [128] [129]

Again, if a man who is proceeding on a journey sees a tree which has [130]

kilos on the road, he pulls up some grass, and throws it on the road; otherwise he fears that his journey will not be successful.

The Masai love grass very much, for they say: "God gave us cattle and grass, we do not separate the things which God has given us."

Whenever Masai women milk their cows, they take some milk from the gourd and pour it away, for they say: "God likes this."

The brand-marks and ear-cutting of cattle, sheep, and donkeys.

The brand-marks which the Masai use for their cattle are as follows.

For each clan and family there is one principal mark, and all the cattle belonging to the various members of a family are branded in a special way.

There are also small marks by which the actual owner can be recognized.

Besides branding, each family has a special method of slitting the ears of their cattle, sheep, and donkeys.

They likewise have smaller marks for each individual owner.

If therefore a cow is seen, it can be recognized as belonging to the *Ałyer* clan, for instance, and also to such and such a person.

Concerning the shields and spears of the Masai warriors.

The warriors' shields are not all of one design; they differ.

Each age and each sub-district has its own design.

In consequence, if the warriors meet an enemy, it is known to what age such a one belongs, and also to what sub-district.

There are four markings for the shields, the red one, the black one, the ornamental one, and the one for beauty.*

Likewise with the spears, they are not all marked alike.

If a spear is found, it can be ascertained by looking at the lower part to what age and also to what sub-district its owner belongs.

Concerning the arrows of the Masai elders.

The old men have special marks for their arrows as the warriors have for their spears.

If an arrow is found, the generation and the sub-district to which its owner belongs can be recognized.

The process of moving.

The Masai are fond of moving, and if they happen to be staying in a place where the grazing is poor, they move to another spot.

When they move, they mollie their dwellings with skins and pack-mollies in which they put their goods, and the women carry bags.

Should they stay in a place where the grass is not good, they do not build proper huts, but they live in the so-called il-ogulumi, i.e. in huts made of skins. When they go to a good grazing ground, they build huts.

The women do the work of building. They prepare poles, and put one end in holes, which they dig in the ground; they then bind the poles together with cord made from trees; after which they cover the framework with long grass. When they have finished this, they plaster the whole of the outside with cow-dung and mud.

Masai warriors' kraals and slaughter-houses.

Masai warriors do not live in the kraals of the married people; they have their own kraals, where they dwell with their mothers and lovers.

When they go to the woods to eat meat, they live in the slaughter-houses* with their boy-servants.

[264] * Meat may not be eaten in the manyat, or warriors' kraals, and special places, called il-gull, are erected in the woods, to which the warriors retire when they slaughter cattle.

The feast called the ellipying.

There is a feast known to the Masai as The ellipying.

When a child is born, and the time has arrived for it to be given a name, a bullock is slaughtered which is called The(bullock) of the ellipying.

A black bullock, and one without a blemish or a white or brown spot on it, is selected, and slaughtered.

The meat is then divided up between the women and men[1].

When the meat has been cooked and is nearly ready, one woman stands up and calls the others. She calls out as follows: 'The honey is ready, this is for the first time; the honey is ready, this is for the second time; the meat is ready, this is for the first time; the meat is ready, this is for the second time.'

The women of the kraal then carry milk to the child's mother, and after each has been given her share of the meat, they take their departure.

In the evening the mother carries her child to the middle kraal, and milks the cows with the child on her back.

When she has finished, three old men and the child's father (which makes four) join her, and the child is named.

The so-called ellipying bullock is always slaughtered at the door of

[1] This word is now used to translate the English Eliz ben, the big day or holiday.

[2] Men and women never eat their meals together.

[1] Meat cooked in a special manner.

Boys' circumcision.

When Masai boys wish to be cir-
cumcised—having previously asse-
tained that the time for circumcision
has arrived—all those who live in
neighbouring districts collect to-
gether, and, taking cattle and honey
with them, go to the medicine-man's
kraal.

The only weapons which they
may carry in their hands are sticks;
they have neither spears nor swords,
and their clothes are stuck into their
belts.

Those who come from countries
also off, such as Kitito or Meipu, or
other distant places, may take their
bows, but they must leave their
arrows and quivers behind.

When they have received per-
mission to hold the circumcision
festival, they enjoy themselves, and
paint their bodies with chalk.

They then pay visits to different
kraals during the next two or three
months, after which they return
home, where they remain until they
are circumcised *.

One ŋ' ailiji enyenyai, the ceremony is started by his being shaved, after which a sheep or bullock is slaughtered, which is called Tin (animal) that has caused him to be taken out (from the boys' enclosure). [illegible]

On the second day the boy sallies forth to cut a tree called El-latin*, which is carried by girls to the kraal, where it is planted at the door of the hut.

The next morning the boy goes and sits down outside the kraal to get cold. He also washes himself with water in which a fern called Father's spear* has been soaked. [illegible] [illegible] [124]

When the ear is some way above the hairline, his mother opens the gate of the kraal, and finishes an ox-hide which she puts on the ground by the right-hand door-post.

The boy then takes his place on the hide, and the operator, a Dorobo, comes together with the man whose duty it is to hold the boy.

The man who holds him straightens out his legs, and the boy sits between them and is circumcised*.

If the boy winces during the operation, his mother is beaten with sticks; and if the boy's parents know that he will behave like a coward, they go away and hide themselves.

As soon as the operation is over, the

* This tree is generally called Ol-ainai (Kigelia aurantiaca, Wild.), but it is called El-latin during the circumcision festivities.

* Asparagus sp.

* The circumcision of the Masai has been described in Thomson's Through Masailand, in Johnston's The Uganda Protectorate, and in The Journal of the Anthropological Society for Great Britain and Ireland, Feas, 1901 (Beggs). [113]

hide on which is the blood is carried by the boy and placed on his bed.

When the boys have all been circumcised they are called 'Sipolio (recluse).

They remain at home for four days, and bows are prepared for them.

They then sally forth and shoot at the young girls, their arrows being blocked with a piece of honey-comb so that they cannot penetrate into the girls' bodies.

They also shoot small birds[1], which they wear round their heads together with ostrich feathers.

The Sipolio like to appear as women and wear the surutya earrings and garments reaching to the ground. They also paint their faces with chalk.

When they have all recovered, they are shaved again and become Il-barnot (the shaved ones). They then discard the long garments and wear warriors' skins and ornaments.

After this their hair is allowed to grow, and as soon as it has grown long enough to plait, they are called Il-muran (warriors)[2].

The warriors are fond of the titles 'L-oingok (the bulls) and 'N-gaminini (the generous people), for they may then wear bells or a bracelet called il-torongen.

Now to become one of the Oingok, a warrior must kill many savages,

[136] [1] The bird which the Sipolio wear round their heads is the mouse bird (*Colius affinis*, Shelley). Boys who behaved in a cowardly manner during the operation are not allowed to shoot these birds.

[2] This word is commonly but incorrectly written Elmoran.

The girls' circumcision.

When Masai girls wish to marry, they are circumcised. 881 [587]

On the day that the operation is performed, a sheep or bullock is slaughtered, and as with the boys it is called The (animal) which has caused her to be taken out (from amongst the girls).

Women are operated upon indoors, and it is not considered a disgrace if they cry out. [304]

Instead of the ostrich feathers which the boys wear, a wreath made from the leaves of the *Hyphaene* (or doum) palm, or of grass, is donned. [237] [297]

When they recover, they are married. [587]

E-unoto.

Marriage[1].

When a Masai wishes to marry, he commences his courtship by making love to a girl while she is still young, and by presenting some tobacco to her father.

He then waits until the girl grows up, when he again offers presents of honey and tobacco.

More honey is given to the father at his daughter's circumcision.

On the young woman's recovery the man proceeds to his future father-in-law's kraal, and takes with him the dowry, viz. three heifers and two bullocks, one of the latter being said to keep the heifers company, whilst the other is slaughtered at the door of the hut. His sister also takes a pot of honey and accompanies him.

The bullock which accompanies the heifers is given to the bride's father in order that the two men may call one another Pakiteng, i. e. the giver and receiver of a bullock, or father and son-in-law.

When the time arrives for the husband to fetch his wife, he takes with him three sheep (two rams and a young ewe). The ewe he presents to the mother to enable them to call one another Pakerr, i. e. the giver and receiver of a sheep, or mother and son-in-law.

The two rams are slaughtered together with two others, which the girl's father provides.

[1] Formerly no Masai was able to marry until he had been on several raids, but nowadays they leave the ranks of the warriors (il-muran) and settle down as married men (il-móruak) at a comparatively early age.

After the bride's wedding-garments have been oiled, she puts them on, and is given a gourd which has been ornamented with cowries. This is put on her back, and she is taken by her husband, who is accompanied by two of his friends and two of the old women from his bride's kraal, to her future home. 585

She does not hurry but walks very slowly until she reaches her husband's kraal, where a child is given her to feed.

When a man marries, it is considered unlucky if he calls his wife by her name. He must give her another name. A favourite method is to call her by the age to which she belongs, thus, The (woman) of the Seure age. 551 593 777 [561]

If a Masai owns large herds of cattle he is able to marry many wives. Some have two wives, others three, and others four; whilst if rich men wish, they may have as many as ten or twenty. 595

When a Masai marries for the second or third time, his first wife gives the new wife a calf, after which they call one another Paashe, i. e. the giver and receiver of a calf. 595 431

No Masai may marry a woman belonging to the same sub-division as himself if both families live in the same district, but he may marry a woman of his own clan or one belonging to another clan. 582

The refuge[1].

If the Masai men beat their wives, some go and seek refuge elsewhere, whilst others suffer and stop at home.

Should a husband beat his wife, but not badly, she will seek refuge in the house of a member of her husband's age.

When the man with whom she has taken refuge returns her to her owner, the latter does not beat her again, for he fears that he will be cursed by the members of his age.

If a woman commits a serious crime, and knows that she will be beaten in consequence, she goes to her father's kraal, and is given an ox, which she takes to her husband and begs forgiveness.

Death.

On the death of a child, or a warrior, or a woman amongst the Masai, the body is thrown away[2], and the person's name is buried, i.e. it is never again mentioned by the family.

Should there be anything which is called by that name, it is given another name which is not like that of the deceased.

For instance, if an unimportant person called Ol-onana (he who is soft, or weak, or gentle) were to die,

[586] [1] Divorce appears to be unknown amongst the Masai.

[823] [2] The body is always taken to the west of the kraal, towards the setting sun. It is laid on the left side with the head towards the north, so that the face looks towards the east. The legs are drawn up to the chest, the left hand supports the head, and the right arm is folded across the breast.

When a man is on the point of death, people say he is about to cut his heart; and when he dies and is eaten (by hyenas), his soul dies with him. It is believed that all is over as with the cattle, and that the soul does not come to life again[4]. [763]

Kake ten ëä ol-oiboni araki ol-karsis, nenukari, ore pe eñgwëyu o-sesen lenye, nëji etawale ol-tau lenye, etaa ol-asurai; nelo ol-asurai eng-añg oo-'n-gera enyena, neiñguraa.

But when a medicine-man or a rich person dies and is buried, his soul turns into a snake as soon as his body rots; and the snake goes to his children's kraal to look after them. 766 775 825

Ti-araki naa nëja, pe mëar il-Maasae 'l-asuria lenye. Naa, ten edol i-ñgoröyok ol-asurai ti-aji, nesuaki kulle, nemej ol-asurai, nelo.

The Masai in consequence do not kill their sacred snakes, and if a woman sees one in her hut, she pours some milk on the ground for it to lick, after which it will go away. 778 825

Etii 'l-asuria oorook, naa le-'n-gishömi oo-'l-Aiser; naa, ten ëar likae etii 'l-oopeny, nëjo: 'Miar, amu 'l-kulalañg.'

There is a black snake, which is sacred to the Aiser clan; and if a person of another clan were to strike the snake whilst the owners were present, they would tell him to desist as it belongs to them. [614]

[1] The Dinka, Bari, and other Nilotic tribes follow similar customs (Kaufmann, *Schilderungen*, pp. 130, 192; and *Emin Pasha in Central Africa*, p. 338, &c.). [171]

[2] Ol-tau, the heart, mind, soul; ol-meneñgani, the corpse, spirit, ghost. [192]

[3] The Dinka, Bari, Latuka, and other Nilotic tribes, also pay reverence to snakes (Kaufmann, *loc. cit.*, pp. 127, 188; Schweinfurth, *The Heart of Africa*, vol. i, p. 55; Casati, *Ten Years*, p. 31; *Emin Pasha*, *loc. cit.*, p. 339, &c.). The Zulus hold that divine ancestral shades are embodied in certain tame and harmless snakes, whom their human kinsfolk receive with kindly respect and propitiate with food (Tylor, *Primitive Culture*, vol. ii, pp. 8, 233). [171]

[4] The Dinka and Bari likewise disbelieve in a life after death (Kaufmann, *loc. cit.*, pp. 124, 188).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

778 825 Eata sii en-gishōmi naji 'l-Tarōsero 'l-asuria lenye sambu. Naa, ten ēarare ol-tuñgani loo-'l-Tarōsero ol-likae, pe meitēu, neipot 'l-asuria lenyena, nājo: 'E-sile e-'ng-aji e-yēyo, talakunye!' Naa, ten eitu ekwet lidoōarare, nepwōnu, 'l-asuria aaony.

The Tarosero family have their own particular snakes, which are of many hues; and when a member of this family fights with some one and gets the worst of the combat, he calls upon his snakes, and says: 'The avengers of my mother's house, come out!' If the man with whom he is fighting does not run away, the snakes will come and bite him.

[614] Eata sii kulye-ahomīto 'l-asuria lenye. Etii 'l-asuria ooibor, netii 'l-oonyokyo, netii sii 'l-oonyori. Etii 'l-kulikae ooata en-dōki natii e-murt anaa ol-kila lo-'l-móruo, neibor kulikae 'l-lughuny anaa ol-móruo kitok.

The other clans and families have their sacred snakes as well. Some are white in colour, others red, and others green. Some have a hood like an old-man's cloak, others again have white heads like very old people.

[791] Ēji sii eata 'l-oibonok 'l-kulenyena ootii ol-bene.

The medicine-men are also said to have snakes, which they keep in their bags.

766 775 791 Nāji ten ēä kulikae-tuñganak kituak anaa 'M-Batyany, ore pe enukari, nepwo 'l-tauja lenye eng-ai.

It is believed that the souls of some big people like Mbatian[1] go to heaven after death and burial.

794 828 Ten eirura ol-tuñgani, nemebuaki likae-tuñgani ainyēye. Einyēye akiti, amu ēji: 'Ebaiki meidim ol-tau lenye atorinyunye, nēä.'

A sleeping man must not be awakened suddenly. He must be roused gently, for it is thought that his soul may perhaps not return and he will die.

Mejuñg il-Maasae 'l-apulayani lenye, amu torono.

Inheritance.

When the father of a family dies, his eldest son inherits all his property[1], and also the herds and flocks belonging to the childless widows, but not those which are the property of widows who have sons. 428

The sons by each wife inherit the cattle belonging to their mother's family.

If a man dies childless, his brothers inherit his cattle and his half-brothers his wives. It is unlawful for a man's own brothers (i. e. brothers by the same mother) to take his wives. [587]

Should a widow have a son by her late husband's half-brother or by another man, the child is given the cattle which he would otherwise have inherited had his mother's former husband been alive, and he is considered to belong to that family. 587 428 851

If a man dies and leaves a son who is a minor, the property which he inherits is taken care of for him until he grows up[2]. 428 429

It is considered unlawful for a man to inherit the property of his maternal uncle. 428 604

[1] The Masai distribute their herds and flocks amongst their wives during their lifetime, each one being given a certain number to look after and milk. The cattle so distributed are said to belong to the wife's family, and are recognized as the property of her sons, who, however, do not assume ownership until after their father's death. [422]

[2] In a case of this kind, the child does not go to the wars, but marries soon after he is circumcised.

Crimes: Theft.

If a Masai steals milk, or meat, or other small things, he is not fined.

Grown up people, however, rarely steal, it is the boys who take the milk and meat, &c.

Whilst the Masai do not consider it wrong to steal trifles of this nature, they dislike immensely having their cattle stolen.

Should any warriors steal an ox and be caught by the owner, they would have to pay; and if three men took part in the theft, each would have to pay three heifers.

In the event of the owner following up the thieves and catching them in the act of slaughtering the stolen animal, one of the warriors might see him and call out 'Guilty,' in which case he would not be fined heavily. Whilst the others would be fined in heifers, he who had cried 'Guilty' would only have to pay a young bull. Were all of them to cry 'Guilty,' they would all be fined in young bulls.

Adultery.

684 [561] Metii ol-murani araki ol-ayōni oidim ataboitare en-gitok o-'l-poror le-menye. Ten eiyōlōuni, nedeki.

No warrior or boy may commit adultery with a woman of his father's age. If he does so, and it becomes known, he is cursed.

Ore ten edeki, neishooyo 'n-gīshu are, en-e-'n-aisho, naaropye 'l-paiyani pe medek. O ol-kiteñg-ōyeñg il-paiyani ten ěok en-aisho.

Should he be cursed, he pays two oxen (one in lieu of honey-wine), and he prays the elders to remove the curse. The elders eat the ox when they drink their honey-wine.

836 837 [561] Kake meikōni nēja ten eboitare 'n-gitnak araki 'n-doiye o-'l-poror lenye. 'Me torono inna.

But this is not the case if a man commits adultery or fornication with a woman or girl of his own age. This is not an offence[2].

[1] This law is not always put into force. The murdered man's relations are often willing to make peace on payment of a heavy fine, say 100 head of cattle.

[595] [2] From this it will be seen that the Masai are polyandrous as well as polygamous. A man may marry as many wives as he can afford to purchase, and a woman may cohabit with any man belonging to her husband's age.

1: Hollis G-5 (ca. 1894-1904) 1905

Ten eboitare ol-móruo engerai enye araki en-o-'l-poror lenye, torono. Ten eniñg ol-poror lenye, nēari, negili eng-añg, nēyeñgi 'n-gishu náiyōuni.

If an old man commits adultery with his daughter or with a girl of her age, it is considered a serious crime. The other old men if they hear of it beat him, pull down his kraal, and slaughter whichever of his cattle they want. 684 [561]

'M-bwat.

Nēji en-dōki naji em-bwata, naa 'l-ala aare eitauni li-aborī.

Neitauni te-'ng-alem.

The extraction of teeth.

There is something called em-bwata, which means the extracting of the two middle incisors of the lower jaw. 304 752

A knife is used with which to perform the operation.

Eisho 'l-Maasae: nebwa 'ngera enye kat'-are. Ten eīni en-gerai, pe ebaya 'l-apaltin isyet, etubulutua 'l-ala pōkin, nebwai. Netonii.

Nepwo 'l-ala pōkin, neiñgwari 'l-opa-ootubulutua. Ore p' eitōki aabulu 'l-ala pōkin, nebaya en-gerai anaa en-oo-'l-arin tomon o aare, nebwai em-bwata e-kitoo, nemeitōki aabulu.

The Masai extract their children's two middle teeth twice. They extract them first of all when the child is about eight months old, and all its teeth have grown. Then they wait.

After the child has lost all its milk teeth and obtained the permanent set, i. e. when it is about twelve years old, the teeth are extracted a second time, and never grow again.

Ore p' eidip aatōbwa engerai, nesirieki eng-omom il-mur loo-'sirkon, nēji: 'I'rōbija.'

When a child has had its teeth extracted, donkey's dung is put on its face in order to cool it. [237]

Ore opa p' eiterunaki aabwa 'l-tuñganak ēji, pe ten emweiyu ol-tuñgani, p' eitere, neony il-ala, neimyeki eng-are innabwata natōbwaki opa.

The origin of this custom of extracting teeth was to enable people, in the event of a man falling ill or being on the point of death, when his teeth would pain him, to pour water through the orifice[1].

[1] Hinde (*The Last of the Masai*, p. 42) writes: 'The origin of this custom is supposed to date back to a time when tetanus was a great scourge amongst the Masai, and they discovered that it was a comparatively simple matter to feed a man suffering from lockjaw if two of his front teeth were missing.' [113]

When a woman gives birth to a child, neither she nor the child are shaved until the latter has four

[113] [191] [194] Sir H. Johnston, in commenting upon this, says (*The Uganda Protectorate*, p. 805): 'It may be this explanation has been invented recently to explain a very ancient custom inherited by the Masai from the Nilotic stock, which was their origin; for amongst these people the removal of the lower incisor teeth is a very common practice.' Hinde's explanation, however, appears to be very widely spread.

[191] [1] This very uncommon practice for women to shave their heads is also followed by the Dinkas, Baria, and Latukas (Cummins, 'Sub-Tribes of the Bahr-el-Ghazal Dinkas,' *Journal of the Anthropological Institute*, June, 1904; and Baker, *The Albert Nyanza*, p. 90, &c.).

Spitting.

The Masai have two ways of spitting; one is used to show contempt, and the other astonishment. Besides this the medicine-men spit when they wish to heal people[1]. 201

If a Masai wishes to show his contempt for another man, he expectorates a small stream of saliva forcibly through the hole in his teeth into the man's face, and says at the same time: 'You are a dog.'

Formerly when the Masai saw Swahilis, they used to spit on the ground and say: 'These coast people stink like fowls.' They never went near them or touched them if they could help it. [177]

When a Masai sees a baby that he has never seen before, he spits on it slightly several times and says: 'Grow, become accustomed to the eyes of people.' 514 789 [856]

When he sees a child that he has never before beheld, he also spits on it slightly, and says: 'This child is bad.' To himself, however, he says: 'This child is good.' It is believed that if he praises a child it will fall ill. [753]

[1] Amongst the Dinkas it is also customary for the medicine-men to spit on their patients (Kaufmann, *Schilderungen*, p. 128). [171]

[2] The name by which the Swahili were formerly known.

When the Europeans came to these countries and the Masai saw them for the first time, they used to spit, for they said: 'We have never seen people like these.' They also called them medicine-men, and if a European gave a Masai medicine, the latter asked him to spit on him to heal him. Europeans were formerly called 'L-Ojuju owing to their being hairy.

[1] *Vide* p. 287.

[191] [113] [2] It is customary amongst the Bari people for old men (fathers or grandfathers) to take children's heads between their knees and spit slightly on them to bless them (Mitterrutzner, *Die Sprache der Bari*, p. xvi).

[3] *Vide* p. 284.

Food.

Amongst the Masai the principal food of the old men, the women, and the children is milk. 262

The warriors alone drive bullocks into the forest, and slaughter them there: at other times they go to the married people's kraals and drink milk, but they never remain for two months together without slaughtering.

Whenever the old men, the women, and the boys are able to do so, they likewise eat meat. They also eat an ox if it dies a natural death [1], or if it is bitten by a snake, or if a beast of prey has killed it.

The Masai elders, however, do not slaughter their cattle without good cause, and a man who is very fond of meat is called a Dorobo. [186]

Whenever a woman gives birth to a child, a bullock is slaughtered, and she is given the fat. [846]

A pregnant woman is not given good food. When she wants meat, she is given bones or lean scraps; and when she wants milk, water is mixed with it. [843]

The Masai are also very fond of blood. They tie a leather ligature round the neck of a beast and pierce a vein with an arrow, the shaft of which has been blocked. When the blood gushes forth, they catch it [415]

[1] The Shiluk and other Nilotic tribes also eat cattle which have died a natural death (Gessi, *Seven Years in the Soudan*, p. 32, &c.). [171] [113]

262 [915]

Ore 'n-gulye-tŏkitin náinọsi.

in gourds. Some drink it pure; others mix it with milk[1].

There are a few other things which the Masai eat.

276 Enyaal il-móruak oo 'ñgorŏyok ol-kumbau áitushulaki e-makat o ol-kumbau loo-'l-muran. Netii 'l-oook too-'n-gumeshi ol-kumbau oidoñgo, nĕji en-gisugi. Netii sii kulikae oook too-'l-mŏtĭo.

Some old men and women chew tobacco mixed with salt and *Ocimum suave*, whilst others sniff ground tobacco up their nostrils: this latter is called snuff. Others again smoke pipes.

Ĕok sii 'l-muran, kake mĕok pŏkin. Menyaal ninje 'l-ayok araki 'n-doiye ol-kumbau, nemĕok; etoni ake.

Those of the warriors who like it also take snuff. The boys and girls, however, neither take snuff nor chew tobacco[2].

437 276 [249] Metumil-Maasae ol-kumbau, amu meiyŏlo aatuturu; kake einyañgu too-'l-meek, áinosye eng-orno oo 'n-dare tasati.

The Masai do not grow tobacco themselves, for they do not know how to dig. They buy it from savages, exchanging it for butter and lean goats.

Memiraki 'l-Maasae 'l-meek in-gĭshu supati, 'n-gĭshu olupin ake oo nemeata kulle, oo náiba 'l-asho, ninje ake emiraki 'l-meek, oo 'n-dare móruak oo 'n-dasati.

The Masai do not sell good cattle to the savages; they only give them barren cows, or those which have no milk, or which do not care for their calves. These and old or lean goats and sheep are the only animals they part with.

273 Nĕok sii 'l-móruak in-aishi, neinyañgu 'l-maruan o en-joi too-'l-meek.

The old men drink honey-wine, and they purchase from the savages two kinds of beer, called Ol-marua and En-joi.

262 'N-gera ake náinos en-aisho najon. Pŏki en-dŏki nainos il-móruak te-'n-aisho najon il-changaro ake.

It is only the children who like wild honey: old men eat the comb full of grubs[3].

[171] [1] This custom is also common among the Bari (Kaufmann, *Schilderungen*, p. 170).

[556] [178] [2] In olden days it was the privilege of rich old men and their chief wives only to take tobacco, which was called ol-chani loo-'ng-onyek, the eye-medicine.

[825] [222] [3] The Masai obtain their honey by following the *Cuculus indicator* bird.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Enyor sii 'n-gera 'l-ñganai-yok naleñg, einos sii 'l-tuñganak kituak, kake mme naleñg.

Nemeinos il-Maasae kulye-tōkitin opa, eton eata 'n-gīshu, kake einosita taata 'n-daiki pōkin oo-'l-meek, anaa 'l-paek, o ol-mishēli, oo 'l-mariko, oo 'n-gulye-daiki e-'n-gop, amu meata 'n-gīshu kumok anaa opa.

Pōki en-dōki nemeinos, e-matwa ake. Nemeinos il-mōtōnyi, oo 'singir[2], oo 'n-giri oo-'l-chañgit.

Children are very fond of various kinds of fruit, which are also eaten by the old people, but the latter do not care for them very much. 262

Formerly the Masai, when they had plenty of cattle, ate no other kind of food, but nowadays they often have to eat savages' food, such as maize, rice, bananas, and cereals, for they no longer own the vast herds which they formerly possessed[1]. [178]

They, however, do not eat everything. They eat neither birds, nor fish, nor the flesh of wild animals.

Il-chañgit.

Menya 'l-Maasae 'l-chañgit opa eton eata 'n-gīshu pōkin; kake eiter kulikae áinos taata 'l-chañgit anaa 'l-Torōbo, amu etumutate 'n-gīshu.

Ten ēar il-ayok il-tōmen, naa 'l-ala ake eitauni, nepwei aamir neinosyeki 'n-gīshu.

Naa, ten ēari 'l-osōhwani, naa ol-chōni eitauni, p' eitaunye 'l-muran il-loñgoi, neitauni sii 'mōwarak, p' eitái 'n-gidoñgita náidoñgyeki 'mashon. Neitaa sii 'l-oibonok in-gidoñgita naapika 'soito le-'n-aibon.

Wild animals.

The Masai ate the flesh of no wild animals when in olden days they all had cattle; but some of those who have lost all their cattle are now beginning to eat venison, like the Dorobo. [178]

If Masai boys kill elephants, they only take the tusks, which they exchange for cattle.

When buffaloes are killed, the hide and the horns are kept. From the former the warriors make their shields, and from the latter mortars are cut in which medicines are ground. The medicine-men also use the horns to put stones in for their prophecies. 237 [914] [915] [787]

[1] It was recently estimated that the Masai in the Naivasha Province own 35,000 head of cattle and 250,000 goats and sheep. Those living in the Ukamba Province and in German East Africa are, however, much poorer, most of their cattle having died of rinderpest some years ago. [233] [184]

[2] The northern Masai sometimes use o-singir (pl. i-singiri) for a fish. The southern invariably use o-singiri (pl. i-singir).

Games.

Small Masai children collect pebbles or berries, with which they play at cattle and sheep. They also build huts and kraals in the sand, and they make spears out of bulrushes. Little girls make dolls of the fruit of the sausage-tree [2]. 857 [824]

Big boys play about in the herds of cattle. They choose a quiet animal, and pretend it is a hut. One boy stands by the cow whilst the others go and hide. When the latter return, the one who is standing by the cow chases them away. If one of the boys who is driven off is caught, they say the enemy have killed him; anybody who manages to escape and touch the cow has won. This game is called Sambwen.

The old men likewise have their game. This is played on a board containing many compartments, in which they circulate pebbles called 'n-doto. This game is called en-geshei. 524 [887]

The warriors also play this game, but they do not care about it much. They have no boards, and make holes in the earth.

Peace.

If the Masai make peace with other people, whether enemies or other Masai with whom they have fought, the warriors seize the im- 728 628

Omens.

The Masai believe in what they term Il-tiloi, or omens. 787 825

If a man goes to visit a woman who is ill, and the bird which is called Ol-tilo[1], on account of its note, cries on his left hand, he knows that the woman is very ill indeed. Should the bird utter its cry on his right hand, he knows that the woman is on a fair way to recovery.

If a person visits a man who is unwell, and hears the same bird crying on his left hand, he knows that the man is only indisposed; but on the other hand, if a bird cries out on the right side of the road, he knows that the man will die. [963]

Again, if a man goes to fight or to raid and hears the Tilo bird crying on his right hand, he knows that he will be successful. Should the sound come from the left hand, he will return home again, as he knows he will be beaten.

If a man is going to pay a visit and hears a Tilo bird behind him, it

The medicine-men.

Medicine-men have four methods of divining future events.

The first is by means of a buffalo or ox horn. A handful of stones[1] is thrown in, and they know what is going to happen by the number which fall out when the horn is shaken.

The second is by examining the entrails of a goat which they slaughter. From what they see there they are able to predict that certain things will come to pass, such as epidemics, &c.

The third method is when they drink honey-wine and get drunk. They are then able to prophesy what will take place.

The fourth method is by dreams. They tell people what they saw in their dreams, and it is believed to be a prophecy. Should the dream not come true after an interval of some years, people cannot say it is

not correct: they must wait until the medicine-man tells them that the event is about to happen. 787

If the medicine-man is going to prophesy by means of the buffalo or ox horn, and there are people on the road, he tells those present that he will wait, as their feet will spoil his prophecy. They always know when people are coming, even if they are afar off.

When a medicine-man makes medicine, he gets drunk before he prophesies. He sings in parables, and the people reply. [533]

For instance, when the medicine-man named The father of Ngupe made medicine for the warriors of Kilepo before they went on a raiding expedition, he sang: 787 726 [533]

'The bulls that cannot move because they are so fat,
They will be beaten by Kilepo.
The bulls that cannot move because they are so fat,
Half of them have been captured.'

The warriors of Kilepo went on their projected raid against the people of Kahe[1], and captured half of their cattle.

They said: 'Thus prophesied the medicine-man.'

All medicine-men belong to the Kidongi family of the Aiser clan, and they are the descendants of Ol-Oimooja or of E-Sigiriaishi[2], the sons of Ol-le-Mweiya[3]. 791 614 [173]

the people to move their grazing grounds, 'for,' he said, 'all the cattle will die. You will first of all see flies which make hives like bees, then the wild beasts will die, and afterwards the cattle.' 791 787

Both of these prophesies have come true: the Europeans have arrived, and the cattle died.

Mbatian himself died while the cattle plague was raging (circa 1890). 791 173

When on the point of death, he called the elders of Matapato, the sub-district in which he lived, and said to them: 'Do not move from your country for I am about to die, and I will send you cattle from heaven. If you move, you will die of small-pox, your cattle will all perish, you will have to fight with a powerful enemy, and you will be beaten. I wish my successor to be the son to whom I give the medicine-man's insignia. Obey him.'

The elders said: 'Very well,' and left.

When they had gone, Mbatian called his eldest son Sendeyo[1], and said to him: 'Come to-morrow morning for I wish to give you the medicine-man's insignia.' 791 173 662

Sendeyo replied: 'Very well,' and went to lie down.

While this was taking place, Lenana, who had hidden himself in the calf-shed, overheard the conversation. He arose early in the morning and went to his father's hut. On his arrival he said: 'Father I have come.'

[1] Lenana is sometimes said to be the eldest son of Mbatian.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

791 173 662 Ore 'M-Batyany na ol-móruo kitok eata eng-oligu nabo ake, nemedol en-gerai enye, neisho 'n-dókitin o-'l-oiboni, aa ol-kuma le-'seghengei, o en-gidoñg, o ol-tulet, o embene, o 'n-doto e-'n-aibon,' nějo: 'Iye oitore 'l-alashera linōno o ol-orere pókin.'

Now Mbatian was very aged and he had only one eye. He therefore did not see which of his sons was before him and gave to Lenana the insignia of the medicine-man (the iron club and the medicine horn, the gourd, the stones[1], and the bag), at the same time saying: 'Thou shalt be great amongst thy brothers and amongst all the people.'

Ne'ya Ol-Ōnana 'n-dókitin o-'l-oiboni, nelo.

Lenana took the medicine-man's insignia and went away.

173 578 791 Ore p' eidip aabōmo, nejiñg Sendēu eng-aji e-menye, nějókini: 'Ol-alashe lino o'yawa 'n-dókitin o-'l-oiboni.' Negoro naleñg Sendēu, nějo: 'Maitore ol-alashe lai, aarare oo metna.'

Sendeyo then went to his father, but was told that his brother had already been there and been given the medicine-man's insignia. When he heard this, he was very angry and said: 'I will not be subject to my brother; I will fight with him till I kill him.'

Ōnaa něä 'M-Batyany, nenukari to-'l-Doinyo Orok.

Mbatian died and was buried near Donyo Erok.

Ore p' eidip atua, nějo kulikae-tuñganak: 'Ol-Ōnana ol-oiboni lañg, amu etiaka 'yook 'M-Batyany, "Aisho 'n-dókitin o-'l-oiboni en-gerai ai nara ol-oiboni linyi."' Netoni te-idye aaboitare Ol-Ōnana.

When he was dead, some of the people proclaimed Lenana principal medicine-man, 'for,' they said, 'Mbatian told us that he would give the insignia of his office to whichever of his sons he wished should succeed him.' They therefore remained with Lenana.

Kake ějo kulikae: 'Mme ol-oiboni lañg elle, amu etelejiahe.' Nepwo ninje aasuj Sendēu.

But others said: 'We will not acknowledge this man for he is a cheat,' and they threw in their lot with Sendeyo[2].

[628]

[1] It is possible that these stones, which according to tradition were brought many years ago from the north, may prove to be of some interest. It is asserted that no European has ever been allowed to behold them.

[2] This is the story as told by the Masai. The official version is that Lenana was chosen by the elders of most of the clans and districts on his father's death, but that Sendeyo refused to acknowledge him, and was

Now disease broke out amongst Sendeyo's people, many of whom died, their cattle all perished, and they were defeated by the Germans; whilst those people who remained with Lenana did not fall ill, and they obtained cattle, as Mbatian had predicted.

The two rivals waged war for many years, and eventually Sendeyo was beaten. He came in 1902 to beg his brother to allow him to live with him, and peace was concluded between the two parties.

Before Lenana dies he will select whichever of his sons is acquainted with the work of the medicine-men to succeed him.

The principal badge of the medicine-man's office is the iron club[1]. If the medicine-man sends a messenger to tell his people anything, he also sends his club so that it may be known that the message comes from him.

Should a medicine-man strike anybody with the iron club, that

supported by the 'L-oitai (i. e. the Masai of the 'L-oita sub-district, near Kilima Njaro), with whom he lived for many years. The warriors of the two parties frequently met in deadly strife, and raided each other's cattle. In 1902 Sendeyo gave up the hopeless conflict, and agreed to acknowledge his brother as chief. He now lives not far from Naivasha. Lenana himself says that he and his three brothers Sendeyo, Nellang, and Tolito were examined by their father a short time before the latter's death, and as he possessed a better knowledge of the work of the medicine-men than his brothers, he was given the iron club, &c., and chosen by the elders as Mbatian's successor.

[1] On one occasion the iron club was lost. A messenger was sent by Lenana to the Government authorities at Nairobi, and when crossing the Uganda Railway he was overtaken by a train. He jumped on one side and saved his life, but dropped the club, which was never found again. Its place was taken for some years by a small iron poker, but another club has now been made.

564 191

[1] The Kunono and Dorobo seem to hold much the same position among the Masai as the Tumaloda (smiths) and Ramis (hunters) among the Somali. No free Somali enters a smithy, or shakes hands with a smith; none takes a wife from this stock, or gives his daughter to a member of it. The Tumaloda are spread over the whole of Somaliland as the Kunono over Masailand, and no instance is known of them giving up the trade. Still more defiled and poorer are the Ramis, who, like the Dorobo, live by hunting game. Cp. Reland, *The History of Mankind*, vol. ii, p. 254.

The smiths have their own language, which, although a corruption of Masai, is not understood by the ordinary Masai. Not all of them can speak this language: it is only a certain number of them who know it. [198]

Ten epwo 'l-murran nayuñgiake, napik en-gine pe etum eibuñga.

Earthenware pots and gourds.

Some Masai women are able to make earthenware pots; others who are unable to make them buy them from savagas. 323 [939]

Gourds are also bought, or they are collected in the deserted kraals. [915]

One pot can be purchased for a goat. [935]

When the Masai make pots they make them in two sizes, big and small; these pots are also provided with handles[2] by which they can be picked up.

When warriors go to the woods to slaughter cattle, they carry their cooking-pots by a strip of hide fastened to the handles[2]. [982] [237]

[1] Lit. neetrila. [2] For illustrations see Hinde, *The Last of the Masai*, p. 69.

The divisions of the day[1].

The Masai have various names for the divisions of day and night.

There is day (as compared to night) and evening.

The evening is the time when the cattle return to the kraals just before the sun sets (6 p.m.).

There is also the time called Nightfall, or the hour for gossip (8 p.m.); this is the hour before people go to bed.

Then there is the night, midnight, and the time when the buffaloes go to drink—this latter is the hour before the sun rises, (which the Swahili call *Saa kumi* (4 a.m.).

There is also the time called The blood-red period *or* When the sun decorates the sky: this is the hour when the first rays of the sun redden the heavens (6 a.m.).

Then there is the morning; this is after the sun has risen.

There are also the hours called The sun stands *or* is opposite to one (midday), The shadows lower themselves (1–2 p.m.), and Afternoon.

[171] [1] The Dinka divide their day in much the same manner as the Masai (Kaufmann, *Schilderungen*, p. 131).

'N-gataltin oo 'l-apaltin.

Etii 'n-gataltin oñgwan oo 'l-apaltin tomon o aare.

'L-apaltin lo-'l-oirujuruj:

1. Kara-ōbo. Ninye ol-le-'n-gidipata e-'ng-al oo-'n-Gokwa, o ol-oiter ol-ari.

2. Kipern. Eiperno 'ñgorō-yok aajo meata 'n-gishu kulle.

3. L'-iarat. Etōito 'n-gujit, etaa 'iarat ake ooata 'n-gujit naanyori.

'L-apaltin lo-'l-amēyu:

1. Pushuka. Ninye eitapukye 'l-kik, áibuñgu 'n-dapuka.

2. 'N-duñgua. Ninye oñgusurari aishunye pe esha eng-al o-'l-tumurel.

3. Ol-oiborare. Eibor ingatambo.

'L-apaltin lo-'l-tumurel:

1. Ol-gisan. Ninye ol-le-'m-bolos lo-'l-tumurel, nemeshaiki 'wejitin pókin eitau 'l-orighaishi anaa 'l-kesen.

2. Ol-ōdalu. Ninye edalunye eng-oloñg, eidipa ataaha eng-al o-'l-tumurel.

3. Loo-'n-gushu. Ninye ol-le-'n-gidipata e-'ng-al o-'l-tumurel, nesuji 'n-gishu 'n-daritik naaji 'n-gushu.

Seasons and months.

There are four seasons and twelve months [1].

The months of showers:

1. June. This is the month after the rain of the Pleiades, and the first month of the year.

2. July. The women wrangle and squabble because the cows give but little milk.

3. August. The grass having become dry, food for the cattle is only found in the valleys.

The months of hunger:

1. September. The trees flower in this month.

2. October. This is the last month of hunger. When it is finished the lesser rains may be expected.

3. November. The clouds become white.

The months of the lesser rains:

1. December. This is the month when the lesser rains fall in showers and the ground looks like stools or cloths for carrying children in.

2. January. The sun comes out again, and the lesser rains stop.

3. February. This is the last month of the lesser rains, when flocks of small birds (Buphaga?) follow the cattle.

[1] The Dinka have two seasons and twelve months (Kaufmann, *Schilderungen*, p. 131).

1. Kuj-orok. Ninye eshaiye eng-ai oo-'n-Gokwa, neroku keper too-'ng-atambo, neata e-rukenya, nēji kuju.

2. Ōāni-oiñgok. Ninye epushunye 'l-oiñgok, nāāni tiañg meimin.

3. Loo-'n-Gokwa. Ninye edōyórie 'n-Gokwa.

Ore ten eidipayu ol-apa loo-'n-Gokwa, pe esha eng-ai naleñg, nājo 'l-Maasae: 'Etorikīne 'yook, elle-apa Loo-'n-Gokwa.' Naa, ten ēosh eng-oloñg, p' eidipayu ol-apa ōji ol-oiborare, nājo aii: 'Etorikīne 'yook, elle-apa Ol-oiborare.'

The months of plenty:

1. March. This is the month when the rains of the Pleiades commence. The clouds become black, and heavy mists hang about.

2. April. The bulls have to be tied up in the kraals to prevent their being lost.

3. May. The Pleiades set in this month.

Should the rains still continue at the beginning of June, the Masai say: 'We have forgotten, this is May;' and should the hot season not be over at the commencement of December, they say: 'We have forgotten, this is November[1].'

827 'N-alimen, o en-giōget o en-dasing, oo 'mweiyani.

753 Ten emweiyu 'l-tuñganak

Yawning, hiccoughs, sneezing, and illnesses.

When the Masai yawn, they are said to be sleepy. If a small child yawns, his mother grasps his mouth between her fingers to prevent it from stretching and becoming big like the savages' mouths.

If a person has hiccoughs, it is believed that he will eat some meat.

When a person sneezes, he says to himself: 'Somebody is calling me.' If other people are present, they say to him: 'May God make your head hard,' or: 'Have good health.'

When a Masai falls ill, it is said

[1] The thirteen lunar months of the solar year are doubtless thus accounted for.

5. Ol-bughoi. Eishori 'l-tamweiya 'm-benek metanyaala.

Ol-chani lo-'supetai:

O-sagararami ōoki, áitu-

The following medicines are used as fever medicines:

1. *Cassia* (?). The crushed bark mixed with milk or blood and water is drunk by a fever-stricken person. It is very hot, and when chewed tastes like pepper.

2. The roots and fruit of *Solanum campylacanthum*, Hochst., are mixed with hot milk and drunk.

3. *Acacia albida*, Delile. The bark is stripped off and boiled. The patient drinks this and vomits, after which he recovers.

4. Blood and hot milk are drunk.

5. *Zanthoxylum sp.* Babies are given a piece of the bark to chew as a preventive against fever, for the Masai say: 'The fever is afraid of this tree.'

The medicines used to cause vomiting:

1. *Lippia sp.* soaked in boiling water.

2. A goat is slaughtered and the undigested food from the intestines is taken by the patient.

3. *Harrisonia abyssinica*, Oliver. The roots are put into hot water which is given to the patient.

4. Serum of a cow[3].

5. *Terminalia sp.* Sick people are given the leaves to chew.

The medicine for nerve complaints: *Bauhinia reticulata*, DC. The

[1] Swahili, pilipili.

[2] There are various kinds of *Solanum*, all of which are called 'N-dulele.

3. Ol-derkēsi. Netum sii 'l-muran eñg-gōlon ten ēok ing-abōbok o-'l-derkēsi áitushulaki eng-are.

4, 5. Ol-mangulai o Engitaru. Ēok il-muran in-dana enye áitushulaki 'mōtori oo-'n-dare, amu eitasapuk naleñg.

bark or roots are mixed with hot milk and drunk. Old men are very fond of this medicine.

757
824

Medicine for the spleen:

1. *Maba* (?). The roots are boiled, and the medicine is mixed with hot milk, which is drunk.

2. *Euclea fructuosa*, Hiern. The boiled roots are mixed with honey.

3. *Loranthus sp.* The roots are mixed with soup.

The medicines used by the warriors in their slaughter-houses:

1. *Acacia abyssinica*, Hochst. When Masai warriors slaughter a bullock, they make a medicine out of the bark and roots of this tree. This they mix with soup and drink out of the stomach of the bullock. Warriors who have been wounded are also given this medicine in water to quench the thirst.

2. *Pappea capensis, forma foliis maioribus*, Radlk. Warriors like drinking water in which some of the crushed bark of this tree has been soaked. The water becomes blood-red in appearance and the warriors gain in courage.

3. *Acacia sp.* Warriors also become brave when they drink a medicine made out of the bark of this tree.

4, 5. *Grewia villosa*, Willd., and *Croton zambesicus*, Müll. Arg. A strengthening medicine is obtained from the roots of these trees, which is mixed with mutton soup.

[1] *Acacia Kirkii*, Oliver, is also called Ol-kiloriti.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

824 283 Il-käk ooitaunyeki 'ng-opit:

1. Ol-mesera.
2. Ol-darpoi.
3. Ol-dōpai.
4. Ol-tepesi.
5. Ol-depe.
6. Ol-churai.
7. Ol-musalala.

The trees from which rope is made:

1. *Adansonia digitata*, L.
2. *Kigelia africana*, Bth.[1]
3. *Sanseviera cylindrica*, Boj.
4. *Acacia Seyal*, Delile.
5. *Acacia Merkeri*, Harms.
6. *Acacia robusta*, Burch.
7. *Musa Ensete*, J. F. Gmel.

Ol-chani ooitaunye 'l-muran 'ng-opit naashetye 'l-taighan:

The tree from which the warriors obtain the cord for binding their plaits with:

824 754 755 578 O-reteti.

Ficus, near *F. elegans*, Miq.

Ore sii ten edek ol-tuñgani ol-likae, pe ebaiki en-diata, neipot ol-likae meĉu anotaki, nēäniki eng-opito o-'reteti, nepik 'n-guti-alle náirōua oo 'musetani oñgwan.

If one man curses another, and the curse takes effect, the man who has been cursed calls the other and asks him to spit on him and to tie on his arm a strip of cord made from this fig-tree. The cord is first of all dipped in hot milk and then four beads are threaded on it.

824 Il-käk ooitaunye 'l-oibonok 'maahon:

1. Ol-oirien o-'l-tarakwai.

2. 'Ng-abōbok oo 'n-dana o-'l-mokongora.

3. O-seki. Ninye ol-chani sidai too-'l-Maasae; eata 'maahon enye naaji Ol-okóra, neitau 'l-oibonok.

[1789]

Eata sii 'l-ñganaiyok ooinos in-gera nēji 'N-gululu o-'seki.

[262]

4. 'Ng-abobok o-'l-kioge.

5. 'N-dana o-'l-asasiai.

The trees used by the medicine-men in making their medicines:

1. The heart-wood of *Juniperus procera*, Hochst.

2. The roots and stalks of *Lantana sp.*

3. *Cordia ovalis*, R. Br. This tree is thought much of by the Masai, and a charm made from it, which the medicine-men use, is called Ol-okora.

It has, too, an edible fruit, called The berries of the Cordia, which the children are fond of.

4. The bark of *Courbonia virgata*, Brongn.

5. The roots of *Osyris tenuifolia*, Engl.

Il-kăk eoirieki 'l-pukurto oo 'malasin naapiki kulle:

The trees which are used for fumigating the milk gourds: 824 264

Ten eisuj i-ñgorōyok il-pukurto naa 'n-gulak oo-'n-gishu ăisuji o e-sōeian o-'l-piro.

The women clean the milk gourds with cows' urine and a twig of the doum palm (*Hyphaene thebaica*, Mart.), the end of which has been chewed till it resembles a brush.

Ore p' eidip aatōir to-'l-oirien, nemesut to-'l-kidoñgoi.

The gourd is then fumigated by means of a smouldering piece of wood, after which it is dusted out with a cow's tail kept especially for this purpose. [237] [412]

Ore 'l-kăk ooitái 'l-oirienito ooji:

The trees which are used for fumigating are:

1. Ol-oirien[1] araki ol-tamiyoi.
2. Ol-dorko.
3. Ol-oisuki.
4. Ol-tai.
5. O-iri.

1. *Olea chrysophylla*, Lam.
2. *Cordia Rothii*, Roem. and Schult.
3. *Zanthoxylum sp.*
4. *Premna oligotricha*, Baker.
5. *Grewia sp.*

Il-kăk ooitaa 'l-muran oo 'n-doiye 'l-orōpili:

The trees which the warriors and girls use for scent: 824 302

1. 'N-dapuka o-'l-orōpil.
2. 'N-dana o-'l-mokongora.
3. 'M-benek o-'l-leleshwa naapik 'n-giyaa.
4. 'M-benek e-'n-jani e-'ngare.
5. E-songōyo eitauni 'ngepit, nepiai, nepiki 'murto.
6. 'N-dapuka oo 'm-benek o-'l-kumbau loo-'l-muran[2].

1. The flowers of *Justicia Fischeri*, Lindau.
2. The roots of *Lantana sp.*
3. The leaves of *Tarchonanthus camphoratus*, Houtt., which they wear in their ears.
4. The leaves of *Urticaceous sp.*, which grows at the water's edge.
5. *Indigofera sp.* This is plaited and hung round the neck.
6. The flowers and leaves of *Ocimum suave*, Willd.

[1] Ol-oirien means both the heart-wood of a tree and the wild olive.
[2] Lit. the warrior's tobacco.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

824 302 7. Ol-matasya enyor il-tuñganak aatepetai amu erōpil; neibuñgna sii 'l-muran too-'ng-aik epwo o-singólio; neiikye sii 'l-ala te-'lle-shani.

7. People like to lie on the leaves of *Clausena inaequalis*, Benth., as they are sweet-scented. The warriors also carry some in their hands when they go to the dances; and the branches of this plant are used as tooth-brushes.

8. 'N-dana oo-'l-ooibor-benek naapiki 'l-papit.

8. The roots of *Dregea rubicunda*, K. Sch., which are worn in the hair.

824 Ol-chani ōshetyeki 'l-loñgoi:

The tree used for binding shields:

[914] Ol-girigiri. Eitauni 'l-loom lenyena áitaa 'l-direta loo-'l-loñgoi.

Acacia pennata, Willd., the spine of which is used to sew the edge of the shields with.

[912] Eitaa sii 'l-muran il-jipeta ooinosye 'n-giri.

The warriors also make their meat-skewers of this tree.

[911] Il-käk ooitaunyeki 'l-kuman, oo 'siáren, oo 'n-gäk oo-'remeta:

The trees from which the clubs and the spear handles are made:

1. Ol-oirien araki ol-tamiyoi.

How fire is obtained.

When the Masai move and go far[1], the men take with them, or cut on the spot where they intend to stay, a hard pointed stick and a flat piece of wood. They then search for some donkey's dung or dry grass, and produce fire in the centre of the new kraal by drilling the stick into a hole in the wood. When the fire has reached the grass they set light to some leaves of *Cordia ovalis* and throw wood on to the fire. The women obtain their fire from the one which the men have made.

The Masai say that the hard stick is a man and the flat piece of wood his wife.

The hard sticks are cut from *Ficus sycomorus* and *Ekebergia sp.*; the flat pieces of wood from any fibrous tree, such as *Kigelia africana*, *Cordia ovalis*, or *Acacia albida*.

[1] When the journey is a short one the women carry fire with them.

Wounds and Surgeons.

752

If a Masai warrior is shot, and an arm or leg broken, the surgeons are able to mend it.

752 237

They cut through the flesh, take out the splinters and bring the edges of the bone together, after which they stitch up the wound with the sinew from the back of an ox, and bind the limb securely.

The only food that is given to a man with a broken limb is roast meat and the thirst-quenching medicine obtained from *Acacia abyssinica*. [278]

Should a man be shot in the belly so that the intestines protrude, the wound is washed and the intestines returned to their place; sheep's fat (a quart or more) is poured into the wound, which is then stitched up.

Again, if a man is shot and a rib broken, the flesh is skinned from the wound, and a sheep's rib is inserted in place of the broken one. Sheep's fat is then poured into the wound, after which it is sewn up.

The wounded man is not allowed to drink milk, and may only eat meat.

If a man is shot with a poisoned arrow, a pregnant cow is slaughtered, and he is given the caul fat to drink. This causes him to vomit and he recovers.

752

If the surgeons see that a man's bone cannot be mended, they fasten

a ligature round the limb and amputate it.

The surgeons are also able to castrate bulls, rams, and he-goats by either removing or crushing the testicles. When bulls are castrated, a cord is fastened tightly round their necks and blood is extracted from the jugular veins to prevent inflammation of the injured parts[1].

Songs.

A prayer to God[1].

782 844

Masai women do as follows when one of their number gives birth to a child.

They collect together and take milk to the mother; they then slaughter a sheep, which is called, The purifier of the hut, or simply The purifier.

The women slaughter the animal by themselves, and eat all the meat.

No man may approach the spot where the animal is slaughtered, for it is considered unlawful.

When the women have finished their meal, they stand up and sing the following song: [539]

[1] Masai women often pray twice daily. Men and children usually only pray in time of drought, or when a cattle plague is raging.

Eng-Ai! eng-Ai! naõmon ai,	*Solo.* The God! the God! whom I pray, my,
Injooki en-dõmõno.	Give me the offspring.
Naikurukur nesha,	Who thunders and it rains,
Iye õshi ak' aaõmon.	*Chorus.* Thee every day only I pray to thee.
Kileghen oilepu,	*Solo.* Morning star which rises hither,
Iye õshi ak' aaõmon.	*Chorus.* Thee every day only I pray to thee.
Ṭaasai leleshwa[1],	*Solo.* He to whom I offer prayer is like sage,
Iye õshi ak' aaõmon.	*Chorus.* Thee every day only I pray to thee.
Naõmoni, neniñg,	*Solo.* Who is prayed to, and He hears,
Iye õshi ak' aaõmon.	*Chorus.* Thee every day only I pray to thee.

Free Translation.

I

My God, to thee alone I pray
That offspring may to me be given.
Thee only I invoke each day,
O morning star in highest heaven.
God of the thunder and the rain,
Give ear unto my suppliant strain.
Lord of the powers of the air,
To thee I raise my daily prayer.

II

My God, to thee alone I pray,
Whose savour is as passing sweet
As only choicest herbs display,
Thy blessing daily I entreat.
Thou hearest when I pray to thee,
And listenest in thy clemency.
Lord of the powers of the air,
To thee I raise my daily prayer.

[1] This line is sometimes rendered Ṭarsai leleshwa. Ṭarsai is another name for God. Ol-leleshwa is *Tarchonanthus camphoratus*, Houtt.

The foe is routed: surely not in vain
Upon our brows we bound the lion's mane.
With bootless zeal the herdsman tracked our line,
Far, far ahead we drove the captured kine.
Their kraals we've burnt, their cattle we have ta'en,
And now we come in triumph home again.

'Singŏliŏitin loo-'l-muran.

Ten epwo 'l-muran loo-'l-Maasse en-jore, ore p' ŏar il-meek, nesira e-matwa e-tatĕne oo-'sesení to-'l-kiria e e-matwa e-kedyaŭye to-'n-duroto.

Nerep il-kulikae lekwa estaarishŏte.

Anaa elle ŏrepi aajo:

Etaa shumaroto

Ol-teigha lino eibuŭgi,
Tin idamu 'ng-aŭgita,
Em-barnoti e-'l-Puruo.

Warriors' songs.

When Masai warriors kill barbarians in a fight, they paint the right half of their bodies red and the left half white. [302]

The comrades of those who have killed some of the enemy then sing their praises.

The following is an example of their songs:

Solo. The pig-tail on the top of your head
Is about to be seized
When you remember the kraals,
Chorus. O warrior son of Ol-Poruo.

Free Translation.

Son of Ol-Puruo,
Mighty in battle,
Dost thou remember
The kraals and the cattle
We took from the foemen,
What time in thy daring
We scarce held thee back by
The plaits thou wast wearing?

1: Hollis G-5 (ca. 1894-1904) 1905

Ẹji sii kulikae-repeta. The following are other examples:

Solo. Ol-le-Langoi, ol-murani ōdo, 'l-memutana
Latukuyanye. (*Chorus*) En-deipa neitu lepeta.
Solo. Ajo edo. (*Chorus*) Keikajita? (*Solo*) Kat'-uni to-'l-apa ōbo.
Chorus. Arui le-'ng-aīg aīg náitadoli 'N-Jōwaine[1].
Nekedōki em-bwoto te-Kimar'[2] eikararo.

Solo. Ol-le-Langoi, the warrior who has reddened the ground with the blood
Of those whose country had not been reconnoitred.
Chorus. Who ran on ahead and returned in the evening to the van.
Solo. I tell you he has killed. (*Chorus*) How often? (*Solo*) Three times in one month.
Chorus. The cows with the crumpled horns which were shown to Ainsworth were in the kraal.
We captured them because he climbed to Kimara to take the place of those who had retired.

Free Translation.

I

Sing we the praise of that foremost of fighters,
Ol-le-Langoi, whose spear was ne'er wielded in vain,
Who spied out the land for our warriors advancing
And made the ground red with the blood of the slain.

II

Slumbered the foemen unwitting of danger,
Though we knew not the country, we felt no dismay,
But a bitter awakening was theirs in the morning
When thrice in one month thou their bravest didst slay.

III

Mighty the spoil from the kraal that we captured,
The herds of horned cattle we drove o'er the plain.
To Ainsworth[1] we showed them. Thine, thine is the glory,
Ol-le-Langoi, whose spear was ne'er wielded in vain.

[1] J. Ainsworth, Esq., C.M.G., H.M. Sub-Commissioner, Ukamba Province.
[2] Kimara is the Masai name for a district in Kikuyu.

1: Hollis G-5 (ca. 1894-1904) 1905

Solo. Etaa eng-orí e-'n-giteñg máitōniñgó,
Chorus. Nikirú 'n-gejek, Medoto lañg ōraposhe.

Solo. It came to pass that we heard the lowing of the kine,
Chorus. He ran (until he captured them), our Medoto of the splendid shield.

Free Translation.

Medoto of the splendid shield
Hath heard the lowing of the kine:
Soon shall their teeming udders yield
Rich store of milk for me and mine.

Solo. Eitu kutuko 'l-Murañgu[1] oo 'l-Makindara[2].
Chorus. Tipika ol-le-Parmet el-lughunya e-'m-bwoto.
Solo. Ebaiye misira ol-pile lai eng-opito,
Chorus. Eitu kinyōtōtó eng-aj'-añg, nado 'l-onito.

Solo. The people of Marangu and Moshi are in terror,
Chorus. Place the son of Parmet in the van of the fight.
Solo. When you did not kill anybody,
Chorus. We did not leave our hut, blood-red is our sign.

Free Translation.

Marangu and Moshi are cowering in terror:
Son of Parmet, go thou in the van of the fight.
If the foemen escape thee, at least we shall conquer,
With thee as our leader we'll never seek flight.
By our shields shalt thou know us, blood-red is our scutcheon,
The hosts of the Chaga shall yield to our might.
Marangu and Moshi are cowering in terror:
Son of Parmet, go thou in the van of the fight.

Solo. Ej' Ol-le-Tema e-sidai añg neitu eiteri.
Chorus. Elle leitu apikye ol-chōkut lin' en-jangar.
Solo. Etaa ol-chōkut ōdupa kiñgurakini.
Chorus. Kido 'm-piron ten enyiku en-jolōloto.

[1] Marangu is one of the Chaga States on Kilima Njaro.
[2] Mandara was a great chieftain of Moshi, one of the Chaga States.

Solo. It is said the son of Tema has an ostrich feather head-dress which has not been worn.

Chorus. I did not refuse to give you the credit of killing the herdsman.

Solo. They are seeking a stronger herdsman for you now.

Chorus. You killed another by the doum palm as we entered the country.

Free Translation.

When Tema's son first donned the ostrich plumes—
The manly dress that marks the warrior's pride—
Two foes he slew before the raid was done,
And in their blood his maiden spear was dyed.
The first was in the border marches slain
Beside the palm-tree, next the neatherd fell.
Sendeyo seeks a stronger herdsman now
To guard his kine 'gainst one who fights so well.

I – INTRODUCTION AND BIBLIOGRAPHY

In the October issue, 1952, of *Africa*, the *Journal of the International African Institute*, I published a critical evaluation of the age-system of the Nilo-Hamitic Peoples. That evaluation was based on an analysis of the existing anthropological literature of which the present paper offers the section on the Masai. It will be followed, I hope, by other papers on the other Nilo-Hamites. In the last few years intense fieldresearch has been going on, and new material is being made available. This will make it possible to fill in the gaps and complete the picture of the Nilo-Hamitic age-system. All this analytical work should be preliminary to a deeper study of Nilo-Hamites' social and religious organisation and possibly provide a basis for defining their cultural-historical relation with such other peoples as the Bantu-Hamites of East Africa, the Kikuyu, the Kamba, etc. 114

The literature on the Masai is comparatively voluminous, though much of it is irrelevant and unreliable and makes reading confusing and any analytical work complicate. I shall not compile here a full bibliography, but limit my indication to the actual works which deal with the age system and a few others I have used. I wish to thank 127

II – TRIBAL DIVISIONS AND OTHER SOCIAL ELEMENTS OF THE MASAI

101 619 The name Masai covers a group of related tribes in British East Africa. The linguistic classification of BEYAN (see Bibl.) distinguishes five Masai tribes:

1. *The Samburu*, north east of Lake Baringo, in the Rift Valley and Northern Frontier Provinces of Kenya. They are sometimes called Burkeneji, a derivative from *il-loo-iboor-keneji*, the people of the white goats. They are pastoral. We know very little of their social organisation as they have never been studied on the field.

2. *The Njamusi or Njemps*. They live close to Lake Baringo, and are mainly agricultural. DUNDAS,[1] states that "they are survivors of a Samburu tribe called Il Digio". What we know of the Njamusi is practically limited to the fact that they exist.

3. *The Kapiti or Kaputiei*. They live mainly in Kenya around Narok, Ngong and Kajiado. Some are found in Tanganyika. All are pastoral. HOLLIS' standard work on the Masai refers mainly to this tribe.

4. *The Kisongo*, found mainly in Tanganyika around Loliondo and Mondul. There are a few in Kenya. All are pastoral. The other standard work on the Masai by MERKER describes, for the most part, the Kisongo.

5. *The Lumbwa*. The name means "farmers", and is correctly applied only to the agricultural Masai. It is wrongly used also for the Kipsigis. The Lumbwa are found mainly in Tanganyika near Lake Natron, Lake Manyara, and around Arusha and Mt. Meru. They are called by the other Masai *Il-Oikop*, a name of despisal.[2]

197 According to BEYAN and TUCKER, all these Masai tribes are linguistically distinguished by "very slight dialectal differences".

[1] DUNDAS, *The Wamanga and other Tribes of the Elgon district, British East Africa* in *J. R. A. I.*, 43, 1913, p. 50.

[2] There are other names which do not indicate any special tribe, such as Il-Arusha, applied to the Masai living in or around Arusha. They are called Wa-Arusha by the neighbouring Bantu. Meru is the name for the Masai living on the slopes of Mt. Meru. They should be distinguished from the A-Meru of Kenya, Central Province. Kwafi is the Swahili term for the Masai, but it is especially applied to the Lumbwa of Kilosa District in Tanganyika. We may add that the Kikuyu and the A-Meru speak of the Masai (Mathai, Matua, respectively) as Okabi.

Z: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

On the whole, those two authorities stress the linguistic unity of all the Masai. 197

The great majority of the Masai are pastoral, only very few tribes having taken to agriculture. The pastoral tribes follow a semi-nomadic way of life. "They move", writes Lord HAILEY,[3] "with their herds in order to avail themselves of the seasonal variations in water supplies, so that in effect they practise a system of rotational grazing". The same writer,[4] reports "a recent estimate" of Masai herds in Kenya which puts "the number of cattle at over 700,000, with 800,000 sheep and a large number of donkeys". For Tanganyika he gives no figure. The above estimates show clearly enough how the attitude of the Masai to cattle is a paramount feature of their life. To own cattle is a privilege obtained through initiation, and large herds are a sign of outstanding social status. Cattle are the main economic interest and investment for the Masai.[5]

233 [221] 181 233 554

The total population of all the Masai may be reckoned at about 122,792. The 1948 census of Kenya's population (see Bibl.) gives for the Samburu an estimate of 20,000, and the following figures: Njemps 3,423, the other Masai 67,201. In 1931 the Tanganyika Masai were reckoned as 32, 168.

162 [161]

* * *

Under the present political situation, the Masai are not administered as a single unit, for they are divided into two sections by the border of Tanganyika Territory and Kenya Colony. 631

In Tanganyika the Masai form one of the four districts of the Territory's Northern Province (the Masai District). In Kenya the main group inhabits the reserve adjoining Tanganyika Masai District, and constitutes the Extra Provincial District (Masai District) of the Colony. The other group (Samburu and Njamusi) is incorporated with the Rift Valley Province (Samburu and Baringo District), and partly with the Northern Frontier Province. The geographical separation of the Samburu from the other Masai is the reason why the Samburu were considered, and are still considered, as a non-Masai tribe. But, as BRYAN remarks, they are true Masai. The splitting of Masailand and the separation of the Masai were made

175 permanent by the present administrative arrangement, but were not established by it. The land which divides the Samburu in the north from the Kapiti in the south of Kenya, was once the home of the Laikipiak and the Uasin Gishu Masai. In those days, Masailand was a continuous strip of land stretching over the plains south of Mt. Kilimanjaro and Mt. Meru up to the shores of Lake Rudolph. At the end of 19th century a great cattle plague and, even more, civil wars (the Kapiti versus the Laikipiak and Uasin Gishu) wrought havoc among the latter, who were almost destroyed. The few remnants have been absorbed by other Masai tribes, especially the Kapiti and the Kisongo. The Laikipiak plains west of Nanyuki which in 1904 had first been set aside as a special reserve (the Northern Masai reserve), were subsequently declared open to European settlement, and by 1911 Agreement the Southern Masai Reserve was enlarged into what is now the Extra Provincial District of the Masai in Kenya Colony. [4]

[731] [235] [669]

* * *

631 A comparative analysis of the literature shows the existence of three graded territorial units, the major and the minor territorial sections, and the village. A character common to the first two sections is the absence of a clear limit or boundary. The sections are spoken of in terms of watering and grazing rights. The nomadic aspect of Masai life is chiefly responsible for this territorial vagueness. The absence of any centralised authority to check people and cattle's transhumance is another important cause of the vagueness of Masai territorial organisation.

634 101 619 The major territorial section is made up by the area in which the movements of a full tribe usually take place. The existence of

[4] SANDFORD, *An Administrative and Political History of the Masai Reserve*, London 1919, Appendix; *K. L. C. E.*, p. 188. One may note that the Uasin Gishu and the Laikipiak, together with the Siria and the Lumbwa were despised as inferior, for they were not considered as "pure Masai" by the other tribes who regarded themselves as descendants of Masainda. See FOSBROOKE, p. 7. This ill-feeling may explain in part, the fury with which the Kapiti fought against the Laikipiak and the Uasin Gishu. [186]

In December 1950. I visited the Ndigirri Dorobo at Dol Dol on the Mukogodo Hills, some 50 miles north west of Nanyuki. They claim to have been dependent on the Laikipiak Masai, and they survived the slaughter thanks to their seclusion in the forests. Their present outlook seems to be entirely Masai. The names of their age-classes are consonant with those of the Masai.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

these sections is evidenced at a superficial level by the adoption of a common tribal name. But members of a major section are more closely bound by their social, ceremonial and military relationships based on their common age-system. FOSBROOKE,[7] who did not consider the major territorial section as a unit of Masai territorial organisation, tries to explain as follows the Kisongo major section: "the majority of the Masai in Tanganyika regard themselves as Kissongo, but Kissongo is a very difficult term to define, for it is neither a sub-tribe, nor yet, strictly speaking, a section. The nearest definition is probably "that group of sections which follows the Mondul laibon".[8] See: below *laibon's* relationship to Masai social organisation. The early fieldresearchers, MERKER and HOLLIS, recorded the major territorial sections which they calle 'Provinzen' and 'Districts', respectively. MERKER,[9] gave their number as three: Kisongo, Loita and Ol Bruggo. HOLLIS,[10] counted five: Kaputiei (Kapite plains) En aiposha (Naivasha), Kisongo (south and West Kilimanjaro), Uasin Gishu and 'L-Aikipiak. He noted that the last two had practically ceased to exist. The point is also confirmed by S. L. HINDE.[11] The term *en-gop*, pl. *in-gwapi*, which HOLLIS translates as "the land, the country", seems to apply to these major sections. Their number corresponds, at present, to the linguistic groups we have reported.

The minor territorial section has been made the subject of special analysis by FOSBROOKE. He defines it as "a territorial unit of the Masai, the members of which regard themselves as owners of the waters and grazing grounds, to the exlusion of other sections. Such a unit is called *ol osho*, pl. *il oishon*. Alone or in groups the sections function as units in war, in allegiance to a particular *laibon*, and in performance of certain tribal ceremonies; in general they possess a sense of solidarity which expresses itself in regarding members of other sections to a certain extent as strangers".[12]

The absence of definite geographical limits and the stress on water and grazing rights have been noted. The *laibon's*, or prophet,

[7] FOSBROOKE, *An Administrative Survey of the Masai Social System*, in *T. N. and R.*, 1948, p. 9.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

634 791 position in connection with the nature of the major and minor territorial sections is questionable. FOSBROOKE has put into evidence the marginal significance of the *laibon* for Masai social organisation. He has also shown how wrong it is to ascribe to the prophet's institution a political function. The prophet can only obtain a personal political influence which is his, and not of his office. Now, to describe the *laibon's* institution as the point of allegiance of territorial sections' members is tantamount to making the prophet a central political authority which he is certainly not. The important point in the nature of the territorial sections is members' consciousness of their strength and sufficiency as to be entitled to keep tribal ceremonies of their own.[13] In studying the Laitayok minor section FOSBROOKE brings that home: "in some areas they (the Laitayok) have been absorbed by the section amongst whom they resided, and thus eventually they came to be regarded as a clan; in other areas they were sufficiently numerous to enable them to retain their own grazing grounds, and to justify their holding tribal ceremonies of their own". FOSBROOKE insists on the fortuitous origin of the territorial minor sections. The point becomes obvious if the nomadism of the Masai and the abselce of any centralised authority are kept in mind. People remain in a definite place only for as long as [221] they find good grazing and water for their cattle, but they move as soon as these fail, thus breaking up their territorial allegiance.

634 101 619 The following is a tentative list of minor territorial sections deducted from the literature:

SAMBURU.	1. Pusigishu	4. L'Orogishu	7. Longeli
	2. Masola	5. Doiju	8. Nyabarei
	3. Lukumai	6. Mwesi	9. Loimusi

NJAMUSI. According to DUNDAS,[14] there are only two villages: Njemps Kubwa or Njemps Liabori – down stream; and Njemps Ndogo or Njemps Lekepir – up stream.

KAPITI.	1. Kaputiei or Kapiti	3. Ladokilarsi	6. Purko
		4. Kakonyuke	7. Loita
	2. Damat	5. Dalalakotok	8. Matapatu

[13] One should note here that tribal ceremonies are ceremonies connected with the institution of age-sets, a fact wich sleds light on the integrating power of the age-system. See BERNARDI, *The age-system of the Nilo-Hamitic Peoples*, in *Africa*, 22, 1952, pp. 316 ss.

[14] DUNDAS, *Notes on the Tribes inhabitating the Baringo district*, in *J. R. A. I.*, 1910, p. 49.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

 634

KISONGO.	1. Kisongo	2. Sigirari	5. Salei or Saleh
	a. Kiteto	3. Laitokitok	6. Laitayok
	b. Moiba	4. Siria	
LUMBWA.	1. Nguruman	2. Serenget	3. Engaruka

101
619

The villages, *eng ang*, pl. *ing angite*, is the minimal territorial unit. Villages are distributed within the minor sections. JOHNSTON,[15] had already noted that "they generally range within certain districts". A village is the residence of one or more elders with his or their wives and cattle. A man after his marriage does not live in the same village as his father, unless the latter has become senile and unable to cater for himself. 621 [591] [888]

The internal structure of the village is based on the gatesystem. This consists in a proper arrangement of the house on the sides of the village's gates. The village consists of a large yard enclosed by a thorny fence with gates opening at opposite sides. The house are built on the right and left sides of each gate, every gate with its houses belonging to a single elder. The usual arrangement is as follows: the first house on the gate's right is the dwelling of the owner's first wife; the first house on the left side is that of his second wife; the second house on the right side is that of his third wife; and the same alternating order is followed if marries more wives. The central yard is reserved for cattle. The elder's cattle are allotted to each of his wives according to her rank in the house. Cattle in possession of one side of the gate cannot be inherited by the other side. When inheritance takes place it is with great care that one tries to avoid cattle interchange.[16] The gate system, observes FOSBROOKE,[17] is an ideal, and "a symmetrically arranged gate is seldom found in practice". When people move in search of better grassland, the village is not destroyed, but simply evacuated. During the owner's absence the houses may be occupied by other temporary tenants. At the reverse migration the owner comes back to his old village if this is not irreparably decayed, and it is agreed by custom that any foreigner who might have found shelter in the house must vacate the place to the original owner. 621 361 [928] [166]

Another type of Masai village should be mentioned here. It is 621

[15] JOHNSTON, *The Uganda Protectorate*, London 1904, p. 810.
[16] See especially MERKER, *l. c.*, pp. 27 s.
[17] FOSBROOKE, *l. c.*, p. 44.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

621 the temporary residence of unmarried initiates or "warriors", called *ol manyatta*, pl. *i manyat*. According to MERKER,[18] "in every [634] section there is at least one warrior's village which gathers all the [561] warriors of the section". This type of village is closely related to the age-system institution. Therefore it is not a distinct territorial unit, though it shows the inter-relationship of the age-system and territorial organisation for its tenants are gathered from different villages. Indeed this is a further instance of the age-system's integrating power.[19]

* * *

614 Masai society is divided into two moieties, *en daloshi*, pl. *in daloishin*, which seem to provide a basis for clan organisation. Every Masai is found in either of the two moieties. These are named after cattle, one: *orok kiteng* — the black cattle, the other: *oodo mongi* — the red bulls. No exogamic restriction is attached to the moieties, 701 but, they seem to have an influence on military organisation. "Whe- 614 never", writes HOLLIS,[20] "the representatives of the clans take part in a raid", they are organised according to their moiety, and the loot is divided "into two parts, one part for each of these main groups".[21] MERKER, states that the words *orok kiteng* and *oodo mongi* are war-cries shouted by warriors according to their moiety. FOSBROOKE,[22] writes that the *orok kiteng* "are regarded as the right hand of the tribe", and the *oodo mongi* as the "left hand". He adds also that this dual division is typical of the "true Masai".

614 At the present there is no apparent relationship between the 634 moiety and the territorial system, but a few indications suggest that such a relationship existed in the past. Thus, in Laitokitok section, according to FOX[23] there is an equal number of "black

[18] MERKER, *l. c.*, p. 82.
[19] BERNARDI, *l. c.*, p. 225.
[20] HOLLIS, *l. c.*, p. 260.
[21] See also MERKER, *l. c.*, p. 97; FOX, *Further notes on the Masai of Kenya Colony*, in *J. R. A. I.*, 60, 1930, p. 457; HOBLEY, *Ethnology of A-Kamba and other East African tribes*, Cambridge 1910, p. 121, who states that the moiety divisions were followed for cattle-breeding purposes. Among the Turkana, the moieties or alternations were distinguished by different war songs or cries and tactical movements. See EMLEY, *The Turkana of Kaloeio District*, in *J. R. A. I.*, 43, 1927, pp. 165 s.

[23] FOX, *l. c.*, p. 457.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

cattle" and "red bulls". HOLLIS,[34] recorded two subdivisions of the Uasin Gishu, "the black striped cattle", and "the red striped cattle", which were, very probably, no other thing than the moieties. 614 634

The Masai *clans*, *ol gilata*, pl. *il gilata* or *en gishomi*, pl. *in gishomi*, are patrilineal and exogamous. Generally, they do not seem to be totemic. However, HOBLEY,[35] and the author of *MS.* No. 48 have recorded the names of a few clan totem. FOX,[36] refers also to the association of snakes with some clans. 614

The true exogamic unit of the Masai seems to be any individed unit, either clan or branch of the clan. A Masai may be adopted into another clan then his original one. The same provision applies even to an alien (Kikuyu, Dorobo). The adoptee, however, never attains the same social status as a full member of the clan. He is free to leave at any time, provided he returns whatever he was presented by his patrons, such as cattle or any other valuable. 614 597 [554]

The relationship between clans and their territorial distribution is not very clear. Analysis would suggest that in the past, clans were territorially separated. At present, there is still a tendency for members of the same clan to live close by to one another and occupy neighbouring encampments. Some sections are almost made up by members of a single clan. Thus, the *Molelian* clan is predominant in Kapiti section; the *Ataysok* clan is predominant in Dalalakotok section. Such facts, however, seem to be the exception. Usually clans are represented at a time in many different sections "There is no rule", writes HOBLEY,[37] "governing the distribution of the various *gilat* (clans); often members of as many as three *gilat* will be found in one *morn engang* (elders' village) or a *morun manyat* (warriors' village)". 614 361

Water and cattle are generally clan possession. When new water sources are discovered, they are claimed on behalf of the clan. All clan members who live in the neighbourhood are entitled to make use of them. A foreigner may also be allowed to water his cattle there. If disputes arise, they are settled by the council of clan-members on the spot. As a matter of fact, these water sources are the centre of ordinary social life, as FOSBROOKE[38] writes: "The 614 623 312 423

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

614 623 312 423 clansmen frequently meet on the water, and other matters — marriage, debts, etc. — come up for settlement before the tribunal". Clan ownership does not exclude individual ownership, which is integrated by the former as a sort of higher supervision. The point is that no clan property must be passed over to other clans without the owning clan's approval. HOBLEY,[29] states that cattle used to be marked by a clan brand showing clan-possession, and sometimes by a brand of the individual owner.

614 677 683 The corporate bond arising from clan relationship is confirmed by cases of murder compensation. Even if a murderer is a wealthy man, and might pay all the compensation out of his own stock, "the other branches of the clan would still contribute and they would pay their share". However, "if a Masai kills a member of his own branch of the *gilat* he pays compensation himself, and the other branches do not contribute".[30] LEAKEY, on the other hand, was told by his informants that no compensation is expected when a man kills a member of his own branch. They say: "what would be the use of taking a fine from one's own sub-clan?"[31] HOBLEY reports further that "each branch of the *gilat* to whom the murdered man belongs, receives a share of the compensation: 2-3rds to the murdered's father", and the rest is distributed among the other elders of the clan.[32] This is also confirmed by the notes of MAGUIRE on the penal code of the Masai.[33]

614 One should note that the corporate bond formed by clan relationship is of a particularist nature. It ties members to their own clan in opposition to other clans within the same tribe.

* * *

648 642 175 The many efforts of the Administration to identify a native political institution for local government make a very interesting piece of etnographical history. First in Kenya, and also, after 1918, in Tanganyika, one *laibon* was recognized as the Paramount Chief of the Masai. In Kenya such an office was abolished in 1918, while a graded system of councils was introduced: a Central Masai Council, 14 Native Councils and local Headmen. They acted as tribunals,

the Central Council being the Appeal Court. In the thirties, the system was again modified, and there are now two regularly constituted tribunals in each of the two Kenya Districts, Narok and Kajiado, in the Masai reserve, and an Appeal Tribunal in each district. It Tanganyika changes came later. Only in 1938 the Paramount Chief was abolished and a new system introduced. There is now a Masai Council, acting as the Appeal Court from the six Local Courts established under the authority of a Headman. Lord HAILEY, commenting on the Tanganyika system, remarks that "the whole of the juridical organisation seems on a tentative basis, and in practice it functions irregularly, owing to the nomadic habits of the people". This is more or less true also for Kenya. It is a fact that, in Kenya and Tanganyika, the Masai never accepted the authority of the *laibon* or prophet in terms of Paramount Chief, and that they dislike the idea of a formally established court.[*] Nomadism, as Lord HAILEY points out, has much to do with this attitude of the Masai, but it is their social structure which has no place for such institutions. Whatever political authority exists among the Masai, it is established on the structural basis of the age-system. This system has a dynamic character which can hardly be reconciled with the rigidity of any administrative system imposed from above by the Governement.

The institution of the Masai prophet has been described by FOSBROOKE, p. 13. He distinguishes three types of *laibon*. "First there is the private practitioner who, for suitable remunerations, will perform such service as curing sickness, removing barrenness and ensuring fidelity in wives. He is only consulted by individual patients. The next stage is when a private practitioner has acquired such a reputation that he is consulted by a deputation on behalf of a group of Masai, and provides charms and lays down a ceremonial to be utilized to the advantage of the whole group. Such prac-

[*] Writing of the Native Authority System in Kenya after 1918, Lord HAILEY says in *Native Administration in the British African Territories*. Part I — *East Africa: Uganda, Kenya, Tanganyika*, London 1950, p. 171, "these Tribunal were not generally recognized by the Masai who preferred that such issues as arose between them should be settled in the customary manner by the Headman or Elders". And with regard to the new development he notes, p. 176, that "the preference for referring cases to the arbitration of local headmen or elders persists". He makes a similar comment for Tanganyika on p. 294: "in the Masai District the majority of the issues arising between the tribesmen are settled by arbitration".

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

756 tices are alleged to be efficacious for the above-mentioned complaints,
791 and may also prove useful in procuring success in war, adequate rainfall, or immunity from disease, both human and bovine. Such a laibon of course retains his private practice. The final stage is when a laibon is invited to superintend and bless ceremonials affecting the whole tribe, such as circumcision, promotion of warriors, standing down, etc. Such a one retains the duties of the two previous stages, and is in fact the Chief Medicine Man of the section or tribe. This is the status which the term laibon popularly connotes." Therefore, it is clear first that the prophet is essentially a private practictioner, and secondly that his promotion to the higher stages of the practice derive primarily from his personal skill and good luck which give him reputation and, hence, influence on tribal matters. It is significant, however, that the prophet, even when he has reached the highest stage "retains the duties of the two previous stages", in other words, he does not cease to be a private practitioner. Therefore, the title "Chief which Fosbrooke also uses, does not properly describe the prophet's office and makes it Medicine Man", more formal than it really is.[**] It is for the same over-formalisation that our early authorities and the Administration were misled in the evaluation of the prophet institution.[**]

III – PRELIMINARIES TO THE INSTITUTION OF THE AGE-CLASS

561 The age-system of the Masai consists essentially in a structure of age-classes distinguished from one another in terms of seniority. An age-class is instituted as the final result of a long course of initiation ceremonies, performed during an official approved time.

The age-class must be distinguished from other minor groups such as the age-units. These are formed at different stages of the initiation course as intermediate steps to the establishment of the age-class. The age-class follows from the merging and unification of two age-units.

The Masai term for age-class is *olé aja*, pl. *il ajijik*; for age-unit, *ol parur*, pl. *il parur*.[**] These terms are frequently rendered into

[114] [*] Indeed Fosbrooke is unable to decide wether the laibon is the chief medicine man of the section or tribe.

[**] See also below, and on the relationship of the prophetinstitution to the structure of the age-system as a whole see Bernardi, l. c., pp. 333, 391.

[**] Merker, l. c., pp. 70 sq.; Hollis, l. c., pp. 128, 361 sq.; Leakey, l. c., pp. 191 sq.; Fox, l. c., p. 446; Fosbrooke, l. c., p. 36.

2:Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

English as 'generation' and 'age', respectively. Such a terminology is too vague and of little assistance in shedding light on the matter. 66

Sometimes the Masai apply these terms alternatively to the class or to the units,[**] but usually *ol oje* stands for the broader and final association i. e., the age-class, and *ol pore* for the temporary association i. e., the age-unit.

Age-class membership is obtained through initiation, and is held for life. The initiation course is opened by some preliminary ceremonies. These must be performed before any individual member may be initiated singly or in a group. Analysis shows that the importance of these ceremonies in connection with the institution of an age-class varies greatly. There are four such ceremonies: 1) *Epolos e-sile*; 2) *Enkoiwata*; 3) *Endengere*; 4) *Engikata*.[**] 67 68

Epolos E - Sile, " The passing of the fence ",[**] " A Masai child ", states HOLLIS, " cannot be circumcised until the father has observed a custom called " The passing of the fence ". The ceremony consists in a period of four days segregation. The candidate's father lives in a special hut set apart from the village, where he also takes his food. During this time he wears the clothes, decorations and weapons of a warrior. On the last day he is taken back to the village by some elders. Before he enters the house where the ceremonial wine is kept, he is addressed five times by one of the elders thus: " Go, become an old man ". He refuses saying: " No, I shall not ". At the fifth time, he replies – " Ho, I have gone then ". He then, enters the hut and puts aside the warrior's paraphernalia; the honey wine is drunk; and he is called by his son's name, thus: The father 69 70 71

[**] WESTERMANN, *Masai Social Customs*, in *J. R. A. I. E. H. E.*, 3, 1913, p. 148; FOX, l. c., p. 448.

[**] It is a widely held opinion that the institution of the Masai age-class is based entirely on the circumcision ceremony. Actually it is not uncommon to find the term " circumcision " used as an alternative to age-system and its groups. This opinion is partly justified by the expressions " right-hand circumcision ", *emurale tatoo*, and " left-hand circumcision ", *emurale kedipopi*, applied by the Masai to the first and second age-units, *il pore*, that forms a single age-class, *ol oje*.

It is a fact that circumcision is one of the outstanding ceremonies of the initiation course. However, it should be realized that circumcision is not identical with initiation, and above all that the institution of the age-unit as well as the age-class does not arise immediately out of circumcision. Therefore the tendency to make everything connected with Masai age-system gravitate towards circumcision is misleading.

[**] HOLLIS, l. c., pp. 304 ss.

2: Bernardi E, M-4 (no date) 1955 FL.12 Masai FL.12

of so-and-so. When he replies to his name, he is told to go and make a profit. He answers: "Herds and flocks". This is repeated four times, and the ceremony is over".

The ceremony is performed only once in a man's life, namely when he "wishes to have his eldest child circumcised". This particular circumstance shows that by "the passing of the fence" a man obtains a special elderly status which gives him a right to have all his children initiated.

Thus, there is a relationship between the father's social status and the initiation into the age-class of his son's. Sons of those may be initiated unless the father has reached the proper status. The personal status of the father is reflected on his children. Therefore the "passing of the fence" is not in itself part of the age-system initiation, but a condition which must have been observed before a man is allowed to have his sons initiated.

Other authorities (Fox) have stressed the fact that class membership of a Masai is somehow dictated by the class to which his father belongs. "The passing of the fence" gives a special emphasis to this fact and shows how a Masai's initiation into a class is conditioned by the social status of his father. It shows how the structure of Masai society stands on the balance of status of its members. *

"*The tearing of the ox*" (*Embolosat of Kiang*). * Though this ceremony is performed by a single section or a group of sections, its performance has a far reaching value which is accepted throughout Masailand. The ceremony is performed by such sections as the Kakonyike, the Dalalekotok and the Purko (all Kayiti). According to Fox the Kisongo also perform it. But this is denied by Fosbrooke, who qualifies Fox's statement by saying that the Kisongo acknowledge and respect the value of the ceremony performed by the Kakonyike.

As a matter of fact special importance is attached to the ceremony performed by the Kakonyike, who in any case must be the first to do it and who have the lead in the matter. All the sections which

* The social balance between the father and his son is only an expression of a wider and basic principle, which, in our opinion, is an essential principle of Masai social organization: the principle of the distribution of power. See Fosbrooke, l. c., pp. 208 ss.

* Fox, *Some on Marriage Customs among the Masai*, in *J. R. A. I. I. S. E.*, 43-44, 1911, pp. 189 s.; Lauer, l. c., p. xxiv *F.A.D.*, 1906, p. 8, n. 11; 1907, p. 14, n. 65; Fosbrooke, l. c., p. 97.

2:Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

do not hold their own ceremony same to, or acknowledge, the Kakonyuke ceremony. This is a point to be carefully noted. [581] [561]

Embolosat is preliminary not only to the circumcision ceremony, but also to any other initiation ceremony. [634]

Three different stages make up the whole of the ceremony, namely the election of the master of ceremonies, the contest, and the sacrifice of a bull followed by the naming of the age-unit.

a) The ceremony is organised by the elders. Their first task is to select a youth qualified to be master of the ceremonies (*el opolos el Kilong*). They also must obtain his father's consent on payment of some heifers.

The transaction is kept secret because the office is not popular with the youths. The elders' nominee is then seized in order that he may not escape, and told what is in store for him.

Not every boy is eligible for the office, but only a member of the *Loguenei* class. The *el opolos* must wear the garments and the ear-ornaments (*ewalpa*) of the elders, whose status he is to be invested with, which seems the reason for the reluctance to accept the office. The status of the *el opolos* is ceremonial and, according to Fox, he has no function outside the *Embolosat*. [614] [654]

The *el opolos* has to supply the ceremonial bull, [a] without blemish, colour black with white breast [b], [c] and the ceremony is completed at his village which is enlarged for the occasion. [d]

b) The day of the contest is fixed by the elders. In the morning the bull is taken back to the village, while the elders officially introduce the *el opolos* to the other candidates. These are told to look up to him because he is their *el opolos*. Then, the elders order the bull into the village and immediately the boys rush in to get hold of it.

Not all the boys enter the competition, only a few from each attending section. [e]

Members of the Kakonyuke section make a point of being victorious. The contest is stopped by the elders as soon as victory is [634]

[a] In the *Annual Report, F.A.D.* 1938, p. 9, n. 11, we are told that the "black ox is fed one day on milk and native beer, not being allowed to eat grass".

[b] According to LEAKEY a special new village is built.

[c] LEAKEY writes that "only those candidates for initiation whose fathers took part in a here-mating ceremony are allowed to take part; the rest of the candidates cannot do so, but stay at their homes while the ceremony takes place".

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

88 56 in sight. Victory consists in getting a hold of the bullock by its right horn and maintaining the grip.

c) After the contest the bull is smothered, and skinned; rings are made out of the skin and distributed by the *ol epolos*.[a] "The meat is eaten and the elders go to a place apart to pray to God for the boys. The age is then given a name which is kept until the *E-Unoto* ceremony, which takes place some years later". (FOX).

The bones of the ox are burnt and the fire is guarded to avoid any evil spell being cast on it.

Eventually the boys return to their homes and wait for their turn to be circumcised.

The fact that "only the right hand circumcision", i. e. the first of the two age-units of an age class, performs the ceremony is essential to an analysis of the significance of *Embolosat*.[b] It means that *Embolosat* is the first ceremony of the initiation which institutes the class, and not simply of the initiation which institutes the age-unit. Indeed the left hand circumcision, i. e. the junior age-unit of the class, does not perform *Embolosat*, and therefore the senior age-unit acting at *Embolosat* does it on behalf of the whole class. *Embolosat* should then be regarded as the starting point of a new class, opening the period during which the class is instituted. This specific value of *Embolosat* is confirmed by the acceptance on the part of all the Masai of the Kakonyuke ceremony. We do not know the reason why this ceremony should have such a paramount importance, but its social significance seems to be a thoroughly established fact. LEAKEY states that "only one ox-seizing ceremony (is held) in the whole Masai country, before a new age-group proceeds to initiation and circumcison". This statement is qualified by FOX in the sense that *Embolosat* is also performed by other sections, as we mentioned above, but the Kakonyuke must first perform it. Of the Kisongo FORRESTER writes: "the elders are extremely vague as to its (of *Embolosat*) meaning, but that the new age is formally inaugurated by *Embolosat* in Kenya is fully confirmed by the elders round Mondul".

[a] According to LEAKEY, the *ol epolos* is given a thong made from the skin and he is supposed never to throw it away, an obligation which does not apply to the youths who are given the rings.

[b] In the chart of Masai "age-grades" arranged by FORRESTER, *l. c.*, p. 24, embolosat is shown as taking place before the two circumcision periods of the age-units. This does not agree with the evidence offered by FOX. [114]

2:Bernardi E, M-4 (no date) 1955 FL.12 Masai FL.12

The value of the Kakonyuke *Endolenat* is further ascertained from the analogous value of *Ngakwy* proper of the Kisongo. This is a ceremony perfecting the institution of a class. It is performed by the Kisongo and accepted by all the Masai of Tanganyika and Kenya. *See below.*

The fact that sections other than the Kakonyuke hold their own ceremony may probably be ascribed to the tendency of the section to act as independent group. Their performance, at any rate, has only a limited local value.

Endungore – Engibata. [**] It appears that these two ceremonies, *Endungore* and *Engibata* are closely connected, if not actually one single ceremony. [**] The aim of *Endungore-Engibata* is to define the period for the institution of the age-units and start the initiation course related to such institution. The ceremony is performed by " the right hand and the left hand " age units, i. e. before the institution of each of the two units (WHITEHOUSE, MERKER, FOSBROOKE).

Some of our authorities stress the fact that the first step towards initiation must be taken by the boys. This is true, but the decision to hold the ceremony rests entirely with the elders, and the aim of the candidates' action on the elders is merely to convince that the time is ripe for the decision.

The elders contacted by the boys are members of the class next but one above the class which is to be formed by the candidates. [***]

It is not the leading elders that the candidates contact first, but others, whose duty, apparently, is to instruct them on the right way and method of approaching the leaders of the elders' class.

Those who are to see the elders are selected with care. They " must be pure bred Masai and must have some knowledge of ceremonial routine " (DAWSON).

It is relevant to note these details. They show how the prospec-

[**] MERKER, *l. c.*, p. 61; RAGON, *The circumcision ceremony among the Ilnyuko Masai*, in *J. R. A. I.*, 34, 1904, p. 166; HOLLIS, *l. c.*, p. 196; LEAKEY, 187 sq.; FOX, *Further Notes on the Masai of Kenia Colony*, in *J. R. A. I.*, 15, 1886, pp. 448 sq.; WHITEHOUSE, *l. c.*, pp. 148 sq.; DAWSON, *Notes on (a) Engopoin ceremony, (b) milk drinking ceremony, (c) Ol Kerendy*, pp. 1 sq.; *NAD*, 1931, p. 32, n. 48; *NAD*, 1937, p. 32, n. 54; FOSBROOKE, *l. c.*, pp. 18 s, 27 s.

[**] According to WHITEHOUSE *engibata* is the name of a dance which starts the *endugore*.

[***] In these and the following paragraphs whenever we refer to the elders " we intend the members of this class, unless otherwise stated.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

tive unit, and class, leaders are carefully selected and practically trained. It is from the outstanding senior members of the class, i. e. from those who have come to the fore since the very beginning, that leaders, whatever their function in Masai society, emerge.

The messengers (*el amal* – message) wear warriors' garments and decorations but no arms. "Their quest is a peaceful one" (WHITEHOUSE). *

Only two of the deputation will be introduced to the class-leader (*aipuenan*) by some of the elders. The message is delivered on behalf of all class candidates to the leader with some presents of honey. The matter is discussed by the leader and his council, and the messengers are advised of the date for the feast.

It is at this point that, according to WHITEHOUSE, *Endungore* is performed.

The ceremony is started by a dance (*Engikata*) in full array * followed by a prayer to God (*Ngai Narok* – the black God) for the candidates. The elders then take the candidates apart and instruct them on their duties towards the elders and their seniors generally. As soon as this is over, a fire-stick, a male circumcision knife, and a small dead bird (other than a dove) are produced. The elders break the stick, pierce the eyes of the bird and break its legs, and lay a curse on the knife. * In this way, the elders formally lay claim to the sponsorship of a new agegroup. From that time the boys refer to their sponsors as *Il Piron* whilst the elders refer to the boys as *Il-Piron* " (WHITEHOUSE). Indeed, it should be noted, as FOSBROOKE points out, that though the term *il piron* is frequently used with reference to the elders, it is a reciprocal term expressing a mutual relationship.

The symbolism of the *Endungore* ceremony is plain: the ceremony closes an initiation period.

When the *Endungore* is over, some of the elders (presumably the *aipuenani*) and three or four of the candidates go with presents to inform the prophet that the firesticks have been broken. They say – *Ol piron lang ele, kiro nale.* "This is our fire stick, we are one", which probably means that a new firestick is used to produce

* It is not lear whether the number of boy messengers is fixed. LEAKEY states that the *amal*-boys number from six to twelve, DUNAYE 18, FOSBROOKE 6. Probably no significance is attached to the actual figure.

* Three sets are formed, each distinguished by proper decoration, the first wears ostrich-feathers, the second wears lion-mane head-dresses, and all the members of the third have their bodies decorated with white stripes.

2: Bernardi E, M-4 (no date) 1955 FL.12 Masai FL.12

fire as a symbol of the new relationship between the elders and the candidates.

The next stage of *Eudungore-Engibata* is the election of the unit leader (*sipuremani*). This office is not popular with the boys, [illegible] and the election is kept as secret as possible from the person concerned. It is not very clear whether the election rest primarily with the boys or with the elders, both have a say in the matter since it is of common concern. [illegible] The selected person is chosen from the so called *ingopior*, i. e. "those who have shown ability and strength of character during the many debates already held" (WHITEHOUSE). This indicates that he must be a man of talent and personality. Some consideration is also given to the clan and family from which he comes. [illegible] The appointment is forced upon the boy, but only after the approval of his family has been obtained. The insignia of the *sipuremani* is a black club, which is presented to him by the leader of the elders. Prayers are also offered for the new elect.

The naming of the age-unit takes place now with great solemnity. Not all the candidates are present but only a few of them. [illegible] These are called *mojengema*. They take part in the ceremony dressed up in full regalia and painted with red clay and chalk. [illegible]

On the following day a great sacrifice of two bullocks [illegible] is also

[illegible] For the same reason given for the *ol epuko*.

[illegible] WHITEHOUSE states that "the names of possible candidates are submitted to the *il-piron* elders for consideration; the elders do not actually select a boy but prevent any unwise choice being made. The responsibility of making a choice rests with the boys themselves". On the other hand FOX, l. c., p. 480, states that in the first instance the nomination is made by the elders, and if the candidates are dissatisfied with him they may ask for a change. MERKER, l. c., p. 81, states the boys elect one of their member.

[illegible] Particularly, he must not be a member of the *Ingidongi* clan, the clan of the *laibon*.

[illegible] According to DAWSON, the *mojengema* must be 43 if the ceremony is for the 'right-hand' unit; 44, if the ceremony is for the 'left-hand' unit. These boys must be pure Masai, and must never have killed a Masai.

[illegible] "The *mojengema*", writes DAWSON, "assemble in the middle of the village and the *Sipuremani*, having poured honey beer into a trumpet made out of a kudu horn, blows two blasts on it and shouts the name. There is no answer as this name must never be mentioned by anyone. He again blows the horn and shouts out another name and is answered by a shout of 'Ee' from the *mojengema*. He again shouts out the name and is again answered by a shout of 'Ee'". The name is later announced to the other candidates by the leader and the *mojengema*.

[illegible] The sacrifice of the bullocks (one must be [illegible] may black) is ended by great ceremonial. The two beasts are smothered and

2:Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

[553] solemny performed. The festival lasts three days, during which
[554] none of the candidates are allowed to leave the place. It is only at the third day that they remove all decorations and are allowed "to cross the stream".

The fourth day after the sacrifice, all candidates are informed by their leader that they are free to return home, and on doing so he warns them that they must be honest and loyal. With this *Endungore-Enpiloto* is over.

The relationship between the elders and the candidates, the *il piron* relationship, offers a special subject of analysis.

As stated above, the elders in question are members of the class next but one above the class to be formed by the initiation of the candidates. The gradation marking the two classes perhaps offers the clue to discovering why the sponsors of the candidates must be members of a definite class. We know from the rhythm of Masai class-system that the class next but one above the class of the candidates is generally the class of the fathers of the candidates. The
[554] *piron*-elders, therefore, possess the same social status as the fathers of the candidates. Hence, being on the same social level, the *piron*-elders possess the social capacity to be sponsors for the candidates. Such sponsorship brings about a mutual relationship between the two classes, a relationship respected by members of the classes concerned throughout their life.

The *piron*-elders have a real authority over the candidates so that no ceremony connected with initiation may be started by the candidate without the approval of the elders. The piron-relationship is officially established at the *Endungore* ceremony."

[555] their blood is drunk in turn by the *enjungoro* and all candidates. Then two of the elders smear the face of the candidates with the bullocks' heart. The elders must be of the 'right-hand' unit, but they are assisted by two of the 'left-hand', who take their place when they are tired. The meat is distributed among the elders (if warriors, i. e. the last initiates, are attending, they are not supposed to be seen eating meat in public), and the usual sacrificial kiddings are prepared for all those present. All the time the bones of the animals are watched to prevent stealing for the purpose of magic, and finally they are burnt out and all the remains buried underground.

" That the *piron*-elders take a strong view of their power is shown by a case reported by Fosbrooke, pp. 18 s. In February, 1948, after *Endungore* had been performed, " a *Dunti* elder (i. e. senior elder, member of the class next after the candidates) [illegible] and lowered beer in preparation for the event. The local *Dunti* (the *piron*-elders), hearing of this, determined to stop him, marched into his house (of-

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

Endungore-Engibata is performed both by the 'right-hand' and the 'left-hand' age units. This shows that the ceremony has a direct effect on the institution of the age units as such and not as coefficients of the age-class. The formation of the age unit takes place during a official period in which all its prospective members must be properly initiated. This official period is primarily defined by the performance of *Endungore-Engibata*.

Endungore-Engibata obtains its value by emphasizing the negative aspect of the new initiation period, namely by making it illegal, a new *piron*-relationship having been established, to initiate any one except on the new *piron*-elders' authority, and by closing the association of further members to the previous age-unit.[40]

Engibata, therefore is to be considered as the opening ceremony for the institution of the age unit. After *Engibata* candidates are legally initiated and automatically, i. e. precisely for having been initiated during a definite approved period, become members of that age unit.

From a territorial point of view *Endungore-Engibata* is a sectional ceremony. It is performed by minor territorial sections, but no single performance is acknowledged throughout Masailand, as in the case of *Embolosat*. This makes clear the different value of *Embolosat* and of *Endungore-Engibata*. *Embolosat* opens the period for the institution of the age-class, and therefore its value is accepted

boys) and drank the beer themselves. It is confirmed by numerous reliable elders, that even if the *laibon* had given his sanction for the circumcision, the *Dareto* elders would have been justified in acting as they did". Note the prophet's limited authority.

[40] This is clearly shown by the case reported by FOSBROOKE and quoted in previous footnote. The *Dwani* man had failed to inform the *Dareto* elders (the *piron*-elders) of his intention, and very probably his sons' initiation was intended to be performed by the outgoing *piron*-elders. If the *Dwani* man had his own way, his sons would have become members of the last age-unit, but illegal; hence the so strong objection of the *Dareto* elders. The above explanation is confirmed by what MERKER, pp. 70 s., states, namely that a fourth minor division, *el oiropa*, could be formed by those who were circumcised immediately before the official closing of the period for individual initiation, as below. In *SAD*, 1937, p. 33, n. 84, we read as follows: " the Officer in charge reported that a number of *lapak* (uncircumcised boys) who would have been too old to await the next '*Ngabata*' were circumcised and incorporated in an *Kidoto* age ". Probably this is a similar case as that referred to by MERKER. The case shows that there is a definite closing time for every set. After this time every new initiate will be associated with a new set.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

881 by all the Masai. It is performed by the first group of class members
561 (right-hand unit), but, as it were, on behalf of the whole class. *Endungore-Engibata* opens the period for the institution of the age unit. It is performed by the first batch of unit-members, who can be said to act on behalf of all their unit-mates.

Endungore-Engibata cuts the period which was opened by *Embolosat* into two sub-periods during which the age-units are instituted.

To these two ceremonies, *Embolosat* and *Endungore-Engibata*, correspond two closing ceremonies having analogous effects and limitations. Thus, every age-unit is officially closed by the performance of the *Unoto* ceremony, and the class is officially closed by the performance of the *Ngeherr* proper.

The problem of the interval between these ceremonies will be discussed below.

IV – INDIVIDUAL INITIATION [44]

881 Individual initiation, or the first initiation of individual members, is effected through the circumcision ceremonial.

This initiation is not, territorially, a sectional ceremony, but it is performed at any village where candidates are found. The ceremony is enacted by small (2 or 3: FOSBROOKE), [45] or perhaps larger (MEEKER), [46] groups of candidates, or even singly (FOSBROOKE, and HOLLIS), [47] and the latter seems to be the general rule according to (FOX), [48] The guiding principle seems to be that a candidate must be initiated at his father's village. [49]

The expression "individual initiation" describes how each and every candidate is expected to pass through it, and how the cere-

[48] HOLLIS, *The Nandi*, Oxford 1909, p. 100.

[49] "Each boy... at his own village separately" states FOX, *Notes on Marriage Customs among the Masai*, p. 190; and FOSBROOKE, *l. c.*, p. 28, writes "... in the father's home (village)". The coming together of few candidates for initiation makes the performance easier and economic. Thus, for a purely economic reason the children of poor parents frequently wait longer than others for initiation.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

monies are not performed by some selected individuals on behalf of others, as for *Embolosat* and *Endungore-Engibata*. Also from a territorial point of view all these ceremonies differ. A single performance of *Embolosat*, which opens the class-period, is valid for all Masailand; *Endungore-Engibata*, which opens the unit-period, is sectional; individual initiation is held at each village. The following diagram illustrates the correspondence.

A candidate's age for individual initiation is indicated by FOSBROOKE as 16-17 years. The principle for admission to initiation seems to be that the candidate must have passed his puberty, and his father must have performed "the passing of the fence" as described above. [67]

Circumcision is the central point of Masai individual initiation. The ceremony is performed in three stages, *a*) a testing of the past moral behaviour of the candidate; *b*) the ordeal of circumcision; *c*) a period of special segregation.

a) On the eve of circumcision day the candidate is completely shaved by his mother. The elders are entertained with meat and beer [68] at the house of the candidate's mother. [69] Then the elders

[67] Cases may occur of boys who have to be initiated at an earlier age for some special reason. FOSBROOKE, *l. c.*, p. 38 records the instance of a father's orphan having to be initiated in his early puberty in order to inherit.

[68] HOLLIS, *l. c.*, p. 297, states that a bullock is slaughtered and called *el-eirupuhiniik* — the (animal) that has caused him to be taken out of the boys' ranks. FOX says that a number (5, 6 or 9) of gourds of beer are offered to the elders.

[69] There is no special meaning in the use of the mother's house. The custom is conditioned by the arrangement of a Masai polygynic village. Every

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

881 "ask the boy (candidate) various questions as to his past behaviour, and he is put on oath to answer truly".[28] Apparently no special ordeal such as we find among the Kipsigis is attached to this testing.

b) The operation may be performed "in the morning or the evening according to the particular custom of the family concerned" (Fox). Generally it takes place early in the morning. The operator [648] is said never to be a Masai. Generally he is a Dorobo, and sometimes a Kikuyu (Fox). This peculiarity is worth noting, especially if it is compared with the great care observed in selecting all other leaders or officers out of the pure Masai.[29]

881 Before the operation is performed, the candidates take a cold 304 bath in order to make their body insensible, or remain "shivering in a state of nudity until the sun rises" (Bagge).[30] Candidates are then operated upon, outside the village near the right-hand post of the gate. The patient must not betray any sign of suffering. That would disgrace him and all his family. A few elders assist and support the patient during the operation, and help him to his mother's house after the wound has been washed. Once inside he is given food (fresh blood) and a special beverage, called *eng alipata*, after which he is allowed to speak.

881 The circumcised youth is presented by his mother's brother [591] with new sandals, and henceforth he is not supposed to make use of any garment worn before the ceremony. A procession by four girls (cfr. Fox), waving branches takes place to the entrance of the [594] boy's hut. The elders are again entertained with meat and beer;

[595] wife of a man has her independent house where she lives with her children and cattle. But the whole homestead belongs to the father, and it would be quite correct, though not as precise, to say: the house of the candidate's father.

[28] We may assume that these questions are connected with the candidate's moral and sexual behaviour. Fosbrooke states that "prior to circumcision [834] no youth may have intercourse with a circumcised woman. This is a rule most strictly adhered to". The same custom is observed among the Nandi-speaking peoples.

[29] Cfr. the election of the Ol Oi *opolos* at the *Enkolomi*; of the *ol emoi* boys, the *oiguenani*, and the *enfoyenos* at the *Endanyore-Enpikata*; of the *ol emoni* at the *manto*.

[23] [30] Leakey states that it is "absolutely essential that the cattle shall be [23] in their enclosure during the whole of the ceremony". *No further details are* given, nor are reasons offered for this fact which is not mentioned by any of our Masai authorities. However, it shows that circumcision is not related to the cattle aspect of Masai culture.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

the warriors with milk. This seems to be the feast that MERKER refers to as "the feast of the circumcised boys – *el ejor lel eijok emerate*". The newly circumcised remain in his mother's house until the wound is healed.

c) At this stage all the newly circumcised assemble from the various villages; they form small bands and go around shooting at small birds with special small bows and arrows. They wear women's clothes, women's ear-decorations (used also by elders) and a special headdress to which they append the birds they kill. During this period they are called *es sibolio*, pl. *i-sibolio* – the recluse, and are under strict regulations: At evening they must return home and enter the village before the cattle. They must not drink blood or cut meat or touch it with their hands. They must not wash. They must avoid girls. They must not fight with, or be struck by, any other: if this happens, milk must be put on their heads. They must not go out in the daytime without their special headdress.

The period of segregation may last for some months. At the end by order of the elders they are shaved by their mothers (hence they are called the shaved ones – *el barusti* pl. *el barust*) and presented by their fathers with the arms of the warriors, a spear, a sword and a shield. It is a peculiar distinction of the initiates to let their hair grow and to twist it into a pigtail of which they are very proud. [19] At this later stage the initiates will be called *el morani*, pl. *el moran*, i. e. those who have been circumcised.

It is generally stated, and apparently even by the Masai themselves, that as soon as a youth is circumcised he becomes a man. The evidence shows clearly that the expression "becomes a man" does not describe the real social status of a newly circumcised. Even if the statement is taken to mean that through circumcision a boy has attained the status of a man, and therefore is entitled to full participation in Masai social life, the statement is at variance with the evidence. As a matter of fact no Masai is allowed to marry soon after circumcision. In order to marry he must be at least a senior initiate, i. e. a member of the senior age-unit. [20] A newly circumcised (i. e. a junior, and to some extent also a senior initiate) may

[19] On this particular custom, cfr. MERKER, l. c., p. 143; ELLIOT, in *J. S. and R.* 1904, n. 34, pp. 80-90.

[20] The seniority of the age units is discussed in the next paragraph. With reference to the text above we note that even when a senior initiate marries, he is not allowed to beget children, as this is the privilege of the elders. See below, where LACKEY and FOX are cited.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 not possess cattle of his own (cattle are the property of his father), and therefore he cannot form his own family which wuld not kelp nt. He may not eat meat in public; he may not drink milk on his own, but only wth some of his age-unit mates; he is expected to live in a special agregated village; and as a member of the age unit, he is, individually as well as corporately, under the social and political authority of the elders. Finally, from the military point of view, although he is allowed to take part in raids or other police action, he is still considered a learner and is expected to accompany the senior initiated in order to be trained properly.

The expression, then, "becomes a man" is merely an antici-
[884] pation of a statusnot yet attained but towards which the first approved step has been taken.

561 554 Individual initiation causes a boy to become a full member of an age-unit, and hereby he is introduced into the active and governing sections of ociety. Indeed, in the present cultural situation of the Masai, circumcision is the main ceremony of individual initiation, and is th essential requirement for unit and class- membership. However, the initiate's membership into a definite unit or class derives primarily not from his individual initiation, but from the initiation being performed during the period for the institution of that unt or class. It is, therefore, from finding himself within a definite priod that a Masai initiate obtains a definite place in the structure f his own society. Indeed, this structural effect of time on the initiate is the essential point of the age-system as a phenomenon relevant to social structive. "

561 V – THE AGEUNITS AND THEIR MUTUAL RELATIONSHIP "

The two age-nits of a class are called respectively "the right-hand circumcision" (*emurata statese*) and the "left-hand circumcision" (*emurata ebkyenye*). These two units are instituted in turn, in succession of time 'the right-hand' first, 'the left-hand' second. That succession is usualy expressed in terms of seniority, as we see below.

Each age-unit however, is further subdivided. These subdivisions are formed by all those who have been individually initiated

during the same season. FOSBROOKE states that "circumcision", or better individual initiation "is usually performed during or at the end of the rains, a time of plenty among the Masai," and is suspended during the dry season". 561

It is, therefore the seasonal rhythm that causes a further division of the period for the institution of the age-unit and thereby brings about the minimal divisions of the age-class. The phenomenon is in some way due to the nature of things. Indeed, as Fosbrooke continues, "it is natural that those circumcised in one season possess a marked feeling of affinity towards one another. This shows itself in the possession of a group name for each batch, the same names being employed from generation to generation".[33]

There is no need to stress that "the possession of a group name" indicates that a special group has been instituted.

Within the period for the institution of an age-unit, i. e., between the performance of two successive *Eadungore-Engibata*, individual initiations take place, according to FOSBROOKE[34] during four rainy seasons, and therefore four minimal age-divisions are formed as follows: (1) *il Changen opirr* or *il Kiperen*; (2) *il Paringetwa-lang*; (3) *il Kirimbot*; (4) *il Tareto*. MEEKER,[35] and HOLLIS,[36] state that the minimal divisions were three:

According to MEEKER, (1) *el fangen obir*; (2) *el baringo duallen*; (3) *el perimbot*, and this last is said to be the youngest: "der jüngste Jahrgang". But MEEKER states also that a fourth one is added, called *el oirogua*, which is formed by those who are initiated immediately before the performance of *Engibata*, i. e. before the proper period for individual initiation, or circumcision, is closed.

According to HOLLIS, the following is the order of names:

(1) *'L-changen-epir* — the big ostrich feathers; (2) *'L-tareto* — the helpers; (3) *'L-paringetwalang* — our fleet runners.

It is not very clear what function these minimal divisions perform in the internal structure of the age-units. It is clear, however, that, being they formed in a succession of time, they define the status of seniority among the age-unit members and foster that [554]

[33] Note how economics ("a time of plenty") influence the holding of an initiation festival.

[34] This means that the names of these minimal divisions are always the same for every class.

[35] FOSBROOKE, l. c., p. 86.

[36] MEEKER, l. c., pp. 70 s.

[37] HOLLIS, l. c., p. 303.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 [554] feeling of corporate responsibility and membership, which is a typical feature of the age-class system.

It seems certain that the left-hand unit does not group as many members as the right-hand unit. According to FOERBOOKE, the left-hand unit is formed only by the three last-named minimal divisions; FOX states that it may not occur at all.

The following tables illustrate the situation.

561 634 The first table is reproduced from FOERBOOKE (1939). * It refers to the number of age-unit members in four different places of the Kisongo section:

PLACES		Kihaya	Samatwa	Engaremet	Longido	TOTAL
Right-Hand Unit	Kisale	62	133	65	200	460
Left-Hand Unit	Meriabe	41	36	11	34	122

The total percentage of members of the left-hand unit as compared with the right-hand unit is therefore 26%.

The second table is taken from FOX (1950). It refers to the names of the age-units:

SECTIONS	Purko	Loita and Siria	Damat
Right-Hand Unit	II Merutoret	II Kishangop	II Merutoret
Left-Hand Unit	II Kiteip	none	II Kiteip

SECTIONS	Kaputei Ledeki-lani Matapato	Laitokitok	Kisongo
Right-Hand Unit	II Alitelli	II Kobosi	?
Left-Hand Unit	none	none	II Kwimbet

561 Though the value of these tables is far from being absolute, they show that the right-hand unit is far more relevant than the left-hand unit. Indeed we find that candidates are far more anxious to join the right-hand unit than the left-hand unit. This may be explai-

* FOERBOOKE, l. c., p. 99; SOMAPANA, *Some Problems of Anthropological Research in Kenya Colony*, in *I. A. I.*, Memorandum XXIII, 1948, p. 6. This date is taken from SOMAPANA, p. 6. SOMAPANA refers to the paper of FOERBOOKE as a manuscript. This was published in 1948.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

ned by the status of seniority which is higher for the right-hand unit than for the left-hand unit. 561

To study how the seniority status of the age-units affects the structure of the age-class may be useful to our analysis.

The right-hand unit, being the first of the two-units forming a class, is senior to the left-hand unit. A class, however, is not an absolute institutionalised set of persons, but it is related to other classes below or above itself. Therefore, the two age-units of a single class must also be considered in relation to other classes.

The right-hand unit at the time of its institution has no actual relation to the left-hand unit for the latter does not exist yet, but it has relation to the class next above itself and particularly to the left-hand unit of this.* Such a relationship makes the right-hand unit junior to the left-hand unit of that class next above. At a later stage, when the new left-hand unit is instituted, the right-hand unit in question becomes a senior unit. The senior right-hand unit and the junior left-hand unit will finally merge into a class. Therefore, if a class is regarded as an absolute body, the right-hand unit is the senior and the left-hand unit the junior. But if the class is viewed as a related body, both the right-hand and the left-hand unit pass through a first stage of juniority, and a successive stage of seniority.

It is important to stress that in the structure of a single age-class the right-hand unit is always the senior unit and the left-hand unit is always the junior unit. 561 554

The status of seniority, as contrasted to that of juniority, is not a mere abstraction. It gives rise to some special privileges which are recorded by FOSBROOKE as follows: (1) " the marking on the shield known as *ewet ewpuki*; " (2) the spear handle of black wool called *enjeta narok*; (3) the right to hold a dance without seeking permission

* One should note that a class is finally instituted, i. e., the two age-units merge into a new single age-set, when the first unit of the next following class has been instituted. See below on the diagrams on the overlapping rhythm.

* According to HANNAH, p. 78, there may be six marks in the coats-of-arms of Masai warriors which they paint on their shields: 1. the warrior red mark (*ewet ewpuki*, to which FOSBROOKE refers; 2. the black mark (*ewet ewuk*); 3. the ornamental band; 4. the coat-of-arms of the clan; 5. the coat of leadership (*Kerpenlerkaffenlaibon*); 6. the mark of bravery or distinction. Of all these marks the most important is the warriors' red mark (No. 1. The mark of the clan was rare in Hannah's time. The mark of bravery is reserved for the warriors who distinguish themselves in military action. The shield of the junior initiates (*il kewuti*) is pure in colour and pattern. They are allowed only the black mark; the red one is reserved for the senior initiates. [531]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 554 from the senior moran". To these, according to MERKER, p. 82, should be added the formation of the initiates' segregated village (manyatta).[*]

561 578 The behaviour set up by seniority relationship is one of open rivalry between the two adjacent units. Members of the senior unit look down with contempt on those of the junior unit and the latter retaliate as best as they can. The conflicts and clashes which ensue seem to be accepted as a normal social institution and in fact they are looked upon with favour.

FORRESTER,[**] notes that initiates make no formal demand for the above mentioned privileges of seniority. "The juniors", he writes, "will assume one of the privileges, and when met by a band of seniors will promptly be beaten up and retreat. This process continues till wounds become frequent in these affrays. When the seniors feel that they are on the point of losing their ascendancy, they graciously hand over these privileges to the juniors, who may then proceed to the Uasin ceremony". A detailed description of the same process is given by MERKER.[***]

561 The claim for the privileges of seniority and the Uasin ceremony mark the final stage of the official period for performing individual initiations and therefore for instituting the age-unit. There is a certain regular interval between these ceremonies, which our authorities try to estimate in terms of years. It seems, however, that the dwelling factors are, the adjustment between the senior and junior initiates, the former handing over the privileges of seniority to the latter, and the agreement of the pseudo-elders that the proper time has come for closing the age-unit period.

VI – THE FINAL INSTITUTION OF THE AGE-UNIT[*]

554 561 The final institution of the age-unit is brought about by the performance of the Uasin ceremony. This is described by FORRESTER,[**] as "the ceremony of promotion from junior to senior

[*] FORRESTER in his short, p. 34, puts this immediately following the period of the individual initiation (circumcision) of each unit.

[**] FORRESTER, l. c., p. 38.

[***] MERKER, l. c., pp. 60 ss.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

warriorhood". He also states that E'uete "is probably the best known and most misconstrued ceremony in the Masai age-grade system".

E'uete is not performed at a single place for whole Masailand, but in every territorial section or group of sections.** It consists of three main stage: (a) a testing of the candidates by the elders; (b) the election of the ceremonial leader of the unit; (c) a sacrifice of a bull.

a) The first stage takes place in a special hut called *singira*.* Not all the candidates, i. e., junior initiates, are allowed into the *singira*, but only those who have kept the sexual regulations which bind junior initiates. In order that no one may enter the *singira* under false pretences the entrance is bewitched by the elders. According to LEAKEY,* another test is performed inside the hut aiming at detecting those who have entered surreptitiously.

In the annual report of the *F.A.D.*,** we read that every candidate is expected to give "an account" of his past life. "The importance of the *E-Uete*" states the same report, "lie in the fact that it imposes an obligation upon a warrior who has disgraced himself in any way to clear himself of the stigma before he can marry and settle down as a respected Elder of the tribe". "The *O-Singira*" says FOX,** "gives the warriors permission to have sexual relations with initiated women".

b) The nomination of the ceremonial leader (*el-oononi*, pl. *il-oonok*, or *el-oiwo*) takes place inside the *singira* hut. The elders

** LEAKEY's statement, p. 184, that at the E'uete "all the members of a given group (i. e., age-unit) from the whole of the Masai country, north, south, east and west are required to be present" is emphatically denied by FOX, p. 481, and FERGUSON, p. 39. According to FOX the following sections perform it: (a) Purko, (b) Loita and Siria, (c) Dorsen, (d) Kaputiei, Loodokilani and Matapato, (e) Lukumai, (f) Kisongo. And FERGUSON says that the E'uete is celebrated "by sections or groups of sections" and is attended by as many warriors as possible, "but by no means all". KOLTREI, on EHRENFEL's authority, recorded that the E'uete was held by the Purko, Kakonyuke, Dalalekutuk and Dorsen on the Kisongo. The Siguroi, Sampuru, Kaputiei and other divisions where it ended then last.

* There are contradictory descriptions of the *singira*. HANNAN states that it is a "very big hut"; RUSSOM says "not so big"; BIRGIR "small". LEAKEY and FOX state respectively "as mushroom", and a "very large" hut. Probably it all depends on the actual number of the initiates involved.

* LEAKEY, l. c., p. 184.
** *F.A.D.*, p. 31.
** FOX, l. c., p. 481.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

56 634 and the candidates have previously agreed on the person to be appointed, and the matter is also discussed with the prophet (laibon). As in previous cases, these transactions are kept secret because the office is not popular, and the selected man and his family would avoid the election. Only a popular man and a " pure Masai " distinguished for his physical strength, may be appointed *oononi*. Generally the *oipuonan* is not elected, but in some cases he may be. "

56 634 PPP According to MERKER, p. 73, on the day of his official appointment, the selected man is seized and forced to sit on a stool in the centre of the *oiapira*. He is then clothed wit elders' garments and decorations. FOSBROOKE, " states that soon after his appointment he will be given a wife and cattle by his age-mates.

The unpopularity of the office seems to derive from the fact that the elected man must settle down and behave as an old man as to the peculiar nature of the office. This is described by FOSBROOKE, " and his description sums up the descriptions and statements of all other authorities. " " The duties of the position (of the *oononi*) are obscure, but as far as is known the *laonon* appears to be a sort of scapegoat for the age (unit). If he flourishes and begets many children, and if his cattle prosper and increase, it is a bad omen for the rest of the age (unit). But his adversity will indicate the age (unit)'s prosperity. He must do everything in advance of his age-mates, marry, settle down, make the final payment that binds the marriage. It is as though the *oononi* standing on the brink of elderhood, send forth the *laonon* as an explorer into the unknown country, so that any bad luck which may be awaiting them shall be focussed on one individual and not on the whole age (unit). But the *laonon* is held in great respect by his age-mates, and any demands that he makes must be fulfilled. It is stated that he is the only official whose order must be obeyed. In discussing this with an elder, I pointed out that this should give the office

56 634 PPP

" *loc. cit*, p. 6.
" FOSBROOKE, l. c., p. 38.
" FOSBROOKE, l. c., pp. 39 s.
" While on p. 39 FOSBROOKE states. Dodo " is performed by sections or groups of sections. The Kisongo traditionally perform the ceremony at Magadal near Ilmo, i. e., on the eastern slopes of Mashai Mountain, actually in the Arusha district. As many as possible of the age-attend, but by no means all ". On p. 38 he writes that " all sections and sub-sections meet together for the main ceremony ". Evidently this statement must be qualified by what he says above.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

great political importance, in reply to which the elder indicated that such did not necessarily follow as "we can always tell the lemom what order to give".

c) The sacrifice of a bull is then performed with great ceremonial. HOLLIS,[**] describes the contest in which the candidates compete in getting hold of a horn which was previously thrown into a fire.

With reference to this sacrifice a special officer is appointed. He is called oberempuyo; he has a ceremonial status and must prepare the hide-rings from the skin of the bull. He is also described by the author of *M.E.* 48 as "the official charmmaker of the morus". His function, however, seems to be limited to Tanis.

Great emphasis is laid by WARNECKEN,[***] on what he calls "the fire-drilling ceremony", which as Fischenke also says, "must in fact be the waste". The ceremony is described by Whitehouse in connection with the first erection of the segregated village of the initiates or *manyatta*.[****]

The fire is ceremonially lighted by the elders, and it must be carried into the new swellings of the village. The next morning after this ceremony, the candidates who have become senior initiates are blessed, and prayers to the black God are offered for them.[****]

At the waste, the women first, and then the other initiates, shave their hair. Pig-tails, however, are again fitted after the ceremony.

Some (four or five) months after the ceremony, when the senior

[**] HOLLIS, l. c., pp. 300 ss.

[***] WARNECKEN, l. c., p. 148.

[****] This circumstance supports HOLLIS's statement that one of the privileges demanded by the junior initiates is the building of their own segregated village, l. c., pp. 80 ss.

[****] It is of some interest to reproduce here from WARNECKEN, the prayer recited by the elders on this occasion. It shows clearly how the senior initiates are about to enter the most important stage of their life as members of Masai society. This is the prayer: " Be trustworthy, Oh, return safely, O God. — Become ye men and of God. — May the thieves pass you by. — With those who love us that they may find dry cows on their journeys. — Lenana and Sabit and Mwatian wish the safe return. — Grow up. Become possessed of wise heads. Become as great as the Kilimanjaro. — Be the fathers of my children, and bring them up well. Have many wives. — May God love you. May the red bull of the night guard them. May our age be the longest ". The expression of the first name " return safely " probably refers to the raid which follows soon. Lenana, Sabit, Mwatian were prophets.

J: Bernardi E, M-4 (no date) 1955 FL12 Maori FL12

[illegible] initiates have returned from a meat festival in the bush a raid is organised. According to HOCART this is called, "the (fulfilment) of the vow" or "the (selection) of the chief" (*Ka-ma-'u-durur arahi Ka-a-'wanu*).[illegible]

The main reason for this raid, is the strong desire of the new senior initiates to show their ability and enjoy the satisfaction of the military efficiency they have reached.

At the ends the age-unit assumes a new name.[illegible]

[illegible] *Uaua* if seen with relation to the social status of the initiates is undoubtedly a promotion ceremony. Junior become senior initiates. But if we consider the ceremony in connection with the institution of the age-unit, we find that *Uaua* brings together all those who have been individually initiated during previous years. In other words it merges into one body the three minimal divisions, it gives them a corporate status and institutes the age-unit. The performance of individual initiation is not ended with *Uaua*. It still takes place, but irregularly, and all those initiated at this time form the fourth minimal division, *ai ainapua*, as reported by MAKARA.[illegible] The ceremony closing the age-unit's legal period for individual initiation is *Endangore*, which, as we have seen, is performed by the *pirau-elders* of the next age-unit.

[illegible] Thus the institution of the age-unit is brought about by three different ceremonies, namely, *Beplinin* as the opening ceremony, *Uaua* as the instituting ceremony, and *Endangore* as the closing ceremony.

The closing value of *Endangore* is due to the negative aspect of this ceremony as we noted.

The point raised by the interval between all these various ceremonies is most confusing. The reason for this is that the interval is defined by all our authorities in terms which are foreign to Maori age-system. Therefore, we must accept the number of years which they suggest as more or less broad approximations.

[illegible] "The (fulfilment) of the vow" is not a special term for the raid which follows *uaua*, but is applied to any raid undertaken after a long pause. Cf. HOCART, l. c., p. 305, n. 3.

[illegible] FOX, l. c., p. 448, writes that "the present (1930) age (unit) of Parke-ravian was called *Ariagi* prior to the *B-Uaua* when they took the name of *B-Ariaki*.

[illegible] FORNANDER, l. c., p. 57, speaks of a "hiatus" between the age-units, and we think that such hiatus is that period which runs between the *Uaua* and the *Endangore-Beplinin*.

2: Bernardi E, M-4 (no date) 1955 FL12 Maori FL12

Hamana,[100] states that each year for three successive years, candidates are individually initiated and formed into separate minimal age-divisions. A fourth one follows immediately before the closing ceremony is celebrated. He does not state the length of the interval between two successive closing ceremonies. [54]

Hiroa,[101] is very definite on this point. He writes that individual initiation is performed for four years in succession, and all those initiated during these years belong to the right-hand unit. "An interval of about three and half years then intervenes before another festival is held". All those initiated during the next four years belong to the left-hand unit. Therefore, according to Hiroa, the period for the institution of each age-unit would be about seven and half years.

Laurey,[102] states that Tuete is celebrated after "nine years of junior warriorhood". But Fox,[103] disputes this and says that "nowadays it takes place from three to five years after initiation".

Wattenmaker,[104] writes that "the (initiation) ceremonies which commence about every 7 years extend over a period of about 5 years".

Freeman,[105] says that the right-hand unit performs Tuete 7 years after their initiation period has been opened; and the left-hand unit 5 years after it.

All these statements show clearly that there is no hard and fast definition of the period for the institution of the age-units, and they are evidence that our system of measuring time does not apply to the Maori. The major factor for fixing that period are the presence of candidates, the authority of the elders stating that the right time for performing the various ceremonies has come, and also the regular occurrence of good rainy seasons.

We may, however, say that the period of seven-eight years is a good approximation of what obtains in actual fact. If we take

[100] Hamana, l. c., p. 76.

[101] Hiroa, l. c., p. [illegible]. His account needs be mentioning. He states that "one hunt (circumcision hunt) is held in each subdivision every year for four years in succession". But it is certain that circumcision is not performed at the single occasion in each sub-division, but in any village where there are candidates. [54]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

56 *Enpikate* as the first ceremony for the institution of an age-unit, we may put *Emdo* at an interval of about three or four years; and then *Endengere* some two or three years, or more, after that.[111]

VII – THE INTERNAL STRUCTURE OF THE AGE-UNIT

The generic reference made by our authorities either to "the elders" or "the candidates", and so on, may cause the false impression that those engaged in the initiation ceremonies always act as a whole and corporate group. In point of fact, general meetings are rare occasions, and they are also restricted to territorial sections or groups of sections.

56 23 Only a few representatives of the age-units take the most important decisions in connection with the institution of the units.

We have mentioned the *ingopior* or *ingobir*, sg. *engobiro*. These are the best of the age-units initiates. It is they who first approach the elders and assist their own leaders, who usually are selected from among their number. These are, generally, the most senior. According to the information of FOERBOOKE,[112] they form "an inner council for appointing or degrading the *laiguenan*, and for the conduct of important public business". However, "there is no definite office of *engobiro*"; they emerge according to their talents, skill and personality. Thus "they are not necessarily confined to the first batch of initiates", but any one else, even of the last batch, whose qualities excel may be considered an *engobiro*.

[23] The elders here referred to are, as said, the *piron* elders. Their office of sponsors is thus summarised by FOERBOOKE,[113]: "the *il piron*-elders, i. e., the guardians of the youths, have to coach the senior boys in citizenship, taking them to the *laiko*, making them sit at their meetings, etc.".

Of the age-unit leaders (*eiguenani*) FOERBOOKE,[114] distinguishes three kinds, 1. of *eiguenani lengiriku pokin*, lit., the *eiguenani* of

[111] One of the few facts we possess concerning the Samburu is that "the circumcision etc. takes place at intervals of seven years". See WEBERER, *l. c.*, p. 8. For the other tribes in Masai District there are no indications in the various reports of the *NAD* concerning the above period. Cf. the references in *NAD*, 1930 and 1937 with 1933 and 1937 which, however, are very vague to be of any real value.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

all the cattle: the chief leader of the agegunit; 2. *ol aiguenani lol kuma orok*; a duly appointed *aiguenani* to whom a black club is presented; 3. *e mart ol aiguenani*, lit. the 'neck of the *aiguenani*', who is the righthand man of the *aiguenani* proper (No. 2), in whose absence no important decisions are taken. 561 624

The election of the *aiguenan loongishu pokin* is described by FOSBROOKE,[116] in connection with the *Unoto*. We have noted, however, that his statement in this passage is contradictory.[117] Unfortunately, there is no other authority on the matter, but one gets the impression that the *aiguenan loongishu pokin* is never elected as such: he emerges from among his fellow *aiguenak* as the best man for the office.

The *aiguenan lol kuma orok* is the ordinary leader elected at the *Engibata* by the elders and the *ingobir*. He is elected from a list of prospective candidates. Second to him is his deputy and assistant, namely, "the neck of the *aiguenani*" (*emart ol aiguenani*).

The *aiguenani* is the leader of the age-unit in his section.

FOSBROOKE mentions the case of some subalterns being elected when the number of the age-unit members in one area is too big and the *ingopir* feel that another leader is needed.

The function of the *aiguenan* is political, military and to some extent judicial, his authority extends to his age-mates of whom he may be said to be "primus inter pares".[118]

Every *aiguenani*, even the *aiguenani loongishu pokin*, is primarily responsible for his territorial section or group of sections or area for which he has been appointed. He has to foster good relations among members of his age-unit, between his unit and other units either in his or in other sections. He is responsible for seeing the elders and the prophet in order to obtain their approval for *Unoto* and any other ceremony or matter connected with his age unit. 629

In military activity the *aiguenani* was more important in former times than at present. When large actions were organised and different sections threw their lot together, the various *aiguenak* united according to their seniority. This might have been the occasion

[116] FOSBROOKE, *l. c.*, p. 38.

[117] In no description of *Unoto* is there mention of an *aiguenani* being elected. The only officers connected with *unoto* are the *emanni or olaua*, and the *oloruengesu*.

[118] Cf. MERKER, *l. c.*, p. 86.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

[561] [624] when the *oipuonani lengiaka pokii* was recognized as a general leader.[**]

Judicial activity is not a real part of the *oipuonani's* office. It [691] all depends on his personality and on how much he is favoured by his age-mates, who may ask him to arbitrate and settle their disputes.[***]

The election and the status of the *ewowi-ebene* as the ceremonial leader of the age-unit has already been described. A peculiar duty of the *ewowi's* office is the responsibility " for the exact turnout of the *morua* (initiates) ".[**] MERKER,[**] and HOLLIS,[**] state that the *ewowi* was responsible to the prophet (*laibon*) for the organisation of raids. The anonymous author of *MS.* 45, p. 4, describes [379] him as the mascot of the unit when this was at war: " as long as he is alive they (the unit-members) cannot be beaten by the enemy... For this reason they take him on their raids ".

The relationship between the *oipuonani* and the *ewowi* is not clear. It seems certain that the latter has a more ceremonial and ritual character than the former.

The term of office for all these officers is limited to the existence of the age-unit as such; but they will always be distinguished and sought for their opinion.

[561] [621] [710] The analysis of the unit's leaders does not offer a complete picture of the internal structure of the age-unit. This structure rests on two other institutions, namely the *ewanaka*, which is the proper

[**] The *oipuonani* was not expected to take part in the actual fighting; he had to be in the rear to govern the action or, as FOSBROOKE, p. 36, puts it, " probably because the *laipuonani* were the charm which had been obtained from the *laibon*, and its loss could not be risked ". At present, adds FOSBROOKE, p. 36, " the relations between senior *laipuonani* and their juniors are very lax. It is probable that this is due to the prohibition of raiding and consequent reduction of the occasions on which large-scale common efforts are required. In the old days when large groups of *morua* (initiates) came together for raids the senior *laipuonani* (sic.) most of necessity have asserted his position, and the others must have obeyed him, to ensure the success of the venture ".

[***] " It appears ", writes FOSBROOKE, p. 36, " to be the privilege of the aggrieved party to select his judges... If a local *laipuonani* has a reputation for fairness and justice, he will be called even from a distance, but proceedings are not invalidated if no *laipuonani* is present ".

[**] FOSBROOKE, p. 45. So, no initiate was supposed to cut off his pig-tail [309] without the permission of the *ewowi*.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

residential place of the initiates, and the *eirit* which is a manifold grouping of comradeship.

The *manyatta* is the village where the initiates live in segregation from other people. Externally it does not differ from any ordinary village. Some authorities state that there is only one *manyatta* for each territorial section.[**] But FOX,[**] qualifying LEAKEY, states that this is only true for some special occasions as when all the initiates of one section come together to perform some special ceremonies, as, e. g., *Uasin*.

In the *manyatta* the initiates are assisted by their mothers who do the housework, and by some uninitiated girls (*na sendja* or *ditis*)[**] who are there mostly for their sexual pleasure.[**] Uninitiated boys may also live in the *manyatta* for the menial works and for tending cattle.[**]

The groupings named *eirit*, pl. *ainit*, are formed, according to WATERHOUSE,[**] at a meeting called by the *ingabi* when it is decided to build the *manyatta*. Membership of the *eirit* is a matter of free choice. An initiate is free to join any *eirit*, and he is free to change it for another soon after his first election. But if he does so when the *manyatta* has been formed, he "incurs the bitter resentment" of his *eirit*-mates, and he may even be fined for that.

As far as numbers go, WATERHOUSE states that "groups of 5 (initiates) will go together to join the same company" (*eirit*).[**] MERKER, however, says that the inhabitants of a single *manyatta*

[**] MERKER, l. c., p. 48; LEAKEY, l. c., p. 180; HOBLEY, l. c., p. 81 notice that "every section has usually some three favourite districts, in each of which is a village, called 'manyatta'".

[**] FOX, l. c., p. 401.

[**] MERKER, l. c., p. 48.

[**] Although the sexual life of the initiates with these girls is promiscuous and free, full sexual intercourse is strongly condemned.

[**] According to MERKER, l. c., p. 110, the initiates who belong to the *ematik* trade usually do not share the village with the other initiates, but have their own villages and the girls who live with them are from families of the same trade. The *ematik* initiates organize their own raids, but because they are few their booty is always small and they are easily deprived of it by other warriors.

[**] WATERHOUSE, l. c., p. 180.

[**] WATERHOUSE described the *eirit* as based on the clan. The *ISL*, ch. p. 6, states that "*manyatta* is inhabitated by the warrs of one particular clan". It seems, however, that this is not a fixed principle, and certainly does not obtain with the *Kisongo*. Cf. FOREMAN, l. c., p. 56.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

may be from 50 to 100; and the anonymous *MS.* 48, p. 6, records that in a *manyata* there may be from 20 to 30 kraals. The extension of the term is not clear. It may be applied alternatively to the whole group forming a *manyata*, and to a subdivision of this. Thus, we find in *MS.* 49 that each *siré* is said to have its own 'portion' of the *manyata*. Similarly, Fox says that each *siré* is commanded by a captain (*il oipomon ler siré*), and that the *manyata* is ruled by a special leader (*il oipomon 'l ol pore* — the leader of the age-mate), who is at the same time the captain of his own *siré*. [**]

The fact that the numbers of the *siré* [**] as a rule quarrel pretty regularly with other *siré* of their *manyata* [**] is emphasized by *MS.* 48, p. 5. There is no indication that the internal organization of the *manyata* is based on the seniority of its members. We may, however, assume quite safely that that is the main principle which regulates the relationship of the *manyata's* of the two age-units existing at the same period. No special information is available on this point, but it is obvious that members of the two age-units have their own *manyata's* and we also know that they unite in time of war, the juniors being trained by the seniors.

Seemingly the *siré* division has a military function and serves to readily organize warriors for raids. Merker, [**] however, applies the term to a special partnership which two age-mates contract on their way to the battle-field. They pledge themselves to assist each other while fighting. They refer to each other as 'my companions' (*ne siré ai*), and if one of them falls, the other has to rescue his arms. [**] Two or twelve such companions form a company.

The term *siré* is further applied to the grouping of initiates who come together for a meat festival (*ne siré el bol*). This group consists according to Merker, [**] of five or six age-mates who go to a segregated place where they revel on co-meat.

The meat festivals (*el bol*, pl. *i bol*) are held once or twice a month;

[**] Very probably this leader of the *manyata* is no other than the *oipomon bol kuma siré*, as indicated. The two different expressions may be taken as describing two different functions exercised by the same person. *Oipomon bol kuma siré* means lit. " the speaker with the black club ", and '*l oipomon 'l ol pore*, " the speaker of the age-mate ".

[**] Merker, l. c., p. 75.

[**] Merker, l. c., p. 80 " Die Aufgabe der Gefährten ist es, dem anderen Kampfe beizustehen und, wenn er fällt, seine Waffen in Sicherheit zu bringen ". The spirit as a military company is also mentioned by *MS* 48.

[**] Merker, l. c., p. 80.

Z: Bernardi E, M-4 (no date) 1955 FL12 Maori FL12

they last for three or four days and generally take place before a raid.[48]

At this point it is relevant to discuss the relationship of military organization and the age units. Mauran,[49] gives a description of Maori military organization. He assumes the existence of a standing army (due stakeside Heer), in which he distinguishes the recruits, the warriors and the reserve.

The recruits are " the shaved ones " (ai korwai).[50] These, together with " the warriors " (ai mawa = initiates)[51] constitute the peacetime force (Friedensstärke), under conscription.[52]

The junior elders come into action in time of war but they may be reckoned as members of the standing army (" ... kaua mau ale Reserve aiaiaua and ait aua stakeside Heer ruhuan... "). The senior elders take arms only in defence of their own territorial arms and settlers (Dienst).

The above description appears to be very formal.[53] It shows, however, that military activity is not confined to the initiates but extends to the classes of elders. And this is a relevant point. We can say, therefore, that the initiates become warriors not to the exclusion of the other classes above them. A further point brought out by Mauran's description is the distinction between an offensive army constituted by the so called recruits, the warriors and the reserve, and a defensive army in which the senior elders are also incorporated.

It would be of great interest to know how the organization of a raid or any other military action is formed, and whether there is any relationship between such an organization and the example

[48] Mauran, l. c., p. 64. See also Gracen, l. c., p. 317. At p. 386, n. 1, he states that " it just are special places assured to the roads, to which the warriors retire when they slaughter cattle ".

[49] Mauran, l. c., p. 78.

[50] " The shaved ones ", (ai korwai, pl. di korwai), is the term applied to those who have just come out of their individual isolation and have been given the warriors' arms. They are the junior initiates.

[51] We may assume that the general term " warriors " as used by Mauran at this place (see also p. 66) refers to the senior initiates.

[52] Mauran, l. c., p. 78, regards stakeside as a kind of compulsory conscription (... where — the alignment — Wehrpflicht ist Gen...).

[53] One may note here that it is Mauran's tendency to describe Maori customs in a way which the his own culture. As known, his thesis on the sacrifice origin of the Maori has so influenced his way as to make his interpretations in many a case unreliable.

2: Bernardi E, M-4 (no date) 1955 FL.12 Masai FL.12

[121] [91] system. Unfortunately, no such information is available. Hanxxx,[xx] describes the actual action in detail but from a purely tactical or strategical point of view.

[91] [154] Special distinctions may be attained by the initiates either in military actions or in social life. Thus, if a warrior is outstanding in war for his courage and he "kills many savages" (Hollis (a)) he is called "the bull", *el-ungok*; if he is liberal and through the assistance of his father "frequently slaughters bullocks" for his comrades, he is called "the benefactor", *Il-paniai*. These distinctions as described by Massaxx,[xx] would suggest the existence of special offices with structural significance. He states that "the bulls" play a leading role (sine führende Rolle), and are the leaders in the fight ("Sie sind die Anführer im Kampf"); "the benefactors" retain a special position (sine besondere stellung). It seems, however, that there are no such institutionalized offices as "the Bulls" and "the Benefactors"; they represent two different distinctions which may be attained by any of the initiates. This seems to be the opinion also of Hollis,[xx] when he states that "the warriors are fond of the titles '*L-ungok* (the bulls) and '*Il-paniai* (the generous people), for they may then wear bells or a bracelet called *il-ewuyan*".

[54] The internal structure of the age-unit, we may now conclude, is based on various principles, which give shape to different groupings.

The essential principle is the contemporaneity of initiation either during the same season in which the minimal age divisions are instituted, or during the same initiation period in which all the minimal divisions merge into a single age-unit.

[131] A second principle is the residential principle, on which the *manyatta* and the *ewi* are organized. The *ewi of bul*, or the grouping for the meat festival in special segregated huts also seems to be due to this principle.

[101] [57] The military principle seems to give a special military aspect to the *ewi* proper, as found in the *manyatta*, and, apparently, the same principle extends to the temporary ceremonial formation of special partnership between two fighting warriors.

[134] Corresponding to these various groupings there are leaders, as mentioned above, who organize their age mates in the performance of the various ceremonies and functions of the age-unit. It is very

[xx] Hanxxx, l. c., pp. 90 ss.
[xx] Hanxxx, l. c., p. 86.
[xx] Hollis, l. c., p. 280.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

important to note their temporary and personal function. In this connection one should also note that, however complex the organisation of the age-unit may appear, its character and nature is entirely democratic. The importance of the *laqwân* as a council to the *ciparuan* has never been stressed sufficiently. Although their office is not very well defined, it is a fact that they may exercise a real control over the leaders of the age-unit whom they have power to degrade.[xx]

The following diagram illustrates the internal structure of the age-unit.

VIII – THE FUNCTION OF THE AGE-UNIT

The most apparent function of the age-unit is military. This is also the aspect stressed by all our authorities, so much so that it is commonly stated that the function of the age system is military.[xx] The evidence we have just analysed suggests a somewhat different description.

We have already noted that the initiates do not become war-

[xx] The relationship of the *ciparuan*, below, to the structure of the age-unit and age-class is discussed below in connection with the latter.

[xx] Cf. for all others Fosbrooke, l. c., p. 90. "The basic function of the age-grade system is doubtless military".

2: Bernardi B, M-4 (no date) 1955 FL.12 Masai FL.12

rise to the exclusion of other classes above them. Their status is that of trainees in the case of junior initiates, and of full warriors in the case of senior initiates. Although it is not incorrect to state that they are in a condition of conscripts it is wrong to say that military activity is solely their privilege.

Residential segregation is generally connected with the military activity of the initiates. Hinzen states that the manyat were ordinarily situated in the strategic positions of the country.[xxx]

But there are other points to show that this segregation was not intended only for military purposes. Thus the initiates are not allowed to form their own family until they are elders. They are also forbidden to eat meat "seen by women", and because their mothers and girls reside with them in their village, the initiates hold their meat festivals on their own in a secluded place. Similarly, they are not allowed to have milk unless they are in groups of two or three at least.[xxxi]

It is difficult to see any relationship between these restrictions and the initiates' military activity. It seems evident that members of the age-units are still considered not sufficiently qualified to deal with cattle, and matters connected with them such as meat and milk, with complete freedom. Apparently, they do not have the full possession of any cattle; the share of their mother's cattle to which they have right remains the property of their fathers' until they get married. And to the father goes the best part of the booty which they take from a raid.[xxxii] Since cattle are the primary source of wealth and food, we must conclude that the initiates are still in a state of dependence on their fathers socially and economically.

This conclusion is corroborated by the fact that an analogous dependence holds true of their political activity. On this they depend entirely on their grow-elders.[xxxiii]

[xxx] The statement is confirmed by Hinzen's description l. c., p. 61. He says that the manyat were always built free from any kind of cattle, "if possible on a plateau overlooking a good water supply", and "overshadowing many miles of plain".

[xxxi] The initiates have a right to ask everybody for milk which cannot be refused. Generally they address themselves to their grow-elders.

[xxxii] Hinzen, l. c., p. 66: "Das Vorkommt der an Krieger beteiligten Eltern besonders in erhaltenen Vieh und Hinzu in der Empfangnis und Durch die Tatsen".

[xxxiii] Other restrictions such as the prohibition against smoking and drinking beer, both privileges of the elders, confirm the general status of inferiority of the initiates with relation to the elders.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

Thereupon we infer that the function of the age-unit is primarily social. Its scope is to organise the initiates into a corporate body, separate and distinct from other similar bodies, and to lead them, both as individuals and as a corporate whole, towards a full social and economic independence and towards taking a full share in political life.[xxx] 56 | 152

IX – THE CEREMONIES FOR THE INSTITUTION OF THE AGE-CLASS

The institution of the age class is brought about by the performance of some special ceremonies, of which the most important is the *eshuer* proper. Before this takes place, other ceremonies, such as "the slaughtering of the ox with jousting" (*el gelow l el kaa*), "the *eshuer* of milk" and "the *eshuer* of meat", must be performed by every initiate. Through these performances the initiate obtains the status of an elder. The *eunoi* is the forerunner of all his age-rites. As was seen, at Uasin, he is given the status of an elder, and soon after that he settles down as a married man. 561 [154]

LEAKEY,[xxxi] states that a warrior (i. e. an initiate) who marries cannot have sexual intercourse with his initiated wife.[xxxii] FOX,[xxxiii] qualifies LEAKEY's statement and says that such a case "is hypothetical, and does not occur in practice", because usually the senior initiate marry after the *eshuer* of milk.

MERKER,[xxxiv] is our only authority for "the slaughtering of the ox with jousting". The ceremony consists in a meat festival offered by the candidate to the elders of the neighbourhood of his father's village. Other initiates share the meat, but sit apart being still under the restrictions of junior initiates. A mock fight follows in which the initiates and women take part. Finally before the sun sets, "a married man with his chief wife come near to their hut and addresses him with the following words": [155]

[xxx] Each unit seems to be distinguished from the other by its peculiar songs. FOX, l. c., p. 400, states that almost all of these songs are in a "certain cryptic language". [156]

[xxxi] LEAKEY, l. c., p. 300.

[xxxii] LEAKEY was somehow misled in his information, he also states l. c., p. 296, that "the actual transfer from the senior warrior stage to the Elder's stage takes place without any ceremonial", which is not correct. [154]

[xxxiii] FOX, l. c., p. 400.

[xxxiv] MERKER, l. c., pp. 108 ss.

2:Bernardi E, M-4 (no date) 1955 FL12 Maasai FL12

[56] [53] "I say, then art no longer of moran (a circumcised, a warrior), but of moran (an elder). Take care of thy cattle, goats and sheep, and have regard for them. Give up the occupations of the warriors thou art now an elder".

"After this feast", remarks MERKER, "it all depends on the warrior whether he chooses to take a greater or lesser part in raids. Usually he gets married at once and lives with his wife either in [50] his father's kraal or in the warriors' kraal (manyatta) until all his age-mates have married. Only then he is recognized as of moran; [54] each one builds his own kraal and lays aside the clothes, decorations and the pigtail of the warriors".

[54] It is evident that the effect of the ceremony is rather limited. It allows an initiate to take a wife, but, even after that, the initiate is not yet "recognized" as an elder. It is as if he were given the elder's status in anticipation of the time when all his age-mates are married. At which time only the status of elder becomes for all purposes official.

[56] A very detailed description of "the spitter of milk" is given by J. T. DUTTON, but the ceremony is mentioned also by other authorities. FOX,[48] states that "this ceremony is performed by each warrior individually",[49] and DUTTON tells us that it occurs at the village of the initiate's father and that four grown-elders take a special part in it.

[56] [54] [54] The ceremony is preceded by a dance. The candidate is clothed in women's clothes and the first two of the elders place women ear-rings (ear-tops) on him.[50]

A test follows, in which the candidate is expected to confess how many times he has "stolen milk", i. e. taken milk by himself or with people other than his age mates. Two heads of cattle are usually paid as a fine by a guilty candidate. He is then solemnly instructed by one of the elders, apparently the most senior, about "what he must and must not do after he has drunk and become an elder". He now drinks the milk, "very little however" as this

[48] Fox, l. c., p. 446.

[49] He says also that "the ceremony usually takes place sometimes a year or two after the E-moran owing to the Government policy of reducing the period of warriorhood as much as possible".

[50] These ear-rings, earrings, are also worn by elders. For this reason some of our authorities describe the earrings put on by candidates as the elder's ear-rings or decorations. But the whole attire of candidate is undoubtedly of a female type.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

time. Then the dance is resumed until night. At this stage the initiate is allowed to have intercourse with his wife. [56] [55] [53]

The next morning the initiate, as soon as he rises, again drinks some milk. Then he is smeared all over with a special mixture by two of the elders, who also present him with an olive and a bamboo stick. A procession is then formed from inside the hut, where these ceremonies have been accomplished, to the cattle kraal. Here the elders choose four or eight " (it must be four or eight) " head of the initiate's cattle, and he hits each one of them with his olive stick.

The initiate must now remain inside for five days. On the fourth day his mother pours liquid, half milk and half water, on his head, and then the mother shaves him.[**] The ceremony is now complete.

Fosbrooke,[**] makes reference to a similar ceremony " by which a woman is permitted to drink the milk from his wife's cattle ".[**] He then remarks that " this does not, however, permit him (the initiate) to drink milk by himself; this must always be done with his age-mates until such time as all go through the spokor ceremony ". This indicates that " that spokor of milk " must also be considered as an individual anticipation of the status officially recognized only at the corporate ceremony.

We do not possess any detailed description of " the spokor of meat ". We are informed by Fox,[**] that the ceremony takes place, and he records it as " the second el-spokor ceremony, called the Ol-spokor of meat ". After such ceremony the initiate may eat meat freely, and, if he chooses, eat meat which has been touched by a woman. [363]

The spokor proper is the closing ceremony which finally initiates the age class. It is celebrated by the Kisongo, but acknowledged and accepted throughout Masailand.[**] The ceremony is briefly described by Hanson,[**] as follows: " when all the members [184]

[**] These formalities may be performed either by the candidates' mother or his first wife, provided the latter had not remarried while he was still uninitiated, or by the two women together.

[**] Fosbrooke, l. c., p. 90.

[**] The expression " his wife's cattle " sounds inaccurate and misleading. Probably it refers to the initiate's cattle herded by his wife.

[**] Fox, l. c., pp. 400 n.

[**] Fosbrooke, l. c., p. 90, states that the ceremony " is traditionally held at Olmepe (to 7 cattle) (On hill of the Ilkiaro), Upper Sanjan, Masai District.

[**] Hanson, l. c., p. 70.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

of these associations (the age-units) have long been married, the *olkoni* (the prophet) binds them more closely by giving a common name to both age-classes [illegible] each of which, as we have seen, had its own name. This takes place at *olkoni* feast. All the members of the associations come together at the *olkoni*'s place and build a great kraal near his village. Everybody brings honey for making beer or an ox for meat. This last is then killed by suffocation at the *ex gabata* feast. The feast consists in consuming all these things, and its climax is the proclamation by the *olkoni* that from now on all the assembled people shall belong to a single *olkiji* (age-class), and have a common class name".

Fosbrooke, [illegible] states that "a single official, *ol-ko-ewuiya*, is chosen as the head of the whole generation (age-class), thus symbolizing the union of the two ages (age-units) which have up to now been independent, each with its own *laiwan* or ceremonial leader".

It is after this feast that "those who are not yet married do so at the earliest opportunity. Those who are married, if their fathers are still alive, move off from the paternal home (village), for they are now in complete control of their cattle, and if they stayed with their fathers there would be constant bickering on animal husbandry matters. It is also this feast that "pigtails are cut off and are not allowed to grow again, the new elders may drink milk alone, and most that married women have now, carry about short blades spears (*endoro ewo*) in place of the long polished warriors' spears, in fact all the customs of warriorhood are abandoned". [illegible] In other words through the *ngokuo* ceremony initiates reach a complete social and economic independence and become full men or elders, they may beget children, own their own stock and build their own village or 'gate'.

There is no doubt that the value of the *Ngokuo* proper for the initiation of the age-class is equal to that of *Eunoto*. This is stated by Fadiewicz. [illegible] He writes: "Just as the Kalenjyiko ceremony of *Eunoto* starts off the age (class-period) for the whole tribe (read – the whole Masailand), it appears that the Kimwaga *Ngokuo* closes it throughout Masailand". This value of *Ngokuo*

[illegible] Read – age-units (my interpolation).
[illegible] Fosbrooke, l. c., p. [illegible].
[illegible] Fosbrooke, l. c., p. [illegible].
[illegible] Fosbrooke, l. c., p. [illegible].

2:Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

is also confirmed by the fact that, as Fox [***] states, " the generation [56.1]
names (i. e. class names) emanate from the Kimonge in Tatguyrike Territory and are common to all the Masai. They are given soon after the warriors (initiates) of the two constituent ages (age-sets) have become elders. Therefore the age-names (i. e. age-unit names) tend to fall into disuse and be replaced by the generation names (i. e. class names) ". (Words in brackets mine).

It should be noted here that the acknowledgement of the Kaberyrike *Endolmat* and of the Kimonge *Ilpalaw* by all the Masai is the more remarkable if one considers the tendency of each territorial section to hold ceremonies of its own for the initiation of the age-sets.

X – THE GENERAL PATTERN OF THE INITIATION CEREMONIES

At this point, when all initiation ceremonies have been studied, [56.1]
it may be of interest to note that the ritual patterns of all these [(14)]
ceremonies, whether their value is territorially sectional or extends throughout Masailand, are essentially similar. Initiation ceremonies are made up of four main elements: a) testing and instruction of candidates; b) election of a leader; c) sacrifice of a bull; d) ceremonial fire.

a) The testing and instruction of the candidates is a broad expression which covers various rites performed at different times. It refers to all the ordeals (except circumcision) and conditions which candidates are expected to pass through, and to the instructions, blessings and prayers which the elders impart to, or offer for, their given candidates.

b) Contrary to expectation the office of leader holds no attrac- [56.1]
tion for the candidates. Very probably the reason is that such lead- [(3)]
ers, or officers, as the *ainomani* and *enemi* are expected to act in a fashion which is not the fashion of their own age-mates at that moment. Indeed they are forced to act as elders when their companions are being recognized as junior or senior initiates. There is no detailed account of the election of the class-leader (*olkiboroto*). If that opposition to office is viewed in the background of the leader's limited and temporary authority in the age system, it may be taken as a further indication that these leaders have nothing in common with political chiefs as found in centralized societies.

[***] Fox, l. c., p. cxx.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

[illegible] c) That the killing of the bull is a religious sacrifice is shown by the fact that the bull is killed in a ceremonial way, i. e. by suffocation.[illegible] Prayers are also offered to God, and ceremonial bits-strings from the bull's skin are distributed to all those present.

d) At first sight the ceremonial fire gives the impression of being inconsistent with this ritual pattern. It serves to destroy the horns of the sacrificed bull, and it is also produced at the foundation of the village of the initiates (*manyata*). The importance of this ritual element, however, becomes evident if we compare it with the so called *piron* relationship. *Piron* is the firestick used for producing new fire. The breaking of a similar stick by the *piron*-elders in the main site of *Endongoro*, and the elders and candidates when they visit the prophet say: " This is our fire-stick, we are one ".[illegible]

[illegible] Against the background of the above patterns, individual initiation, in the way it is now performed, i. e. by circumcision, seems to stand apart and follow a pattern of its own. This dissent is somewhat striking, and one may be permitted to hazard the opinion that circumcision as such is foreign to the age-system of the Masai. Indeed, the structure of the age-system as such has no direct connection with individual initiation.

[illegible] *The Overlapping Rhythm.* Discussing the interval between the various ceremonies which institute the age-sets we accepted the period of seven years as a good though vague, approximation. On that basis we may now assume that fifteen years is a parallel approximation of the interval between the institution of two age-classes.

The inaccuracy of any numerical computation with regard to Masai age-system is emphasized by what we call the overlapping rhythm.

Up to this point the age-class has been considered absolutely, i. e. without relation to preceding or succeeding classes. In fact the actual institution of a class is related to other classes, and especially to that class immediately preceding and the one which follows immediately. Similarly one age-set is related to the set next above it and the one next below it. Let us consider the phenomenon by focusing attention on the left-hand unit. This is the second of the two sets of a class, and the junior of the two. As

[illegible] [illegible] The ordinary way of killing a beast is by stabbing it in the nape of the neck. Cf. Sutton, l. c., pp. [illegible], [illegible].

[illegible] Waramoran, l. c., pp. [illegible] ss.

[illegible] [illegible]

seen as the leftward unit is about to perform *Tuda*, and thus obtain the privilege of seniority, the condition of the next class below hold the *Rudabad* ceremony and a new period of initiation is started. The rhythm of the age system moves on, and the right-hand unit of the new class enters the process of initiation. When the left-hand unit in question becomes senior, the preceding right-hand unit has been senior for a long time, usually since the first initiation ceremonies (*Rudangere-Bagidata*) of the left-hand unit. Members of both, however, officially become elders at the same time by the performance of *Ngabare*. At this same time the right-hand unit of the next class below is already to hold *Tuda* and become the senior unit. And so on.[19]

The phenomenon is made clear by the following series of diagrams:

DIAGRAM 1. The overlapping of the age-units.

1 = Left-hand age unit of the preceding class.

2 = Right-hand age-unit
3 = Left-hand age-unit
} of a single class

4 = Right-hand age-unit of the succeeding class.

[19] Lauman, l. c., p. 180 sees the reason for this phenomenon of overlapping in the military aspect of the age-system. He writes: "as two senior groups (units) may move out into the fifteen stage until there is a next age group in the senior stage, so otherwise it would seem having a single age group alone in the senior stage for too long, and this would be a serious thing when only senior groups are the fighting forces of the tribe".

56 | DIAGRAM II. A single age-class in itself.

DIAGRAM III. The overlapping of the age-classes.

B = a full single class

2 = right-hand unit of class B

3 = left-hand unit of class B

C = the succeeding class

4 = right-hand unit of class C

The Intermediates of Age-Classes. The rhythm of Masai age-system seems to allow for five contemporary classes. All these classes differ in status and power according to their seniority as well as the efficiency of their individual members. We may thus distinguish between the *junior elders* who are members of the last instituted class; the *senior elders* who are members of the next one above; the *old men* who might further be distinguished for they are the few surviving members of the other three classes above.

The *junior elders* "are mostly concerned with family matters, establishing their own gates, marrying and performing ceremonies to ensure the fertility of their wives."[*] In other words, their

[*] Fosbrooke, l. c., p. 31.

2: Bernardi E, M-4 (no date) 1955 FL12 Mana FL12

[illegible] immediate interest are in the main of a private nature, and their share in tribal or public affairs is a minor one. They try to enhance their social status by increasing cattle, marrying other wives, and having their sons initiated.

[illegible] The senior elders have a full share in political life. It would even be correct to say that this is their privilege, and theirs is the class in power. Their sons are ready for initiation. Therefore it is upon their class that falls the duty of undertaking the institution of a new class by controlling and performing all the proper ceremonies. It is from such duty or privilege that the so called pirow relationship is derived. It is a mutual relationship by which, on the one hand, the elders pledge themselves to assist the candidates, and be their sponsors, and, on the other hand, the latter revere the elders' authority and follow their advices. Thus the pirow-elders control the main branch of social and political activity, namely the institution of a new class. And, because the initiates, both junior and senior, constitute the strongest body of the military force over this other branch of political structure, namely military organization and activity, fall to stand subject under the elders' authority. The peculiar nature of Masai society makes it out of place the search for individual political leaders, but if we want to express ourselves with usual terms, we could say that the pirow-elders are the true political leaders of the Masai.

[illegible] The three classes of the old men are the classes which have retired. In practice they take no further active part in political life, but are concerned with religious occasions in which their presence is greatly considered. Their number is naturally decreasing and the few survivors of the last classes are generally decrepit. When possible, these survivors, particularly the former leaders, are consulted when tradition is to be maintained.

[illegible] Analysis shows that the prerogatives of the age-classes are common and proper to all their members, and it shows also that the number of class-members, after the class is constituted, is so closed as no member is any longer accepted into the class.

Junior elders succeed seniors in political leadership when the institution of a new class is officially opened. The phenomenon takes place through the rhythm of the age-system construction.

In this connection, Fosbrooke,[illegible] speaks of a bonding over ceremony performed by the senior and junior elders. "The mar-

[illegible] Fosbrooke, l. c., p. 96.

2:Bernardi E, M-4 (no date) 1955 FL12 Maasai FL12

tor", he writes, "is by no means clear, but there exist vestiges of a ceremony here practised in conjunction with fertility rites, etc., whereby the senior elders retire and hand over the government to the junior elders". Unfortunately, no details of such "vestiges" are indicated, nor is a similar ceremony mentioned by any other authority. [illegible]

In 1909 Fosbrooke compiled a census of the elders and uniniciates among some of the Kimojo. Above we reproduced the membership figures of the age units; it is now of interest to give the figures of the same census for the age-classes. [illegible]

	PLACES	Kibaya	Dameroni	Engosiyiu	Longido	Total	
Classes	TYANGIRI	1	–	–	–	1	Old men
	LAIMER	3	1	–	1	4	
	DALALA	14	13	9	59	97	
	DWATI	50	50	50	50	150	Senior Elders
	DARUTU	40	40	30	40	150	Junior Elders
	TOTALS	108	104	89	110	400	

The above totals should be compared with the total of the age-units members, which are as follows:

TOTALS	100	100	90	110	400	Initiates

A special officer is elected at the spokers. He is called *el-kerwaiga*.[illegible] His functions are not very clear. He is described by Fosbrooke,[illegible] as having "no duty", though he is held in great [illegible]

[illegible] The name refers evidently to the elder's functions. The *eurwaiga* are the marriage proper of the elders.

[illegible] Fosbrooke, l. c., p. 40.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

respect by all his age-mates. It appears that there is only one such officer for the whole class as there is a single performance of the spokes' proper.

XI – THE PROPHET AND THE INSTITUTION OF THE AGE-CLASS

"There can be little doubt", writes Fosbrooke,[xxx] "that at this time (i. e., in pre-European times) a laibon's chief functions were: i. dispensing charms for raids; ii. supervising and blessing the age grade ceremonies; iii. propitiating the ritual and giving charms for local ceremonies, concerned with fertility and disease (both human and bovine) and with rainfall".

He also remarks,[xxxi] that "although the supervision of the age-grade ceremonies has been recorded as an important function of the laibon, this activity is subject to various restrictions, the principle of which I have been unable to ascertain".

It seems to me, on the basis of the foregoing analysis, that the function of the prophet in connection with the institution of the age-sets and the age-class is marginal and secondary to the authority of the *piron*-elders, and that it possesses a wholly ritual value. The authority of the prophet does not find a proper place in the structure of Masai age-system. This system is the principle which restricts his activity.

Whenever one of the initiation ceremonies is held, a delegation of the *piron*, both elders and candidates, approaches one of the prophets for his blessing. According to Fosbrooke's information it does not matter whether the sought prophet is a prophet of the territorial section where the ceremony is performed or of another section or even an "unofficial" laibon.[xxxii] The same cer-

[xxx] Fosbrooke, l. c., p. 18.

[xxxi] Fosbrooke, l. c., p. 15.

[xxxii] Fosbrooke, l. c., p. 15. The passage continues as follows: "For instance the *Ilpukori* or passing out ceremony of the *Dareto* age-set (class) of the *Kisongo* section was certainly held under Parit, and the *Dareto* or previous ceremony of the *Kisale* age (age-set) under Mbatyo, who were respectively the ruling laibon at the material times. But at least an old Kibaya adopter of the Engidong clan, one Lolkokwa ole Laukonga (now deceased) was called to assist in both these ceremonies. By agreement the Mondul laibon received the fees in respect of these ceremonies from the Baraguna and Kibaya areas, whilst those contributed by the Mondul and Longido Masai went to Lolkokwa at Siali, Kenya Colony. In another case, Sangayon, laibon of the *Kisale* age for the Matapato and Lokishiani sections, which are normally under Kimaiyat".

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

tact with a prophet is established before a raid. All these delegations are expected to pay the prophet a number of cattle contributed by the age-set's members they represent. The responsibility for collections of this kind is one of the main duties of the leaders.[119] 56 79

The authority and the influence of the prophet do not extend beyond these contacts. The elders alone are responsible for the organisation of the initiation ceremonies and hence for the institution of the age-class.

However, in his description of the *laikwa* FOURNOUX assumes too much. He writes,[120] " On evidence which need not be recorded here, it seems certain that the Masai, whose age grade custom so closely approaches that of the Galla, were possessed of their present military organisation prior to leaving their original home.[121] Thus it appears that the *laikwa* is a later adaptation imposed on a self-sufficient organisation of government through age-grades. Probably much of the confusion of function which exists today, the indefinite division of governmental authority between the *laikwa* and the age-set leaders, is due to the adoption of an institution (namely, the *laikwa* head, B. B.) incompatible with the original culture. It would be wrong to regard the institution as being foreign to Masai nature, but it is probably true that it is a feature which had not found its true level in the tribal structure when European influence intervened ". [171]

The assumption that the Masai age-system is related to the Galla age-system is frequently taken for granted but up to the present, nothing definite has been ascertained on this point.[122] On the basis of our present analysis we agree with FOURNOUX's conclusion on the secondary character oft he prophet's function in the institution of the age-class.[123] But we find it difficult to agree with him when he states that " the age grades " have been the channel through which the *laikwa* institution came to be established as an [114]

[119] It frequently happens, remarks FOURNOUX, *l. c.*, p. 18, that the contributor does not know exactly the reason for his contribution. Of course he relies entirely on his leader.

[120] FOURNOUX, *l. c.*, p. 12.

[121] FOURNOUX, *l. c.*, p. 3. " lying between Lake Rudolf and Kenya Highlands ".

[122] On this point, see BERNARDI, *l. c.*, p. 314, fn. 2.

[123] FOURNOUX, *l. c.*, p. 16: " But he (the prophet) is not responsible for the organisation of such matters (i. e. *Eunoto* and *Ngakar* ceremonies) nor is it on his initiative that new age-grades or hold ones stand down ".

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 79 [114] institution of Masai culture. We are much inclined to think on different lines. The office of the prophet is essentially a ritual office. His true power derives from his ritual value. It seems evident from the preceding analysis that Masai political and social structure is primarily based on the age-system. We think that it is solely for this system that the *laikos* did not entirely succeed in invading the political field and usurping the authority of the elders.

That the function of the prophet is essentially foreign to the age system is a fact which the present analysis may also have helped to make evident. The conclusion arrived at by FOERSCHER on "the incompatibility" of the *laikos* institution "with the original culture" of the Masai is one that could only be properly reached after an historical and critical study of Masai ritual and religious institutions and not merely from a survey of their political and social institutions. [114]

XII – THE RELATIONSHIP OF CLASS-MEMBERS [106]

561 574 A strong bond of solidarity is felt by all members of a class. Such feeling is primarily due, as is natural, to the mere fact of belonging to the same social body. Other factors, such as a more or less equal age and the contemporaneous performance of essential initiation ceremonies give substantial cause for a feeling and bond of that kind. That such a bond is strong and effective is clearly shown by Masai hospitality customs. They show also what force of cohesion springs from the age-system structure. Any class-member has a right to stay and live at the house of any of his age-mates. While he is a stranger to the place, he is not a stranger to his age-mate for they are members of the same class. The latter cannot refuse him, otherwise he would be cursed by his own class. This curing power of the age-class is very significant to our present purpose. It shows the authority and power possessed by the class for keeping its structural cohesion and for defending itself from any disruptive attack. [106] [126]

[106] MERKER, *l. c.*, p. 67; HOLLIS, *l. c.*, p. 280; FOX, *l. c.*, p. 183.

[106] Masai hospitality customs are best described by HOLLIS, *l. c.*, pp. 287 s. Translating, as he does, direct Masai accounts, he writes: "When a Masai goes to other kraals to pay a visit, he does not on his arrival enter a hut unless he knows the owner, for if he belongs, for instance, to the *Aimer* age, he must not enter the hut of one of the *Kishumu* age, as he does not belong to this age. He will ask where the huts of the members of the *Aimer* age are, and when he

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

It is possible to consider that solidarity as a kind of class identity. This identity does not exclude the possible variations and differentiations of class-members arising from individual differentiations of talents and character, from leadership, seniority and social prestige attached to the possession of a great number of wives and a large herd of cattle. The main expressions of that identity are the use of a single name for the whole class and some special marriage regulations which apply to class members and, to some extent, to their children. 561

Thus, a man may not marry the daughter of a member of his own class. If he fornicates with her he is punished by his own age-mates. " His kraal is destroyed, he is severely beaten, and a number of his cows are slaughtered ". Similarly, " if a warrior or boy commits adultery with a wife of a man belonging to his father's age-grade (or class), he is solemnly cursed by the members of that age-grade ". (HOLLIS). Furthermore, any class member when a guest of any of his age-mates, has a right to cohabit with his host's wife. MERKER, says that a widow " must not re-marry but she must live with the members of her deceased husband's class ". This " sexual communism ", as HOLLIS calls it, takes place only among members of the same class. It is limited, of course, by clan and kinship exogamy, which, even for class members, is strictly enforced. 582 584 587 587 587 587

At the performance of the *Enkolowat*, *Enpikia*, *Unoto*, *Ngakerr* names are given to sets instituted. Names assumed at the *Enkolowat*, *Enpikia*, and *Unoto* are temporary, for temporary is the nature of the set thus established. At the *Ngakerr*-proper all previous names are discarded for a single name which is final and applies to the age-class as a whole. It is this name which is handed down to the following generations. Age-class names are, as it were, the milestones by which Masai can order their past into a certain historical perspective. Class names are thus recalled when historical facts are recounted. 561 552

Lists of class-names have been recorded by our authorities. It may be of interest to reproduce here some of those lists collected by MERKER, FOX, and FOSBROOKE.[101] FOSBROOKE has attempted

has been shown them, he will enter one. When he has entered, the owner of the hut leaves him and goes to search for a place to sleep in... A Masai cannot refuse hospitality to a stranger (of his own age) for he is afraid that the other members of his age will curse him, and he will die ". 574 954 622

a concordance of class-names with dates and some known historical facts.*** At this stage there is no need to indicate how the very precise 14 years interval is misleading: dates must be taken as a vague attempt to a correct translation of Maasai age-system binary system.***

	MEDERER (1896)	FOX (1900)	FORBINDER (1906)		
1	-	II Sadaya	-		
2	-	II Sabaah	-		
3	II Dagi	II Tagi	Dagi	1700	– *Members of this class are to remembered by being elders.*
4	II Kimwani	-	Kimwani	1701	
5	II Mariakani	I Mariakani	Mariakani	1800	
6	II Kidoto	II Kidoto	Kidoto	1801

			Kimala	1800	– *Right-hand unit.*
			Mariaka	1810	– *Left-hand unit.*

[114] *** *Figures of years are described by* Forbinder *as the "approximate date of circumcision. The expression is very vague and shows how inaccurate the usual terminology is. Following our analysis it seems clear that "circumcision" means here "age-class", and, therefore, dates may be referred to either the performance of Eunoitoi or the performance of the Ilpukore proper.*

[114] *** *A fourth list recorded by* Hollis, *l. c., p. 366, is not reproduced here because it is evident from a comparison with the other lists that it contains "an indiscriminate mixture of age (unit) and class-names" (Fox).*

[For material on the "il-oshom" ("ol-osho," singular), which may be either a tribal unit or a strictly political territorial unit or even both (discrepancy in the literature between sources # 9 and 13) see also category 636.]

616

[The "Black Cattle" and "Red Bulls" have previously been referred to as sub-clans (see 1: Hollis, this file); therefore all data in this source pertinent to these groups will be found in category 614, even though Bernardi refers to them as moieties.]

[For the dynamics of political power, including the mechanics of political leadership and decision making activities in the group, see category 561. The age-set system is the key to the understanding of the political structure and behavior of the pastoral Masai.]

[For description of the moran (warrior) societies (called oirial), which form the standing army of the Masai, including their recruitment and training, see category 561.]

[For ceremonies that initiate the Masai youth into the status of both legal majority and adulthood see category 541.]

601

A NOTE ON THE SOCIAL POSITION OF RELATIONSHIP AND OTHER NATURAL CONTRACTS TERMINOLOGY.

By A. C. Haddon.

The principal terms of relationship used by the Maori are as follows:—

	Signifies of indefinitely	Affirmed directly	Remarks
Father	[illegible]	[illegible]	My father, [illegible]; [illegible], [illegible].
Mother	[illegible]	[illegible]	My mother, [illegible]; [illegible], [illegible]; [illegible], [illegible] or [illegible] mother, [illegible].
Daughter ...	[illegible]	[illegible]	
Daughter ...	[illegible]	[illegible]	
Brother Elder brother Younger brother	[illegible] ...	[illegible]	
Sister ... Elder sister Younger sister	[illegible] ...	[illegible]	
Half-brother ...	[illegible]	[illegible]	
Half-sister ...	[illegible]	[illegible]	
Husband	[illegible], [illegible], [illegible]	[illegible], [illegible], [illegible], [illegible]	[illegible] = [illegible] means the father of [illegible], a child's name to take the place of [illegible].
Son-in-law ...	[illegible], [illegible], [illegible]	[illegible]	

	Spoken of indirectly	Addressed directly	Remarks
Wife	[illegible], [illegible]; [illegible] (of young)	[illegible], [illegible], [illegible]; [illegible] (of young); or by name given by husband to wife at marriage.	[illegible] means the mother of [illegible], a child's name to take the place of [illegible].
Son's wife	[illegible] ...	[illegible]	Son's wife. Stands on right side of [illegible].
Brother's wife ... Husband's brother's wife ... Husband's sister's wife ...	[illegible]	[illegible] ...	Brother's wife. Stands on left side of [illegible]. Husband's brother's wife. Stands on right side of [illegible]. Husband's sister's wife. Stands on left side of [illegible].
Co-wife	[illegible]	[illegible] or [illegible].	
Son	[illegible], [illegible] ...	[illegible], [illegible], [illegible], [illegible].	There are numerous pet names used by parents for small children, e.g., [illegible] (my shadow), [illegible] (my garment), [illegible] (my [illegible]), [illegible] (my [illegible]), [illegible] (or [illegible] God gave me).
Eldest son ...	[illegible]	[illegible] (family name).	
Youngest son ...	[illegible]	[illegible] (family name).	
Daughter ...	[illegible], [illegible] ...	[illegible], [illegible].	
Eldest daughter ...	[illegible]	[illegible] (family name).	
Youngest daughter	[illegible] ...	[illegible] (family name).	
Father's father ...	[illegible]	[illegible] (boy and man); [illegible] (girl and woman).	
Father's mother ...	[illegible] or [illegible] ...	[illegible].	

[illegible] (c.) (c. [illegible]) [illegible] [illegible] [illegible]

	Spoken of indirectly.	Addressed directly.	Remarks.
Mother's father ...	[illegible]	[illegible] (boy and man); [illegible] (girl and woman).	
Mother's mother ...	[illegible] or [illegible] ...	[illegible].	
Father's brother ...	[illegible], [illegible].	[illegible].	
Father's elder brother	[illegible] ...	[illegible].	
Father's younger brother	[illegible]	[illegible].	
Father's sister ...	[illegible], [illegible].	[illegible].	
Mother's brother ...	[illegible] (boy and man); [illegible] (girl and woman).	[illegible] (boy and man); [illegible] (girl and woman).	
Mother's sister ...	[illegible]	[illegible].	
Father's brother's wife	[illegible]	[illegible].	
Father's sister's husband	[illegible] (boy and man); [illegible] or [illegible] (girl and woman).	[illegible] or [illegible] [illegible], [illegible] or [illegible]. Children say [illegible].	
Mother's brother's wife	[illegible]	[illegible].	
Mother's sister's husband	[illegible] or [illegible].	[illegible] (or, if children, by name). Children say [illegible].	If children, name [illegible] or relation.
Father's brother's son	[illegible]	son brother.	
Father's brother's daughter	[illegible]	sister.	
Father's sister's son	[illegible] (boy and man); [illegible] (girl and woman).	[illegible] (boy and man); [illegible] (girl and woman).	
Father's sister's daughter	[illegible] ...	[illegible] (boy or man); [illegible] (girl or woman).	

3: Hollis G-5 (ca. 1894-1904) 1910 FL12 Masai FL12

601

	Spoken of indirectly.	Addressed directly.	Remarks.
Mother's brother's son	*ol-le-'ng-apu* or *ol-apu* (boy or man); *en-e-'ng-apu* or *eng-apu* (girl or woman).	*apula* (boy or man); *ngapulayu* (girl or woman).	
Mother's brother's daughter	*en-e-'ng-apu* ...	*ngapulayu* (boy or man); *ne-'ng-apu* (girl or woman).	
Mother's sister's son	*ol-le-'sōtwa* or *ol-lo-'sōtwa.*	by name. Rarely, *ara-apa*, etc., see brother.	
Mother's sister's daughter	*en-e-'sōtwa* or *en-o-'sōtwa.*	by name. Rarely, *ne-apa.*	
Son's son	*ol-akwi* (man); *okwi* or *kokw* (woman).	*akwiya* (man); *kokwo* (woman).	
Son's daughter ...	*eng-akwi* (man); *okwi* or *kokw* (woman).	*ngakwiya* (man); *kokwo* (woman).	
Daughter's son ...	*ol-akwi* (man); *okwi* or *kokw* (woman).	*akwiya* (man); *kokwo* (woman).	
Daughter's daughter	*eng-akwi* (man); *okwi* or *kokw* (woman).	*ngakwiya* (man); *kokwo* (woman).	
Wife's father ...	*ol-aputani*	*li-aputani* or *ol-aputani lai.*	
Wife's mother ...	*eng-aputani* ...	*na-aputani, eng-aputani ai* or *yeiya.*	
Wife's brother... Wife's half-brother	*ol-aputani*	*li-aputani* or *ol-aputani lai.*	
Wife's sister ...	*e-sindani e-anyil* ...	*par-sindan* or *e-sindani ai.*	*le-anyil* or *e-anyil* means *honoured.*
Wife's half-sister	*e-sindani*	*par-sindan* or *e-sindani ai.*	
Wife's sister's husband	*ol-le-'sōtwa* or *ol-lo-'sōtwa.*	*menye-ōgania* (or, if childless, by name).	
Husband's father	*ol-aputani* or *menye*	*li-aputani* or *papa.*	
Husband's mother	*eng-aputani* or *ōgoto*	*na-aputani* or *yeiya.*	
Husband's brother	*e-sindani le-anyil* ...	*par-sindan* or *e-sindani lai.*	
Husband's half-brother	*e-sindani*	*par-sindan* or *e-sindani lai.*

601.

	Spoken of indirectly.	Addressed directly.	Remarks.
Husband's sister Husband's half-sister	*e-sindani*	*par-sindan* or *e-sindani ai.*	
Husband's brother's wife	*e-sindani*	*par-sindan* or *e-sindani ai.*	
Son's wife ...	*en-gerai*	*na-kerai.*	
Daughter's husband	*ol-aputani* (man); *eng-aputani* (woman).	*ol-aputani lai* (man); *eng-aputani ai* (woman).	
Brother's wife ...	*e-sindani e-angit* (man); *e-sindani* (woman).	*par-sindan* or *e-sindani ai.*	
Half-brother's wife	*e-sindani*	*par-sindan* or *e-sindani ai.*	
Sister's husband ...	*ol-aputani* (man or boy); *o-sindani le-angit* (girl or woman).	*ol-aputani lai*; *par-sindan* or *o-sindani lai.*	
Brother's son Half-brother's son	*ol-ayöni, en-gerai* ...	see son.	
Brother's daughter Half-brother's daughter	*en-dito, en-gerai* ...	see daughter.	
Sister's son ... Half-sister's son	*ol-ayöni, en-gerai* ...	see son.	
Sister's daughter Half-sister's daughter	*en-dito, en-gerai* ...	see daughter.	

When listening to Masai talking to one another it would often appear as if many of the terms of relationship used were the same as names of cattle, sheep, goats, and donkeys, etc. This is chiefly due to the fact that whenever a woman is brought into the family by marriage it is customary for her husband's relations and their wives to give her an animal to show that she is recognized as a member of the family. The giver and the recipient ever afterwards call one another after the animal which has been given, to which the particle *pa-* is prefixed.

601 431 [585]

3: Hollis G-5 (ca. 1894-1904) 1910 FL12 Masai FL12

601 431 Thus, a man gives his brother's wife or his paternal uncle's wife, or his paternal uncle's son's wife a cow, a calf, or a lamb, and the terms of address used by the two, instead of being *par-sidan* or *yeiye*, as the case may be, are *pa-kitchg*, *pa-ashe*, or *pa-serpen*; a father-in-law gives his daughter-in-law a calf, and the two call one another *pa-ashe*; and a paternal uncle gives his nephew's wife a she-goat and calls her *pa-kine*. Similarly a man's first wife usually presents each successive wife with [595] a calf on her marriage, and instead of using the term *na-aini* when speaking to one another the two women say *pa-ashe*; a woman gives her husband's brother's wife a donkey as a wedding present, and the two women call one another *pa-sighirin*; and a mother-in-law selects a cow for her daughter-in-law some months after marriage, when she has learnt to keep house for her husband, and the form of address is *pa-kitchg*. This method of address is carried even further, and is used between men of the same family. A father, for instance, usually gives his son a bull when the boy is eight or nine years of age, and the two call one another *pa-oiâgôni* instead of *papa* and *li-ayôni*; a paternal uncle makes a similar present to his nephew, and the same form of address is used; an elder brother gives his younger brother a heifer, and the two call one another *pa-'n-dawo*; and paternal cousins often use the terms *pa-oro* or *pa-merregesh* when talking to each other.

The following terms are found: *pa-kitchg*, the bullock or the cow; *pa-mokgi*, the bullock; *pa-kishu*, the cows; *pa-oiâgôni*, the bull; *pa-'n-dawo*, the heifer; *pa-bukgwi*, the bull calf; *pa-ashe*, the calf; *pa-kwo*, *pa-oro*, or *pa-sitima*, the he-goat; *pa-kine*, the she-goat; *pa-lelela*, the kid; *pa-kerr*, the ewe; *pa-merregesh*, the ram; *pa-sighirin*, the donkey; *pa-serpen*, the ewe lamb; *pa-mao*, the twin kids.

With one exception, a present of this nature is not made, nor are these terms of address used, outside the father's family. Thus, a brother cannot give his sister a heifer so that the two might call one another *pa-'n-dawo*, because if the sister marries she will leave the family; a maternal uncle cannot give his nephew a bull and call him *pa-oiâgôni*, and maternal cousins may not address one another by the terms *pa-oro*, etc. The exception to this rule is made when a man marries. He then presents his father-in-law with a bullock and his mother-in-law with an ewe, and the terms of address are *pa-kitchg* and *pa-kerr*. These presents have nothing [583] to do with the cattle paid for the bride.

604 578 754 A maternal uncle (*ol-apu*) exercises great influence over his nephews, as it is believed that if he were to curse them they would die. He can at any time stop a fight in which one of his nephews is engaged by merely calling on his nephew to desist, as the nephew would be afraid of his right arm withering if he were to [593] disobey. This power is to a certain extent reciprocal, and if a man were to start beating his wife he would have to stop if his maternal nephew ordered him to do 593 so. A father and any old man of the family can also usually stop a fight by telling 626 the combatants to desist, but they are not necessarily listened to. A mother has 754 more influence, and if her son refuses to obey her, she strikes her stomach and says, "You were born in this"; whereupon the son is said to sicken, and can only recover when his mother makes a rope of fibre which she hangs round his neck.

3: Hollis G-5 (ca. 1894-1904) 1910 FL12 Masai FL12

Besides the power of a maternal uncle to stop a fight, he has also the right to take anything which belongs to his nephew. If the uncle desires anything that is the property of his nephew's father, the nephew must buy it from his father, who will at once give it up when he knows for whom it is required. This power of taking property is reciprocal, and in fact applies to all persons who address one another as *ol-apu*, *ol-le-'ng-apu*, etc. A nephew, for instance, can go to his maternal uncle's kraal, and if his uncle is absent, he can slaughter a goat or drink his uncle's milk, and nothing would be said. He cannot, however, drive off a cow without his uncle's sanction, but permission would not be refused. Other relatives have likewise some power of taking property. A boy or man can go to his father's or paternal uncle's kraal and take or demand a goat or milk, and in all probability nothing would be said, but if it were done repeatedly the father or uncle would express dissatisfaction or refuse altogether. A man may also go to his sister's husband or wife's brother (*ol-aputani*) and take anything, but an account is kept and the debt has to be returned. If a man is poor it is customary for him to live with one of his brothers-in-law (*ol-aputani*) and help to look after the stock. He is fed for his trouble, and as payment receives one out of every pair of twin goats born.

First cousins and second cousins may not marry, but there is no objection to third cousins marrying if the relationship is no nearer than *ol-le-'ăitwa* (or *en-e-'ăitwa*). Thus, a man's son's son's son may not marry the man's brother's son's son's daughter, nor may a man's son's son's son marry the sister's son's son's daughter, but there would be no objection to a man's son's son's son marrying the brother's daughter's daughter's daughter or the sister's daughter's daughter's daughter. Likewise though a man's son's son may not marry the man's maternal uncle's son's son's daughter, he may marry the maternal uncle's son's daughter's daughter. These unions are always contingent on the two parties not belonging to the same sub-clan.[1] The rules of consanguinity and affinity which regulate marriage also apply to the sexual intercourse of warriors with immature girls before marriage and to the rights of hospitality after marriage. No warrior may select as his

[1] The Masai are divided into five clans: *Il-Aiser*, *Il-Mekgesa*, *Il-Molesen*, *Il-Mötelpus*, and *Il-Tardaro*. Each clan is again divided into sub-clans, *e.g.*, the *Il-Aiser* contain amongst others the following: *In-gidokyi* and *Il-Parkesati*. No man belonging to the *In-gidokyi* sub-clan may take as wife the daughter of a man of the same sub-clan, but he may marry the daughter of the *Il-Parkesati* or he may marry a daughter of the *Il-Mekgesa*, *Il-Molesen*, *Il-Mötelpus*, or *Il-Tardaro* clans. Members of the various sub-clans are usually to be found in all the districts and sub-districts. Marriages are not affected by geographical considerations, and a man has the same lawful marital relations in all the sub-districts as he has in his own home sub-district.

In his recent book, *The Ethnology of the A-Kamba and other East African Tribes* (Cambridge, 1910), Hobley states (p. 121) that the restrictions governing marriage amongst the Masai are far from simple, and he gives a number of complicated instances. As a matter of fact the rules are quite simple if one remembers (i) that though the clans are not exogamous, the sub-clans into which the clans are divided are exogamous; and (ii) that no man may marry a nearer relation than a third cousin, and then only if the terms of address used are *ol-le-'ăitwa* and *en-e-'ăitwa*.

3: Hollis G-5 (ca. 1894-1904) 1910 FL12 Masai FL12

83 sweetheart (*e-sanja*) a girl of the same sub-clan as himself, or one who is more nearly related to him than third cousin, and only then if the terms of address used are *ol-le-'sötwa* and *en-e-'sötwa*; and no traveller may cohabit with the wife of a member of his own age-grade if that man is married to one of his near relations, or to a daughter of his sub-clan.[1]

581 The payment of the bridal price authorizes a Masai to reckon the children
583 which his wives bear as his own; it further gives him a full measure of control
837 over both his wives and children, and they do all the household work and tend and look after his herds and flocks. But though individual marriage is recognised,
[834 sexual communism or something very like it prevails between all the men of one
835] age-grade and the women of the corresponding age-grade, subject to the rules of exogamy and relationship, which forbid a man to marry or have sexual intercourse with a woman of his own clan or with a near relative. In other words the Masai may be said to live in a state of group marriage, based on the organisation of the whole community in age-grades, and restricted by the exogamy of the sub-clans and the rules regarding incest.

684 If a man is knowingly guilty of incest, or has sexual intercourse with a daughter of his own sub-clan, he is punished by his relations, who flog him and slaughter some of his cattle. If he fornicates or commits adultery with a daughter of a member of his own age-grade, he is punished by the members of his age-grade. His kraal is destroyed, he is severely beaten, and a number of his oxen are laughtered. If a warrior or boy commits adultery with a wife of a man belonging to his father's age-grade, he is solemnly cursed by the members of that age-grade. Unless he pays the elders two oxen, one for them to eat and the other to enable them to buy honey wine, and prays them to remove the curse, it is supposed he will die.

835 If a man unintentionally commits incest—and it is quite conceivable that a
684 man might not know his fourth or fifth cousin, for instance, should the two live in different districts—he has to present a cow to the girl's relations in order to "kill the relationship" (*a-ar eng-anyit*).

843 A man must abstain from having sexual intercourse with his wife as soon as
833 she becomes pregnant, and he may not again have connection with her until the
[856] child cuts the two middle incisor teeth of its upper and lower jaws. Should this rule be broken it is believed that the child will never be strong. In the event of
682 a man having intercourse with a pregnant woman, and thereby causing her to
684 abort, he must submit to a punishment which is called *ol-kishurota*. All the
833 women of the neighbourhood collect together and, having stripped, seize the guilty person and flog him, after which they slaughter as many of his cattle as they can, strangling and suffocating the animals with their garments.

834 Other occasions when the sexes may not have sexual intercourse are when
278

[1] For the rules regarding hospitality see *The Masai*, p. 287. An age-grade consists of all those men who are circumcised at one of the four festivals held during every 7½ years. See *The Masai*, p. 262.

3: Hollis G-5 (ca. 1894-1904) 1910 FL12 Masai FL12

poison is being made and when honey wine is being brewed. During the time that a man is making poison (eight days) he is treated almost as an outcast. He must leave his house at 4 a.m. and not return till 7 p.m., when he must rub clay on his body. He may not eat when the sun is above the horizon; he may only relieve nature far away from the kraal; and he must sleep alone. If he were to break any of these rules it is believed that the poison would be useless. When honey wine is to be brewed a man and a woman are selected for the purpose, neither of whom has had sexual intercourse for two days. A hut is set apart for them to live in until the honey wine is ready for drinking (six days), during which time they may not sleep together. As soon as the honey wine is ready they receive payment, and go to their respective homes. Were they to have sexual intercourse during the six days that the honey wine is brewing, it is believed that the wine would be undrinkable, and the bees that made the honey would fly away. 834 278 834 273

Mothers-in-law and their sons-in-law (*eng-aputani*) must avoid one another as much as possible, and if a son-in-law enters his mother-in-law's hut she must retire into the inner compartment and sit on the bed, whilst he remains in the outer compartment; they may then talk. Own brothers-in-law and sisters-in-law (*o-sindani le-anyit* and *e-sindani e-anyit*) must also avoid one another, though this rule does not apply to half-brothers-in-law and sisters-in-law (*o-sindani* and *e-sindani*). This rule is possibly due to the fact that when a man dies his own brother may not marry his widow, though there is no objection to his half-brother (paternal) or one of his paternal cousins taking her to wife. In fact, the only person who may marry a widow is one of the deceased husband's half-brothers or paternal cousins. It frequently happens, however, that widows never re-marry, but live with their children in the kraal of the eldest living brother of their late husband, who becomes the guardian of their children. 606 607 606 607 587 [591]

Divorce is almost unknown amongst the Masai, and it is only barren women who may be divorced. But if a woman is barren it is usual for her husband to give her some of his children by another wife to bring up. Daughters are usually selected; but if there are several sons the youngest and the youngest but two may be given to the stepmother. When a barren woman is a bad woman and is disliked by her husband and his other wives, she may be divorced, in which case her father or his heirs must refund the cattle paid for her, and she is at liberty to re-marry. 586

[p. ii]

114 With the exception of Chapter II., the matter contained in this Administrative
[121] and Political Record of the Masai has been drawn from official papers. Chapter II. has been compiled from early reports and various published books, and assistance in enlarging and in checking detail for this chapter has been obtained from Mr. Ainsworth, who has personal knowledge of the early history of administrative contact with the tribe.

[102] The maps which have been distributed where necessary throughout the text have occasioned considerable difficulty, as a large part of the Masai Reserve is unsurveyed. The more general maps must be regarded only as illustrative, and it is probable that much of the detail is inaccurate. The boundary of the Masai Reserve still awaits demarcation, and the line purporting to show its position is therefore tentative.

[104] A mass of inconsistency in the spelling of tribal and geographical names permeates the official records, and the spelling adopted here, selected as that most constantly employed, makes no pretension to phonological or linguistic accuracy.

G. R. SANDFORD.

PREFATORY NOTE.

THE administration of the Masai tribe has aways been one of the most interesting native problems of the East Africa Protectorate. The Masai occupy a reserve nine million acres in extent, which is at present fully stocked up; if water facilities were improved, not only could the number of cattle be very materially increased, but the reserve could also hold cattle of a better quality bred from imported stock. The potential value of the Masai Reserve as a home for cattle is enormous. [2] [131]

The lessons of the past may help us to solve the problems of the future. With this end in view, Sir Charles Bowring, when administering the Protectorate, instructed Mr. G. R. Sandford to prepare a short History of the administration of the tribe up to date.

The result of Mr. Sandford's researches is the very valuable compilation to which I am glad to be able to attach this foreword. The particulars have been drawn from official records, and the historical portion of the work may be accepted as an authentic summary of past events. Conditions as they existed in October, 1918, together with the steps that were being taken to deal with them, are accurately portrayed, while illustrative maps, compiled by Mr. Sandford himself, are distributed where necessary throughout the text. [127]

The volume forms a valuable addition to the records of the Protectorate.

EDWARD NORTHEY.

AN ADMINISTRATIVE AND POLITICAL HISTORY

OF THE

MASAI RESERVE.

CHAPTER I.

THE CHARACTERISTICS AND TRIBAL ORGANIZATION OF THE MASAI.

Peculiar policy necessary in dealing with the Masai—Why this peculiar policy is necessary—The tribal formation of the Masai—Social system of the pastoral section—"L-Ayuk"—"Muran"—The effect of the military organization—The medicine-men—The Laibon—The Masai as a stockman—Employment of the Muran—Masai conservatism respecting cattle—Councils of Elders—Crime in the Masai Reserve—Divisions—Masai Council—The Tribal Divisions—Purko—Loita—L'Otayok—Salei—Siria—Il Damat—Kakonyukye—L'Odo Kilani—Ngurman—Matapato—Sighirari of the Engidongi—Il Dala Lekutuk—Kapotei—Sighirari of Laitokitok—Wandorobo—Il-Kaseno—Recapitulation.

000

WITH a view to the better understanding of the steps which have already been taken and of the policy which has in the past been pursued in dealing with the Masai situated within the limits of the East Africa Protectorate, it appears desirable, in the first instance, to recapitulate concisely the facts which have at various times been recorded on the subject of their tribal characteristics and peculiar organization, attributes which have rendered it impracticable to carry out in their case the policies which have been adopted in dealing with the majority of other tribes in the Protectorate. These policies, established and maintained for the most part by the senior administrative officers in each Province, have undoubtedly not been uniform, but they have to a large extent achieved the result which is noticed in the majority of the native administered areas to-day, of developing the native inhabitants of the Province into useful agricultural labourers fit for residential work on European farms and available for duty on works of public utility, and they have also, by maintaining the system of self-government recognised by each tribe, produced within the reserves, a type of native so well under control that the demands of the military authorities, large though they were, for natives to serve as porters in German East Africa were met from these Provinces without disturbance of any kind, in spite of the fact that compulsion had to be resorted to and that the work was unpopular, and, furthermore, they have so developed the system of native administration that the majority of the porters so recruited were obtained by the native authorities themselves without the aid or intervention of the European administrative officers. The Masai were among the first tribes which came into contact with the administration but their conservatism has been so great, and their subservience to antiquated tribal custom and tradition has been so powerful that it has proved impossible as yet materially to alter and renovate their ideas.

Peculiar policy necessary in dealing with the Masai.

648* 177

[181]

The Masai are a Nilotic people, closely allied to the Nandi and Lumbwa and to the Suk and Turkana. In common with those other four tribes, they possess a form of military organization which obliges all the male population between the ages of about seventeen and thirty to submit to a special discipline and to constitute a warrior class. It is, however, impracticable for the purpose of policy to compare the Masai with either the Suk or the Turkana, which tribes have only recently come into touch with the Administration, and a comparison with the Nandi and Lumbwa, Buret and Sotik, discloses a position markedly unfavourable to the Masai. Though none of these former tribes has definitely

Why this peculiar policy is necessary.

101

648* 177

648
179

discarded their old formations, adversities of various descriptions have introduced the necessity of undertaking manual labour in portions of each reserve and a succession of punitive expeditions or displays of force, the last of which occurred some ten years ago, has brought home to them a conception of the power of the Government, a realization which has tended towards a more progressive attitude owing to the diminution which it caused in their minds of the influence held by their medicine-men. No punitive expedition has ever been undertaken against the Masai, an omission which was very largely due to the authority and sagacity of Lenana, the chief medicine-man at the time when the European Government was first encountered, who survived long enough to keep his people in check until such a degree of administration had been effected as to render the despatch of a punitive expedition a measure that would only be resorted to in the last extremity. Further, the Masai now thoroughly realize how vulnerable they are if ever they come into armed conflict with the Government. Their enormous, immobile herds would immediately be lost and a sufficient degree of punishment could quickly be attained. For this reason, it is extremely improbable that they will, of their own initiative, so far forget what they consider to be their best interests as to cause a serious disturbance. The escape from punitive expeditions, however, has undoubtedly been a factor in the perpetuation in their original form of the Masai ideas and traditions.

101
184
578
628

The tribal formation of the Masai.

As will be seen in Chapter II., the Masai tribe originally consisted of both pastoral and agricultural sections, of which the latter was almost annihilated by the former and survives at present only in one or two scattered localities, mainly in areas reserved for other tribes. A small section of these agriculturalists, the Ngurumau, is to be found at the north end of Lake Natron, but that is the only trace of them in the present Masai Reserve, and these people now show a tendency to assume the habits and customs of the pastoralists. The problem presented in the administration of the Masai is therefore almost exclusively concerned with the pastoral section. According to the social system of this section, the male sex is divided into boys, warriors and elders. The first stage continues until circumcision, which may be performed approximately between the ages of thirteen and seventeen. These boys are called "L-Ayok." After circumcision, they become warriors, or "Muran," those who have been circumcised at about the same time being said to belong to the same age. The "Muran" remain on the fighting strength of the tribe for periods varying from seven to fourteen years, during which period they constitute a standing army. They are divided into Companies, or "Sirits," which live in separate villages, or "Manyattas," some of these containing as many as six or seven hundred fighting men. With few exceptions, the "Muran" of the present day perform no work of any kind. In days gone by, they were expected to carry out raids and preserve the armed prestige of the tribe, but the introduction of the "Pax Britannica" has deprived them of such employment, and they, having found no alternative occupation, are content to remain in idleness and to live in the state of free love with immature girls which tradition prescribed as the duty of the warrior in the days of tribal warfare.

561

Special system of the pastoral section. "L-Ayok." "Muran."

The effect of the military organization.

This military organization of the Masai made them, in the past, a most effective body for destructive military operations, and explains not only the predominant position which they acquired in East Africa, but also the respect which they inspired and the extent to which their customs were imitated by other tribes. On the other hand, it probably also is the reason why they never founded any state or polity analogous to the Kingdoms of Uganda and Unyoro. The centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military comradeship and desirous only of military glory. Retirement from this band of warriors as a chief was honourable, but seems to have been regarded as a removal to an inferior sphere of activity. The chiefs arranged the details of the raids which the warriors wished to undertake, but their power of compelling them to do anything which they did not wish was very slight.*

561

622

* Sir Charles Eliot, November, 1904, Introduction to "The Masai: Language and Folklore," by A. C. Hollis.

An important factor in the tribal system of the Masai is the presence of medicine-men whose duties are in general connected with the divination of future events, with the administration of drugs, and with the practice of witchcraft. There appear to be three grades of medicine-men, whose spheres of influence are divided into these three categories, but, for practical purposes, it is only necessary to consider the position of the first grade, represented by the person of the Laibon, or "Ol-oiboni," who is the Chief Medicine-Man of the tribe. The history of the Laibons is recorded in Mr. Hollis' book on the Masai, pp. 294-330, and it is unnecessary to enter into it here, but it may be mentioned that Mbatian, who died about 1890, and Lenana, his son and successor, acquired such great influence over all sections of the Masai that the position of Laibon came to be regarded by certain of the European officers who had not carefully investigated the facts of the case, as synonymous with that of a paramount chief. It does not appear, however, that the Laibons have ever attempted to assume a position resembling that of kings of native tribes, and the appointment by Government of Lenana, and, at his death, of his son Seggi, to the office of Paramount Chief of the Masai was, in fact, the result of a misunderstanding of the normal state of affairs which steps have now been taken to rectify.

The medicine-men

The Laibon.

991

The proness displayed by the pastoral Masai "Morans" in raids on surrounding tribes combined with their ceaseless activity in following this pursuit made their name dreaded throughout East Africa and hindered for many years the passage of caravans by the direct route from Uganda to the Coast. When eventually Europeans penetrated the highlands of British East Africa, they found the Masai with their flocks and herds scattered over a wide area. The story of how they were eventually concentrated in one reserve is told in Chapter III., but it is necessary to draw attention here to the effect which this concentration, combined with the introduction of veterinary skill and the cessation of raiding by and against them, had on the Masai. In 1904, before any administrative limit had been placed on the movements of the tribe, it was estimated that the Masai possessed 50,000 head of cattle. In 1911, 80,000 head were said to be in the Northern Reserve alone, and this estimate was subsequently increased to 200,000 when the mobs which were attempting to move south had been more thoroughly examined. 50,000 head of cattle moved south in 1911, but in the final move from Laikipia in 1912 and 1913, nearly 200,000 head were counted. By March 1914, all the Masai herds being located in one reserve, the total estimate for the tribe had leaped up to 600,000 and the number of cattle in the possession of the Masai is now supposed to be in the neighbourhood of three-quarters of a million. These latter figures are the estimates of Mr. R. W. Hemsted, who has been the Officer-in-Charge of the Masai Reserve for more than five years, and, in spite of the objection taken by the Masai on superstitious grounds to the counting of their stock, they must be taken to be substantially accurate. It is scarcely reasonable to suppose that the earlier figures, particularly the first two mentioned, are in any way so exact, but, after allowances have been made for this, it is obvious that an enormous increase in stock has taken place. In addition to this cattle, the Masai are said to possess something over two million sheep and ten thousand donkeys. The stock-carrying capacity of the 14,600 square miles included within the borders of the Masai Reserve, is limited to a certain extent by the aversion shown by the natives to grazing cattle in areas which from past experience they believe to be infected by disease, and, in parts of the Reserve, land which appears to be admirably suited for stock remains untenanted on that account, no attempt having been made to utilise veterinary skill and treatment in rendering their cattle immune from the disease. With the exception of these areas, the Reserve may fairly be said to be stocked to its fullest capacity, and the Masai, who number all told about 43,000 souls, possess capital to an average amount of rather more than £110 per head. They are thus, in all probability, the richest uncivilised tribe in the world. It is not surprising, therefore, considering their conception of manual labour as degrading, the limitations of their personal requirements and their immense wealth in livestock, to find that they are unwilling to work for wages as do the members of other tribes. Their national diet is meat and milk, both of which they have in plenty, and they can procure any other food or commodity they desire by sale or barter of stock.

The Morans or warriors.

181 464 561 Employment of the "Morans."

More particularly does this argument apply to the "Moran" who are of the ages at which the members of agricultural tribes are expected to work. No suitable employment has as yet been found for them on a body, though a small number have been known to reside as herds on the farms of sympathetic European stock-owners who are willing to pay a high wage for a modicum of service and who will not insist on their performance of any uncongenial labour. A very few also have proved efficient in the Police Force and K.A.R., while members of them, employed in the capacity of native levies have frequently proved of assistance in punitive expeditions against other tribes,* but for the majority, all attempts to find a suitable form of employment have failed, and they continue to lead their idle life in the Reserve, where their attitude is one of conceited conservatism combined with opulent apathy. The discipline formerly necessary to their existence as a fighting race is rapidly falling into disuse, and the good qualities they once possessed are fast deteriorating. Many of them have condemned to a feeling of boredom with their idle life but few have had the moral courage to change it for one of labour. This manner of existence is having a disastrous effect both physically and mentally on the Masai as a tribe, and it is stated that the average height of the "Moran" has decreased by three or four inches during the last fifteen years.

181 232 233 197 Masai overstocking and its results.

It has been said that the Masai Reserve is already, with certain reservations, stocked to its fullest capacity. Mr. Hemsted has estimated the natural increase in cattle at 15 per cent. or approximately 100,000 per head per annum. It follows therefore, that a similar number must be disposed of or perish annually; but this is an argument which does not appeal to the Masai. They have not only shown a marked reluctance to sell their stock, but they have made no serious attempt to accept the assistance of science in improving the grazing conditions of their country, and, being satisfied as a result of the few experiments they have made that the class of stock they possess—a small, degenerate, in-bred animal—is best suited to withstand the arduous conditions prevailing in the Reserve, they are unwilling to permit a cross-breeding with pure-bred or grade stock which might materially increase the value of their herds in the world's markets, and which would, by the introduction of fresh blood, obviate the ill-effects of in-breeding which has been rendered necessary by the cessation of raids. The wealth of the Masai, therefore, is turned to no good purpose; their style of living does not change; they are still content to live in low buildings constructed of poles, grass and mud, in conditions of filth that defy description; and, although an improvement has been noticeable in recent years, they have shown no great desire to utilise their wealth in the purchase of imported articles and in the improvement of their diet.

623 561 Councils of Elders.

Another aspect of the character of the Masai "Moran" which deserves consideration is the disregard which they evince for the authority of their own native administration as represented by the Councils of Elders. These Councils exist according to native custom, but have never been in the past, nor are they now, efficient to enforce the decisions they may give in respect of the young warriors. It may be said that serious crime in the Masai Reserve is rare, and that there are not more than three or four cases on record, since European administration was established, when the attitude of the "Moran" gave cause for anxiety and in no one of these cases did a disturbance of such magnitude occur as to render necessary a recourse to armed force to quell it. Politically, the Masai have remained loyal to the British Government since they first encountered it, and except for isolated instances where certain sections attempted to help the allied cause and to increase their herds by the despatch of raiding expeditions against German territory, their conduct throughout the trying period when the war in East Africa was on their borders was exemplary. Nevertheless, a catalogue of the misdeeds of the Masai will show a not inconsiderable number of instances

[509] Crime in the Masai Reserve.

+ 648 674

---

* The Masai have rendered assistance in the capacity of native levies on the following occasions:—

(1) South Kavirondo, 1906. 40 Morans.	(10) Kakamega Patrol, 1909. 120 Masai and Nandi.
(2) South Kavirondo, 1906. 400 Morans.	(11) Sotik Expedition, 1906. 200 Morans.
(3) Naivasha Patrol, 1906. 200 Morans.	(12) Kisii Patrol, 1908.
(4) Tana Operations, 1907-08. 300 Morans.	(13) North Kavirondo, 1907-08. 400 Morans.
(5) Lumbwa Patrol. 400 Morans.	(14) Present Turkana operations.

Reports on the work of these levies have on the whole been highly satisfactory, except in the present Turkana operations, where it is doubtful if the personal Masai have been used, and in the Kakamega patrol, where it was found that the Masai sympathise more of little use against the Nandi in their country.

where unarmed natives of the neighbouring tribes, whose duty or pleasure took them into the Masai Reserve, have been wantonly murdered, and the catalogue also includes numerous instances of thefts of stock from neighbouring farms and territories. An investigation of the record of each of these cases will show that in a small number only of incidents has the perpetrator of the crime been brought to book. The probability that the commission of a stock-theft or a murder can be performed by a Masai of the "Moran" class without the knowledge of his associates is so slight that it has been found necessary to accept the principle that the responsibility for the surrender of criminals traced to any particular area rests on all the members of the section inhabiting that area. This system is in vogue throughout all the native districts of the Protectorate and is generally employed with a fair measure of success, but a similar success does not attend its application to the Masai Reserve, and this reserve is, in fact, the area to which the great majority of impositions of fines under the Collective Punishments Ordinance, 1909, have been applied, the refusal of the Masai to assist in tracing the criminal rendering it necessary to utilize the provisions of the Ordinance to effect the punishment of the whole section involved. The blinding of a spear by the number of an unprotected wanderer or the theft of stock guarded perhaps by children is a survival of the traditions which necessitated the "Moran" to prove their manhood during the period in the standing army or the "L-Ayok" to prove their worth before circumcision. Such acts may not be regarded at the present day as valiant, but it seems that the criminal's associates have not yet come to look on them as reprehensible, and the Masai, on account of their wealth, do not possess the same dread of a collective fine as is felt by certain of the poorer tribes. Under any circumstances, the "Moran" offer no assistance in the tracking down of the criminal and the elders, though possessing detective zeal, are powerless to intervene. The attitude of the section involved in such cases is one of surprise and listlessness—they never know anything—and the collective fine which may ensue has not hitherto had the result of discouraging the adoption of such an attitude.

It will generally be found that fines of this nature have been levied on Companies or "Sirits" of different clans, and, sometimes, on all the members of a clan or division. There is no case on record in which a collective punishment has been imposed on the Masai tribe as a whole. It is therefore necessary to refer shortly to the divisions into which the Masai, who are all of one tribe, are divided by their traditions and customs, and to note also the divisions into which they are divided in practice for the purposes of the administration of the reserve. A description of the traditional divisions of the Masai people is given in Mr. Hollis' Book on the Masai, pp. 300 and 301, but the names which are now in use to denote the divisions of the tribe within the reserve do not exclusively follow either the genealogical or the geographical divisions which are there set out. The Officer-in-Charge of the Masai reserve is endeavouring to confine the members of each division to certain areas set apart for them as locations, and this step will have the effect of reconciling the name given to a division with the locality in which it is found, thus tending to perpetuate a convenient form of nomenclature.

Whatever may have been the original system on which these divisions were formed, it appears that there is a really marked clan feeling between them, and several incidents are recorded which disclose the presence of mutual distrust and strained relationship between the divisions, while interference by one division with another is keenly resented. These divisions form the basis of the tribal organisation of the Masai as it exists to-day and each division has its own Council of Elders. In the recently constituted "Masai Council," one elder, or more, has been chosen to represent each division and the Council so formed has been accepted as representative of the whole tribe. It will thus be seen that the division system presents an admirable method of dealing with the tribe, closely allied to the location system employed in other Native Reserves in the Protectorate, and has enabled unrest or crime to be so localized as to limit the liability for offences committed to certain definite sections of the Masai. Nevertheless, there is not sufficient difference in the behaviour or customs of the members of each

Divisions.

division to necessitate or render advisable a departure on their behalf from the general policy to be pursued in dealing with the tribe as a whole.

634 167 561 231

The Tribal Divisions.

The Tribal Divisions of the Masai as they are recognised for the purposes of the administration of the tribe are as follows :—

Purko.

The Purko is the largest and most important division. They number about 16,500 and of these some 10,000 came from Laikipia. There are rather more than 2,000 Muran, who inhabit five large villages. The names of the "Sirits" are Il Kisaruni, Il Merisho, L'Aimer, Il Mejuali and Il Pelyani. In 1916, the Kisaruni Purko Muran decided to divide, and while one part retained the name of Kisaruni, the other adopted the name of "Il Kidemmi." In 1917, the Purko were estimated to possess 375,000 head of cattle, 1,000,000 sheep and 5,200 donkeys. They live in the country known as Ngatet and in Ol-Orokuti.

Loita.

The population of the Loita Division is about 5,000 of whom some 700 are Muran. This division formerly lived near Ngong but when Sendeu, their medicine-man quarrelled with Lenana, they moved into German territory returning subsequently to the Loita Hills where they now are. The Muran "Sirits" are known as Il Paragwo and Il Kisaruni. The Loita are estimated to possess 80,000 head of cattle, 225,000 sheep and 750 donkeys.

L'Otayok.

A small division known as the L'Otayak inhabits the same region as the Loita. They number about 800 of whom 60 are Muran. They are said to possess 1,000 head of cattle, 18,000 sheep and 100 donkeys. A small number of L'Otayok also live in German East Africa.

Salei.

The members of the Salei Division generally inhabit the Loita Country and they recognize Sendeu as their Laibon. Their population is assessed at 600 of whom about 50 are Muran. They possess 6,000 head of cattle, 15,000 sheep and 100 donkeys. A small portion of the Salei have amalgamated with the L'Odo Kilani.

Siria.

The Siria Division also recognizes Sendeu as Laibon. They inhabit the Ol-Orokuti country, number about 1,200 of whom 80 are Muran, and possess 12,000 head of cattle, 25,000 sheep and 50 donkeys.

Il Damat.

The Il Damat form one location with Purko by whom they were vanquished some years ago. They are to be found on the Loita Plains and number 900 in all of whom 65 are Muran. They are estimated to possess 8,000 head of cattle, 20,000 sheep and 100 donkeys (see p. 37).

Kakonyukye

The members of the Kakonyukye Division number 3,500, of whom 350 are Muran, and possess 50,000 head of cattle, 200,000 sheep and 2,000 donkeys. They inhabit the country known as Il Melili and Mosiro, and the neighbourhood of Mount Suswa. The "Sirits" of the Muran are named Il Mejuali, Il Paragwo and Il Kidemmi.

L'Odo Kilani.

The L'Odo Kilani Division inhabits the country near the German border south of Lake Magadi. The population numbers 1,200 of whom 80 are Muran, and they possess 10,000 head of cattle, 30,000 sheep and 150 donkeys. The Muran are divided into two "Sirits" both known as Il Kidemmi.

Nguruman.

The Nguruman form a survival of the old agricultural Masai, but they have discontinued agriculture and now live in the same manner as the pastoralists. They inhabit the country near the mouth of the Uaso Nyiro River. They number 400, of whom 40 are Muran, and possess 1,000 head of cattle, 10,000 sheep and 50 donkeys.

Matapatu.

The Matapatu number 2,400, possess 40,000 head of cattle, 175,000 sheep and 500 donkeys. Their Muran number 160 and are divided into three "Sirits" named Il Kiluso, Il Tetiain and Seure, and they inhabit the country between Kajiado and the German border.

634 162 561 23 The Sighirari of the Engidongi inhabit the country in the neighbourhood of the Ngong Hills and En Doinyo Narok. To this division belong the medicine-men of the L'Aiser Gilata of whom Seggi is now the chief. The Division is estimated to possess a population of 1,900 of whom 120 are Muran, 28,000 head of cattle, 80,000 sheep and 300 donkeys. Sighirari of the Engidongi.

[563] [144] The Il Dala Lekutuk came from Laikipia in 1912 and are sometimes known as the Nyeri Masai. They have a considerable admixture of Kikuyu blood in them. They inhabit generally the neighbourhood of En Doinyo Narok and their population is estimated at 700, including some 75 Muran. They are said to possess 6,000 head of cattle, 20,000 sheep and 75 donkeys. Their Muran are divided into two "Sirits" named Il Tareto and Seure. Il Dala Lekutuk.

The Kaputiei are to be found in the neighbourhood of the Nyiri Desert. Their population is estimated at 2,600 including 175 Muran, and their possessions at 30,000 head of cattle, 100,000 sheep and 400 donkeys. Their Muran are divided into four "Sirits" whose names are Il Mokesen, Il Mejuali, Il Kidemmi and Il Sogon. Kaputiei.

The Sighirari of Laitokitok inhabit the country to the north of Kilimanjaro, which country is watered by the Engare Rongai, Kikalelwa, Naromuro, Ol ol Turesh and Rombo streams. The population of this division is estimated to number about 2,800 of whom 180 are Muran. These are divided into two "Sirits," named Il Kituli and Il Mejuali. The live-stock possessions are said to number 60,000 head of cattle, 175,000 sheep and 500 donkeys. Sighirari of Laitokitok.

563 In addition to the Masai, there are considerable numbers of Wandorobo ("Il Torobo") living in the Masai Reserve. Their numbers are probably not less than three or four thousand, and many of them possess considerable herds of cattle, and live the life of ordinary Masai, from whom it is difficult to distinguish them. They may be conveniently divided into two classes, namely, those who live in the bush and forest, and those who possess cattle. The former possess little or no live-stock, and subsist almost entirely upon wild animals and honey, while the latter live in villages and subsist only to a very limited extent on game. Wandorobo.

The former are to be found mainly in the neighbourhood of the Mau, but small parties of them are also met on the Uaso Nyiro, on the Lower Mara River, along the Sotik border, and in the Trans-Mara region. They live on tree rabbits and the smaller game animals, in rough shelters in the forests, or in the huts in some of the Masai villages.

The latter are to be found on the Uaso Nyiro, in the neighbourhood of Ol Alunga and Ol Doinyo Rasha, on the western bank of the Mara River, and in the Siria country. In all, they probably number about 1,000.

564 326 There exists in the reserve, a special tribe of smiths, somewhat similar to the Wandorobo, called Il-Kunono, who make iron weapons, but are treated as inferiors, and are not allowed to marry Masai women. Il-Kunono.

181 105 To recapitulate, the Masai are a listless, conservative, slothful people, inadequately governed by Councils of Elders, who admit themselves to be incompetent to deal with the idle body of warriors whose *raison d'etre* has now disappeared, but who are still sufficiently insubordinate to render ineffective the counsels of their seniors. They have been concentrated in one area, where they have amassed enormous herds of cattle of a poor quality, and countless sheep. No suitable means of employment has as yet been found for the males of the tribe as a whole, though they are experts in the care of stock, and once possessed fighting qualities of a savage nature, which spread the terror of their name far and wide. They have considerable latent powers of organization, alertness and ability, but these are largely discounted owing to their unreliability: they have always realized that it is in their best interests to be loyal to the British Government, and have never been responsible for any serious disturbance, being too proud to work, and rich enough to disregard fines, they are probably the most backward administered native tribe in the East Africa Protectorate. Recapitulation.

Chapter II.

EARLY HISTORY OF THE MASAI.

Origin of the Masai—Pastoral and Agricultural sections—Settlements of 'L-Oikop—Sir Charles Eliot's theory—European influence—Wakwavi—Early history of the Masai—The Masai as a power—Masai raids—Rebmann's visits to Chagga—Dr. Krapf—Dr. Krapf's description—Discovery of the source of the Nile—Dr. Fischer's tour to Naivasha—Mr. Thomson's journey through Masailand—Count Teleki's expedition—Mr. Jackson's journey—Dr. Peters—Masai and modern firearms—Decline of Masai power—A Masai raid—Cattle plague—Small-pox—Relations between Masai and Wakamba—Machakos Station—Ngong—Dagoretti—Relations between Masai and Kikuyu—Mr. George Wilson—Sack of Dagoretti—Trading treaty—Fort Smith—Masai hostile—Meeting at Muthaiga—Uganda Railway survey—Debates in the House of Commons—Position of the Masai in 1895—Removal to Ngong—Protectorate over Uganda—East Africa Protectorate—Kedong Massacre—Mr. Andrew Dick—Lenana's first visit—Sir Arthur Hardinge's report—Sir Charles Eliot's report—Inclusion of Uganda Provinces in East Africa Protectorate—Uganda Railway—Sir Charles Eliot's report, April, 1903—The year 1903-1904—Conclusion.

173 Origin of the Masai.

Little is known of the early history of the Masai tribe, but it seems to be an established fact that the original home of this people was the country between the north of Lake Rudolf and the Nile, from which area the Masai are said to have moved in a south-easterly direction so long ago that tradition does not recall any incidents of the exodus, nor the reason therefor.

101 173 Pastoral and agricultural sections.

It seems, also, that there were two distinct sections of the Masai, distinct in point of habits of life and customs, though not of language or ancestry, between which sections continual war was waged, wars which now form the greater part of the traditional history of the tribe as it is known at the present day to its members. The sections are usually defined as the agricultural and pastoral sections, the former, known as 'L-Oikop, being more or less settled, while the latter was entirely nomadic, and never practised agriculture in any form. Masai tradition does not extend back for more than one hundred years, but the history of that century shows, to the exclusion of all other topics, a conflict between these two sections, which resulted in the practical annihilation of the 'L-Oikop, who have now ceased to exist, with the exception of small settlements found at Nguruman, to the north of Lake Natron, two villages, Great and Little Njempa, to the south of Lake Baringo, possibly the so-called Uasin Gishu Masai, now located near Eldama Ravine, and in Kavirondo country, and certain individual settlements of Masai among neighbouring tribes, where they have assimilated the customs and adopted the language of their protectors, and from whom it is now difficult to distinguish them.

[361]

Settlements of 'L-Oikop.

174 114 Sir Charles Eliot's theory.

The theory suggested by Sir Charles Eliot, is that the nomad pastoral state cannot be assumed to be primitive or very ancient, and that it is quite probable that there was a large agricultural settlement on the Uasin Gishu plateau, from which the more adventurous of the warriors detached themselves.

177 European influence.

It is this conflict which made the Masai name what it was and which has rendered so complex the question of the administration of the conquering pastoral section. The victors depended entirely on cattle for their means of subsistence, and were driven to raiding other tribes, in order to amass sufficient herds of cattle. The introduction of the European element, therefore, deprived the Masai of their one pursuit, and had the inevitable result of reducing the Masai from the first to a very low rank of economic importance among East African tribes.

[721]

101 Wakwavi.

The term Wakwavi (Wakuafi of Krapf) is frequently used by the early writers in reference to the Masai, but it appears that this term has, in fact, no connection with the agricultural section, being merely a Swahili nickname borrowed from the Masai Kwavi or Kwapi, meaning places.

175
648*

Early history of the Masai.

"The expansion of the tribe," writes Sir Charles Eliot, "seems to have come to an end about the middle of last century. About 1830, they reached their furthest recorded point in the south, and were driven back by the Wagogo and Wahehe . . . . . About 1850, the Turkana drove the most westerly branch of the Masai from the west to the south of Lake Rudolf . . . . . Somewhere about the same period . . . . . the Masai dwelling on the Uasin Gishu plateau attacked those of Naivasha, and after defeating them were in their turn thoroughly defeated by a combination of Naivasha and allies from Kilima-Njaro. The inhabitants of the Uasin Gishu were scattered to the four winds: those who escaped their brethren were annihilated by the Nandi, and only a few fragmentary remnants survive in Kavirondo, Lumbwa, and the two villages called Great and Little Enjamusi, at the south end of Lake Baringo. Another branch called 'L-Osigella, or Segelli, took refuge in the Nyando valley, but were wiped out by the Nandi and Lumbwa."

The Masai as a power.

The same writer says:—"From at least 1850 to the early eighties, the pastoral Masai were a formidable power in East Africa. They successfully asserted themselves against the Arab slave-traders, took tribute from all who passed through their country, and treated other races, whether African or not, with the greatest arrogance." The record of Masai raids is much more complete as it affects the eastern part of their territory than on the west. This is readily understandable on account of the records having been made by Europeans, who obtained their information from the east coast, and not by wanderers from Uganda: but it also appears probable that the Masai found their expeditions eastwards to be more remunerative and less costly than any they might undertake on the west, for it has never been contended that the Nandi and Lumbwa, their western neighbours, were not at any time of their history a match, or more than a match, for the Masai. About 1859, the Masai raided Vanga; in August, 1865, they were in the Galla country near Mtanganyiko: and again, early in 1867, they were raiding on the Tana River, near Wachu; the Gallas would retreat to Ramo in times of war with the Masai as, that place being surrounded by water, it was considered immune from Masai attack. In August, 1876, the Masai were at Ribe, whence all natives fled to Mombasa, while six years later, they again raided the same locality, on this occasion visiting the Mission station, and killing two of the native converts. In 1883, they raided Saadani, on the coast opposite Zanzibar, whence they were repulsed with guns, and these exploits were followed by two raids on the Mission station of the United Methodist Free Churches Mission, at Golbanti, on the Tana River, in the first of which, in March, 1886, two native Christians were killed, and in the second, on May 3rd of the same year, the two resident missionaries, Mr. and Mrs. Houghton, shared the same fate. As late as 1889, the Masai raided within sight of Mombasa Island. The result of these constant raids was that all inhabitants were driven from the more exposed portions of the coast belt, that the Giriama were prevented from keeping large herds, and that Galla settlements on the southern Tana totally disappeared.

Masai raids.

Rebmann's visits to Chagga. Dr. Krapf.

Probably the first European who made the acquaintance of the Masai, was Mr. Rebmann, the colleague of Dr. Krapf, who visited Chagga country on three occasions; and Dr. Krapf, who himself toured in Ukambani in 1848 and 1849, gives a description of "The Wakuafi and Masai Tribes" in his book "Travels, Researches, and Missionary Labours, &c.," published in 1860. The following extracts are taken from this description as giving the early impressions created by the tribe in the mind of this European traveller.

Dr. Krapf's description.

[101]

"The Wakuafi and Masai," writes Dr. Krapf, "who call themselves 'Orloikob,' or 'Loikob,' 'loigob,' . . . . . , that is, possessors of the land, ... , occupy large plains in the interior of Eastern Africa, which extend from about two degrees north of the Equator to about four degrees south of it. The names 'Wakuafi' and 'Masai' are given them by the tribes of the coast. . . . . Their manner of life is nomadic, and where they find water and grass, there they encamp often for months together. They live entirely on milk, butter, honey, and the meat of black cattle, goats and sheep, and on the game which they hunt down: having a great distaste for agriculture, believing that the nourishment

195 *648 afforded by cereals exhibits, and is only suited to the despised tribes of the mountains: while to feed on meat and milk gives strength and courage. When cattle fail them they make raids on the tribes which they know to be in possession of herds. They say that Engai (Heaven) gave them all that exists in the way of cattle, and that no other nation ought to possess any. Wherever there is a herd of cattle, thither it is the call of the Wakuafi and Masai to proceed and seize it. Agreeably with this maxim, they undertake expeditions for hundreds of leagues to attain their object, and make forays into the territories of the Wakamba, the Galla, the Wajagga, and even the Wanika on the sea-coast. They are dreaded as warriors, laying all waste with fire and sword, so that the weaker tribes do not venture to resist them in the open field, but leave them in possession of their herds, and seek only to save themselves by the quickest possible flight.

[411] "The weapons of the Masai and Wakuafi consist of a spear, a large, oblong shield, and a club round and thick at the top, hurling which with the greatest precision, at a distance of from fifty to seventy paces they can dash out the brains of an enemy: and it is this weapon, above all, which strikes terror into the East-Africans, the Suahili with their muskets not excepted. The Wakuafi shelter themselves behind their long shields until they become close enough to the enemy [961] to make good use of their clubs. They conquer or die, death having no terrors for them. . . . . .

"The two kindred tribes, the Wakuafi and the Masai, hate each other mortally, which is a fortunate circumstance for the weaker African tribes: since, were they united and ruled by one supreme head, there would soon be an end to the existence of the other East-African tribes, who could not possibly resist them, the savage Gallas themselves not excepted: for the latter fly before the Wakuafi and Masai, and, at the most, only prove dangerous enemies to them by stratagem and cunning, but never cope with them in a fair and open field.

"As regards the physical conformation of the Masai and Wakuafi, their forms are tall and slender, with handsome and rather light-complexioned features. . . . . From their beauty of form the Masai and Wakuafi slaves, especially the young females, are much sought after by the Arabs and Suahili of the coast: and they become much attached to their Mohammedan masters, provided always, that the latter do not require from them any kind of labour which is repugnant to their habits, such as tilling the soil and similar occupations.

"The Wakuafi and Masai as pastoral tribes, consider themselves the exclusive possessors of the plains and wildernesses, with their springs and streams, and they do not attack the inhabitants of the mountains, so long as they confine themselves to their mountains, and refrain from descending into the level country to turn it to agricultural or pastoral purposes. It is said, however, that very recently they have resolved to take possession of the mountain Kadiaro* to facilitate their freebooting expeditions against the Galla, Wanika, and Suahili, and to exclude these tribes of the coast from access to the interior. . . . . .

Discovery of the source of the Nile.

The Masai first came into prominence in connection with the development of Africa and with geographical discovery by the discovery of the source of the Nile in 1875 and by the interest then aroused in Europe, both in Uganda and in the possibilities of opening up a more direct route from the sea than that one then in use from opposite Zanzibar to the southern end of the Victoria Nyanza. To the opening of this route the most serious difficulty to overcome was the negotiation of the country occupied by the then hostile and dreaded Masai, of whom practically all that was known was the history of their fighting and prowess in arms. East coast traders had repeatedly crossed Masailand, but no Europeans had attempted the task.

Dr. Fischer's trip to Kenia.

In 1882, a German naturalist, named Dr. G. A. Fischer, was sent out by the Geographical Society of Hamburg to explore the possibilities of this route. He started from Pangani, opposite Zanzibar, with a caravan of 130 natives and porters,

* Now better known as Kilimanjaro.

and, on reaching the borders of Masailand at Little Aruscha, was attacked by some of the Murran. These were beaten off, and the expedition advanced as far as Lake Naivasha, which was reached on the 11th of May. There the Masai stubbornly opposed his further progress, and after a stay of nearly four weeks in that neighbourhood, he was forced to return to the coast.

175
648

About a year later, the feasibility of the route was fully demonstrated by Mr. Joseph Thomson, who was sent out to East Africa for the purpose by the Royal Geographical Society, and the account of whose adventures is given in full in his book ("Through Masai Land." Sampson, Low and Co., 1885). Mr. Thomson's journey through Masailand.

Mr. Thomson, with his caravan of 140 men, left Mombasa in March, 1883, and travelled by way of the Church Missionary Society's station at Teita to Taveta and the eastern slopes of Kilimanjaro. On attempting to enter the Masai country, he found them so hostile that he was compelled to return to Taveta, where he joined forces with a body of Arab ivory traders. The caravan being now too powerful to fear attack, he proceeded to Ngongo Bagas, being subjected to much annoyance and many indignities by the Masai. Arrived at Naivasha, he found the Masai very troublesome, and had great difficulty in moving, as he desired, towards Kenya over Settima, the highest point in the Aberdare Range. He found the Masai in great force on Laikipia, and further difficulties beset him, his supplies of food and trade goods giving out. He records a terrible epidemic of rinderpest which had recently broken out, decimating the Masai herds and rendering it impossible to procure food. Finally, he was forced to "fly in the middle of the night," and he escaped towards the northern part of Laikipia, arriving at Nyanga early in November. From there he proceeded without much difficulty to the Victoria Nyanza, at a place forty-five miles east of the outlet of the Nile. Thomson was thus the first explorer to cross the whole width of the Masai country and reach the Victoria Nyanza from the east.

The third great expedition across Masai country was undertaken by Count Samuel Teleki von Szek, who was accompanied by Lieut. von Hoehnel, and who left Zanzibar in January, 1887. He passed by Kilimanjaro, crossed the Kapetiai Plains, reached Ngongo Bagas in August, and moved northwards to Lake Rudolf. This expedition was important, on account of Count Teleki having twice crossed the Masai country without conflict with the natives. Count Teleki's expedition.

No encounter with the Masai occurred on the occasion of Mr. (now Sir Frederick) Jackson's journey towards the Victoria Nyanza in the autumn of 1889, but Dr. Carl Peters, who followed a route further to the north, met them on Laikipia where an engagement took place, two Somalis and one Swahili being killed from among his followers. An account of this latter journey is given in Mr. P. L. McDermott's book, "British East Africa or Ibea" (Chapman and Hall, 1895), from which the following is a quotation from a narrative related by one of Dr. Peters' Somali followers:— Mr. Jackson's journey. Dr. Peters.

"The Masai at this place (Laikipia) had large herds of cattle, goats and sheep, and we carried all the goats and sheep away with us, but had to leave the cattle behind, being too wild to drive. There would be about sixty of us in the caravan at this time. In the confusion at this engagement, nine of the Wa-Kikuya escaped. These Masai followed our caravan for two days, but our Askari kept them away by firing at long distances. On the third night they came down on us but were repulsed.

"We had another engagement at a later period, and lost one Swahili."

Dr. Peters' methods may not command approval, but it would appear that the Masai, who were accustomed to attack whatever caravan they met, received from him a wholesome lesson as to the efficacy of the modern firearm, a lesson which they were ready to remember in their subsequent meetings with European caravans. Masai and modern firearms.

The year 1890 may be said to mark the commencement of the decline of the power of the Masai. The western portions of Girama, the lowlands of the Sabaki River, the plains of Ukambani, and the neighbourhood of Mount Kenya were all Decline of Masai power.

175
#L48

visited in that year. A graphic account of a Masai visitation to the country east of Mount Kenya is given by Commander Dundas, R.N., in the "Scottish Geographical Magazine" of March, 1899. Commander Dundas navigated the Tana River to a point 300 miles from its mouth in the early nineties, and then proceeded overland towards Mount Kenya.

A Masai raid.

"On our return," he writes, "through the Kikuyu country, a most harrowing sight presented itself; what only a few days before were prosperous villages, standing amid fields of grain, were now smoking ruins; bodies of old men, women and children, half-buried, lay in all directions; here and there might be seen a few solitary individuals, sitting with their heads buried in their hands, hardly noticing the passing caravan, and apparently in the lowest depths of misery and despair. On questioning several of these unhappy beings, I was informed that the Masai had unexpectedly arrived one morning at dawn, spearing and burning all before them, and carrying off some 250 women and large herds of cattle. Only a few of the unfortunate people had escaped by flying to the mountains."

175

#L48

Cattle plague.

Smallpox.

At the end of 1890, a cattle plague started on the East Coast, opposite Aden, and spread inland. In the spring of 1891 it had not reached the Masai country, but by the autumn of that year it had spread through Masailand and Ukambani and the majority of cattle and buffalo were dead. Simultaneously, the Masai were attacked by smallpox and their numbers considerably reduced. The cattle plague turned their arrogance and largely deprived them of their means of subsistence and the subsequent disease found them weak and hungry and killed off large numbers. From this date Masai supremacy ceased to exist and, though the terror of their name long outlived their prowess in the coast areas, the tribes surrounding the Masai country were not slow to take their revenge for the oppression and plunder they had suffered in the past, and on the advent of the Company's administration, the Masai were in a pitiable plight.

175
#L48

Relations between Masai and Wakamba.

An extract from Captain (now General Sir F. D.) Lugard's diary is interesting as showing the relations of the Wakamba and the Masai at this transition stage:—"These Wakamba are at constant war with the Masai. They have scouts out along the hills and on the borderland, by day and night, I believe, so that the approach of any Masai is at once known, and they assemble in numerous numbers, almost instantaneously, to fight them. Moreover, every day little parties pass my camp (at Machakos) on their way to lift cattle from the Masai—three or four at a time, perhaps, running further on (where they put on their war-dress). It is a daily sight, and one sees them going and returning all day long on these expeditions. Altogether, they seem to make it pretty hot for the Masai about here. In turn the Masai lift Wakamba cattle, etc."

Machakos Station.

Ngong.

A station was established by the Imperial British East Africa Company at Machakos in 1889, and on being sent on his mission to Uganda Captain Lugard had received instructions to build a station at Ngongo Bagas; this area, however, he found to be a mere waste land, uninhabited except by passing Masai, who were in the habit of grazing their flocks and herds in that neighbourhood during the dry season. As the object of this station was to be the foundation of a centre for the purchase of food for caravans proceeding to Uganda, he decided to build at the southern extremity of Kikuyu, as close as possible to Masailand, so as to get in touch with the tribe, but within the limits of the rich and fertile, food-producing country, and he consequently selected Dagoretti as a suitable site, in October, 1890.

Dagoretti.

Relations between Masai and Kikuyu.

In describing the Kikuyu relations with the Masai at the time of his first visit, Captain Lugard writes:—"These people are at constant war with the Masai, who periodically raid the country in strong war-parties. The Wa-Kikuyu, however, hold their own, unless surprised or attacked in overpowering force. I saw along one of the main roads a series of pits concealed in the rank vegetation by the side of the path, and was told that, in the event of a Masai raid, warriors would conceal themselves in each of these pits, and spear the Masai as they passed!"

175
248

Captain Leggard left Dagoretti on November 1st, 1890, having completed the stockade and put together some rough houses for stores and native quarters. He left in charge Mr. George Wilson with some thirty men, and Mr. Wilson, while at Dagoretti, succeeded in getting into touch with the neighbouring Masai and in extending British influence into the Masai country. This, wrote Captain Leggard, was "the first time that any Europeans had ever succeeded in winning their confidence and friendship." In April, 1891, Mr. Wilson had to evacuate the fort owing to lack of provisions and it was thereupon burnt down by the Kikuyu, who looted the stores it contained. Having collected thirty men at Machakos, Mr. Wilson returned to Kikuyu, and the Masai, with whom he had made great friends, offered their assistance. He declined it, but they would not be denied and remained close at hand in case he should meet with a reverse.

Mr. George Wilson.

Sack of Dagoretti.

Having recaptured Dagoretti station, he took steps to rebuild the fort and a stipulation was made with the Kikuyu that the Masai, who had been his staunch friends throughout, should have free access to Kikuyu country to trade. This treaty was kept inviolate for seven months.

Treaty broken.

Shortly after this, Mr. Wilson left the service of the Company and Dagoretti station was abandoned, while another station with a strong stockade was erected at Fort Smith.

Fort Smith.

The Masai, who had previously behaved so well, were fired upon by the Company's troops while carrying out a raid against the Kikuyu, and retaliated by the murder of small-pox, finally abandoning their friendly attitude and becoming definitely hostile.

Masai hostile.

The possibilities of travelling to Uganda by the route traversing Masai country had been fully demonstrated by various caravans which had performed the journey but this route had not come into general use in 1892, the longer but safer way through the less hazardous districts of German East Africa being normally used by other than Government caravans. In that year it was suggested that it might be convenient to missionaries and other parties if arrangements could be made for the utilisation of the more direct route to Uganda and the Company's representatives were therefore asked to get into touch with the Masai in order to facilitate such journeys. A meeting was held at Mathiaga near Naivasha in 1892 between the Masai and Mr. Ainsworth as the representative of the Company, when certain details regarding this route were amicably settled, the Masai assisting on that occasion by the provision of one hundred donkeys for transport work.

Meeting at Mathiaga.

Though the power of the Masai had largely decreased by the year 1897, it appears that they were still considered a people to be reckoned with, for Major Macdonald, in his report dealing with the construction of a railway from Mombasa to Kikuyu, remarked :—

Uganda Railway survey.

"The most fertile districts of the Company's territory would be in touch with the railway, and the check the line would place on Masai raids would probably considerably extend the scope of cultivation, and enable much valuable and well-watered land now uninhabited to be made use of by the agricultural Wakamba."

In a later paragraph of this report, it is stated :—

"As regards the action of the Masai with regard to the construction of the proposed railway, I do not think that they would offer any opposition to it. Cases of thieving would occur, as elsewhere, but of organised or even petty opposition there would probably be none."

In the debates which took place in the House of Commons in regard to the construction of this railway, the opposition to the railway was almost entirely based on objections drawn from the character of the Baganda and Masai, with whom it was feared trouble might occur. The Masai were at that time estimated to number 100,000 and it was considered that the first effect of the railway would be to put a stop to their raiding and oblige them to adopt peaceful industry.

Debates in the House of Commons.

Position of the Masai in 1895.

The following extract from Mr. McDermott's book referred to above, indicates the position in which the Masai were to be found after the cattle-plague and small-pox which decimated the tribe and their herds in 1890 and 1891. This extract was written in 1895 and also shows the early attitude of the Masai towards the Company's administration.

"The Masai, who inhabit the country west of Kikuyu and who have won such notoriety for marauding, have latterly fallen upon evil days and have ceased to be the terror they formerly were to the other tribes. The presence of European authority in the country inspired them with awe from the first, and no party, however small, has been molested passing through their country, or obliged to pay the 'hongo' tribute, since the advent of the Company. The moral authority of European occupation has been of itself sufficient to inspire this respect. The steps taken to intercept their raiding routes have restricted their licence in other directions. Lastly, the epidemic which lately swept over the country and destroyed the cattle was a terrible blow to them, and reduced them to the verge of starvation. The Wa-Kikuyu, their old enemies, have seized every opportunity of attacking their kraals, and by force or fraud have made a practice of carrying off their women and children as slaves. Some of these they have retained for themselves, some they have bartered with coast traders, and some with the neighbouring Wakamba. The slave trade thus carried on it has been the object of the persistent efforts of Mr. Ainsworth and Mr. Hall to suppress. Their action has met with marked success, especially in stopping the trade between Kikuyu and Ukambani. It would be impossible at present, and until the Wa-Kikuyu are more completely under control, to prevent the raiding and kidnapping of these people in the Masai country, but the liberation of their captives, when discovered, has lessened the profits of the business and so far discouraged it. Nor has this been the only measure taken with effect by Mr. Hall. Last year a party of the Masai came to him at Fort Smith and begged protection for their people. These were in the forest, in hourly danger of an attack from the Wa-Kikuyu, and Mr. Hall sent to have them brought in. Mr. Hall's men actually found the Wa-Kikuyu assembled at the place ready for the attack—the usual method of which was to kill all the men and carry away the women and children—but a couple of shots dispersed them, and the Masai party, numbering between 400 and 500 souls, were brought in to the Company's stations. These people, Mr. Hall stated, belonged to the Matambata section of the tribe, and owing to a feud raging among the various sections of the Masai and the treacherous attacks of the Wa-Kikuyu, they had suffered heavily, and wished to live under the European Officer's protection. Mr. Hall settled them on some ground near the fort where they could cultivate, and although they were entirely destitute, and it was evident that help from the Company's stores would be needed for some time, these people quite understood that they were to live by their own labour, and gratefully settled down to work. The Wa-Kikuyu in the neighbourhood treated them in a friendly way and supplied them with plenty of food." As Mr. Hall observes, had it not been for the protection thus promptly given them, "these people would now be scattered through the district as slaves to the Wa-Kikuyu, and the men all killed and the fact of their having come here under protection has had a distinctly depressing effect on the slaving propensities of the Wa-Kikuyu!"

Removal to Ngong.

These Masai resided for some two years near Fort Smith and were then removed to Ngong, where a temporary station was built.

Protectorate over part of Uganda.

In June, 1894, a Protectorate was established over Uganda, and that Protectorate was defined as extending over the whole of the intervening territory from which the Imperial British East Africa Company had withdrawn its effective control. The whole of the country to the west of the western limits of the Company's district of Kikuyu was thus originally included in the Uganda Protectorate, and, in fact, so remained until the 1st of April, 1902. The result of this division was that part of the Masai tribe was to be found on the eastern borders of the Uganda Protectorate, while the Company retained control of the Masai situated east of that line, round the Ngong Hills and on the plains to the south-east.

On the 1st of July, 1896, the remainder of the British sphere between the Zanzibar and Uganda boundaries and the Tana River and German frontier was placed under Her Majesty's protection, and this area, together with those Protectorates which had previously been established on this part of the East Coast, were fused into one administrative whole under the title of the "East Africa Protectorate." The western boundary of the Protectorate in the Masai country was the Kedong River, and while Laikipia was in the East Africa Protectorate, Baringo, Njemps, Nakuru, Elmenteita and Naivasha were situated in Uganda.

East Africa Protectorate. 175 648*

In November, 1895, a large caravan consisting of some 1,400 Swahilis and Kikuyu was cut up by the Masai in the Kedong Valley on its return from Eldama Ravine, to which place it had been sent on Government duty. Nearly all the Swahilis lost their lives but a fair number of the Kikuyu escaped and reported the incident to Mr. Gilkison, the officer in charge of Fort Smith. Mr. Ainsworth, the Sub-Commissioner, left Machakos for Fort Smith and he, together with Mr. (now Sir Frederick) Jackson, who hurried there from Naivasha, conducted an enquiry into the matter, at which it was established that the Swahilis were the aggressors, the headman having taken two girls from a Masai kraal. These had been handed back as a result of representations made by the Masai, but a renewed attempt to capture them had been made the following morning before the caravan started on its journey. This attempt was unsuccessful but a shot was fired in the village which killed a cow, and the Masai attacked the caravan as a retaliatory measure.

Kedong massacre.

Mr. Andrew Dick, an English trader who was travelling in the neighbourhood in company with two Frenchmen at the time of the massacre, attacked the Masai and succeeded in capturing them from a number of cattle, but he was killed by the Masai in his retreat up the Kikuyu Escarpment.

Mr. Andrew Dick.

As a result of the enquiry into these two incidents it was held that the Masai had been acting under such provocation that no great punishment was necessary. They had lost a considerable number of men in their encounter with Mr. Dick, and the only punishment that it was considered necessary to inflict was the confiscation of the cattle that had been captured from them by Mr. Dick, which cattle were paid to the relatives of the Kikuyu who had lost their lives in the massacre as compensation for the loss sustained.

One important result followed the "Kedong Massacre." Lenana, the Masai Laibon, who had for some time expressed his intention of visiting the Government officer at Fort Smith, had overcome the reluctance shown by his followers, and had actually arrived at that station just before the news of the massacre reached Mr. Gilkison. There he was instructed to stay until an enquiry had been held, but when the result of the enquiry was known he was so impressed with the impartial hearing given to the Masai witnesses, and with the justice of the decision, that he vowed allegiance to the British Government, a vow which he faithfully kept. British justice on this occasion gained the friendship of the most powerful man in the Masai tribe, and rendered his influence warmly loyal to the administration from that day to the day of his death.

Lenana's first visit. 175 648* 791

The Masai in the East Africa Protectorate were situated in the Province of Ukamba, of which they occupied the southern portion, and inhabited the district known as the Kenia or Kikuyu District. The following extract is taken from Sir Arthur Hardinge's "Report on the Condition and Progress of the East Africa Protectorate from its Establishment to the 30th of July, 1897," and once again describes the fallen position of the Masai at that time:—

Sir Arthur Hardinge's report. 175 648*

"The Masai consist of one entire tribe, the Naivasha or Kisongop Masai, whose King or Chief is Lenana, and of the broken remnants of seven other tribes, the Dogolani, Burko, Lipurali, Matapato, Kurukoi, Gikinda and Kapte Masai, who, after long terrorizing the whole country have at last been defeated and broken up by the superior force of the Wakamba and We-Kikuyu, and, having had their old military organization utterly shattered, have accepted, and to a great

175 extent are really controlled by the authority of the European district officers.
*648 It may seem strange that this race of brave and haughty warriors should have succumbed to tribes so inferior to them in military prowess as the Wakamba and Wa-Kikuyu, but the reason is to be found in the peculiar conditions of their mode of life.

"Once their own flocks and herds were decimated by the great cattle plague of a few years ago, the Masai, a purely pastoral people, were compelled by famine to depend, not partially as before, but exclusively, upon raids, and about half, or perhaps more, of the warriors of a given tribe would be absent for a long period on a foray, leaving the kraal, which with them, owing to the dislike of the whole race for any manual labour, is never stockaded or provided with defensive works of any kind, protected by a few hundred men.

"The Wakamba, and, after the Masai were driven from Ukamba proper into Kikuyu, the Wa-Kikuyu, would be on the watch for these raiding expeditions, and, as soon as one was well on the way, would swoop down on the undefended or only partially defended kraal in overwhelming numbers, and the raiders would return with their spoil only to find their houses in ashes, and the women and children whom they left behind there carried off to be sold as slaves.

"A constant repetition of these tactics, which their necessary dependence, after the famine, upon raids, prevented them from meeting, broke the power and prestige of the Masai, and those in the settled and administered portions of our Protectorate at least, with the single exception of Lenana's tribe, are now a mere feeble fragment of this once redoubtable people.

"They are mostly settled at Ngongo Bagas, a fort seven miles south of the district headquarters of Kikuyu, where they live under the supervision of an English officer.

"Lenana's tribe now have their headquarters at Naivasha, on the Uganda side of the border. Kinangop, their summer quarters, being also under the Uganda administration, and though Lenana himself is said to wish to settle in the East Africa rather than in the Uganda Protectorate (though up till now he and his people have been in the habit of wandering from one to the other), it would probably be most convenient that he should not be encouraged to do so.

"Besides Lenana's, a section of the Naivasha Masai have followed his brother and rival for the Chieftainship, Sendeyo, to the district known as Loita, on the German frontier, and pasture their cattle sometimes on ours, sometimes, but oftener, on the German side of the border. Sendeyo is said to be more hostile to Europeans than Lenana, and his attitude has of late given grounds for thinking that both we and the Germans might have trouble with him. There are also Masai tribes of whom, as yet, we know little or nothing, living at Ndoro, near the base of Mount Kenia.

*648 "A helot tribe, or rather caste, formed out of various conquered and enslaved
175 neighbouring tribes of Bantu race, constitutes the servile class among the Masai,
56 and performs the necessary domestic and manual labour which the latter deem degrading. This race or caste is known as the Elderobbo: their proportion to the Masai in the Province of Ukamba is said to be about 15 to 100. They are generally paid in kind for their labour, and are free to hunt themselves for meat and ivory, but must give half they get to the chief medicine man of the Masai. They are forbidden to marry Masai women, and their kraals are separate from those of their Masai masters. This is the only approach within the Province to any regular system of domestic slavery. Among its other races, such slaves as exist are generally members of a neighbouring free tribe, made prisoners in a raid.

*648 "These raids are, however, fast diminishing, as the authority of our Administration is making itself felt, and Mr. Ainsworth reports to me that, whereas in
175 the years 1892 to 1896 not a month passed without serious trouble in connection with slaving and slave-trading, he has only had to deal in the last twelve months with a few isolated cases, not more than three having occurred in the last quarter.

"The political and military organization of the Masai has been so fully described by the various travellers, notably Mr. Thomson, who have made it their study, that it is unnecessary for me in this report to reproduce the information which writers with far greater knowledge than I can pretend to possess, have already supplied on this subject. There seems, so far, but little hope that this wild people will, as a whole, be weaned from their predatory mode of life, and induced to become peaceful cultivators: though a few of those settled at Ngongo Bagas have recently begun to take to agriculture, under the supervision of the local officials. 648* 175

"The total number of the Masai in the Kenia district, including the Wandorobbo, is estimated by Mr. Ainsworth at 23,000. Those in our settlement at Ngongo Bagas include 532 'Kimoran' or warriors under 20, commanders or 'Legumas,' and about 4,000 old men, women and children." [162]

In another part of this report Sir Arthur Hardinge writes as follows:—

"Mr. Gilkison, when in charge of Kikuyu, introduced the practice of employing Masai runners to carry the mails, and they have proved, I believe, very satisfactory, covering the 140 miles of the third stage in five days. The average total time taken to transport the mails from Mombasa to the Eldoma Ravine, a distance of 495 miles, is twenty days, or about 24¾ miles a day. The weight of each load of mails is 30 lbs." [492] [484] [461]

In a subsequent passage, dealing with the slave-trade, Sir Arthur Hardinge writes:— 648* 175 567

"The trade in Ukamba is confined to the district of Kitui, ... and is chiefly in Masai women and children.

"Its origin is as follows: When the Masai of Mount Meru, near Kenia, were decimated about four years ago by an epidemic of small-pox, following upon a severe cattle plague, which obliged their warriors to go long distances to raid for cattle, and thus leave their kraals almost undefended, the Kikuyu people, their hereditary foes, fell upon them in overwhelming numbers, massacring their old men and carrying off their women and children as slaves. These they are now selling at low rates, having more of them than they want, to local Arab or Swahili middlemen, who, driven by our anti-slavery laws from the coast, can only carry on their trade with safety in inland districts as yet unoccupied by us, and who retail the slaves thus purchased at a profit to the natives throughout eastern Ukamba, these latter people being all themselves free, and therefore requiring to be supplied with such slaves as they may need from other tribes.

"Some of the Masai girls are kept by their Swahili purchasers as concubines, and these, when they have learnt in a year or two enough Swahili to pass in the Swahili dress as coast women, will go down with their masters to the coast, where a few of them (not having borne children) may be secretly sold to other Arabs or Swahilis, but Mr. Sub-Commissioner Ainsworth, who knows Ukamba well, assures me that they nearly all remain in Kitui, and doubts whether fifty of them in a year even leave it."

Referring again to the activities of Sendeyo, Sir Arthur Hardinge wrote:— 648* 175

"Of late there have been symptoms of unrest among the Masai, which have made it necessary to keep a careful watch on them. Sendeyo, Chief of the Loita division of the race, who wander sometimes in English and sometimes in German territory, has been endeavouring to persuade his brother Lemana, the Chief of the Masai of Naivasha, all of them on our side of the border, to join him in a general movement against the Germans in Kilimanjaro, who recently chastised a local tribe of Masai, the Wa-Arusha, for the murder of two German missionaries.

"In anticipation of trouble in this quarter, I sent reinforcements to Taveta, and the simultaneous arrival of troops from Uganda at Naivasha and at Ngongo Bagas from Machakos seems to have induced Lemana to decline Sendeyo's proposals, which, though primarily directed against the Germans, really aimed at a general rising against all European control."

*648 175 Sir Charles Eliot's report.

In his report on the East Africa Protectorate, dated the 10th of June, 1901, Sir Charles Eliot describes the Masai as "perhaps the most remarkable people in East Africa. . . . . The greater number are still warlike nomads, who roam about over the Rift Valley and the plains between Kilima Njaro and Nairobi. . . . .

"The spread of law and order has somewhat curtailed their exploits, but the men are still all warriors by profession. . . . . .

"The Masai are found in both German and British territory. When the last Chief, Batyan, died, a dispute arose between his sons, Lenana and Sendeyo, as to the succession, and the tribe was divided. The former is now recognized as Chief of the Masai in the British sphere, and the latter of those in the German. Sendeyo has several times had trouble with the German authorities, but has always been defeated. Fortunately for us, Lenana's familiar spirit advised him that he had better make peace with the white men, because they were invincible, and he has proved our best friend and ally among the natives. In return, he receives £6 13s. 4d. a month, which is a very moderate stipend for a monarch of such considerable powers, both real and imaginary. Though I see no reason to anticipate that Lenana will change his present attitude, I regard the Masai as the most important and dangerous of the tribes with whom we have to deal in East Africa, and I think it will long be necessary to maintain an adequate military force in the districts which they inhabit."

[291 178]

At this date, the Masai in the East Africa Protectorate had been placed in a district of their own, called the Masailand District, whose headquarters were at Nairobi.

Inclusion of Uganda Provinces in East Africa Protectorate.

By an Order of the Secretary of State for Foreign Affairs, dated the 5th of March, 1902, the Kisumu and Naivasha Provinces of the Uganda Protectorate were included in the East Africa Protectorate, and the Naivasha Masai therefore came under the control of the latter Protectorate.

Uganda Railway.

The construction of the Uganda Railway was commenced in 1893, and the line reached the Lake in 1901. Throughout the construction period the Masai gave no trouble whatsoever to the workers on the line.

Sir Charles Eliot's report, April, 1902.

In his report on the East Africa Protectorate, dated the 18th of April, 1902, Sir Charles Eliot writes:—

"I agree with those who do not think the Masai are a formidable element in East Africa. It would, of course, be unwise to irritate them, and there is always some danger of misunderstandings in dealing with a people of whose language we are profoundly ignorant. But it appears to me that, even within the last year, the Masai have become more amenable. They have taken to wearing red blankets, and the astonishing exhibitions of nudity, which were common a year ago, are now comparatively rare. Lenana even wears a greatcoat and is one of the judges at the Nairobi cattle show."

[291 178]

Later in his report he writes:—"The troops, which are under the direct management of the Military Department of this Protectorate, form the 3rd Battalion of the King's African Rifles . . . . . One company at Nairobi is composed of Masai. There is no doubt of the warlike powers of this tribe under their own system, but military authorities differ as to their qualifications for service in a disciplined army. Colonel Hatch's last report on their capacities is, however, very favourable, and his only criticism on them is that they cannot stand service on the coast. There are many advantages in employing the Masai as soldiers and police, for they are little disposed to cultivate, and if we are effectively to stop their ancient occupation of cattle raiding, we must give them something else to do. In some ways they answer very well: they are extraordinarily active, and have better notions of honour and loyalty than most tribes, but it would clearly be rash to trust too much to Masai troops and Masai police in Masailand."

DISTRIBUTION OF THE MASAI IN THE EAST AFRICA PROTECTORATE.

The following quotations are made from the Protectorate Annual Report for the year 1903-1904 :— The year 1903-1904. 648* 175

"About the beginning of September last, it was reported that the Masai contemplated a wholesale raid into the Kisii country; the adoption of prompt measures, however, both in this province" (Ukamba) "and at Naivasha, prevented any carrying out of their intentions. Since that time they have been quiet, with the exception of a party belonging to the Matapatu section, which secretly organized a small expedition some two or three months ago: the kraal concerned was fined, and the 'leganan,' or head warrior, is now a fugitive, the raid having been unsuccessful. With the exception of these two incidents, the conduct of this tribe has been satisfactory. . . . . ."

"Nothing of great political importance has occurred in this district" (Naivasha District, Masailand) "during the year. In the autumn of 1903, the Masai held a large circumcision festival on the plains of Kinopop (or Kinangop). This was attended by several thousand tribesmen, and it was thought by some that the event would be commemorated by the dispatch of a large party to raid Lumbwa, Kisii, and, possibly, the German territory at the back of Shirati. Though the idea was discredited by those on the spot, it was considered advisable to make a military demonstration in the neighbourhood of Naivasha to discourage any breaches of the peace. At any rate, the ceremonies on Kinopop passed over without incident. Curiously enough, about this time, a large war party of Masai did make a raid on the country east of Shirati, but, owing to warnings sent by us in anticipation of such an event, little damage was done, and the raiders were dispersed by the German troops. Our German neighbours appeared to be under the impression that Sendeo organized this raid, but what 'elmoran,' or warriors, formed the war party seems to remain in obscurity. The elders of what may be termed the Naivasha Masai are undoubtedly loyal, and will do their best to discourage raids by the elmoran. [561]

"The executive officials in this district who may be considered to be in the confidence of the tribe, report that the elders discuss the question of raiding quite frankly, and often enquire what is to become of the poorer elmoran, who have no live-stock, and thus cannot marry and settle down as 'Elmoru,' or Elders, and now raiding is forbidden, do not see how they are to acquire wealth. Numbers of these earn a bare livelihood by herding the property of their richer friends, others serve in the King's African Rifles and police force, and those in regular Government employ, steadily save enough to start them in married life. It is probable that a partial solution of this problem lies in the formation of a labour bureau, the object of which will be to find suitable employment for the poorer elmoran and 'laiok,' or youths, who have not attained the status of warrior." 648* 175 178 469

As distinct from the Masai Moves, the history of which forms the subject of Chapter III., the early history of the Masai contains little further of interest. The administrative steps which have been taken on their account from time to time have been treated separately in the following chapters, and Masai raids may be said to have ceased after the year 1898, the last year in which they carried out a successful expedition against another tribe in the Protectorate. Their more recent raids against German territory, are referred to in Chapter VII. Conclusion. 648* 175

CHAPTER III.

HISTORY OF THE MASAI MOVES.

Distribution of the Masai in 1902—Nomadic disposition—Applications by Europeans for land in the Rift Valley—Sir Charles Eliot's memorandum on Native Rights—Unrest among the Masai—Policy to be pursued in dealing with the Masai—Secretary of State's views—Mr. Hobley's reports on Laikipia—Mr. Jackson's memorandum—Resignation of Sir Charles Eliot—Mr. Hobley's investigations regarding Laikipia—Sir Donald Stewart's views—Agreement of 1904—Secretary of State's approval—The Masai Move, 1904—Extension of the boundaries of the Northern Masai Reserve—Further extension of the Reserve—Northern Reserve a Closed District—The further extension of the Northern Reserve—Proposals to extend the Northern Reserve—The Kakonyukye division—Purko on the Loita Plains—The suggested removal from Laikipia—Reports on Loita—Lenana's views—Reports on the Loita Plains—Irrigation of the Loita Plains—E-Unoto Ceremony, 1909—Meeting at Kisarian—The preliminary move—The move suspended—The Meeting of May 30th, 1910—Mr. Collyer's visits to the Loita country—The death of Lenana—The Agreement of 1911—The Masai Move of 1911—Congestion on the Mau—Desire to return north—Masai returned to Laikipia—Underestimation of Masai stock—Report on Extended Southern Masai Reserve—Tours in the Ol-Orokuti—Laikipia compared with the Southern Extension—The Move suspended—Census of the Masai on Laikipia—Tours in Ol-Orokuti—Meeting at Naivasha—Directions to the Masai to move—Arrangements for the Move—Meeting at Naivasha, 21st May, 1912—The "Masai Case"—Allotment of land to Settlers—The Meeting of December 5th, 1912—Completion of the Move—Attitude of the Masai after the Move—Disputes with previous residents—Relations between the Purko and Damat—Relations with the Lumbwa.

231 131 422

Distribution of the Masai in 1902.

In 1902-03, when settlers were first attracted to British East Africa, in considerable numbers, the Masai roamed unmolested on both sides of the Uganda Railway from Molo to Naivasha and on the South side from Nairobi to Kiu. They had, to a large extent, recovered from the effects of the cattle plague of 1890 and 1891 and were fairly wealthy again. It was estimated in 1904 that they possessed, in the Naivasha Province alone, 35,000 cattle and half-a-million sheep and goats. Their total possessions at that time amounted probably to 50,000 cattle and 600,000 sheep and goats.

361

Nomadic disposition.

The Masai are a nomad race, in so far as they change their residence frequently and without hesitation, and usually spend the cold weather in the valleys and the hot weather in the mountains. For their cattle, also, they are continuously seeking fresh pastures, and a grazing area, once left, remains untouched for a considerable period. A small number of kraals, to which the Masai would return annually, did exist, but these villages were few and far between and frequently uninhabited.

FL98 361

Applications by Europeans for land in the Rift Valley.

The absence of fixed habitations and the periodical migrations of the Masai led to the belief that a considerable portion of Masai country was masterless. In particular was this the case in respect of the Rift Valley, an area admirably suited to stock-raising and European settlement. Applications for those areas which were not continuously occupied by the Masai were accordingly made by Europeans, and the attention of the Government was drawn to the question of how far the country could, with safety and justice, be opened to white settlement, without thereby encroaching on the native grazing rights. As was natural, the land most sought after was that adjacent to the Railway Line, and the advisability of the policy of allowing Masai residence near the Railway on land suitable for Europeans was questioned. It was felt that European settlers, to whom the Railway was a necessity, would not be content to see the Masai, to whom it could be of no use whatever, excluding them from its vicinity.

Sir Charles Eliot's Memorandum on Native Rights.

Considerable discussion took place on this question and Sir Charles Eliot wrote a memorandum on the subject of Native Rights in the Naivasha Province on the 7th of September, 1903 to the following effect :—

648*
361

"In the discussion on this question two things seem to me to have been confused :—

"1. The right of the Masai to *inhabit* particular districts.

"2. Their right to *monopolise* particular districts and keep everybody else out.

"The first right is undoubted, but the second appears to me most questionable. As a matter of expediency it may sometimes be best to make reserves but, as a matter of principle, I cannot admit that wandering tribes have a right to keep other and superior races out of large tracts merely because they have acquired a habit of straggling over far more land than they can utilise.

"The customs of the Masai may be interesting to anthropologists, but morally and economically they seem to me to be all bad, and it is our duty, as it will also be to our advantage, to change them as soon as it is practicable. Tribes closely akin to the Masai on Kilimanjaro and elsewhere are said to cultivate and those in the neighbourhood of Nairobi seem to be settling down. It is much to be desired that the Naivasha Masai should follow the same example, instead of straying about with large herds of inferior cattle and sheep, which are reported to be of little use to the owners and of none at all to anyone else. It is also desirable to break up the tribes as far as possible, and discourage assemblies of warriors, circumcision, ceremonies, etc., which all conduce to raiding.

"With this object it is clearly best, if practicable, to induce them to settle in small villages among Europeans, by whom they might be employed as cattle guards, etc., and I should wish officers to look upon this as the ideal solution of the question. But I quite recognize that the stupidity of the Masai or the brutality of Europeans may render it impossible and therefore we must have a reserve ready if needed. Such a reserve should not be too far off, which would result in the Masai not being under control and I would suggest the Kedong Valley and the country to the south of it as a suitable place. If higher ground is really necessary for their cattle they might have some in the neighbourhood of Kinangop or of the Southern Mau. I never contemplated, as some people seem to have thought, that the Masai should have *all* the land to the south and west of the line in the Rift Valley. That seems to me too much.

"It follows from the above that the question should not be hurried and that we should try to accustom the Masai to Europeans and their ways. Applications for land cannot be delayed indefinitely and if they are not very large should be granted unless the area wanted is either actually occupied by Masai or used by them at regular intervals.

"I should like to have an estimate of :—

"1. The number of Masai.

"2. The average number who live in one village.

"3. The number of sheep and cattle which they possess.

"The Masai should beware of exaggerating their numbers, as they might be called upon to pay more hut tax."

648*

Unrest among the Masai.

In October 1903, Sir Charles Eliot reported a feeling of serious unrest which had been recently noticed among the Masai, culminating in preparations for a great raid on the south-western part of the Protectorate near the Anglo-German border and he ascribed the cause of this feeling to the E-Unoto ceremony which had just taken place, after which honour required each young warrior to blood his spear. The Masai were informed that they would be very severely punished if any raid took place and Colonel Harrison remained for ten days at Naivasha with 180 troops. In reporting this unrest, Sir Charles alluded to the policy which he considered should be followed in dealing with this tribe. He was strongly opposed to the creation of a native reserve for them if such a step could possibly be avoided as such isolation could only tend to confirm the Masai in their peculiar ideas and customs and he thought that the only sound policy was to break up their present organization.

Policy to be pursued in dealing with the Masai.

*648 Secretary of State's views.

The Secretary of State for Foreign Affairs expressed himself as generally in agreement with these views, anticipating that contact with other races and with Europeans would gradually result in a change in the customs and organization of the Masai. It was agreed that the settlement of Europeans among the Masai would incline them to abandon their wandering habits and become, at least partially cultivators of the soil or servants of those who were developing the resources of the country. Sir Charles Eliot realized that such a condition of things implied some risk of conflict between the Masai and Europeans and he was prepared, but only as an ultimate resort, to remove the tribesmen from their present homes to a special reserve elsewhere, should experience prove that they could not get on with the settlers.

Mr. Hobley's reports on Laikipia.

In December, 1903, and January, 1904, Mr. Hobley made extensive tours through the country, in the neighbourhood of the Rift Valley, accompanied by Masikondi and a few other elders of the tribe, with a view to discovering some division of the eligible grazing land, without detriment to the Masai, while admitting of as many grants to settlers as was feasible. By the middle of February, 1904, he had amassed sufficient information to enable him to assure Sir Charles Eliot that the formulation of an agreement with the Masai on the question of the division of grazing land in the Rift Valley was possible, subject to compensation being paid for grazing rights over certain areas which would have to be given up.

Mr. Jackson's memorandum.

While on leave in England, Mr. (now Sir Frederick) Jackson wrote a memorandum on the Masai question, which it may be desirable to quote in extenso. The memorandum was dated the 22nd of February, 1904.

"The Masai will never give us serious trouble, so long as we treat them fairly, and do not deprive them of their best and favourite grazing grounds—*i.e.*, those in the vicinity of Lake Naivasha.

"Apart from the just cause for complaint that such action would give them, it would be a great mistake to push them on one side and away from the close vicinity and control of the Government stations. The further they are away from us, the more trouble they will give us in the matter of raiding.

"Neither the Germans nor ourselves are in touch with the Masai occupying the country on either side of the boundary between Kilimanjaro and the Lake. It is, however, by no means certain that there are any Masai resident in British territory close to the boundary, but no doubt those resident in German territory take refuge across the border after a raid, and when pursued by German troops. The 'loyal' Chief Sendeyo of the Loita Masai, left German territory about a year ago, and came to Nairobi with 2,000 followers, including 250 or 300 moran (warriors). The remainder of the clan declined to follow him. Sendeyo, who now lives with his brother Lenana at Nairobi, has no power over, or dealings with, the rest of the clan resident in German territory. A raid, which is said to have taken place last May is, no doubt, the one that Bishop Tucker of Uganda brought to our notice, owing to the raiders having attacked one of the Church Missionary Society's stations on the south-east shore of the Lake. Several of the raiders were dressed in khaki uniforms, spoke Swahili, and were armed with breech-loading rifles. These facts, for presumably they are facts, point to these men being deserters from the German service, and as Sendeyo left German territory owing to the ill-treatment he met with, it is not unlikely that the remainder of the clan, subjected to similar treatment, bore a grudge against Europeans generally, and attacked the Mission station and settlement with the aid of the deserters. Up to the present, the Masai have never been known to attack Europeans in British territory, and they are not likely to, so long as they are treated fairly.

*648 561

"The recent unrest was due, as Sir. C. Eliot has pointed out, to an unusually large circumcision feast that takes place once in eight years. The ordinary ceremony is an annual one. The increase last year was due to a large number of young men, including many private servants of Europeans, and soldiers and policemen in Government service, postponing the service for one or two years,

648* [561]

and they were all, not unnaturally, keen to distinguish themselves in a raid on an unusually large scale. There was even a considerable amount of open boasting amongst those recently-made 'moran,' that the Government would not, and could not, stop them. This led to greatly exaggerated stories being circulated in the Nairobi bazaar, and these stories were made the most of by those settlers who can see no good in the Masai, and are keenly desirous of appropriating the best of their grazing grounds at Naivasha.

"As a matter of fact, the local authorities were well posted by Lenana at Nairobi, and by Masikondi, the principal Chief at Naivasha, as to what was going on, and there was never at any time justification for the alarmist reports that were circulated.

"The steps that were taken—viz., the temporary display of force at Naivasha by 180 men, under Colonel Harrison, who knows the Masai well—had the desired effect, and prevented the raid taking place. These steps were taken at the suggestion of Lenana.

"It is true that the Chiefs and Elders have little authority over the 'morans,' but they assist us in every way they can, and have given us information of contemplated raids.

"Up to the time I left Mombasa, the large grazing areas applied for in the Naivasha district, were 500 square miles (320,000 acres) by the East Africa Syndicate, 100,000 acres by Lord Delamere, and 32,000 acres each by Messrs. Chamberlain and Flemmer, and I pointed out to Sir C. Eliot that these areas not only embraced the best and most favoured grazing grounds of the Masai between Lakes Nakuru and Naivasha, but also embraced both banks of the only four rivers in the vicinity.

"Within this area, there are at the present moment not less than a quarter of a million sheep. Lord Delamere's application was therefore refused, and he selected another area on the Molo River, to which there were no local objections, as the Masai do not extend so far to the west in the valley. I was also given to understand by Mr. Hollis, the Secretary, that Sir Charles Eliot would not consider any further applications for large areas—including Mr. Chamberlain's application—between Nakuru and Naivasha. To Mr. Flemmer's application for land on the Mbarak River, north of Elmenteita, there were no local objections. This left only the Syndicate's 500 square miles to be considered, and for this purpose Mr. Bagge, the Sub-Commissioner, called a meeting of the Elders, who, after pointing out that the area embraced the pick of their ground, eventually agreed to raise no further objections, provided the remainder might be left to them.

"Shortly after I left, Sir C. Eliot himself visited Naivasha, and informed the Elders that between Naivasha and Nakuru no further grants would be considered. I learn, however, from a letter to Mr. Bagge from Mr. Hobley, who is doing my work as well as Mr. Bagge's, that applications for large areas have been received, amounting to 75 per cent. of the grazing grounds in the valley and on the Kinangop Plateau. These applications now embrace the whole of the Njoro River, the Enderet, the Mbarak, and Kedong, and the greater part of the Gil-Gil and Morendiat, and I cannot see how it is possible to allow these grants without very seriously interfering with native interests. To any applications for land north of Nakuru and Elmenteita there are no local objections, as the Masai for many years have not occupied it, but I would strongly urge that no grants—except the Syndicate's—should be made south of a line between the north ends of Nakuru and Elmenteita.

"Our only hope of keeping the Masai under proper control for some years to come, is to keep them near us."

*648 Resignation of Sir Charles Eliot.

The policy subsequently adopted by the Secretary of State for Foreign Affairs in dealing with applications for land, which had been received in respect of areas inhabited by the Masai, led to the resignation of Sir Charles Eliot, and hastened the concentration of the Masai within the confines of reserves set apart exclusively for their use, the policy which Sir Charles Eliot had maintained should be resorted to only in the last extremity.

*648 311 166 Mr. Hobley's investigations regarding Laikipia.

While he was acting Commissioner, Mr. Hobley continued to collect information on the subject of the Masai grazing grounds and came to the conclusion that the Masai were not effectively occupying at any period of the year more than one-fifth of that grazing. He considered, however, that the concentration of the Masai in certain portions of the Rift Valley could only be regarded as a tentative solution of the Masai question, while the final settlement of the problem could be attained by placing the whole of the Masai tribe on the Laikipia highlands. He described Laikipia as an extensive plateau stretching from Loroghi mountain on the north to the Uaso Narok on the south and south-east and bounded on the west by a steep escarpment. Until 1890, this plateau had been inhabited by a powerful branch of the Masai, called the Laikipia, who were in that year attacked and dispersed by the Purko division with the loss of all their cattle. The great cattle plague of 1891 killed off most of the Purko captures and they once more retired south leaving Laikipia practically unoccupied. The western part of the plateau was not so well watered as some of the Rift Valley, but the Masai reported that owing to better distribution and the considerable amount of rainfall the grazing was more dependable than and superior to that of the Rift, and had formerly carried much larger flocks and herds than those possessed by the Masai in 1904. The Masai also expressed themselves as quite satisfied in regard to the water supply on Laikipia and as willing to move from the Rift Valley to the plateau.

Sir Donald Stewart's views.

On his arrival in the Protectorate, Sir Donald Stewart gave immediate consideration to the matter and came to the conclusion that the removal of the Masai from the Rift Valley into two reserves was the only real settlement to the question. Masai and Europeans could never live together without endless trouble and friction: the Laikipia lands were well known to the Masai and well suited to them; they were some way removed from the Railway and not tempting to the settlers then in the Protectorate, though it was quite possible, he wrote, that when the Masai had grazed down the grass and got it sweet, envious eyes would be cast on their lands. He, therefore, emphasized the necessity of making these Laikipia lands an absolute native reserve for the Masai and asked that no applications for land by the settlers would be entertained within its limits.

Agreement of 1904.

On the 9th of August, 1904, he held a meeting with the Masai Chiefs at Naivasha, at which were present Lenana, Masikondi, Legalishu and other principal chiefs representing the Purko, Kakonyukye, Loita, Damat and L'Otayok sections of the tribe. After explaining the position to them, he asked if it was true that they were agreeable to move to other lands of their own free will and give up the Rift Valley to European settlement. They replied that they were willing to do so under certain conditions, which appeared to be reasonable, and Sir Donald Stewart made a formal agreement with them, embodying their requests. This agreement was translated to and signed by all of them, and the Commissioner also signed, with a proviso that the Secretary of State's approval was necessary before the agreement became valid. Later, he held another meeting with the Masai of the Kaputiei, Matapatu, L'Odo Kilani and Sighirari divisions, at which the same three head chiefs were present. The agreement was read over and explained to them and they asked to sign the paper. The text of this agreement, the "Masai Agreement of 1904," is to be found in Appendix 1.

The settlement arrived at was to be enduring "so long as the Masai as a race shall exist." Compensation was stipulated for in respect of a few small plots of cultivation (which would not amount to more than some two thousand rupees in all), and the Commissioner saw no objection to the reservation of a tract of land on Mount Kinangop for the exercise of their religious ceremonies connected with circumcision. The land which had been used in 1903 was situated seven miles

648*
319
166

to the north-east of Naivasha, in an open plain without either timber or water, and the land now asked for was some seven miles beyond, situated at the base of the hill Ngorinitu, along which runs a small though perpetual stream, the Nagarangata, and an area of some five square miles was considered sufficient for their requirements. A road area, half a mile broad, would be beaconed off as a path by which Masai could travel between the areas reserved for the two sections of the tribe and an administrative station would be established on Laikipia.*

Secretary of State's approval.

Lord Lansdowne conveyed his approval to the Agreement by telegram on the 15th of October, 1904 and by despatch on the 21st of that month, and in his despatch he concurred in the opinion that Masai and Europeans could never live together without friction. The remarkable influx of colonists from South Africa and elsewhere and the rapidly increasing number of applications for permission to settle in the Rift Valley lent force to these considerations. It was clear that the squatting of numerous colonists on the land over which the Masai flocks and herds had hitherto roamed without hinderance and the need of all new-comers to gain access to the principal watering-places must inevitably lead to disputes and probably to disturbances which might easily assume the shape of a bitter and vindictive struggle between the two races. This aspect of the case had come forward prominently owing to the fact that a large number of intending settlers had applied for grants which would practically absorb the best and most favoured grazing grounds of the Masai between Lakes Nakuru and Naivasha.

The Secretary of State recapitulated the position which had been arrived at with the East Africa Syndicate with whom arrangements were being made in June and July, 1903, for the grant to them of 500 square miles of land in the Naivasha Province, north and east of the Railway. It was not, he said, until the terms with the Syndicate had been finally arranged that he was warned that this grant, to which by that time the Government was committed, would materially curtail the best grazing grounds of the Masai; that the effect of large additional grants in the same vicinity would be to deprive the tribe of the best of their remaining pastures; or that the Masai had, in formal conference, only undertaken to raise no objection to the grant of the Syndicate land on the condition that the remaining grazing grounds were left to them.

He had, therefore, come to the conclusion that it would be advisable at least temporarily to exclude European settlers from the lands which still remained to the Masai in the Rift Valley after the grant of this concession, but he realized that this step was tantamount to the provisional creation of a Masai reserve in the Rift Valley. He, therefore, welcomed the solution of the problem proposed by Sir Donald Stewart in the form of the Agreement of 1904, by which the Masai would move from their old country and thus make it available for European colonization and which would involve the definite and permanent establishment of two reserves for the northern and southern sections of the tribe respectively.

The Secretary of State emphasised the fact that the definite acceptance of the policy of native reserves implied an absolute guarantee that the natives would, so long as they desired it, remain in undisputed and exclusive possession of the areas set aside for their use. In concluding his despatch, he remarked that the scheme submitted appeared to offer every possibility of a satisfactory solution of a difficult problem, and that he was the more glad to be able to express his approval, as it could probably not have been withheld without occasioning much disappointment to the Masai and shaking their confidence in the authorities of the Protectorate.

The Masai Move, 1904.

Steps were at once taken to move the Masai from the Rift Valley to Laikipia and from Nairobi to Ngong. The latter move was undertaken without difficulty, but some pressure had to be put on the Masai, of the Rift Valley, to induce them to leave their grazing grounds for the Northern Reserve. The separation of one

* On August 8th, 1904, the day on which Sir Donald Stewart met the Masai Chief at Kabete, he signed the lease to the East Africa Syndicate Limited, the terms of which are alluded to in page 18b. Though no reference is made in the Agreement with the Masai it must be presumed that the area so detached was excluded from the lands set apart for the Northern Masai Reserve by the Agreement of 1904.

*648
311
166

part of the tribe from the other was regarded with suspicion, it being suspected that the Government were adopting this policy in order that they might the more easily annihilate the tribe by defeating the sections each in turn. Further, almost immediately after the move commenced, it was found that the water supply there was totally inadequate for the requirements of the Masai.

The Masai, in fact, so neglected to carry out the terms of the agreement, as largely to destroy its meaning. Five sections, referred to as the Kiburgu, Gekunuki, Loita, Damat and Laitutok undertook to move absolutely to Laikipia. A considerable portion, estimated at about one quarter, of the first-named section remained in the Southern Reserve or in the uninhabited country between the Uaso Nyiro and Mara Rivers. The Kakonyukye (Gekunuki) moved from the neighbourhood of Naivasha to Il Melili and the southern slopes of the Mau. The Loita continued to occupy the Loita Hills and Plains. The Damat made use of the country watered by the Southern Uaso Nyiro and its tributaries and the last named section continued to inhabit the region to the north of Kilimanjaro.

Extension of the boundaries of the Northern Masai Reserve.

The boundaries of the Northern Masai Reserve had been fixed by the Agreement of 1904 as follows:—

On the north, the Loroghi Mountains.

On the west, the Laikipia Escarpment.

On the south, the Lesuwa or Nyam and the Uaso Narok, and

On the east, the Kisima.

A short while before his death, Sir Donald Stewart, realising that the area so enclosed was inadequate, promised an extension of the original boundary, but he died before he had been able to place on record what had occurred at a conference held with the representatives of the Masai and those settlers who had taken up land in the area proposed for this extension. The provisional boundaries agreed upon seem to have been:—

On the east of the Aberdare Range, the Uaso Nyiro.

On the west of the Aberdare Range, the southern boundary was the Equator and the western boundary the crest line of the Osobugo loo-'l-ellan and the Laikipia Escarpment.

Further extension of the Reserve.

This extension, however, was insufficient, and Sir James Hayes Sadler, in February, 1906, proposed a further enlargement, making the southern boundary of the reserve the northern boundaries of the East Africa Syndicate land, the eastern boundary the Uaso Nyiro, and the western boundary the crest of the Osobugo loo-'l-ellan, as before. Several settlers, who were under the necessity of vacating their land, were compensated by additional grants elsewhere.

Northern Reserve a Closed District.

By a Proclamation, dated the 30th of May, 1906, the Northern Masai Reserve, whose boundaries are therein defined, was declared a closed district.

The further extension of the Northern Reserve.

On April 6, 1906, the Secretary of State signified his concurrence with these proposals. But the Northern Masai were still discontented. Their stock, after the removal from the somewhat foul grounds of the Rift Valley, had increased enormously, and at least once every year they had to break the boundaries of their reserve, both on the East and on the South, the grazing within the reserve allotted to them being insufficient. On the East they were permitted, every dry season, to cross the Uaso Nyiro and pasture their herds and flocks between that river and the Uaso Nanyukye, *i.e.*, over an area of 200 square miles outside their reserve. On the South, they settled on the shores of Lake Ol Bolossat, and Sir James Hayes Sadler asked, on November 22, 1906, that these grazing grounds might be relinquished by the East Africa Syndicate in exchange for land elsewhere, the lands so relinquished to be handed over to the Masai. No agreement, however, was come to with the East Africa Syndicate, and although this area was much used by the Masai, it never actually formed part of their reserve.

In the year 1907 there was a partial failure of rains and the Masai were allowed to break their boundaries eastwards across the Uaso Nyiro, southwards towards Mount Kippiperi, and westwards towards Lake Solai. Their stock was estimated by Mr. Collyer, the District Commissioner Rumuruti, at 70,000 head of cattle, and 1,750,000 sheep and goats, and it was amply demonstrated that, for their large and increasing herds, the grazing to be found in the Northern Reserve would be totally inadequate in a period of severe drought. It was suggested that the time was opportune for inducing the Masai to part with their superfluous cattle, but proposals were also considered for the permanent and final extension of their reserve. On September 22nd, 1908, Sir J. Hayes Sadler forwarded to the Colonial Office a recommendation made by Mr. Bagge, that the 200 square miles east of the Uaso Nyiro should be definitely added to the reserve, but no extension of this nature was made and the subject was dropped, when more detailed consideration was given to the possibility of moving all the Masai from the Northern Reserve.

Proposals to extend the Northern Reserve. 648* 311 162 131

When the move of the Northern Masai was started at the end of 1904, the Provincial Commissioner at Naivasha thought it would be advisable to keep a few Masai near the Government station, in order that Europeans of the Rift Valley might the more easily obtain the services of herdsmen and servants. These Masai, of the Kakonyukye division, were allowed to settle with their cattle on Government land. The rapid increase of the stock belonging to the Purko Masai, on Laikipia, caused an insufficiency of pasturage for the Kakonyukye Masai, who had moved north from the Rift Valley and these latter, therefore, gradually returned to join their friends and relations near Naivasha. They took up their residence on all the unoccupied farms, squatted on the East Africa Syndicate land, grazed over the whole of the Commonage, and became a general nuisance. They were repeatedly warned by Mr. Bagge and others that they must leave Naivasha, but the move was not undertaken until 1910, when they went to the Loita Plains, to the west of the Masai Southern Reserve, taking with them some 10,000 head of cattle and 30,000 sheep and goats.

The Kakonyukye Division. 648* 311 162

In addition to these Kakonyukye Masai, there lived in the Loita Plains about 2,000 Masai, with 20,000 cattle and half a million sheep and goats. Some of these were Sendeu's (Loita) Masai, whilst others were Purko Masai, who, instead of moving to Laikipia in 1904, went South and occupied what was at the time an unexplored region.

Purko on the Loita Plains.

In the year 1908, various suggestions were made with a view to moving the Masai from the Northern Reserve to the area lying between the Mara River and the Southern Uaso Nyiro. This country, like Laikipia, had formerly been occupied by various sections of the Masai, the Loita, L'Otayok and Damat, who had, for the most part, disappeared from the area. The suggestion to move the Masai was undoubtedly made in the interests of European settlers, some of whom had cast envious eyes on the grazing grounds of Laikipia, as Sir Donald Stewart had prophesied when submitting the Masai Agreement of 1904.

The suggested removal from Laikipia.

In the month of December, 1908, Mr. McClure and Captain Monckton, the Assistant District Commissioners of Ngong and Sotik, after extensive tours through the Loita country, submitted reports in which it was stated that the area south of Sotik and between the Uaso Nyiro and the Mara River, comprised some 2,300 square miles, of which 1,300 square miles were waterless. The Masai population numbered approximately 2,270, with 20,000 cattle and 100,000 sheep. The land, as a whole, was unsuitable for European settlement, though several areas might be regarded as good farming land, but these were so disconnected, as to render impossible their proper supervision. Further, permanent streams were so far apart as to preclude the possibility of allotting such farms on a continuous system. The land was generally suited to the requirements of a nomadic and pastoral tribe such as the Masai.

Reports on Loita.

On the 4th of January, 1909, the Governor mentioned the proposal to Lenana, and somewhat to his surprise, found that the Laibon was entirely in favour of it, provided that the settlers left the suggested area, but he doubted whether the

Lenana's views.

*648
3||
166

water in that country was sufficient for the requirements of the Northern Masai. Lenana's main object in recommending the move was to re-amalgamate the various sections of the tribe, in order to enable him once more to exercise direct control over all his followers. Ever since the removal of the Northern Masai to Laikipia, he had found his authority to be waning. The Rift Valley Masai had been somewhat more from the Kaimbi Masai than Lenana had expected when the Agreement was signed. This separation was, to a large extent due to the fact that the Government had failed to carry out all the conditions of the treaty. The road half a mile broad, which was to have been left intervening between the reserves had been reduced to such an extent that it was practically useless for cattle, and the land on either side had been leased to Europeans. In August, 1908, the movement of cattle between the reserves was altogether prohibited, owing to quarantine regulations, and the Masai of Laikipia were thus, to all intents and purposes, cut off from their Laibons at Ngong. Legalishu, who was present at the meeting, could not be induced to give his opinion on the subject. The Governor stated that the question of the move would not be contemplated by the Government unless it was in accord with the expressed wishes of the Masai, and he refused to comply with Lenana's suggestion that the matter might be settled without delay, he he considered that further investigation was necessary to ascertain whether the suggested area was suitable for the accommodation of the Northern Masai.

Reports on the Lotia Plains.

As Lenana was so much in favour of the move, and as the reports sent in by Mr. McClure and Captain Monckton, though not enthusiastic, had been sufficiently encouraging, the Governor gave orders for two senior officers to inspect the country. [illegible] of the year, March, was chosen in order that the country might be seen at its worst, and an extended tour was made through a part of Mau, Elgeyo, Kapsiel and the Lotia Plains to the Mara River, thence along the Anglo-German frontier, the Lotia Hills and the Southern Uaso Nyiro to Nairobi. The gist of the reports submitted by these officers was that the land and grazing were, on the whole, good, but that there was an insufficiency of water and, much as they would like to see all the Masai concentrated in one reserve, they could not recommend the move until steps had been taken to irrigate the land, and until the settlers who were living in the area had been given leave elsewhere. Mr. Boggs, however, pointed out that the inclusion in the reserve of any of the country known as the Mau Plateau had not been considered, and that it was probable that by engineering works the water supply might be considerably increased. He suggested that an engineer should be sent into the area to report on the prospects of irrigation near the Ungwalomi River.

Irrigation of the Lotia Plains.

On Sir J. Hayes Sadler's departure from East Africa, Mr. Jackson instructed Mr. Watts, the Commissioner of Public Works, to visit the Lotia Plains, and to report on the possibility of irrigation. At the same time, the settlers in the area which might be allotted to the Masai, were to be approached with a view to ascertaining if they would be prepared to move, should the scheme be carried through on consideration of receiving compensation on Laikipia or in the vicinity, to the extent of their present holdings, plus half as much again. Mr. Watts drew up an elaborate report and showed that by the expenditure of £1,000 the whole of the area could be watered. He also estimated that after deducting 12 million acres for grazing of game, forest and waste areas, there remained 6½ million acres of good grazing land available for the support of 100,000 cattle and 1,000,000 sheep, reckoning seven acres per cow and six acres per sheep. A sum of £1,000 was inserted in the Estimates for 1910-1911 as a commencement for the irrigation scheme, but was disallowed by the Secretary of State.

E-Karsha Reserve.

In August, 1908, the District Commissioner of the Northern Masai Reserve reported that the Purko warriors wished shortly to proceed to the E-Karsha reservation which had been set aside for the E-Karsha community, and to take some 10,000 cattle with them. The Purko Masai living in the Lotia Plains likewise asked, through Lenana, for permission to proceed to E-Karsha. Arrangements were made with the East Africa Syndicate, and the Northern Masai was

permitted to take their cattle to the Kimangya Reserve, but, although the Mazel living in the Loita Hills were informed that they themselves might go to Kimangya, they were forbidden to take their cattle with them for fear of infecting with East Coast fever, the stock belonging to the European farmers through whose lands they would have to pass, and of carrying the disease to the Northern Reserve.

By December, the Northern Mazel, with 10,000 cattle but unsuccessful by their principal chiefs, Mashonki and Legalishu, had moved to Kimangya, but the ceremonies were commenced prematurely, for Lenana, on learning that the Southern Parts might not take their cattle with them, withheld his sanction, which is necessary, according to the custom of the tribe, before a start can be made. On January 14th, 1919, he sent orders to Kimangya for the warriors to proceed with their cattle to the Southern Reserve in order to hold the ceremony at Ngong. At the same time he appealed to the Governor and pointed out that, unless his authority were recognized and his instructions obeyed, he feared a disruption between the two sections of the tribe.

On February 3rd, Sir Percy Girouard held a meeting at Naivasha, at which were present Lenana and three chiefs of the Northern Reserve that were taking part in the ceremony on Kimangya. Lenana made a direct appeal to the Governor, and stated that the condition of affairs which had arisen since the last E.Coast ceremony, whereby free inter-communication between the two sections of the tribe had become impossible, was gradually but surely disorganizing his authority, a matter of great concern, he said, to himself and his people. The Governor, in reply, [illegible] that there should be two ceremonies for one section of the tribe, one on Kimangya and the other at Ngong, and, since the Southern Mazel were forbidden to take their cattle to Kimangya, he desired the Northern Mazel to proceed to Ngong to hold the ceremony there. He further stated that it was his most earnest wish that all the Northern Mazel should move from Laikipia and inhabit the proposed extended Southern Reserve. The Governor informed Lenana that he could not sanction the move of all the Mazel without consulting Mashonki and Legalishu, but, as regards the ceremony, he was quite willing that it should be held at Ngong if that was Lenana's wish and if he could arrange matters with the people concerned. The Mazel chiefs then proceeded to Lenana's kraal to discuss the matter with his elders, with the result that they returned to Kimangya, and, having collected their cattle, proceeded with the warriors to the Southern Reserve. It was, fortunately, unnecessary for the Government actually to intervene in support of the Laibons.

On February 24th, 1919, a second meeting was held at a camp known as Kiserian, close to Lenana's kraal near Ngong, with the Mazel. At this meeting there were present, besides Lenana, Mashonki and Legalishu, respectively the senior elder and the spokesman of the senior warriors (who are generally referred to as the two chiefs) of the Northern Mazel. These two representatives of the Northern Reserve not only agreed to the suggested move but expressed themselves in favour of it. It was accordingly proposed to carry it out as soon after the rains had commenced as practicable.

Mr. Collyer, the District Commissioner of the Northern Reserve, was appointed Special Commissioner for the move, and, as several Purchase and intended were affected, he was directed to correspond with the Secretary for Native Affairs, who was to arrange the details, and submit recommendations for the displacement of the white settlers from the Southern Uaso Nyiro.

Everything went well. The majority of settlers were public spirited enough to consent to the Mazel passing over their farms, and best separate routes were arranged. Special officers were deputed to accompany the cattle of cattle and a survey was commenced on Laikipia for farms to which the settlers from the Southern Uaso Nyiro might proceed.

In April, gastro-enteritis, which for some time past had been prevalent all along the Uaso Nyiro valley to Kisumu as well as in the northern Mazel Reserve, broke out among the Mazel herds in epidemic form. It is possible that the bad

#C48
311
166
932

something to do with the readiness of the Masai to move, for their methods of agriculture are to quit foul ground and drive their herds on to fresh pastures. Be that as it may, the Masai started towards the middle of April of their own accord, and before the Government was really ready, those from the extreme north of the reserve pressing south, and those on the southern boundaries leaving the reserve by the routes that had been arranged. The drought may have expedited their movements, for no rain had fallen in the Northern Masai Reserve whilst there had been a plentiful quantity on the Loita Plains, on Mau, and near the railway.

The Nyeri Negotiations.

On April 20th, 1910, a telegram was received from the Secretary of State ordering the move to be suspended and before the end of the month, steps had to be taken to send the Masai back to their reserve. The Secretary of State's telegram was followed by a despatch, dated April 22nd, 1910, intimating that, inasmuch as the agreement signed in 1904 was solemn and binding, it could not be cancelled without the clearest proof that the proposed agreement was in accordance with the wishes of the Masai and especially of the northern section. A document must be procured of equal formality with that of 1904 and must be signed by an equally representative body of Masai. Owing to the severe form which the cattle disease had taken, it is probable that the move could not have been undertaken in any case for fear of infecting the stock on European farms and in the Loita Plains, and this was made the excuse for the postponement. But the Masai were neither willing nor, indeed, able to remain in their reserve, for there was very little grazing owing to the drought and the ground was foul; and before many weeks were past, between twenty and thirty thousand cattle had been driven across the Northern Uaso Nyiro. Permission was afterwards granted to the Masai to occupy the 350 square miles between the Rivers Nyiro and

The Meeting of May 26, 1910.

On May 26th another meeting was held at Ngong, and a provisional agreement was entered into between the Governor and the Masai, according to the terms of which the tribesmen, being satisfied that it was to their best interests that the Masai people should inhabit one area, and not be divided into two sections, as must arise under the treaty of 1904, agreed to move from Lelkipia to the Loita Plains, when the Governor should notify them. There were present, as representatives of the Masai, Lenana, Mashonoki, and Legalishu, Saboti (whose position in the Southern Reserve was analogous to Mashonoki's in the Northern Reserve), the heads of clans, *i.e.*, the principal elders, of the Northern Reserve, and the spokesmen of the senior, the junior, and the coming age-groups of warriors. The Governor was supported by Messrs. Hobley and Lane, Provincial Commissioners, Mr. Gordon, Crown Advocate, Mr. Hollis, Secretary for Native Affairs, and Mr. Collyer, the District Commissioner of the Northern Reserve. The Rev. Dr. Scott was also present as an independent witness. The agreement, which was entered into by the Masai of their own free will, was translated and fully explained to them. There was, however, one dissentient voice, and, during the discussion which preceded the signing of the agreement, Legalishu said he did not consider the new area large enough. The Governor informed the Masai that the move, if it was to take place at all, must be a voluntary one, and he asked Lenana, Mashonoki, and Legalishu to depute representatives to visit the country with Mr. Collyer. He further promised the Masai that, if they did not wish to move, they need not do so, and that if they did move, and the area was found to be too small, the country across the Mara River towards Kisii would be included in their territory. Before a final agreement could be entered into, the return of the party that would go and inspect the land would be awaited, and their report considered.

The Inspection of the Loita Country.

Mr. Collyer spent two months in the Loita Plains, on Mau, and Ngatet, and in the Kisii country. Two men from the Northern Reserve who accompanied the party were both nominated by Legalishu, and, when they returned to Lelkipia in August, they reported that the proposed area was too small, that there was no sufficiency of water, and that the Kisii would steal their cattle. This report was accepted by the chiefs and elders of the northern section, and a large gathering, led by Mashonoki and Legalishu, met at Rumuruti, on August 27th, 1910, to

inform Mr. Collyer, the District Commissioner, of their decision. They said that, as their Laibon wished them to move, they were ready to go if the Governor ordered them to do so, but that they did not wish to leave Laikipia. As this was their determination, no attempt was made to influence them, no pressure was put upon them, and the subject was not again broached to them. 648* 311 166

On March 7th, 1911, Lenana died. He had been suffering from dysentery for a month, but was getting better, when he suddenly collapsed. The Assistant District Commissioner in charge of the Southern Masai Reserve, Mr. Crewe-Read, was with him a few hours before his death, and discussed various minor questions with him. Lenana did not nominate his successor, as is the custom with the Masai Laibons, for he only realised a short time before he died, that his last hour had come, but, when he felt he was dying, he made the following speech in the presence of numerous witnesses:— The death of Lenana. 648* 311 166 791

"Tell the Government to look after my children and to give them the money which I should have earned if I had been alive. Tell my people to obey the Government as they have done during my life. Tell the Laikipia Masai to move with their cattle to the Loita Plains."

April 2nd was fixed upon as the date for a meeting with the Masai representatives of both the Northern and Southern Reserves in order to select a successor to Lenana. Masikonti, the senior elder of the Northern Masai, was too unwell to proceed to Ngong, but he delegated his powers to two of the members of his clan. Legalishu, with the other heads of the clans and the spokesmen of the various age-grades from the Northern and Southern Reserves, were present, and the proceedings were watched on behalf of the Government by Mr. Lane, Provincial Commissioner of Naivasha, Mr. Hollis, Secretary for Native Affairs, and Mr. Crewe-Read. Seggi, Lenana's eldest surviving son, a youth of thirteen years of age, was unanimously chosen as Laibon. Owing to his youth, it was decided to appoint two Regents to assist him in governing his people, one for the Southern and one for the Northern Reserve. Ngurora, a cousin of Lenana, was selected as Regent for the south, and Legalishu for the north. When these ceremonies were completed, Legalishu stated, on behalf of the Northern Masai, that he wished to ask that they might be permitted to move to the extended Southern Reserve. This change of opinion was undoubtedly due partly to the dying wishes of Lenana and partly to a fear of disruption between the two sections of the tribe. On the other representative expressing a like request, the Masai were informed by their Provincial Commissioner that they would have to proceed to Nairobi and approach the Governor personally on the matter. [429]

Sir Percy Girouard held a meeting with the Masai representatives on April 3rd, 1911, in Nairobi. Legalishu, as spokesman of the Northern Masai, again stated that it was their wish to move to the extended Southern Reserve. The Governor repeated that, if the move were to take place, it must be a voluntary one, that the Masai were completely free to accept or reject the proposed arrangement, and that, if they did reject it, the pledges made to them by the Government in 1904, would be scrupulously adhered to. They thereupon replied that it was their own wish that they might be allowed to move. A formal treaty was drafted, and another meeting was held on April 4th. The members of the Executive Council and the Provincial Commissioners were summoned, and, in the presence of all, the Governor asked the Masai whether or not they wished to move to the extended Southern Reserve. The reply was again in the affirmative. Several minor points were then discussed, Legalishu acting as spokesman. The principal matter was the water question. The Masai stated that, if the Government would help to improve the water supply, they themselves would contribute towards the work by the payment of bullocks. They requested that all Europeans should be removed from the area, and that as much as possible of the area known as "The Promised Land," which had been applied for by Mr. Powys Cobb, should be given to them. Protection from possible South raids was asked for and granted. Finally, the Masai begged to be allowed to start the move as soon as there was sufficient grass along the routes, and asked that they might not be hurried. They were informed in reply, that the move was contingent on the approval of His The Agreement of 1911. 648* 311 166

#C48
311
166

Majesty the King, and that, if they were permitted to move, they would be allowed to proceed slowly. After this, the treaty was translated and fully explained to them, and the Masai affixed their marks in the presence of the European officers. The treaty was then sent to Ramonyoti to ascertain if Mashonoti and such of the old men as were too infirm to attend the meeting at Ngong approved of the terms.

The agreement, as drafted, was submitted to the Secretary of State, who approved of its terms, by telegram, on the 29th of May, and by despatch on the 23rd of June, 1911.

The Masai Move to Laikipia.

The Masai were accordingly informed that the Government had agreed to their moving from the Northern Reserve into an extended Southern Reserve. The move was arranged to proceed along four routes throughout June, July and August. No compulsion of any kind was used, and administrative and veterinary officers were detailed to escort the stocks of cattle across the European farms.

One of the routes, which proceeded by Lake Naivasha, went straight into the extended Southern Reserve, and those Masai who travelled by this route soon reached the Lake Plains. The other three routes converged on the top of the Rift into "The Promised Land." The first Masai to arrive on the plateau went right through to their destination, but the succeeding parties, finding the grazing good, remained, erected their kraals, and decided not to push forward into the plains below. Unfortunately, no precautions were taken to induce them to leave the plateau, and there was consequently a great congestion at the commencement of the heavy rains, which usually fall on the Rift towards the end of August and in September. The roads became impassable, and the people and stock suffered from cold and discomfort. They accordingly returned to the European farms lying between Njoro and Kinanduda Stations on the Uganda Railway.

Visits to Masai Lands.

In consequence of this check, the Secretary for Native Affairs and the Director of Agriculture were sent, on August 21st, to investigate the situation, and they reported that there was nothing to show that the move was other than temporarily checked. It had, however, considerably affected the views of some of the people, and a doubt appeared, more particularly on the part of Lenjulin, to return to the north.

Masai removed to Laikipia.

As it was impossible for the Masai to remain on European farms near the Railway for any length of time, the Governor issued directions for them to be sent back to the southern part of Laikipia, and to the land belonging to the East Africa Syndicate, adjacent to the former Northern Masai Reserve. The carrying out of the necessary arrangements were entrusted to Mr. John Ainsworth, Provincial Commissioner, Kisumu, who sent the Masai representatives at Kisumu, Iuta and Nakuru early in September. Mr. J. K. Hill placed 100,000 acres of Syndicate land at the disposal of the natives, and the move towards this land was completed by September 19th.

Character of the Move.

This check was undoubtedly the result of the Masai having proceeded too quickly. They pressed forward even when asked by European farmers (through whose farms they were passing) to hold back, the farmers being desirous of trying to open up a trade with them. No police measures of any kind were adopted, testifying to the voluntary character of the move. It appears that the Masai did not suffer to any extent by the journey, and the losses reported were those which would naturally take place in large movements of stock.

#C48
311
166
420

Under-estimation of Masai stock.

The move had brought to light one matter of importance; previous estimates of the number of stock possessed by the Northern Masai had been greatly underestimated, and the probable figure was computed at 300,000 cattle and 1,000,000 sheep, a large increase over the original estimate, made in 1911, of 80,000 cattle and 1,000,000 sheep. That such an error should have been made is accounted for by the superstitious opposition of the Masai to the counting of any of their stock.

A report submitted by the Director of Agriculture at this time stated that the extended Southern Reserve was, more or less, fully stocked, partly owing to the fact that those Masai who had originally occupied the Northern Reserve had broken their boundaries, and driven their herds and herds into the extended reserve, and partly owing to the arrival of 50,000 cattle and half-a-million sheep from Lekipia. The extended reserve was, however, stated to be capable of holding more stock if necessary, and investigations were immediately made regarding the suitability of the land across the Mara River. Number of Extended Southern Reserve. 6,000* 311 166

The tour of investigation was undertaken by the Director of Agriculture and the Director of Public Works, and the report sent in was to the effect that the area available consisted of one million acres of the finest grazing land in the Protectorate, exceedingly well-watered, and superior to the former Northern Reserve. The country was practically uninhabited, owing, it was said, to the fact that some years before the Masai who then occupied the country were decimated by small-pox while, simultaneously, almost all their cattle died from rinderpest. Messrs. J. K. Hill and C. O'N. Chaplin, two prominent settlers, accompanied the Director of Agriculture on his tour, and submitted separate reports, testifying to the excellent quality of the land in question as a grazing area. In view of the extreme desirability of including all the Masai in one reserve, the Governor felt compelled to recommend that this further area should be allotted to the Masai. Tour in the Ol-Doinyo.

The position at this point was that an area of 4,000 square miles on Lekipia, of which not more than 1,000 was well-watered, was to be exchanged for 4,000 square miles in the south, of which 1,000 was described as some of the best stock country in British East Africa, and through the remaining 3,000 square miles of which flowed the perennial rivers, the Mara and Uaso Nyiro. It was further stated that the whole of this southern area was free from tsetse fly or other disease-carrying fly. Lekipia compared with the Southern Extension.

Meanwhile, on receipt of information regarding the check in the move, the Secretary of State had issued instructions that those natives who had not been provided with suitable accommodation in the south must be immediately provided for in the Northern Reserve. They could not be allowed to remain on private lands without giving rise to future difficulties, and the whole question of an eventual move must be suspended until the suitability and capacity of the new reserve had been thoroughly examined, it had been reported by representatives of the Northern Masai, and until their full and free assent to the assumption of the move had been obtained. The actual move, if these conditions were fulfilled, must not be made until the Governor had satisfied the Secretary of State that an adequate water supply would be immediately available, and that the preparations for proper supervision of the move were complete. The Move suspended.

After the check which took place in 1911, and the subsequent withdrawal of so to Naragumo farm, the Masai returned to the Northern Reserve. Officers were immediately detailed to make a census of the Masai on Lekipia, and the returns showed a population of not more than 4,000 adults, together with 100,000 cattle and 1,000,000 sheep. It was calculated at the same time that there was, in the Southern and extended Southern Reserves, accommodation for 50,000 cattle, and it was therefore decided that the extensions at the Southern Reserve were more than capable of holding all the Masai stock from the north. Census of Masai on Lekipia.

In November, 1911, six chiefs and a few warriors from the Northern Reserve accompanied Mr. R. W. Hemsted on a tour of inspection of the Uaso Nyiro country. They then shown every part of the Ol-Doinyo (Uaso Nyiro) area, and unanimously expressed the opinion that the country was eminently suitable for the Masai and their cattle. Tour in the Ol-Doinyo.

In the same month Lekipiaks deputed four chiefs to visit the district, and these chiefs accompanied by Mr. Hemsted, toured the Ol-Doinyo for fourteen days. Their opinion on the area was not expressed, and they returned nothing but evasive answers, at the same time admitting that the grazing was sufficient and the water supply adequate.

Meeting at Naivasha.

On the 10th of February, 1912, a meeting was held at Naivasha between the representatives of Masai from the Northern, Southern and extended Southern Reserves and the Secretary for Native Affairs (Mr. Hollis), supported by the Provincial Commissioner, Naivasha and several other administrative officers. There were present Mashonoli and Lenjishu with some thirty elders of the Northern Reserve, Ngenyya, the Reguet of the Southern Reserve, carrying the iron club, as representing the Laibon, Ole Kotikush and other Purko Masai, who had already moved into the extended Southern Reserve, and Ol le Sati with other Kaboneyokye Masai. Lenjishu and Mashonoli stated that they did not now wish to move and that they believed the country offered to them in exchange for Laikipia was inadequate. Ngenyya said that he was authorized to inform them that it was the Laibon's wish that they should move north and so remain the tribe, but the northern chiefs declined to carry out this wish of the Laibon. Ole Kotikush expressed the desire of the rest of the Purko division to be allowed to proceed with the move south, and Ol le Sati stated that most of the Kaboneyokye were already in the extended Southern Reserve and that the remainder wished to follow. As a result of this meeting the members of the Purko division who had remained in the north were permitted to move with their cattle, and arrangements for the move were entrusted to the Provincial Commissioner, Naivasha, on the 18th of February. The influence against the move exerted by Lenjishu, however, was so great that although several of the Purko wished to proceed they were prevented from doing so, and small success attended a visit to Laikipia carried out by Ngenyya and Ole Kotikush with a view to using their influence in favour of the move.

Decision to allow the Masai to move.

On the 6th of May, while Sir Percy Girouard was on leave in England, the Secretary of State decided that the Masai should be directed to move to the Southern from the Northern Reserve, but he gave instructions that the lands vacated in the north must not be dealt with in any way until the matter had received his approval.

Arrangements made for the move.

Arrangements for the move were at once put in hand. On the 14th of May, Mr. Bowring, the Acting Governor, proceeded to Naivasha accompanied by Mr. Hollis, Dr. Milne, the Principal Medical Officer, and Mr. Bennett, Acting Chief Veterinary Officer, in order to discuss with Mr. McCallum and the local officials the details of the move. Two routes only were to be used, one via Elementaita and across the Mau by the land known as "The Promised Land," and the other via Gilgil and Elburgon and across the Mau near Lake Naivasha. A broad track, twenty-five miles long, had been cut through the forest from the western slopes of Mau to the Mara River. Not more than 10,000 cattle were to be allowed to move in the first instance by each route and no further moves were to follow until the first ones had settled down. Adequate arrangements were made for the supervision of the move and medical and veterinary officers were provided.

Meeting at Naivasha, 21st May, 1913.

On the 21st of May, a meeting was held at Naivasha when it was explained to the Masai that the Government had decided that the terms of the treaty entered into on April 2nd, 1911, should be kept and that the northern Masai would be required to move. The chiefs offered no opposition, and, indeed, appeared to be relieved that the Government had come to a decision on the matter. Ngenyya, the Reguet of the Southern Reserve, expressed his thanks on behalf of the Laibon and stated that it was a great satisfaction to all the Masai to know that they would be brought together again and not be divided into two sections. Lenjishu agreed to move with the first batch and to help the others to settle after they had crossed the Mau.

The "Masai Case."

On the 20th of June, 1913, Mr. A. Morrison addressed the Colonial Office, intimating that he, in company with Mr. A. D. Shaw and Mr. A. W. Buckland, had been instructed to act for Lenjishu in the taking of legal proceedings against the Government on behalf of the Masai. Action was brought in the High Court by Ol le Nyage and others against the Attorney General and others in May, 1913, and the case was dismissed with costs by the Chief Justice. An appeal was made to the Court of Appeal for Eastern Africa in December, 1913, but the appeal was dismissed with costs. Conditional leave to appeal to the Privy Council was

granted, but lapsed owing to the applicants failing to give security for costs. Further details of the proceedings will be found in Appendix 3.

While the move was in progress the question of the allotment of land to settlers who were affected by the removal of the Masai from Laikipia was brought up. The claimants fall into two distinct categories, viz.:—

Allotment of land to settlers.

(1) Those who, in 1904, abandoned their farms, or claims to farms, on Laikipia in order to make room for the Masai who were, in that year, settled in the Northern Reserve; and

(2) Those who had abandoned their farms in the Lerwick Valley and in the Southern Uaso Nyiro in connection with the move then proposed.

The original intention in respect of those of the first class was to make grants of land to them elsewhere. Those Laikipia settlers were allowed time to make their selections, but, before these selections had been made, the removal of the Masai from Laikipia was vacated and the settlers preferred to wait in the hope of being, after all, able to take up their land on Laikipia as originally intended. The negotiations for the surrender of claims of those settlers who came within the second category were begun in 1908, and were carried out on the basis of a grant of land equal in area to that surrendered in the Northern Reserve, plus fifty per cent., or a sum of money, by way of compensation for improvements, if any. It was understood that no definite promises had been made that the Laikipia lands would be available for exchange, but there was little doubt that it had been taken for granted that this would be the case. Mr. Bowring consequently suggested that, in offering farms to claimants efforts should be made to offer farms approximately equal in value to the land to which the claimants would be entitled on Laikipia, were the land available. At the same time they would be given the alternative of waiting in the hope of being eventually granted land on Laikipia. The Secretary of State considered it desirable, from the public point of view, that no one who was to be compensated in connection with the movement of the Masai should be granted such compensation on Laikipia. He further directed that the claims should be satisfied purely on the basis of area, without reference to the hypothetical value of Laikipia lands. The satisfaction of such claims was to take precedence, within a reasonable limit of time, of any further general allotment of Crown Lands.

On the 23rd of October, 1912, further facts were telegraphed to the Secretary of State regarding the lands on Laikipia. It appears that, on April 7th, 1910, the Commissioner of Lands had informed the Governor that the result of the negotiations with the Masai would be the granting of approximately 200,000 acres on Laikipia. On April the 13th, the Governor had accepted the Commissioner's proposals, and, on that authority, the Land Office had informed the parties concerned that, if they surrendered their land in the Southern Reserve, they would be given areas in the Northern Reserve or in vicinity when the move had been accomplished. Similar promises had been made by the Governor to Major the Hon. R. F. Curzon and Lady Sandford on the 14th of June, 1910. Sir Henry Belfield was therefore of opinion that the Government was under a legal obligation to fulfil the promise made on the completion of the move. He anticipated the most serious results if land on Laikipia was now refused to claimants. All the Southern Reserve farmers confidently expected to receive one and a half times their previous holdings out of the lands to be vacated by the Masai and the Governor feared that there was no chance of their accepting land elsewhere.

On receipt of this information the Secretary of State expressed to the view that the Government was committed to the grant of lands vacated by the northern Masai to the claimants in question and felt otherwise compelled to discard the principles which he had previously laid down. He therefore directed that the obligations entered into in 1910 must be discharged, and as the land, if left vacant for any length of time, could only become useless, or at any rate, greatly impoverished, he approved of arrangements being made for the necessary grants, due regard being had to any prior claims which might be admitted to lands on Laikipia in view of the fact that the claimants surrendered their holdings there when the Masai were transferred from the Rift Valley in 1904.

[illegible]

#649 166 311

The Meeting of December 5th, 1912.

On December 5th, 1912, the Governor met the Masai chiefs at Nakuru. The remarks then made by Legalishu and his adherents were evasive, and no attempt was made to express their true feelings in the matter or to disclose their reasons for taking legal proceedings against the Government. The Governor was of opinion that only a minority of the tribal elders, headed by Legalishu and Mankwali, were responsible for this action, ostensibly on behalf of their tribe, and that the personal avidity and ambition of these two men were doubtless contributory causes of their organized opposition to the approved Government policy. Those who opposed the move had no valid ground for their objection as to the suitability of the new country to which they were being moved.

Completion of the move.

On the 9th of April, 1913, Sir Henry Belfield informed the Secretary of State that the Masai move was completed. With the exception of II Dalo Lekutuk division all the Laikipia Masai were located in the extended Reserve, while that division, after remaining for some months on the Uaso Nyiro, moved to the Kapotei country and settled there. Reports showed that the losses suffered by the Masai on account of the move had been very small. Rinderpest was rife, both in Laikipia and the south, from which many hundreds of beasts died, but the veterinary officers who were in charge of both areas did all that was possible to prevent the spread of the disease. Sheep suffered on one or two occasions, but only a few succumbed. Two drifts were being used, each with an officer in control, and of the thousands of sheep at these drifts not one was lost. The death rate of the Masai themselves, directly attributable to the move, was probably nil. On the whole, the Masai behaved well throughout, and there was very little friction with settlers. Statistics show that the number of Masai moved between the 10th of June, 1912, and the 27th of March, 1913, was 482 warriors, 1,920 other males, 4,081 women and 3,701 children, a total of 10,184 souls, while nearly 200,000 head of cattle and 300,000 sheep were counted. The number of sheep is probably very greatly underestimated. The Secretary of State expressed his appreciation of the manner in which the delicate and difficult task had been performed.

Contents of the Masai after the move.

On the completion of the move the Purko division evinced a considerable disinclination to cross the Mara River, but no steps were taken to induce them to do so and a large number of Masai, including all the Purko Moran, moved into the trans-Mara region in September, 1913.

The Masai did not, on the whole, settle down contentedly in their new surroundings and they showed a disposition to make the worst of everything. Complaints were incessant that the country was unsuitable for them and for their stock, and every device short of active resistance was employed to obstruct the Administration and to defeat the ends of justice. Information concerning others was withheld, and escaped prisoners were assisted and harboured. Chiefs and elders proved anything but helpful and were occasionally almost defiant. The "Masai Case" was undoubtedly responsible for much of this feeling, but it is also probable that the natives resented the closer administration which had been rendered possible by the amalgamation of the two reserves.

This discontented feeling began to disappear some six months after the completion of the move and raids, murders and stock thefts decreased in number. Two years after their arrival the Masai could be described as contented and happy in spite of their dissatisfied disposition.

Disposition of previous inhabitants.

Prior to the arrival of the Masai from Laikipia, the country constituting the extended Southern Reserve had been occupied by members of the Loita, Dorobo, Kaloenyokye and Siria tribal divisions as well as by about one-quarter of the Purko division. These sections had undertaken to move to Laikipia in 1904, but succeeded in evading the terms of their agreement with the Government and, while admitting that they had no claim to the land, occupied the area and came to regard it as their own. By these Masai the arrival of their fellows from Laikipia was resented, while the latter were displeased at finding the best grazing grounds already taken up. A considerable amount of friction ensued, more particularly between the Purko and II Dorobo divisions.

Relations between the Purko and Dorobo. 578 628

Some years previously the Dorobo division had been almost annihilated by the Purko and many of the survivors had been forced to throw in their lot with their conquerors owing to the loss of all their possessions. In subsequent successful wars waged by the Purko they had received their share of the booty, and had thus come once more to possess large herds of sheep and cattle. They now expressed a desire to rejoin their own tribal division, but the Purko maintained that if they did so they must hand back those possessions which they had acquired as a result of the Purko raids. This question was not settled until April, 1918, when, at the inaugural meeting of the Masai Council, Ole Kateiga, President of the Dorobo Council, agreed that the Dorobo should continue as a part of the Purko division.

Relations with the Lumbwa. 648*

Masai and Lumbwa at first regarded each other with suspicion and dislike. Thefts and counter-thefts were common and precautions had to be taken to preserve peace between the Morans of the two tribes. This ill-feeling nearly came to a head towards the end of 1912, when a party of Masai Morans made a raid on a Lumbwa village and murdered several people, but no actual trouble occurred, and the presence of the Masai on the Lumbwa borders has now ceased to give cause for anxiety, though occasional thefts still occur.

The Southern Masai Reserve in 1904—Masailand District—South Masai District—Southern Masai Reserve a Closed District—Boundaries of the Naivasha Province—The Extended Masai Reserve—Eastern Extension—From the Mbagathi to Mount Suswa—From Mount Suswa to Mr. Powys Cobb's land—From Mr. Powys Cobb's land to the Sotik Reserve—In the trans-Mara country—Proclamation of July 23rd, 1912—From the Mbagathi Stream to Mount Suswa—From Mount Suswa to Mr. Powys Cobb's land—The trans-Mara area—The South-Eastern Boundary—The most recent description—[illegible] Mau Narok.

The Southern Masai Reserve in 1904.

By the Agreement of 1904, which [illegible] for the removal of the Masai tribes to definite reserves, "the [illegible]tapatu, Ndogalani and Sigarari sections" of the tribe agreed to [illegible] the territory originally occupied by them, to the south of Donyo [illegible] (Ngongo) and the Kisearian Stream, and to comprise within the area [illegible] Donyo Lamuyu, Ndogalani and Matapatu mountains and the Donyo Narok, and to extend to Sosian on the west.

"In addition, ... Lenana, as Chief Lybon, and his successors, to be allowed to occupy the land lying in between the Mbagathi and Kisearian streams, from Donyo Lamuyu to the point where both streams meet, with the exception of land already occupied by Mr. Oulton, Mr. McQueen and Mr. Paterson."

Masailand District.

On the 11th of February, 1905, a Proclamation was signed defining the boundaries of the Masailand District of the Ukamba Province, and declaring that that district should be divided into two, namely, the Kikuyu District and the South Masai District.

South Masai District.

The boundaries of the South Masai District were defined as follows:—

The South Masai District shall comprise all the land lying in between the Athi River and the Nairobi stream to a point on the latter, where the Masari enters the Nairobi, and then all land lying to the east and south-east of the Masari, and the line drawn from the point on the same stream opposite the Homestead Farm, to the place where the Fort Smith Road crosses the railway line, thence all land east of the line drawn from the railway crossing to the junction of the Dagoretti Road with the Ngongo Road, thence in a line along the Dagoretti Road to a point east of Kinanjui's village, all land east and south-east of a line from the point near Kinanjui's village to the Mbagathi. All land south of the Mbagathi stream, including Donyo Lamuyu (Ngongo) and to the south as far as the Anglo-German boundary. The boundaries between the Masai District and the Ulu District shall be an imaginary line drawn one mile parallel south and west of the railway line from the Athi River Station to Simba, and then in a direct line to the German frontier, following the Simba River as far as possible.

The Kedong Valley, from the edge of the Kikuyu occupyment and railway line to the boundary of the Naivasha Province, shall be in the South Masai District.

(N.B.—Loitokitok and Tsavo Swamp are included in the Teita District. Lake Magadi is in the South Masai District.)

The headquarters of the South Masai District shall be for the present Nairobi.

Southern Masai Reserve a Closed District.

On the 18th of June, 1906, a Proclamation was issued declaring the Southern Masai Reserve to be a closed district under the Outlying Districts Ordinance, and the boundaries were defined as follows:—

LAB R 131

On the north this reserve is bounded by the Mbagathi stream and by the Athi River to a point on the latter where the railway crosses the river.

The eastern boundary is a line due south, from the Athi River railway bridge to the Anglo-German boundary, thence N.W. along the Anglo-German boundary to the point where it is intersected by the Guaso Nyiro River, thence approximate north along the Guaso Nyiro to a point shown on the map as *Sonian*, thence in a N.E. direction to the peak of Donyo Nyuki (*Suswa*), thence in a southern direction to a point where the Mbagathi River rises.

Boundaries of Naivasha Province.

In the description of the boundaries of Naivasha Province, published in the "Official Gazette" of the 1st of January, 1911, the eastern boundary of the Province was stated to be " . . . . the Ngare Rongai down stream to its junction with the Tsavo River, thence by a line northerly to the most southerly peak of the Chyulu (or Kyulu) Range, thence by the Chyulu Range to its most northerly point, thence by a straight line north-westerly to Kemali Hill, thence by a line direct to the southerly one-mile zone of the Uganda Railway, thence by the one-mile zone north-westerly to its intersection by portion No. 1219, thence by its southerly boundary north-westerly to the south-west corner, thence by its westerly boundary north-easterly to the Athi River, thence by the Athi River up stream to its junction with the Mbagathi River, thence by the Mbagathi River up stream to the easterly corner of farm No. 1184, thence by the southerly and westerly boundaries of farms Nos. 1184, 193, 192 and 197 to the westerly corner of farm No. 197, thence by a line south-westerly to a beacon near the forest edge, thence by a beaconed line in the direction of Mount *Suswa* (Ol Doinyo Onyokie). . . . ."

The Extended Masai Reserve.

In the Agreement of 1911 the extended Masai Reserve was defined as being approximately bounded as follows:—

"On the south by the Anglo-German frontier.

"On the west by the Ol-orukoti Range, by the Amala River, otherwise called Eng-aro-dabash or Eng-aro-o-o-gipai, by the eastern and northern boundaries of the Sotik Native Reserve, and by a line drawn from the most northerly point of the northern boundary of the Sotik Native Reserve to the south-western boundary of the land set aside for Mr. E. Powys Cobb on Mau.

"On the north by the southern and eastern boundaries of the said land set aside for Mr. E. Powys Cobb, and by a straight line drawn from the north-eastern boundary of the said land to the highest point of Mount *Suswa*, otherwise called Ol Doinyo Onyokyie.

"On the east by the Southern Masai Reserve, as defined in the Proclamation dated June 18th, 1906, and published in the '*Official Gazette*' of July 1st, 1906."

Subsequent Extensions.

In signing this Agreement, Sir Percy Girouard further extended the existing Masai Native Reserve " by an addition of an area of approximately three thousand and one hundred square miles, the approximate boundaries being, on the south the Anglo-German frontier, on the west the eastern boundary of the Southern Masai Reserve, on the north and east by the Uganda Railway zone, from the Athi River to Sultan Hamud Railway Station, thence in a line drawn from the said station to the north-west point of the Chimbi Range, thence along the Chimbi Range to the south-eastern extremity thereof, thence by a straight line to the meeting point of the Eng-ere Rongai and the Tsavo Rivers, thence by the Eng-ere Rongai River to the Anglo-German frontier."

No proclamation giving the boundaries of this Reserve in full was published until July, 1912, and before that date, enquiries and investigations had been made on the spot in regard to the physical boundary at certain parts.

Crown Land Disposal in Masai Reserve.

In May, 1910, Mr. Hobley had visited the sources of the Mbagathi River, of which there were two, the southern rising near the boundary of farm No. 240 (Pauline, now No. 196) and the northern rising to the west of Ngong station. The

but Ilkeyo village was observed over the northern spurs. With a view to determining the boundary he ran a line from the corner of farm 201 (farm No. 197) to the point where the stock road from Naivasha to Ngong emerged from the forest. He erected a beacon at this point, which was on the south side of the head of the valley marking the source of the Mbagathi. Thence he marked out a line directed on Mount Suswa so far as the top of the escarpment overlooking the Kedong Valley, a distance of some ten miles. It was subsequently found that the continuation of this line over the Kedong Valley towards Mount Suswa passed over the southern part of the settlement farm in that valley. Mr. Bobby was not accompanied on this journey by any officer of the Masai Reserve.

Line from Mount Suswa to Mr. Powys Cobb's farm, Naivasha Lake.

The straight line from the summit of Mount Suswa to the north-western corner of Mr. Powys Cobb's land was found to cross the boundaries of outside farms which had already been allotted to Europeans on the south-west side of Naivasha Lake. The western boundaries of these farms was therefore chosen to be the boundary and a corresponding area to the north was included in the Reserve.

Line from Mr. Powys Cobb's land to the Kedong Valley.

A slight alteration, beneficial to the Masai, was made by including the northern corner of farm No. 248 among the defining points.

Proclamation of 1918.

In July, 1918, while the Masai survey was in progress, it became necessary to publish a Proclamation defining the boundaries of the reserve in order that certain rules might be applied to control the Masai. That part of the boundary situated in the trans-Mara country had not been the subject of investigation by the officers concerned and a boundary which appeared suitable on judgment on a map was inserted in the Proclamation, it being understood that such boundaries were provisional only.

Proclamation of July 1918.

In the Proclamation dated the 23rd of July, 1918, the following Schedule was published defining the boundaries of the Masai Reserve:—

Schedule.

Commencing at the summit of Ol Doinyo Ongokia (Mt. Suswa) the boundary follows a straight line north-westerly to the most southerly corner of farm No. 1,200, thence along the generally western boundaries of farms Nos. 1,200, 1,201, 400, 408, 411 (minor reserve), 413 and 1,202 to the north-west corner of the latter;

Thence in a straight line north-westerly to the north-easterly corner of farm No. 1,203;

Thence along the eastern and southern boundaries of that farm to its most westerly corner;

Thence in a straight line westerly to the southern corner of farm No. 145;

Thence in a straight line westerly to the north-west corner of the Sotik Native Reserve;

Thence along the generally western boundary of the Sotik Native Reserve;

Thence down the Amala River (Eng-aro Dabash) to a point due west of the summit of Kipkiko;

Thence in a straight line due west to the Mogor River;

Thence up this river to its source to the south of Gelegele Hill;

Thence in a straight line to the summit of Gelegele Hill;

Thence westerly in a straight line for about 20 miles to the summit of Magwaji Hill;

Thence in a straight line due west to the Gwaita River;

Thence down this river to its junction with the Kaja River;

Thence westerly in a straight line for about 20 miles to the junction of the Guci and Sudanoi Rivers;

Thence up the Guci River to its junction with the Lemmi River;

Thence north-westerly in a straight line to Lorale Tower (No. 18 on the Anglo-German Boundary);

Case # 181

Thence north-westerly along the Anglo-German Boundary to its intersection with the Kikulewe River (on the slopes of Kilimanjaro);

Thence down the Kikulewe River to its junction with the Tsavo River;

Thence in a straight line northerly to the most southerly peak of the Chyulu (Kyulu) Range;

Thence along the summits of the Chyulu Range to its most northerly peak;

Thence in a straight line north-westerly to the summit of Kasali Hill;

Thence in a straight line to the nearest point of the southerly cable-wire of the Uganda Railway;

Thence by the cable-wire north-westerly to its intersection by portion No. 1,019;

Thence by the southerly boundary of this portion north-westerly to its north-west corner;

Thence by a westerly boundary to the Kibongoto River;

Thence by the Kibongoto River down stream to its intersection by portion No. 897 (Ahki Township) Reserve;

Thence by the westerly boundary of this portion to its intersection by the Ahki River;

Thence up this river to the westerly corner of farm No. 1,120;

Thence by the southerly and westerly boundaries of farms Nos. 1,124, 108, 106, 104 and 107 to the westerly corner of the latter;

Thence in a straight line north-westerly to a beacon near the forest edge;

Thence along a beaconed line in the direction of Ol Doinyo Oyokie to a beacon overlooking the Lekong Valley;

Thence in a straight line to the north-westerly corner of farm No. 300;

Thence in a straight line to the southern corner of farm No. 309;

Thence in a straight line to the summit of Ol Doinyo Oyokie, the point of commencement.

There shall be excluded from the above area all land extending for a distance of a quarter of a mile on either side of the Magadi Railway Line, also Lake Magadi, and all land within a quarter of a mile of the said lake.

The boundary thus defined has not yet been altered by publication in the "Official Gazette," but amendments have been made in certain parts and a revised schedule has been drawn up giving what is proposed and what is in fact taken to be the boundary of the reserve.

In April, 1918, it was made apparent that the boundary demarcated by Mr. Hobley near the upper reaches of the Mbagathi had the effect of cutting off the Masai from access to the water supply in that stream. This disability was counteracted by the erection of a fence by the Elkeyo under the direction of the Assistant District Commissioner at Dagoretti round the source of the stream on the supposition that it was "Elkeyo water," which fence was responsible for the creation of friction between the Masai and the Elkeyo. In deference to representations from the Provincial Commissioner, Rift Valley, the Provincial Commissioner, Nairobi, agreed to move the fence back to the forest, but it appears that this was not done at the time, and the District Commissioner, Kiambu, who succeeded the one in February, 1919, found the fence in its original position with a gap of one hundred yards enabling the Masai cattle to pass through. Mr. Hobley pointed out that the treaties of 1904 and 1911 had made provision for the inclusion in the Masai Reserve of the land between the Mbagathi and the Kiambu Rivers, while the Provincial boundary gazetted on the 1st of January, 1911, had given a different boundary in the part, which boundary had again been demarcated in the description of July 22nd, 1916. But these latter descriptions had made reference to the beacon erected by Mr. Hobley near the forest edge and the inclusion of this beacon as a point on the boundary resulted from the course in one case the greater part and in the other case the whole of the Mbagathi Stream.

Land in Mbagathi River to Masai Reserve.

4:Sandford G-4.5 (1918) 1919 FL12 Maps FL12

[Facing P. 42]

Historical data of the localities occupied by the Maud showed that an equitable continuation of the boundary from the centre of the Mingadid was in a direction approximately due west, while the lines that had been erected in fact ran due north. In order to come to a final settlement of the matter, officers representing both sides were instructed to make investigation on the spot. As a result of this inspection the Governor decided that the boundary as fixed must be altered to conform with that described in the treaties.

Some Chief claims to Mr. Powys Cobb's land.

Certain amendments to the boundary between Maud Town and Mr. Powys Cobb's land were considered in order to bring the Maud Reserve boundary up to the line of the surveyed farms.

Mr. Powys Cobb's land.

No definition has as yet been finally arrived at of the boundary of the Maud Reserve with Mr. Powys Cobb's land as far as the north-eastern corner of farm No. 246.

The Maud-Rose area.

In February, 1913, Mr. Hewetson, accompanied by the District Commissioner, Kwii, examined the Maud-Rose area with a view to the more accurate delimitation between the Maud Reserve boundary and the South Kyabanda district. The boundary suggested by these two officers was acceptable to the Provincial Commissioner concerned and was approved by Sir Hilary Rudkin on the completion of his tour in the reserve. It was, however, decided to postpone the granting of this boundary until after the conclusion of the "Maud Case."

The Kyabanda-Kwii boundary.

In August, 1914, the District Commissioner, Tyrong, suggested the addition to the Maud Reserve of the country between the Kibabiro and Bumbo rivers, formerly included in the Tyrong sub-district of the Sotiki Province. This would provide compensation for the area alienated from the reserve by the Bugoli Railway and the Sotiki Company's settlement at Kajindo. It would also cause the Maud Reserve and the Northern Game Reserve boundaries to be conterminous on the north-east; the suggested boundary was clearly demarcated by beacons, and was much more definite and visible than the Kibabiro River. This additional area was provided for the needs of the Lokolobi Maud who had, in fact, used it for grazing their herds for some time. This proposed extension was recommended also by the Provincial Commissioner, Sotiki.

The most recent description of the Maud Reserve boundary was written in March, 1918. This has been approved, but has not yet been gazetted, owing to the difficulty of obtaining the services of a surveyor to demarcate it. The description reads as follows:—

"Commencing at the summit of Ol Dolopo O'Ilyokye, thence in a straight line in a southerly direction to a beacon on the Kijabe east road, thence in a straight line to the most easterly corner of farm No. [illegible], thence following the southerly boundary to the south-western boundary of farm No. 1200, thence along the generally western boundaries of farms Nos. 1200, 1201, [illegible], 414, 411 (water reserve), 413 and 1208, to the north-western corner of the latter, thence in a north-west direction to the southern corner of farm No. 1171, thence by the western boundaries of farms Nos. 1171, 1172 and 1700 to the north-west corner of the latter, thence by a boundary to be defined hereafter, to the south-eastern corner of farm No. 246, thence following the eastern boundary of that farm to its most southerly corner, thence in a straight line westerly to the north-eastern corner of the Sotiki Native Reserve, thence along the general eastern boundary of the Sotiki Native Reserve to the junction of the Amala (Sagana Ol Kiverenia) and Mpagaria rivers, thence in a straight line to the summit of Oldapin Hill, thence in a straight line in a west south-western direction for about 31 miles to a point marked by a beacon on the Sagana Ronger river, about five miles south of Dolopo Hill, thence in a southerly direction to the Sagar (Gaal) River, thence up that river for about 13 miles to a beacon on the south bank, thence in a southerly direction to beacon No. 17 on the Anglo-German border, thence in a south-westerly direction along the border to beacon No. [illegible], thence in an easterly direction along a line of beacons to the source of the Sagar (Gaal) River, thence down the river to the Game Reserve beacon, where the Figoto and Ogiolo Hills (Ol Dolopo Lot)

Hanyawyi approach the river, thence in a northerly direction along the remainder of the Chyulu Range, thence in a straight line to the nearest point of the northerly rule area of the Uganda Railway, thence by this rule area north-westerly to the intersection by portion No. 1218, thence by the southerly boundary of this portion north-westerly to the south-west corner, thence by its westerly boundary to the Kimangela River, thence by the Kimangela River down stream to its intersection by portion No. 207 (Athi Township Reserve), thence by the westerly boundary of this portion to its intersection by the Athi River, thence up this river to the westerly corner of farm No. 1124, thence by the southerly and westerly boundaries of farms Nos. 1124, 198, 192, 190 and 191, to the westerly corner of the latter, thence along the western boundary of farm No. 197 northerly to the intersection by the main stream of the Mbagathi River, thence up stream to its source, thence in a straight line to the north-east corner of farm No. 300, thence following the boundary westerly to the southern corner, thence in a straight line to the summit of Ol Dolepo O'Dyakye, the point of commencement."

In 1917 two areas of 30,000 acres and 5,000 acres respectively were surveyed for Mr. Powys Cobb on the Mau Narok, and the Officer in Charge suggested the following boundary, in consultation with the Land Officer, as completing the definition of the Masai Reserve boundary in this part:— The Mau.

From the north-west corner of farm No. 1700 in a westerly direction to Mr. Powys Cobb's 30,000 acre farm, thence by the eastern, southern and western boundaries of that farm to the Sonoro Drag, thence in a northerly direction to the north-east corner of Lord Delamere's Mau farm, thence following the southern boundaries of that farm to the north-east corner of Mr. Powys Cobb's 5,000 acre farm, thence following the eastern and southern boundaries of that farm to the north-west corner, thence in a straight line to the north-east corner of farm No. 448.

Chapter V.

A DESCRIPTION OF THE MASAI RESERVE.

Historical divisions—Administrative divisions—Geographical divisions—General description of the Reserve—Mountains—Rivers—Lakes—The Rift Valley—Eastern portion—The central portion—The western portion.

Historical divisions.

The present Masai Reserve, of which the boundaries have been defined in the preceding chapter, may be divided historically into four sections. The original Southern Masai Reserve has been in Masai occupation from before the time of European administration: the Extended Southern Masai Reserve, that is, roughly the country between the Uaso Nyiro and the Mara River formed the basis of the Agreement of 1911: the trans-Mara or Ol-Orokoti area was added subsequent to the Agreement, not being included within the terms of that treaty, and the eastern portion of the reserve, from the Ngong Hills to Kilimanjaro was added to the Masai territory by Sir Percy Girouard in signing the Agreement of 1913.

Administrative divisions.

For administrative purposes, the reserve is divided into three districts, the boundaries of which, together with the reasons for this partition, are described in Chapter V., Section I.

131 Geographical divisions.

For a geographical description of the reserve, three divisions may be taken, the Mara River and the Uaso Nyiro being the dividing lines between these sections.

General description of the Reserve.

The Masai Reserve extends approximately from 34° 37' east longitude to 36° 15' east longitude, and from 0° 34' south latitude to 3° 15' south latitude. It is 200 miles long and 94 miles broad, and contains an area of some 14,000 square miles, or over nine million acres.

The Anglo-German border which, throughout 250 miles of its length forms the northern boundary of the Masai Reserve in British East Africa, divides the localities inhabited by the Masai tribe into two portions of which the larger is in British territory, and does not itself conform to any tribal or social division of the Masai tribe.

133 Mountains.

The highest point of the reserve is to be found at its northern extremity where the boundary crosses the Mau Range. In that part of the reserve adjoining Mt. Powys Cobb's land, an altitude of 10,000 feet is reached. Little of the rest of the reserve is more than 8,000 feet in height, the most considerable mountains or groups being in the eastern portion, Ol Doinyo Orok, 8,274 feet, an isolated mass, forty miles in circumference, which rises more than 4,000 feet above the surrounding plain, and is situated on the southern borders of the reserve; the Ngong Hills, sixteen miles south-west of Nairobi, which attain an altitude of 8,000 feet; and Ol Doinyo Kyokye, 7,731 feet, a conspicuous extinct volcano, situated to the west of the Kedong Valley; in the central portion, the upper slopes of the Mau Range; the group of rugged mountains, known as the Loita Hills, whose highest point is at an altitude of 8,000 feet; and the mountainous region along which passes the Anglo-German boundary; and in the trans-Mara area, the Lemiti Escarpment, and Mount Gelegele, on the borders of the Kisii country. In the south-east of the reserve, the boundary crosses the foothills of Kilimanjaro, but does not exceed that mountain to a height greater than 7,000 feet above sea level.

Rivers.

The only two considerable rivers in the reserve are the Uaso Nyiro, with its tributaries, and the Mara River. The Uaso Nyiro divides the reserve into two parts, running in a southerly direction in the neighbourhood of the 36th degree of east longitude. This river, rising in the Mau Range, and flowing into Lake Rudolf, falls some 5,000 feet in 140 miles, and is fed in the first part of its course

by numerous tributaries, which run in deep valleys from the heights of the Mau. Chief among these are the streams known as Marsh, Hyaket, Paul Lokwayi, Chokori, Tuiyin and Sosion. At latitude 1° 30' south, the Uaso Nyiro enters a deep gorge and flows sluggishly through swamps and tall grass from that point to Lake Natron, flanked throughout by the Ngorongoro Escarpment on its right bank. Eight miles from its mouth, it becomes lost in a swamp, but its course is sometimes visible as far as the lake. 133

The Mara River also rises on the Mau, whence it cascades down in a south-westerly direction until, a few miles below the Mara Bridge, it too becomes sluggish. After crossing the Anglo-German boundary, this river proceeds due west until it reaches the Victoria Nyanza, seventy miles away.

Other less important rivers are the Gori River, in the trans-Mara country, which rises from Gologolo Hill, and finally flows into the Kuja near Kavango Bay, the temporary river Kikaldoon flowing eastwards from Kilimanjaro, and the Ravungu flowing from Monti Creek.

There are no permanent lakes of water of any size within the reserve. Perhaps the most interesting feature of the country is found in the soda lake at Magadi, where deposits are now forming the object of commercial enterprise. Lake Amboseli is a flood of water in the wet season, but dries up during dry weather. Lakes

The Rift Valley, which marks the termination of the lava plains of Kapetiel and Athi on the east, crosses the Masai Reserve from north to south from the Kedong Valley to Lake Natron. This valley, the Eryikonon or Great Rift Valley, extends through East Africa from the German frontier to Abyssinia, and thence to the Jordan Valley. "This valley," writes Professor Gregory, "has been formed by the subsidence of the block of material that once filled it. At one time, the surface of the volcanic plains to the east of the Rift Valley were continuous with the similar plains to the west. Parallel cracks, hundreds of miles in length, broke across the rocks: the block of material between these cracks sank, leaving walls, in places, so precipitous that the Uganda Railway has had temporarily to use a cable-worked funicular railway for the descent into the valley from the Kikuyu plateau. The walls of the valley, however, are not always precipitous. The lines along which the subsidence occurred cut across ridges, valleys, and basins: and the character of the scarps that now bound the valley varies with the structure of the country on either side of the Rift Valley."* The Rift Valley

Dealing more particularly with the geographical divisions into which the reserve is divisible, the eastern portion of the reserve consists initially of an open plain, known as the Ryiri Desert, situated to the west of the Chyulu Hills. This so-called desert is at an altitude of about 4,000 feet, and is covered with bush of a varying density. There is no surface water in it, but the bed of a stream, known as the Sand River, crosses it from west to east, a bed averaging two to three hundred yards broad, from which water can be obtained by digging. One branch of this underground watercourse appears to be the continuation of the Kajiado River. Eastern portion

Further to the south, and at about the same altitude, lies the sometimes swampy country at the foot of Kilimanjaro. This plain consists of muddy sand, impregnated with various salts, which renders difficult the growth of any vegetation. Here and there a few shoots of water are to be found in the wet weather, surrounded by rings of grass, while considerable areas are covered with the white crust of soda and saltpetre. No rivers run from Kilimanjaro on the northern face, and the small streamlets which are occasionally running from the snow line do not proceed further down this plain.

Perhaps the most remarkable feature of the Ryiri Desert and the plains to the south is the quantity of game which exists in these areas, and it must be remembered, in this connection, that that country forms part of the Southern Game Reserve. [126]

Further to the west, the ground falls slightly to an altitude of under 3,000 feet at Lake Amboseli, and then rises to Monti Creek. From this eminence the

* "The Structure of British East Africa," Geogr. Journal, 1896.

[113]

133 one or two streams which are permanent and which run for some distance from the foot of the hill. The most important are the Ramanga and Kidongoi, but several other springs are to be found on the mountain itself. The upper portions of Mount Orok, as well as the northern slopes are covered with good grass, suitable for grazing during the wet season, but the Masai usually proceed to the more permanent watering places in the dry season.

Following the line of the Longido-Kajiado road northwards, more broken country is encountered, with the Ngorongoibi and Ol Kesepuraba Hills on the right forming the western boundaries of the Nyiri plains. This part of the reserve is bare and barren with little grass, and water can only be obtained by digging. The road lies generally at an altitude of between 4,000 and 5,000 feet, and the first permanent water that is to be found is at Ibeil. There are some perennial springs on the slopes of the Kesepuraba and Ngorongoibi Hills. North of Ibeil the country is covered with grass, and forms excellent grazing grounds comparatively free from tsetse. To the east lies the broken country of the Ranga Hills, which contains numerous water holes, some of them permanent, but no permanent rivers. The line of the Magadi Railway is then reached, north of which lie the Kapatiei Plains, stretching north-eastwards into the Ukambani country. These plains are at an altitude of about 3,500 feet, and are covered with grass, though the ground is somewhat stony.

To the west the ground rises fairly uniformly to the Ngong Hills, Doinyo Lemayo, and Ee Doinyo Narok. West of these heights lies the escarpment of lava rock, running north and south, which forms the eastern wall of the Rift Valley, and which is more or less clearly defined from the northern boundary of the Masai Reserve at the Kilonyo Escarpment in a south and south-easterly direction to Ee Doinyo Narok and the Tarakia Ravine, thence south-westerly past Longiji, to the Anglo-German boundary near Boundary Post 37.

East of this escarpment the country is at a much lower level, is barren, rocky and destitute of water. A few isolated hills rise up, but it presents the appearance of a rugged desert and is practically uninhabited. Descending from the escarpment, at a mean altitude of 4,000 feet, the general altitude at the foot is little more than 4,000 while in the neighbourhood of Lake Magadi the country falls to 2,000 feet. To the south of the Lake stands Ol Esiteyi, a mass of three or four peaks, of which the highest attains an elevation of 4,001 feet, and to the north there is a series of islands and ridges. Near Lake Magadi, and extending eastwards and northwards for some miles, there are the deposits of an old lake. These are associated with volcanic debris and have in places been overflowed by lava.

Northwards, and some fifteen miles west of the Ngong Hills, the country consists of a series of parallel valleys divided by rocky fault scarps, details of the successive fault movement so definitely marked in the Rift Valley.

West of Lake Magadi the Rift Valley maintains its low altitude, broken only by Udongoiro, a hill which flanks the Uaso Nyiro on the east at a height of 3,000 feet, but at the northern extremity of Lake Natron, a few miles north of the boundary, Ol Doinyo Lengai rises as isolated peak to an altitude of 3,100 feet, 2,000 feet above the swamps of the Uaso Nyiro at the immediate foot.

133 [Bill] The country to the east of the Uaso Nyiro, and lying in the Rift Valley, is undoubtedly the poorest portion of the reserve from a pastoral point of view. East of the Rumuruti-Longido road, and in the higher Hills, the country may be described as fair stock land, and though water is not plentiful, and though there are in general considerable distances to be covered between water-holes, a considerable quantity of stock can be maintained on it by utilizing the drier areas during the wet season. Statistics show that this area does in fact support about 150,000 head of cattle and nearly 400,000 sheep.

There remains the country situated in the Rift Valley from the Kalewa to the Uaso Nyiro. The Kalewa River does not itself enter the Masai Reserve, as a stream flowing above ground except in the wet weather and it is, therefore,

but to the Masai as a watering place. Situated at an altitude of 4,000 feet it is flanked on the east by the Kikuyu Escarpment, and on the north-west by Mount Suswa. Water is not permanent during the dry season, but the area is used by the Masai during the rains when most of the available water then runs to waste. 133

The country between the Kedong Valley and the Uaso Nyiro at Van de Weyer's Drift, is cut up by deep escarpments and studded with innumerable hills, intersected by jagged alluvial ridges, all of a volcanic nature. The soil is, for the most part, a sandy orange dust. The hill sides are covered with rough thorn bushes and scattered scrubwood, which a considerable amount of good grass is apparent. The area is practically waterless at most times of the year, but the appearance of watercourses indicates the presence of large bodies of surface water during the rains. [134] [137]

Near the Uaso Nyiro lies the country known as Rosiro, level grass country, which affords permanent grazing for large herds of cattle all the year round on account of the proximity of the river and the consequent regular water supply.

To the east lies the country known as L'Olda Kiboi, which is the northern extremity of the barren country round Lake Magadi.

The Uaso Nyiro, which is taken as the dividing line between the eastern and central portions of the Masai Reserve for the purpose of geographical description, flows into a swamp to the north of Lake Baringo, which constitutes the lowest part of the reserve, being no more than 2,000 feet above sea level. The valley is fairly healthy in dry weather, but in the rainy season the inhabitants move outwards to the summit of the escarpment, which rises to a series of abrupt and rocky ridges on the right bank of the river from the Anglo-German boundary as far north as the Ramisiro River. Topographical portion

West of this escarpment stand the Lolto Hills, rugged masses extending over a wide area of country, watered by frequent streams, and of an altitude generally greater than 7,000 feet. These hills form the watershed of the tributaries of the Ewaso Nyiro, the chief of which in these parts is the Olkeju Ungwakorr, which follows a course mostly parallel to the boundary and which enters the Ewaso Nyiro as it crosses the border. The Lolto Hills present good grazing grounds, well supplied with water and grass, but they are too mountainous and rocky to phase to be utilised to their full capacity.

North of the Ramisiro, and before reaching the Lolto Plains, the Ramisiro Plains present grazing areas of the best quality, whose undulating slopes carry heavy crops of grass and are much frequented by Masai cattle. Permanent water is obtainable at regular intervals from the small tributaries of the Ramisiro.

The Lolto Plains are entered at the Ragaro Rivers and, though there is a deficiency of permanent water in this part, the grazing is otherwise good. The extensive areas comprised in the north-eastern portion of the Lolto Plains consist of very open and bleak country, swept by cold winds, which send the temperature at night down to well below 40° F. and carrying a short close grass, which is more suitable for sheep than for cattle. The eastern boundary of the Plains is the Uaso Nyiro, which has cut at this time entirely into the deep ravine. At Van de Weyer's Drift the river is some twenty yards wide, running with a strong current between fairly high banks and of a depth varying at different seasons of the year, but rarely less than two or three feet deep at the drift. North of Ronsi Station the heights of the Rift are through thick bush and forest country, well watered, but practically unusable for stock, to the top of the range and it is through this country that the Uaso Nyiro, with its tributaries, fall until they enter near the drift. [136]

West of the Ronsi lies the main portion of the Lolto Plains, a vast area of open grass country, level, or slightly undulating, intersected with small water courses, which hold water in the deeper sections and in the neighbourhood of numerous springs at most seasons of the year, and dotted at intervals with copses of bush and scattered clumps of scrubwood, a country which possesses magnificent possibilities as a grazing area if a few engineering projects are undertaken to

133 improve the permanent water supply. The area is well stocked, but there is no doubt that a larger herd of cattle could be carried there if such improvements were effected.

At the north-western extremity of the Loita Plains lies the Lemek Valley, the scene of certain engineering activity in the construction of dams and an area which was considered suitable for European occupation before it was decided to concentrate the Masai from Loitokitok in the Kilimanjaro Southern Masai Reserve. This valley possesses no permanent watercourse but provides excellent grazing during the wet weather when water abounds. To the west stand the Lemek Hills, the highest point of which, Ilkiboni (Kipkelion), rises to an altitude of nearly 7,000 feet, while to the north, Ngulot separates the Lemek Valley from the Mara River.

North of the Lemek Range lies the country known as Oloro, Isiria and Ololorian, while on the west the country descends to the Lemagrut Plain through which flows the Mara River. In the vicinity of Mara Station another lower hill is reached situated on both sides of the river, forming the southern extremity of the Chepalungu Forest which acts as a buffer space between the Masai and Kisii on the right bank of the Mara.

The Lemek plateau

The plateau Mara area of the Masai Reserve may be described as an elevated tableland at an average height of some 6,000 feet with a long central range of hills running up it from south to north and there merging into a still higher plateau of an undulating surface, many of the eminences of which attain an altitude of about 7,000 feet. On the south, the plateau is terminated abruptly along the eastern side by the Loita Escarpment, leading down about a thousand feet to the Mara River which flows at the base in a southerly direction. Through this area flows the Gol (Sogoi) River, the most important branch of which rises to the west of Cologale and flows almost directly southwards until it passes the long flat-topped hill known as Lengapemo. It then turns east. The area is covered with bush in varying density but one half to two-thirds of the whole is excellent grass land which is all within reach of one branch or the other of the Gol River.

[931] The portion of the country now previously occupied by Masai who were previously established by settlers in 1911, while on the same time their cattle perished in the epidemic of rinderpest.

The northern area consists of rolling hills and valleys interspersed with well-drained flats and smaller hills, the whole being heavily grassed with luxuriant vegetation and elephant grass. It is fairly well watered, especially near the exclusive of the Chepalungu Forest, but there are also large tracts destitute of wood or bush. The available water supply is ample for any number of stock.

The western area lies at a lower altitude and has an average rainfall of less less than 30 inches. The grazing is long and rank and there is bush over about one-third of it.

Between the Gol River and the Loita Escarpment the country consists of change of bush with excellent grazing in the other parts. It is rather poorly watered but several streams exist which do not dry up altogether.

The country below the escarpment is fairly well watered and is used by the Masai in the dry season.

CHAPTER VI.

ADMINISTRATION OF THE NAGAI REMONTE.

Section I.—GENERAL.

[illegible]

[illegible]

[illegible]

[illegible]

[illegible]

[illegible]

[illegible]

[illegible]

649 considerable inconvenience to the Board. He thought that with certain reservations as to areas and species a scheme might be considered under which concessions could be granted to persons to shoot game, the bites and meat of which could be exported. In the Maori Reserve it was necessary to regard Maori interests as paramount and the game should therefore be reserved.

Terms of Administration Grants.—The most suitable sites having been selected for stations, it would be necessary to obtain details and particulars of population, healthy of water, grazing areas, forests, etc., for establishment in each. It would be their duty to inquire upon the Board the necessity for observing the boundaries of their reserve and of the European farms.

Administration and Development.—The reserve should be sub-divided into districts with definitive boundaries and containing as far as possible both upland and lowland grazing, while sub-districts and boundaries should also be determined to accommodate the various clans. Each sub-district would be under the direct charge of a headman and a council of elders.

Tenures should be in relation to property, i.e., in the case of the Board, in their stock and Mr. Ainsworth suggested a tax of £1 per annum per head of female cattle, cows, 20 per annum per head of male cattle and stallions, and cows, six per head of sheep and goats; but, however an certain difficulties might be encountered in the assessment for and collection of such a tax, he put forward an alternative proposal for the taxation of land at the rate of £1 for five acres of cattle grazing land and cows, 20 for five acres of sheep grazing land. Therefore could be used as revenue and paid a salary based on 5 per cent. of the collection.

Dwellings, or Kainga would take the form in the first instance of meeting the cost of administration, after which half of the remainder might be devoted to the cost of the central Protectorate administration and the Dominion and units to be borne against possible losses, an adjustment taking place every three years when half of the accumulated funds might be devoted to carrying out improvements in the water supply and other necessary public works. In addition to considered that the Commissioner should be in a position to call upon the Board at any time to defray the cost of additional expenditure deemed necessary by them for keeping peace or things to maintain order in or over the reserve.

Tourist trade to be encouraged by the establishment of trading centres and by the introduction of imported articles for sale to the Maori.

Forests in favor the reserve should only be issued under strict regulations and the good of legitimate business outside. The inhabitants of the reserve should be discouraged from having intercourse with Maori on settlement lands (not Maori) but the latter should be freely permitted to visit their settlement lands and return to the reserve.

Control of the reserve should be formed in the office in charge who would correspond independently with headquarters.

Cover Permanent Lease might become necessary to accommodate Maori who did not wish to reside in the reserve for reasons connected with sanitation or population, such as a disinclination to marry from Lichfield. Mr. Ainsworth calculated the letting units of an area on Lichfield, to be divided into blocks, on an annual basis by the County, and rent to be charged at the rate of £1 20 per annum per hundred acres, together with the usual dues. Then through Maori tenants to operate for five years, after which, a graduated tax would be enforced calculated to discourage permanent occupancy on these areas. An officer would be employed on Rotorua, under the P.C. Patrolles, to supervise this area, to see that no unauthorized persons resided there, and to prevent grazing outside the area.

It might, further, be possible to arrange for a Maori tenancy under European landholders, on terms of mutual convenience as regards tenancy, the number of tenants being limited, and graduated form of taxation being introduced to prevent overstocking.

On August 1st, 1918, Dr. E. W. Hemsted was placed in charge of the Mand Reserve. In February, 1919, he submitted a scheme for the administration of the Reserve. This memorandum dealt with the following points:—

Stations are Sub-Districts.—The Mand being a tribe of nomadic habits, scattered over a wide area, and concentrated in no particular localities, he considered that effective administration could not be reached on by officers remaining at fixed stations. Constant travelling was necessary, and he advocated the establishment of one central station only, with four or five outposts at each of which a small house would be erected for the visiting officer, with a few huts for his staff. The central station would be situated near the Umm Dubas, or on the River Sarasara, and would be the headquarters of the officer in charge. In this way, economy and mobility would be combined with efficiency. He suggested the creation of outposts in the Al-Ordonah near the Anglo-Russian border, in the Lesah Valley or on the Upper Mara, at El Bidh, at Ngang, and among the Lakabinda, or in the Bagirl Valley area.

Staff would consist of an officer in charge, a Senior District Commissioner, four Assistant District Commissioners, one Police and one Veterinary officer.

Native Administration.—The tribal system of the Mand rendered direct administration of the chiefs through their own chiefs particularly suitable. The paramount chief was recognized by the whole tribe, but had resided, under British protection, in Omdurman for a more Sudanese land. The duties could be considerably extended. Legislation, Revenue, Statistics, and Travel came now from the Government, but these were, though intelligent, were conservative and lacking in energy. A few young and energetic men could be included in the ranks of the chief headmen, whose numbers should be increased, and Dr. Hemsted suggested the following appointments as sufficient for the needs of the tribe:—

For the Parks due		1 chief and 2 headmen.
[illegible]		1 chief and 2 headmen.
[illegible]		1 chief and 1 headmen.
[illegible]		1 chief or headmen.
[illegible]		1 chief or headmen.
[illegible]		1 chief or headmen.
[illegible]		1 chief or headmen.
[illegible]		1 chief or headmen.

—a total of 14 chiefs and headmen, in addition to the paramount chief, for the supervision of some [illegible] Mand and [illegible] square miles of territory.

The new divisions mentioned above were, in fact, geographical divisions overlapping in certain cases, but Dr. Hemsted proposed the demarcation of each district and the restriction of the chief to the use of the area allotted to them, which would be named headmen. The Mand were, he said, agreeable to such an arrangement, realizing that any trouble which might arise would then be localized.

Taxation.—While agreeing that the present form of hut tax was generally [illegible], and inclusive to the case of the Mand, he considered that the difficulties of assessment, the discrimination that ought to exist, and the probable non-payment, furnished in the revenue were serious objections to the imposition of a cattle tax. He therefore suggested a poll tax of Rs. 10 per head per annum, together with a compulsory subscription of Rs. 10 per head per annum towards a fund for development, and improvements in the country. A revenue of Rs. [illegible] or Rs. [illegible] would thus be secured, and it was difficult to justify a higher tax. In the alternative, he suggested a tax of one to one-and-a-half per head, on all cattle, irrespective of age or sex.

[illegible]

Recreation.—Under the national military training scheme, the Board now rapidly materializing. The continued service of honor shown but developed attitude, power of concentration, ability to organization, and high intellectual growth. It was necessary to provide a substitute, and for advanced recreational education. The Board then not necessarily a recreational influence, but he considered that beneficial results would be obtained by the institution of industrial schools, where the being management of stock, the use of the plough, the culture of better grasses, and the establishment of home gardens might be taught. Such schools would be under Government supervision, and the Board might be consulted in school between the ages of eight and twelve.

Trees.—The Board being power in providing with their cattle, trees should be encouraged, and a demand between the Board and Homesteads settlers. Therefore, stock, blackbirds, tobacco, smoking pipes, knives, axes, and other articles were becoming increasingly popular. Demand trading together with the establishment of trading centres, which because this demand, and it would be beneficial if necessary restrictions on the permission of stock could be removed.

Commissioner of Works.—Stock could be done to improve the water supply, and the Board could be authorized to grant their cattle away from the protected areas during the rain.

Mr. McCallum.

Mr. McCallum, the Provincial Commissioner, Kalinda, agreed to general with Mr. Bennett's proposals, but considered one central station to be sufficient for the whole area. The farmers in consultation authorized for the establishment of one station only would be constituted by the Council and of travelling.

Commissioner of Works.

The Board were now completed on the 8th of April, 1918, but further only selection of the question of the establishment of the Board was postponed until after the Kaiserhof, Mr. Henry Ballard, had completed the geographical tour in the country.

Mr. Bennett, Kalinda, and Mr. McCallum.

In response to a request from Inchcombe, Mr. McCallum substituted for generally in the week of April. He recommended between the Board of three members for the elements of the 18th September, 1918 both agreed that he considered that the country should be under the jurisdiction of the Bennett Commissioner, Kalinda. There should be one district district, and in the principal centres, and of the Town Board, as which should be appointed one District Commissioner and two Assistant District Commissioners, and one of Mining, and one District Commissioner. The Board District would include particularly of the Board who had recently moved from Lullingin.

The place of a stock and grazing report could be brought in efficiently about by the Board districts. The experienced that gone to the country would be not little damage and could have the better grazing area for the occupied parts on the control of the cattle from Lullingin.

Expenses and Expenditure.—Mr. McCallum suggested that 10 per cent. of the taxes should be set aside and a fund of the 18th 1918 had accumulated, then the one could be placed on deposit for future relief, the interest being utilized in the improvement of roads in the country. In addition, 10 per cent. of revenue could be deducted for use on roads, such as clearing roads, and removing. The [illegible] gold tax, should be paid into the Treasury.

Trees.—Bennett Officer, selling tobacco in the country should be discouraged, but Bennett trading by Indians, Kalinda, and others might be allowed on permits.

Opening Representation Lands.—He considered that the Board should not be allowed with their stock on unfenced lands under any conditions, and considering [illegible] in conjunction with employment on Homestead Farms should be discontinued. He did not agree with the proposal to create Farm settlement lands for the Board outside their reserve area, but he considered that, when the time came, a portion of the reserve might be set apart for the establishment of distributed settlers.

His Excellency proceeded on his tour to the reserve in June, 1919, and while on tour he decided the following points, in consultation with the Provincial Commissioner and District Commissioner:—

The reserve was to be divided into two districts, one on each side of the Gwe River River. The inter-district boundary was to be a line commencing at the source of the Sukubiri River on the Mwi, running thence in a straight line in a north-easterly direction to the junction of the River Rusk and Kyle, thence following the Gwe River to the Gwaza boundary.

The Ryang District, on the eastern side of this boundary, was to have its headquarters at Ryang, which was to be considered a permanent station. Buildings were required there for a District Commissioner and an Assistant District Commissioner, while the present District Commissioner's house would be requested here as office.

The site for the headquarters station of the Gwe-Kyle district was provisionally selected at a point on the north side of the Kyle River, within about half a mile of the new Kyle River bridge and of the Kyle wagon track. The buildings to be erected there were to be of a temporary nature only, considered to last about two years, but they were to be substantial permanently and to consist of quarters for a District Commissioner, an Assistant District Commissioner, and a clerk, and an office and dispensary. It would probably be necessary also to station a veterinary officer there.

The Mwi post was accepted as a station for an Assistant District Commissioner, and permanent buildings were to be erected there for such an officer and the staff as soon as funds become available.

The Secretary of State approved the proposal that the Rusk Reserve should continue to form part of the Kyle District, and remain under the jurisdiction of the Provincial Commissioner, but opined that the officer in charge might occasionally share with headquarters.[1] The Rusk Railway zone was excluded from the Rusk Reserve and incorporated in the Gwaza Province.

The officer in charge, Mr. Dawnell, established himself at Rusk at the end of September, 1919. Mr. Dawnell's temporary office, clerk's hut, dispensary, prison hut, and hut for the police and prisoners had been erected at that place.

On the 14th of March, 1919, Mr. Dawnell asked approval to the formation of a third district in the Rusk Reserve, whose headquarters were to be at Mwi River station. The proposed district would include the Gwaza, or lower Mwi region, the Lemik Valley, and the western portion of the Lotto hills and plain, and would comprise a population of about 15,000. An additional District Commissioner would be necessary for the post at Mwi River, but the existing arrangement, whereby the Assistant District Commissioner at Mwi River administered this area under orders from the District Commissioner at Rusk, was satisfactory, and the Rusk District was too large for administration by one District Commissioner.

Mr. Dawnell also suggested an alteration in the inter-district boundaries of the Rusk and Ryang districts, so that the former would comprise the western Lotto plains and hills, the Mwi Reservoirs, Ti Mulli, and would extend in an easterly direction as far as the Kalang Valley. The population affected would number about 10,000. An Assistant District Commissioner was necessary at Mwi.

The Ryang district would be reduced by these alterations by some 1,000 square miles, and the District Commissioner at Ryang would then be enabled to devote more attention to the Lemikini Basin.

His Excellency was not prepared to recommend these alterations at the time, but, after discussion with Mr. Dawnell, on the 21st of August, 1919, he approved proposals that the jurisdiction of the officer at Ryang should extend westerly as far as the Kalang Valley only; that an administrative officer holding periodic

[1] The jurisdiction of the Provincial Commissioner, however, was in fact exercised by the former only related.

as a second class magistrate should be posted to Mara River, and that an Assistant District Commissioner should be transferred from Narok to Mara as soon as the military situation permitted; and that, in future, the Mara District should be controlled by a District Commissioner, and that the station should be considered as the headquarters of the area and no longer as a sub-station under Narok. One officer of the Narok District was to be posted continually in the vicinity of Sendeyo's village, near the German border, to attend to intelligence work and administrative matters in that locality, while, in addition to his work as officer in charge of the reserve, Mr. Hemsted would undertake the work of District Commissioner, Narok. His Excellency did not consider it desirable to gazette the suggested districts at that time, but approved the proposal that three administrative areas should be allotted to by the officers in the reserve.

Officers: Staffing, Establishment, Duties, Rights, etc.

The establishment of the administrative staff in the Masai Reserve then sanctioned was:—

At Ngong—One District Commissioner and one Assistant District Commissioner.

At Narok—The Officer-in-Charge and District Commissioner.

At Mara River—One District Commissioner, with the subsequent addition of one Assistant District Commissioner to be transferred from Narok.

Narok: Establishment: Duties.

No changes have been made in these arrangements since 1918, except that a District Commissioner has been posted to Narok in addition to the officer-in-charge, and the districts suggested by Mr. Hemsted have been accepted for administrative use though their boundaries have never been gazetted. The authorised establishment of European officials has been slightly augmented and now stands as follows:—

One Officer-in-Charge.

Narok District—One District Commissioner, one Assistant District Commissioner.

Ngong District—One District Commissioner, one Assistant District Commissioner.

Mara District—One District Commissioner.

Unallotted—One Assistant District Commissioner.

Status of Administration.

The system of administration which has been pursued in dealing with the Masai has been that commonly employed in the case of other native tribes in the Protectorate, namely, the utilisation of the tribal system of self-government as sanctioned by native law and custom, supported by the assistance and co-operation of the administrative officers in an advisory capacity, by the help afforded by the courts of law, and by the police where necessary. The proposals made by Mr. Hemsted in 1918 have, in effect, been put into force, and a system of native tribunals was established and recognised under the Native Tribunal Rules of 1918. A list of the tribunals which are so recognised at present is to be found in Appendix 4.

The Indigenous Authorities.

It cannot be said that this system of self-government has proved the success it was hoped. Though it might be thought from the past record of successful rule that the tribal organisation of the Masai would lend itself in an admirable way to tribal control, it has been found that the Masai are, in fact, incapable of ruling themselves under the changed circumstances that have been brought about by the introduction and establishment of the Pax Britannica. The ignorant, lazy and conceited Morans, are quite out of the control of the elders. Sporadic efforts are made by the Councils to assert their authority, but their decisions, when they arrive at any, are invariably ignored in cases where the young men are concerned, and the elders fully admit that they are powerless.

Only one Council has attained to any real measure of success and that is the one presided over by Ngenyo at Ngong. This Council is supported by the majority of the members of the tribe, a tribute to Ngenyo's exceptionally strong

[See pp. 223-224 - Appendix]

character and great reputation as a medicine-man, but even his influence does not extend throughout the Purko and Loita divisions. The Council presided over by Sendeu also possesses a certain measure of authority, but these two present the only instances where respect is given and the respect shown to these rests in the almost entirely to the personalities of the individual presidents and not to the system which they represent.

The population of the Masai Reserve numbers not much more than [illegible] of whom the great majority are Masai, but which also includes a considerable number of pure or half-caste Kikuyu. The indigent lives led by the Masai pastoralists possess considerable attraction for the neighbouring Kikuyu, who being less wealthy, are under the necessity of performing agricultural and manual labour either in their reserves or on alienated lands. For many years, the Kikuyu and Masai have engaged in trade, and their lands being contiguous, they have had ample opportunities for intercourse. To satisfy their conditions of an idle life, migrations of individuals from Kikuyu to Masai country have been of not infrequent occurrence and the Masai Reserve therefore contains these mentioned units, mainly among the divisions known as the Kaputei and Il Dala Lekerali. The Kikuyu element in the Masai Reserve.

The policy of the Government in dealing with the native tribes in the East African Protectorate has been to develop their agricultural instincts and industry and to discourage tendencies towards pastoralism. This policy has been pursued with success among the Kavirondo, Kikuyu and other tribes who, when encountered by the administration were under the necessity of engaging in agriculture and has been introduced with fair results into the reserves of such pastoral tribes as the Nandi and Lumbwa, but with the Masai it has been a total failure. Though encouragement has always been given, the Masai have shown no inclination to till the soil, and in the only recent cases where gardens have been prepared at the instigation of Masai owners, the labour employed was drawn from the Kikuyu tribe. Masai attitude to agriculture.

The increased activity in recruiting natives as porters for the Carrier Corps necessitated by the military situation in March and April, 1917, led to the emigration of a number of Kikuyu from their own country into the Masai Reserve, and these emigrants, with a view to escaping conscription, signed agreements to work as servants for Indians, Somalis and Masai. Colonel Ainsworth, then Military Commissioner for Labour, represented that, while such evasion of their duties was highly reprehensible in regard to the employment with Indians and Somalis, any system which admitted of Kikuyu working for Masai was open to the greatest objections on both administrative and economic grounds. The question of such Kikuyu emigration to the Masai Reserve and elsewhere was discussed in Executive Council in June, 1917, and was referred to the Chairman of the Special Committee appointed to consider the "Resident Natives Bill," but no decision on the matter has yet been reported. Work by Kikuyu in the Masai Reserve.

In view of the general desirability of discouraging such emigration of Kikuyu natives, the policy has been adopted in the Masai Reserve of prosecuting all Kikuyu living in that reserve who cannot claim by long residence or circumcision rights to have become Masai, and of returning them to their own reserve. This policy applies to the cases of all those Kikuyu who have joined the Masai since the move from Laikipia. Efforts have also been made to register all Kikuyu who may be considered to have become Masai. Present policy in dealing with Kikuyu emigration.

An important step in the revision of the system of Masai administration was undertaken early in 1918, when for reasons mainly connected with the personality of the holder, the Acting Governor recommended that the office of Paramount Chief of the Masai should be abolished. The Paramount Chief.

At the time of Lenana's death, in 1911, Seggi was still a boy, and control over the Masai was exercised by the two regents, Ngurunya and Lenjoldon. When Seggi came of age and assumed the duties assigned to him in his capacity as Paramount Chief, he was given an extended trial but proved himself to be totally unsuitable. He lacked energy, physique and moral courage: he was intemperate and untrustworthy: he appeared to regard any administrative function as an Seggi.

[illegible]

[illegible]

[illegible]

Dr. Bowring also drew attention to the fact that the effect of his proposals, if approved, would be to constitute a revision of that part of the concluding paragraph of the Agreement of 1911 which read " and not to lease or grant any land within the said area without the sanction of the permanent chief and the representatives of the Bunsi tribe." He suggested that such sanction should be vested in the headmen of the different divisions, and that the paragraph be amended so as to read " and not to lease or grant without the sanction and approval of the local council of elders having authority in such area." He said that the reserve would then be divided into administrative areas, and that the different local authorities would be appointed in accordance with the wishes of each section.

The Agreement of 1911.

The provisions of the Agreement of 1911, whereby the Governor undertook not to lease or grant any land within the area reserved for the Bunsi except such land as might be required for mining purposes or for any public purpose, without the sanction of the paramount chief and representatives of the Bunsi tribe, prohibited (sub-section 3) the opening of trade routes in the reserve until July, 1912, when the " Bunsi Case " had been concluded, and although many such routes were subsequently opened, the inconvenience of obtaining the formal assent of each of the representatives who were taken to be the signatories to the Agreement, was so great as seriously to retard progress. The difficulties with which the administration was faced because of this Agreement were again brought into prominence during the latter part of 1937, when numerous applications were received for mill sites in the reserve on temporary occupation licences. The establishment of mills being a material factor in assisting development and in relieving the price of native foodstuffs, Dr. Bowring considered that it might be possible to arrange for the introduction of some more effective form of native government in the reserve by which a recognized council of Bunsi, selected as far as possible by themselves, should be given powers to treat with the Government in all matters arising out of the Agreement, and thus render unnecessary the conferences previous had been held.

The Bunsi Chiefs.

The Attorney-General and the Officer-in-Charge of the Bunsi Reserve were accordingly directed to discuss the matter, and they recorded their opinion that such a council could perform the functions of the Bunsi representatives under the 1911 Agreement. They considered that a formal document in writing, however advisable, was not necessary in every case in which the sanction of the paramount chief and representatives was obtained under the treaty, and that it would be sufficient if full notes of the meeting with the paramount chief and representatives were made, and signed by the Officer-in-Charge. Such a course would not be an effective evidence of sanction as a document acknowledged by the chief and representatives, but, as long as these latter preserved their policy of objecting to putting their thumb-marks to any document, it would be an efficient substitute. The objections to the suggested council under the present conditions were that, that the paramount chief was a person of no importance in the tribe, and was not generally recognized as such, and secondly, that the elders of locations not concerned with the particular location in which the land to be dealt with was situated, would exhibit no interest in the matter, but it was hoped that the effect of having a tribal council of the nature might develop some instinct more national than that shown at the time. The policy of the Officer-in-Charge had been to develop the location system rather than to allow such chiefs to wander at random in the reserve, and he supported the intention of shortly asking for the appointment of headmen for the locations. They therefore suggested that these headmen would be sufficiently representative of the Bunsi tribe for the purposes of the Agreement, if care were taken in their selection, and if the sections of the tribe concerned were consulted in the appointments. It would be necessary for the paramount chief, if the office were to be retained, to attend whenever the headmen met in council for the purposes of the treaty. In addition to such meetings, the council would be useful for the purpose of discussing affairs affecting the tribe as a whole.

The reserve the Bunsi Council of Elders.

On the 14th of February, 1910, the Acting Governor discussed the proposal with the members of Executive Council, who agreed with him as to the desirability of the formation of such an institution and of sub-councils, which would deal with specific matters in specified areas.

In reporting this decision to the Secretary of State, Sir Bowring remarked that he regarded the word "representatives," as used in the Agreement, to mean the representatives for the time being and he considered that if the members of the council were selected with the approval of the respective sections of the tribe represented by them, they might be regarded as the representatives of the Bond for the purposes of the Agreement.

On the 14th of February, Sir Bowring submitted for approval a list of Native Councils which it was proposed to recognize for the purposes of the Native Tribunal Rules, and which would exercise the powers of Collection Tribunals under the Native Authority Ordinance. The Councils had been chosen to avoid overlapping with Bond centres, and consisted of the recognized "Ogowuls," or committees of the different co-operative open of the various tribal divisions, with a few of the more influential chiefs and Bonos added. The presidents had been selected from the "Ogowuls" by the Bond Executive, and were those who had been accustomed to preside at the council meetings.

The members of the Ogowuls Bonos

These presidents of councils would also form the council which had been proposed by the Acting Governor and was considered to be sufficiently representative of the Bond tribe, all the principal tribal divisions being represented, and arrangements had been made by the council as constituted to meet as Bonos, not less than twice a year, for discussing matters affecting the tribe as a whole, as well as those connected with the Agreement of 1911.

The Bonos as selected contained the Bonos of "Ogowuls" of the "Ahaba," and it was intended that they should exercise jurisdiction as headmen over their own Bonos only. Bonos "Ogowuls" were not authority selected to consult of tribes by native custom, but, as the tribes did not themselves possess any great measure of control over the Bonos, it was thought that the appointment of such leading members might tend to improve the situation. These appointments were considered to be purely of a temporary character, as the age of Bonos then in power was shortly being effaced, its members giving place to the new age and therefore becoming elders, but, in view of this, it was eventually decided to cancel the proposed appointments, at any rate until the new age had assumed its responsibilities, and Bonos be duly representatives. A list of the Councils granted, and of the headmen appointed to preside over them, is to be found in Appendix A.

Inaugural meeting of the Bond Council

The inaugural meeting of the Council was held at Bonos on the 1st to the 4th of April, 1910. There were present Sage Ole Lenana, Paramount Chief, Mukonoi, Lagdaire and Ole Sadera, respectively presidents of the Native Council for the Bonos, Bonos, and Bonoonos areas; Ole Kunga, Sunage Ole Pumbun, Ole Kaday (sen.) and Sadalla, presidents of the Council, Kakamakera, Lolo and Bala Councils respectively; Kangaiyo, representing Saballa, president of the Sabbaat (Lolokiani) Council; Ole Sunage, representing Ole Sunage, president of the Il Pala Lolokiani Council; Sapuria, president of the Sabbaat (Sagalanga) Council; Ole Pulpuria, Sunage Ole Lord and Sabalaka, respectively, presidents of the Councils of the Ulyin Kibori, Kapsirir and Sulungaia Divisions. The Olkeri-Olunge explained to the elders that they had been called as representatives of all the Bonos, and that they would form a permanent council for the purpose of discussing the affairs of the tribe as a whole, and the matters arising out of the Agreement, and to refer to upon the Government in carrying out the policy. The Bonos were expected to rule themselves under the direction of their officers and to help maintain law and order in their own country. The tribal councils, which had been formed in each division according to native custom, were intended to settle local matters dealing with land or property and to punish people for minor offences.

The duty of the Council appealed to the Bonos tribe as a whole, and the members of the Council agreed to attend to all matters affecting the tribe, and also to settle cases which the local sub-councils had been unable to decide.

[illegible]

Various matters were discussed at the meeting. The Council recorded their opinion that they were opposed to the breeding sows, as applied to the others, though they were willing to accept the idea as applied to the Sows. The abolition of certain sites selected for the purchase of sows with an temporary occupation licence was agreed to by the Council, who also approved the work. Selection of any further trading centres or places where the Government conducted these activities. Deputy president of sub-committee was elected to represent the president on the Council when the latter should be unable to attend.

In regard to the land administration of the Sows, the Council considered that the "Sows" centres should be continued for the coming age of Sows, as the centre work for better control, but agreed that the "Sows" should be small and that the Sows should not change their "Sows" after these had once been made up. The coming Sows were to be forbidden to carry on the practice of cohabitation with young girls, and the Council agreed that it would be beneficial for a number of Sows, according to the size of each "Sows," to go out to work, either as hands, or as others. At the same time, they confirmed that they could not enforce such a decision enacted and were opposed to the idea of purely casual labour.

(1) Sows.

The two most serious stock diseases which are encountered in the Sows reserve are Sow Cash Price and Photo-pneumonia. A number of other diseases which the Sows and hands at various times, but these two are responsible for a higher mortality than any of the others.

That Sows stock should be largely subject to disease is only to be expected, in consideration of the excessive amount of cattle and sheep located in the reserve, and of the consequent congestion in the grazing areas. Treatment of the diseases has not yet been undertaken to any comprehensive measure, though it has been suggested and approved in the case of some of them. But the necessity for making any treatment arrangement successfully applicable throughout the reserve, if uniformity is to be obtained, has in such case rendered the staff available insufficient to cope with the amount of work that would require attention, and but little actual progress has been made. It is readily recognised that the provision of veterinary facilities for Sows stock is among the most important matters now before the administration but, owing to the impossibility of procuring the necessary personnel of government, municipal and bush white men qualified, it is also recognised that this work must wait the conclusion of hostilities.

At the end of 1941 and the beginning of 1942, the Officer-in-Charge sent in frequent reports of disease which was affecting stock in the Sows Reserve. He estimated that between May, 1941, and March, 1942, the Sows had lost by disease more than one hundred thousand head of cattle and about one million sheep. Sow Cash Price, contagious anthrax, photo-pneumonia, foot and mouth disease and other ailments exist, to such, particular in epidemic form in almost all parts of the reserve.

In a number of the diseases affecting Sows cattle and sheep some of an obscure nature, it was decided that careful investigation would be necessary to ascertain their causes and, if possible, to devise methods of prevention and treatment. A search laboratory in Sowdom, now in course of construction near Sows, and it is hoped that it will be possible to carry out research work

[illegible]

Sleeping sickness

Sleeping sickness. The necessity for a continuous survey of the Game Reserve has resulted in instructions being issued to a veterinary officer to visit the reserve with a view to obtaining accurate information as to the existence and prevalence of the various stock diseases, and Mr. Dixon has been entrusted with this work.

Epizootic diseases

In addition to the better known diseases of animals, numerous epizootic forms have reported from time to time by the Officer-in-Charge as a result of representations made by the Boers, of which the identity has not as yet been established. Among these is a disease known to the Boers as Gangri, a word derived from the Boers name for a whitehorse. The Boers state that the grass becomes poisonous to the plains where the whitehorse have called, and that any cattle which graze on such plains invariably succumb. It may be that this disease is born of superstition, but it is impossible to discuss the report without investigation, and it is a fact that the Boers avoid the plains during the time these animals are calving.

Grass

The western portion of the Game Reserve adjoining with the Southern Game Reserve, and the effect of the grass on the stock thereon has in consequence frequently been a matter of discussion. It is known that certain species of grass are constantly or periodically infected with various diseases inimical to cattle, but it is generally thought that the preservation of the grass does not materially affect the Boer herds, mainly on account of the fact that the Boer, being nomadic stockers, are sufficiently observant and astute to effect a kind of symbiosis between their cattle and the grass which reduces to a minimum the chances of their utilizing the more grazing grounds.

(8) Anthrax.

Outbreaks of Anthrax in the Boer Reserve have been reported from time to time, and in several instances native have died as a result of handling or eating the carcasses of animals which have succumbed to the disease. An increase in the prevalence of Anthrax was noted early in 1919, when it was stated that from two to three per cent. of the Boer cattle had died from it, but the Officer-in-Charge did not consider that there was anything in the nature of an epidemic and reported that it always appeared to be present to a rather more severe form during periods of drought.

(9) Bovine Pleuro-pneumonia.

Infection in 1911 (Outbreak in North and Bere District, May 1911; Outbreak in Tsang, July, 1911; Outbreak at Tsang, December, 1911; Spread of the disease, Boer District, January, 1912; Outbreak at Kwakwa, March, 1912; Outbreak at Kwakwa, July, 1912; The Officer-in-Charge's comments; Circular to provide 20 Boer cattle; Instructions for procedure; Dr. Kennedy's view, August, 1912; Captain Hamilton's visit, August, 1912; Dr. Kennedy's visit, September, 1912; Further complaints of the disease; Dr. McDonald's recommendations; Dr. Kennedy's report; Establishment of a Boer laboratory experiment; Instructions as regards transport of stock; Site for the Boer laboratory; Dr. Kennedy's view, October, 1912; Outbreak of cattle and subsequent disposal; removal of Boer stock from Kwakwa area; Reported disappearance of plague parasites.

Disease in Tsang

During the Boer move from Lechipia, some five villages were infected with plague-parasites. These were placed in quarantine but a recommendation that any cattle in them likely to carry infection should be slaughtered was not accepted.

Outbreak in North and Bere Districts, May, 1911.

In May, 1911, an outbreak was reported affecting some twelve or fifteen villages containing about 10,000 head of cattle in the North and Bere districts. Quarantine measures were adopted but the disease continued to spread and the Veterinary Department was unable to devote attention to the matter owing to the entire staff being employed on military work. The measures taken by the Officer-in-Charge included the placing in quarantine of the whole of the Boer Reserve east of Boer Spring and a disembargoment of the bees of parasite to some stock.

Outbreak at Tsang, July, 1911.

In July, 1911, the disease appeared at Tsang and on a farm near Tsumeb, due it is believed, to cattle for the military supplies having been taken from the neighbourhood of the Usab River. Other parts of the Boer Reserve also became infected. The whole reserve was therefore placed in quarantine and removal

quarantine was abolished. Posts were established on the roads routes to prevent direct horses sent in the course and then coming to the boundary with Angola. These measures were instrumental in preventing the disease from spreading outside.

In December, 1936, the Chief Veterinary Officer reported an outbreak of plaque-pneumonia of cattle at Ngang, involving about 140 head. These animals were slaughtered and compensation was paid to the owners. In the same month, Captain Carter of the Rift Alive Veterinary Corps paid a visit of inspection to the Rural Reserve and reported that the disease was very prevalent in the Tarab area. He later reported that the disease was to be found in other parts of the reserve but not to same extent as in the Tarab District.

Outbreak in Ngang, 1936.

By January, 1937, Mr. Bennett estimated that the disease had spread to such an extent that approximately one-third of the cattle, or 200,000 head were infected, this increase being attributable to illicit movement of cattle from the quarantine area as a result of large demands being made on the cattle for the feeding of troops. It seemed inevitable that the disease must spread throughout the district in spite of all precautions, and the Rural Reserve represent a pathcrave that the disease should not be remove.

Spread of the disease.

The Rural Reserve was declared an infected area under the Diseases of Animals Ordinance on the 26th of January, 1937.

Proclamation declaring infected area.

Reference had been made to Dr. W. H. Chen, Chief Veterinary Officer, Berkeyndland Protectorate, in regard to the best means of combating the disease, and a letter was received from him in February, 1937, giving the results of measures taken by him, explaining the method of inoculation with lymph collected in the field and indicating the administrative measures adopted.

Reference to Dr. Chen and his methods.

In view of the success that had attended Dr. Chen's methods, the Director of Agriculture, in July, 1937, advocated the creation of all no cattle from Kijabe to the Rural border, the sub-division of the Rural Reserve into three areas, with a veterinary surgeon and four inoculators for each area, and the inoculation of all cattle within these areas.

The Director of Agriculture's proposals.

Mr. Bennett, in commenting on these proposals, considered it necessary to stop all no transport from Kijabe to the Rural border, as such a step would not only cure the principal market but would greatly hamper the introduction of supplies. There was, in fact, only a slight risk of infection. If the arrangements then in operation were considered inadequate, he suggested that a strip of land a quarter of a mile wide across the road to the Rural border should be cleared off and no cattle allowed to cross this strip. He considered that it was too late for inoculation to be effective or of material value except possibly in the case of cheap herds. Most of the Rural cattle had already succumbed or were convalescent and their would probably not want to treatment by inoculation. He anticipated no opposition except convalescent of cattle and thought that loss could be reduced satisfactorily, but he mentioned that the completion of the scheme of inoculation would not be attained for at least a year with the suggested staff.

The Chief Veterinary Officer's proposals.

The question was discussed in Executive Council on the 4th of August, when the Excellency approved the proposals for the undertaking of the inoculation against plaque-pneumonia of all Rural cattle whether infected or not. Captain Bradshaw was to commence the work and other officers were to be detailed as they became available. A fee of fifty cents was to be charged, but this fee was to be remitted in the case of animals which died as the result of inoculation. Animals required for the manufacture of lymph were to be purchased. As a preliminary measure, Captain Bradshaw was to arrange for an effective quarantine and the inoculation of transport oxen on the eastern side of the border.

Decision to undertake inoculation of Rural cattle.

Captain Bradshaw arrived at Tarab in August and inoculated about 400 transport oxen, but the results were not satisfactory and nothing further was done at the time.

The Secretary of State was informed of this decision, and a rule under the Diseases of Animals Ordinance was signed on the 11th of August prescribing the fee of fifty cents for inoculation against plaque-pneumonia.

Inoculation in Rural.

Mr. Kennedy, Acting Chief Veterinary Officer, 1919.

On August 26th, Mr. Sandford expressed a desire to notify the previous statement that no great difficulty would be experienced in the collection of the inoculation fees. The fee proposed was higher than he had anticipated and it appeared impossible that the Board could procure Rs. 400,000 for payment of such fees in cash. The cattle market was closed, as then cattle were scarcely, and the collection would be attended with difficulty by the absence of legal machinery to enforce it. He advocated a reduction in the fee and suggested the promulgation of a special rule providing for the compulsory inoculation of all Board cattle and for the recovery of fees. In the alternative, he thought that the imposition of a cattle tax would obviate the necessity for charging inoculation fees in addition. He mentioned that it would not be impracticable to induce the Board to inoculate their own cattle, which course, though open to certain drawbacks, would possess the advantage of dealing quickly with the outbreak.

Veterinary Officer's visit, 1919.

As a result of his visit to the Bhaal Reserve in August, 1919, Captain Bradshaw found recommendations, mainly of an administrative nature, which included proposals for the erection of fences a quarter of a mile apart across transport routes on the reserve boundary, necessary to prevent the infringement of quarantine restrictions by persons in charge of cattle-transports, an invasion in the police force in the reserve, and the marking out of a neutral zone two or three miles wide, surrounding the reserve, in which no cattle should be allowed except on authorised routes. Measures should be taken to prevent cattle in the reserve belonging to traders from leaving the reserve, and he suggested that all movement of cattle both into and out of the reserve should be prohibited.

Mr. Kennedy's visit, September, 1919.

Early in September, Mr. Kennedy, the Acting Chief Veterinary Officer, visited the reserve and, with Mr. Sandford, interviewed several Bhaal chiefs. He gathered that the natives were opposed to steps being taken to control the disease. The cattle in the reserve numbered approximately 700,000 and, to carry out the inoculation within a period of twelve to fifteen months, he estimated that a staff of eight Veterinary Officers, fifty Field Inspectors and seven hundred and fifty cattle-guards would be necessary.

Mr. Kennedy's report of 10th September.

In the course of his report, dated the 10th of September, Mr. Kennedy wrote:—

"It has been our experience that, when well-known diseases come under notice in this country, they exhibit peculiar resistance to vaccines, sera-prophylactics and serums, and do not strictly conform to the standards laid down for them in other countries. Bearing this in mind, it is apparent that, before any definite action is taken with regard to general inoculation against bovine plasma-protozoan, it is very desirable that the disease be fully investigated.

"As an example of the difficulties to be overcome in regards inoculation, I may mention that the Acting Assistant Veterinary Pathologist has been making post-mortem examinations of infected animals during the past [illegible] months without once finding lymph suitable for inoculation.

"The definite scheme for inoculation was therefore to suggested until the results of Mr. Sandford's investigations come to hand."

Mr. Kennedy's recommendations.

The Director of Agriculture, however, considered that inoculation should be commenced without delay, in view of the losses on the products staff affected. He recommended an appeal to the military authorities for the release from military service of all Veterinary Officers concerned therein, and suggested that application be made to the Bechuanaland Protectorate for the loan of the services of Mr. Chase for a period of six months. These steps were taken, but it was found impossible to spare Mr. Chase from Bechuanaland, and the military authorities signified that the Veterinary Officers could not then be released from their military units.

Mr. Kennedy's report.

Towards the end of September a report was received from the Acting Veterinary Pathologist on the subject of the cattle shown in the Bhaal reserve considered to be plasma-protozoate. Difficulties had been experienced in obtaining some typical of plasma-protozoate, organisms had been evaluated with the

material brought to Perth, and the animals had been inoculated with large doses with practically no result. Dr. Kinnear, therefore, was led to conclude from the evidence that it would be undesirable to attempt any inoculation on a large scale until the nature of the disease had been clearly established. Such precautions as he might cause heavy losses with other bacteria, and effect no immunity to the existing disease. In view of the danger of introducing the disease into a clean area, he considered it inadvisable to conduct further experiments at Kelvin, and, as it was necessary thoroughly to investigate the pathology of the Bovet disease, he was of the opinion that further research should be conducted in the Bovet Reserve, where abundant material for investigation was at hand. He therefore recommended the early erection and equipment of a Field Station within the reserve. Two thousand pounds would be required to erect and equip a laboratory for the preliminary investigation, while subsequent development and investigation would depend upon the results obtained.

Dr. Kinnear's proposals received the support of the Governor-in-Council, and his suggestions were reported to the Colonial Office by despatch on the 11th of October, 1917.

On the 14th of October, a rule under the Diseases of Animals Ordinance was issued, prohibiting the inoculation of any male cattle into the Bovet Reserve.

A site suitable for the branch laboratory was selected on the left bank of the Cane Bank, some three miles down-stream from Tanch Station, and an area of 200 acres was to be reserved there as a site for as long as the laboratory was necessary. Work was commenced in January, 1918, and Dr. Stockdale proceeded to the reserve to superintend.

On October 23rd, 1917, Dr. Kinnear submitted a memorandum on the general question of plague-prevention in the Bovet Reserve. He believed that the Bovet would not tolerate inoculation or any other steps that might be taken for the eradication of plague-prevention from amongst their cattle, but, although no assistance could be expected from the Bovet, he was no reason to suppose that any actual opposition to inoculation would be encountered. Plague losses had not been very heavy and the disease had practically run its course. The cattle of the Pure Bovet in the east and those of the Highland of Lakeshed in the east of the reserve had escaped infection, being entirely isolated from other herds. Dr. Kinnear thought that the estimates given by Dr. Kinnear of the staff required for the inoculation, and of the time which the undertaking would take, were too low, and he understood that the inoculation was only effective for a period of two years. The presence of large herds of buffalo and other game would have the effect of perpetuating the disease. He again advocated the imposition of a cattle tax, in preference to the levying of inoculation fees. The establishment of additional police posts on the borders of the reserve would diminish the chances of the infection spreading outside. He was of the opinion that, inasmuch as the Bovet stock was now under almost natural conditions, the methods employed in regard to European stock could only be applied with difficulty, both as regards the management and preventive measures against disease. The position resembled that of the natives struggle for existence, and the Bovet herds would eventually recover. Efforts, if herdsmen were endangered by disease or overstocks of grazing. Grazing was, however, restricted and the reserve, he said, was stocked to its fullest capacity. An benefit would therefore accrue to the Bovet by saving from plague-prevention cattle, which would probably die subsequently of starvation or some other disease. The inoculation of plague-prevention cattle could only be considered in conjunction with questions affecting the general development of the Bovet as a stock-producing tribe in the Protectorate, and but such results would be achieved by confining our energies solely to the inoculation of Bovet cattle against that disease. He recently introduced the proposal to erect a branch laboratory in the reserve which would deal with all forms of stock disease.

In November, 1917, Dr. Kinnear reported the presence of anthrax and rinderpest in most parts of the Bovet Reserve, the latter having broken out in a very severe form and leading him to think that the previous immunity to rinderpest obtained by the Bovet cattle had been impaired by plague-prevention.

In the same month, the question arose of the advisability of moving the Shoat cattle back from the Dodoldin and Shoat to some area well removed from the European farms. It had been agreed that these cattle should not be removed until they had been inoculated against pleuro-pneumonia, but, in view of the results obtained by Mr. Bradshaw, it appeared probable that some considerable time would elapse before a satisfactory method of inoculation could be evolved, and it was considered that if inoculations were attempted with unsatisfactory results a bad effect would be produced on the native mind. Mr. Kennedy therefore suggested the immediate removal of these cattle, but Mr. Shoatel maintained that inoculation could be secured to the Shoat by depriving them of grazing generally, and also that it would be unfair to move these herds into an infected area without conferring immunity by inoculation. The decision given by Government in the matter was that, as the disease appeared to be diminishing, no area should be declared, but that the Officer-in-Charge should order the Shoat whose herds were there to take every precaution, and that any sign of disease appearing amongst their herds should be immediately reported.

In May, 1916, the Officer-in-Charge reported that he had been unable to find any case of pleuro-pneumonia during a recent tour in parts of the Dodoldin and Shoat districts, and that the Shoat in the areas visited had informed him that the disease was entirely non-existent in the cattle. Mr. Bradshaw stressed that the prevention measures by inoculation, but the Chief Veterinary Officer was unable to support this recommendation until a careful enumeration survey of all the cattle in that area had been carried out. The daughter of cattle purchased for military requirements in July, 1916, gave evidence that the disease was still prevalent in parts of the reserve.

(b) Bare Coast Areas.

In August, 1916, East Coast fever in the Shoat Reserve was confined to the neighbourhood of Ngong Station, in the country near the Kirk bridge, and to the Kisii-Bare District. Bare cattle appeared to have had a certain degree of immunity to the disease, but the Officer-in-Charge was inclined to think that the cattle which had come from Lodigale were less immune than those which had previously resided in the Northern Reserve.

In June, 1916, the Shoat complained of the losses they had suffered from East Coast fever in the Bare region and in Nyabohoi country.

In November, 1917, reports were received that the disease was spreading rapidly along the east bank of the Bare River, in the Lower Valley and along the Kirk bridge. Steps were taken to place the infected herds in full quarantine, but these were unsuccessful, and in March, 1918, the Officer-in-Charge reported that the disease had spread to parts of the country previously free from it. It had appeared at Tarak, in the Lake Hills and Thaka, in the neighbourhood of Kiu, at Kapkelo, Kisii and Nyamaga, and the infected area in the Bare district had increased considerably. In view of the fact that Bare cattle are highly susceptible to East Coast fever, Mr. Shoatel recommended that a dipping scheme should be devised as soon as possible in order that a commencement might be made towards the control of the disease. The Chief Veterinary Officer agreed that such steps should be taken by erecting cattle dips and encouraging the Shoat to use them. He supported a proposal by Mr. Shoatel that avoid dipping tanks, in addition to that already in use at Ngong, should be erected in the Nyabohoi of the Government stations in the reserve, where they would be under constant supervision, and that the Shoat should be encouraged to use them. In his report, he pointed out that some time would elapse before the Shoat herds contained of the benefits derived from this treatment, he suggested that immediate steps be taken to commence dipping demonstrations, but it was pointed out by the Governor that a necessary preliminary to the provision of dipping facilities lay in the carrying out of improvements in the water supply, and that this question was dependent on the effort of the cattle was prepared for exposition on the Shoat Cattle Station [illegible].

It is possible that much of the mortality attributed to East Coast fever is due to the death of a disease known as heart water, which is described as a tick-borne disease, very similar to East Coast fever. There is no just no evidence to support this idea.

East Coast fever appears to be the only cattle disease which the Bemba really fears, and it is, in fact, the disease which seems to be the highest mortality among their herds. Nevertheless, they have not made forward very readily to assist one of the cattle dip which was erected at Bigwa in 1914, and it is evident that, in addition to the opportunities which generally have been taking advantage of such an innovation, they are also too dark and fearful to go to the trouble of making the treatment a matter of regular routine. In view, however, it is to be hoped that they will come to appreciate more fully the necessity which depends upon their stock, and, when this realization has been arrived at, it will follow that large herds of otherwise valuable grazing areas will become available within their reserve for their and their stock, thus tending to relieve the congestion which is now noticeable in those parts of the reserve which are considered by the Boma to be suitable for their cattle.

(b) Foot and Mouth Disease.

Foot and mouth disease has not given serious cause for anxiety in the Bemba Districts. An outbreak was reported in June, 1917, and in February, 1918, it was said to be very prevalent in the vicinity of the village situated in the Bemba and Mwa districts. Accordingly, in that month, the Chief Veterinary Officer prohibited the removal of stock from the reserve.

The direct mortality from this disease is slight, but it very seriously affects the milk supply, and indirectly it causes a certain amount of loss, as infected animals, being in a weak state, are unable to move about sufficiently to obtain the necessary and adequate grazing, and, as a consequence, they very die of starvation.

The disease was reported in May, 1918, to have practically died out.

(c) Trypanosomiasis.

Outbreaks have been reported in the Bemba Reserve for many years and the majority of adult Bemba cattle are immune. It was also in the Northern Bemba Reserve from 1913 until the completion of the survey in 1915, and several cases occur in both the Northern and Southern Reserves were reported between November, 1916, and January, 1918.

Anti-trypanosomal treatments have varied and where practicable and a large number of Bemba cattle were thereby protected, with the result that the mortality was very low.

For the most this cause mortalities has been of low domestic, but it became especially prevalent early in 1918, and heavy mortality occurred among the calves, of which it was estimated that about fifty per cent. of the annual increase succumbed.

The Bemba have proved to be opposed to the treatment of their cattle for trypanosomiasis against rinderpest, on their grounds that immunity should be obtained by the natural process of the survival of the fittest.

(d) Tsetse Fly.

During the year underwritten in October, 1917, by the Director of Agriculture, accompanied by Messrs. Hill and Chaplin, the Director of Public Works and the Native Commissioner, North Kawambwa, an region of tsetse fly were seen along the roads traversed, and the cattle were with did not appear to be troubled by the influence being fly. On a previous visit the Director of Agriculture had noticed a species of "Glossina," and he stated that this fly was fairly common all over the Protectorate, but that in the so was known it did not carry any cattle disease.

[illegible]

[illegible]

[illegible]

Impossibility of education. Mawai with School at Ngang-Tomoty for education. Proposal made here. Punished fall. Mr. Emery Roberts's comments on development of the Mawai.

Perhaps in no direction do the Mawai demonstrate their conservatism more clearly than in their determination to emerge from ancestral customs and traditions by means of education. The whole system of tribal life is against progress and education appears to be generally unpopular among young and old alike. The above difficulties such as discussed are applied to the boys, as they desire to keep their children at home for work with the sheep and cattle in order that they may live at ease while their sons do the work, and the Mawai resent the idea of any system of control and would not willingly submit to a discipline in order to establish a knowledge of which they consider they stand to be good. This attitude of the Mawai has no doubt been responsible for the almost total absence of Missionary activity in the reserve.

Our or two members of the Mawai tribe have attended Native Schools, notably the Ukiam Island Station on Kipahi, but it cannot be said that the results of such instruction have invariably been successful. There are no established Missions in the reserve, though attempts have been made by certain Missionary bodies to simply from the Mawai permission to erect a station. These attempts have met with no encouragement from the Mawai and nothing has been done.

During 1937, a school was opened in the neighbourhood of Ngang-Tomoty under the auspices of the Church of Scotland Mission, Kilmany. This school was placed under the tutelage of a native teacher and about forty Mawai children attend daily. Reading and writing in Mawai and a little arithmetic are taught as well as the rudiments of agriculture, and so far as it goes this school may be considered to be a success, but it cannot be said that the establishment has given any distinct to solving the problem of the education of the Mawai or of removing their prejudice to the introduction of this means of disseminating civilisation, by rendering them as a whole amenable to Missionary influence.

Mr. Emerson has repeatedly given it as his opinion that the education of the Mawai is one of the most important steps that must be taken in order to ensure the conservation of the tribe and future them to emerge from their old and antiquated habits. The moral and physical degeneration of the tribe that was a natural result of the enclosure of their existence and the most of a definite occupation could only be remedied by the provision of an object upon which their attention might be concentrated. In September, 1933, he asked that money might be set aside for the erection and maintenance of a native school, but this money was not forthcoming. Arrangements were then taken to hand whereby the Agricultural Department should give instruction to the tribe in the improved methods of tending and breeding stock, but these fell through before completion. In August, 1934, it was suggested that provision should be made for a Veterinary Officer to be stationed permanently in the reserve who would, in addition to veterinary work, impart a course of instruction in the care of stock, paying special attention to the method of dipping. This scheme also fell through owing to the lack of available funds following the outbreak of war.

In January, 1937, Mr. Emerson submitted proposals for the establishment of a stock farm for the Mawai. It was, he said, generally agreed that the policy of the Government in regard to the Mawai was to develop them as particularly and to recognise the reserve as a source of supply of cattle and sheep for the European parts of the Protectorate, and also eventually for export. One of the first essentials of such a policy would be to induce the Mawai to sell an quality rather than quantity. Under existing conditions, the reserve was stocked with cattle of a most inferior quality, among them being an entire proportion of bullocks and aged and barren cows. Negotiations gained in connection with the purchase of supplies for the military authorities showed that a comparatively small number of their animals could be considered to be of the quality desirable for food purposes. In the old days, when the Mawai were able to draw from the greater part of South Africa and there was little or no demand for their stock, the number of cattle they kept was immaterial. In these days the breed of their cattle benefited by the continual amalgamation of bulls that obtained in the numerous cattle they

[illegible]

[illegible]

[illegible]

experienced on other farms. But the present conditions have altered this by the establishment of the foundation of the reserve, and in addition to the determination caused by the lack of both blood and consequent breeding, the cattle suffer from want of pasturage and water in certain parts of the land that has been altered to them. It is found generally that the quality of land obtained from Bush cattle is very good and is working to become extra.

Owing to this determination, the Director of Agriculture suggested the immediate purchase of a pure-bred bull for crossing with selected native cows. This experiment was tried, and the bull was sent to Tonga, where it died in 1931, having left a few useful calves, but not having survived long enough to demonstrate the success of such an enterprise.

Mr. Stewart suggested the establishment of a Government stock farm, to be maintained at the expense of the Bush, and intended solely for the benefit of the tribe. This would be of an experimental nature at first, but would be developed as circumstances required, and as funds permitted. The half-bred stock produced on the farm, especially the bulls, would be sold to the Bush with the object of improving their herds. In connection with this farm a dairy industry might be started, and the Bush might be encouraged to plant and farm produce. This would tend to make the scheme self-supporting. As a commencement Mr. Stewart asked sanction to purchase up to one hundred native cows in Indiana and a few pure-bred bulls, and to establish a farm in the reserve for owners of the funds derived from the Bush Support Account.

The proposal received the support of the Director of Agriculture, who thought that far-reaching results might thereby be obtained in the improvement of Bush cattle.

The scheme was discussed by the Governor-in-Council on the 18th of April, 1931, when a decision was given that the time was inopportune for the establishment of such a farm, and the further consideration of the matter was postponed until the conclusion of hostilities.

Before proceeding on leave in April, 1931, Sir Henry Moberly recorded the following minute on the subject of the development of the Bush:—

"The proposal" (for the establishment of a stock farm) "is based on the assumption that the policy of the future is to develop the Bush as permanently. If this assumption is correct, the proposal is sound. Personally, I doubt either on the practicability of numerous Bush gradually discouraged by taxation, and encouragement given to industrial labour. Further, I would prefer to see land and capital resulting provided for our Europeans greater value than for the Bush. The proposal should stand over until the question of taxing of the Bush cattle has assumed a more definite form."

[illegible]

Purpose of the company. Formation of the company. Arrangements [illegible] for the Bush to participate subject to Europeans. [illegible] Company to [illegible] Registration fee. [illegible] of rights to Europeans. Lordship [illegible] to the Bush according to [illegible] Bush [illegible] Registration. [illegible] Bush. Completion of the company. Decision to Bush [illegible] to members of Europe.

The G.F.Lane Company, which forms large in the history of the Bush Rivers, is a company built according to Bush tradition, an [illegible] of approximately seven years. The function of the company is from time to time to provide for each tribal division or group of divisions, and the division for the whole tribe may, therefore, take form into a [illegible] years.

The purpose of the company is not too clear, but it is said to be for the benefit [illegible] of the grounding of the Bush owners to the [illegible] age of [illegible], and it takes place a year or two before the [illegible] commencement. On the completion of their [illegible], the past age of Bush [illegible] to take [illegible] and go out to [illegible]. [illegible] property said to be held by the Bush, but at the date of the [illegible] of 1931 the Bush were [illegible] to hand over the grounding of their [illegible] to the Government. In the case of the Bush the [illegible] would appear to be both [illegible] and [illegible].

[illegible]

The following description is given by Mr. Stewart:—

[illegible]

A Chief, known as "[illegible] Chiefs," and a Sub-Chief, known as "[illegible] [illegible]," is chosen by the Elders from the males of the Bunu for each division or group of divisions.

A black ballock is supplied, tied up and strapped with "medicine." The "[illegible]" Bunu compete in pulling off the horns of the ballock. The one who succeeds in doing so is regarded as a great master.

The ballock is subsequently strangled—it must not be touched by a knife—and eaten by the "[illegible]."

The "[illegible]" (Counsellors) of the incoming masters are selected prior to the ceremony. The Elders give each of them a black cloth, a knife, a large goat and [illegible].

A new name is given to the outgoing Bunu, and the incoming Bunu are given an "[illegible]" name.

Immediately after the [illegible] the "[illegible]" return to their [illegible] villages, where they are crowned by certain "[illegible]," and their heads shaved.

They then have "[illegible]" of their own, and show their hair to grow.

They are known as "[illegible]" before their hair has become long.

The outgoing masters also have their hair cut and return to their "[illegible]." They may still remain Bunu for as long as their years last, but it is said that in the absence of any more this period will be [illegible].

There are therefore for a time two groups of Bunu, the senior and junior masters. Constant fights are said to take place between them.

[illegible]

In the Agreement between the Bunu and the Consolidated Diamond, concluded in August, 1906, it is recorded that the Bunu asked that they might be allowed to retain control of an area five square miles of land (or a point on the slopes of Chinamgwi whereon they could have our dwellings) [illegible] and [illegible] in accordance with the customs of their ancestors. The Consolidated Diamond, in signing the Agreement, stated that, subject to the Secretary of State's approval, he agreed to the terms contained therein. The Agreement of 1907 contained a proviso that the Bunu who should not develop the diamond of the rights reserved to it under the former Agreement in respect of the land on the slopes of Chinamgwi, whereon the consolidation dues and concession might be held.

[illegible]

The fact that that area was still reserved for them induced the Bunu in January, 1912, to apply for permission for a few of their members to be allowed to reside permanently on the area, with a view to keeping it in good order. To this application the Government was not disposed to consent, and it became necessary for other methods to be employed to assure that the ground did not become overgrown. In the same time, he gave his opinion that it was not essential for their concession to be held on Chinamgwi, and suggested the utilisation of some place within the boundaries of the Main Reserve.

[illegible]

In 1912 a deputation of the Government was due to commence, and in February of that year the Chiefs and headmen approached the Officer-in-Charge with a request that certain Kindsen might proceed to the reserved area on the daily duty. The Kindsen allowed were the Kaikaiwabes, Pieter, Jan Lakenie and Damas, each of which should, according to custom, proceed to the concession ground with its Bunu and lands in the order named and remain there especially for one month. Though the Government was loath to an agreement to the action of a money with the Bunu who is also there to control the area on Chinamgwi for commercial purposes, it was considered that it would be more impolitic to allow these Bunu Kindsen to leave their homes with their wives, but the area reserved could be beneficial to the needs of the Bunu when the number of cattle they were allowed to take was regulated, and the cattle would constitute a source of

*448
347

[illegible] only to the surrounding farms but also to the farms over which they would pass in order to reach Kitangiri owing to the probability that the Board would then, to a greater or less extent, [illegible] by chiefs. Mr. Grimwood estimated the period that would be taken by all the divisions to complete the S.C.farms to be of four thirty months.

[illegible]

Conferences were therefore opened with the Board chiefs for the alienation of the right to control and use the Kitangiri site for the S.C.farm and for the establishment of some other site within the Bari Reserve, while compensation in money, to be employed in improvements in the reserve, was offered in respect of the alienation of these rights. A suggestion was made by Kipanga that the Kakwenkiya division be permitted to use unoccupied but allocated lands in the Kidong Valley, but this was regarded as unsatisfactory in that it did not afford a permanent solution of the Kitangiri difficulty, and it was thought that any solution must embrace the whole village by the establishment of a suitable site within the confines of the reserve.

[illegible]

While carrying into the suggested conferences with the Board Chiefs in October, 1931, Mr. Grimwood pointed out that only four of the divisions, the Pedro, Kakwenkiya, Tuly Lakwak and Dwak, were desirous of proceeding to the Kitangiri site and that the other divisions were unwilling to hold their harvest elsewhere and where it would then. The Bajimani, Bangwara, Kapwiri and other divisions had always favoured the locality of the Spring Hills, and the ceremony conducted by Lomwa in 1931 had only concerned these divisions. The Lobo division had already completed their ceremony in their own country. The main reason for the desire of the four divisions to hold the ceremony at Kitangiri appeared to be a desire to remove a number of cattle out of the reserve for a time and so relieve the congestion thereby, and the result of permitting the ceremony to be held at Kitangiri would be that a number of Bari would remain outside the reserve for two or three years out of every seven. The severity of any particular site was not of such moment.

[illegible]

The result of the negotiations with the Board for the surrender of the area at Kitangiri was a revival of hope that they would be permitted to hold their ceremony in their own country. Meanwhile, the Yale and the other Pedro chiefs stated that they did not wish to give up the land. It was however decided in November, 1931, that the present conditions of the reserve made it impossible to allow the Board to proceed to Kitangiri for the S.C.farm ceremony, and Mr. Grimwood was instructed to advise the chiefs to select an alternative site within the confines of the reserve.

[illegible]

In the middle of Nov. 1931, a representative meeting of the Pedro tribe was held, and as a result Mr. Grimwood was approached with a request that they be permitted to proceed to Kitangiri for the S.C.farm ceremony. Mr. Grimwood endeavoured that he was unable to alienate the former decision to the reserve.

[illegible]

In October, 1931, Mr. Grimwood reported that the Pedro and Dwak divisions had agreed to hold their S.C.farm ceremony on the Bari Bank provided they might have the use of the land granted to Mr. Pierre Tabb, generally known as the "Kwanzari land". Mr. Tabb was willing to allow an area of 50.00 acres of his Libo and Bari Bank land at the disposal of the tribe for the purpose of the S.C.farm on the understanding that the ceremony commenced as soon as possible and that it would last such time as and has two years and upon conditions that communications should remain open between Kitangiri and Libo. That the Board should secure use of Libo and remove themselves to Bari Bank if land-development conditions were present for the Government during the continuation of the ceremonies. That arrangements be made to the tribe allowed for the fulfilment of development conditions should such disease break out among Bari cattle as would render the land liable to other such outbreaks upon it. That a nominal fee of one two-year-old bulls each be paid to Kipanga for Lugalabo and Bandwanda the each year or part of a year during which the land was used by the Board for the S.C.farm, and that the Board be responsible to see that young and [illegible] [illegible] Kitangiri.

The Masai chiefs agreed to these terms after prolonged negotiations and they were approved by the Governor on the 26th of October. Mr. Sandford reported that the ceremony in regard to the Purko division would occupy from five to six months, that the Dorobo division were uniting with the Purko and that these people were to proceed to the Ngo Narok in some two-months' time, provided the rains were favourable.

Completion of the ceremony.

The ceremony proper, in so far as it affected the Purko division, commenced in November, 1917, and was completed by December of that year. The new age of the Moran took the E-Unoto name of Mondjoro.

The Loita, Siria and Salei divisions held their E-Unoto about April to July, 1918. The new name of the Moran of these divisions is "Il Kidongoro." The last age was known as E-Ketet, in common with the Moran of all the divisions.

The Matapato and L'Odo Kiboi held their E-Unoto together at a place called Ele-Dorkonyi at the foot of the Ngong Hills. The Sighirori held their ceremony in the Lolodokok country. The Kaputei held it near Ele-Dorkonyi, but apart from the Matapato and L'Odo Kiboi.

Decision by Masai Council on number of Kiongozi.

The question of the surrender by the Masai of their rights to the reserved area on Kiongozi was considered at the inaugural meeting of the Masai Council in April, 1919, when the Council stated that it was not prepared to authorize the sale of the Kiongozi reservation, but it would further consider the matter.

SECTION 5.—PUBLIC WORKS.

(1) Buildings—Ngong—Narok—New River.
(2) Roads—Kajiado-Magadi Road—Lorok Path—Ngong Railway—Narok-Longido.
(3) Bridges—New River—Cow Spits.

(1) BUILDINGS.

Ngong.

A small wood and iron house was built for the clerk in 1913.

Two stone houses for the use of the District Commissioner and District Clerk were completed about May 1914. The clerk's house has been occupied by an Assistant District Commissioner.

An office, with an iron roof and rough plaster walls, was erected in January, 1916, by the District Commissioner.

A small store was erected during 1916.

Narok.

Three small two-roomed houses consisting of unlined corrugated iron were completed in March, 1917.

An additional office and a store were constructed in the same year.

Two water tanks were placed at the houses of the Officer-in-Charge and the District Commissioner in 1916.

The estimates for 1916-1917 provided £100 for additions to buildings at Narok Station. This sum was utilized in quarrying and dressing stone and in cutting timber for a new house for the Officer-in-Charge.

A fire-place was built into each of these two houses in 1916-17.

In 1917-1918, an additional clerk's house was constructed.

New River.

A two-roomed iron house was built in April, 1914, and a clerk's house was erected in the same year. The former house was lined and improved during 1916-1918.

A new office was constructed during 1917-1918.

+648
491

(b) Roads.

There are four main roads in the Masai Reserve. These are from Kijabe to Gilgaigai Hill by way of Narok and Mara River, from Lemek to Naik, from Ngong to Kedong and from Naimbi to Longido by way of Kajiado.

Kijabe-Gilgaigai Hill.

That part of the Kijabe-Gilgaigai road running from Mara Bridge to Gilgaigai Hill was made by the Assistant District Commissioner at Mara River Post in 1914-1915, from funds set apart for that purpose out of the proceeds of a collective fine imposed on the Kisonoi Sub of the Purko Masai. (Vide Chapter VII., Incident 12.) The Masai expressed their approval of the work done and provided a number of bullocks as food for the labourers.

A road from Kijabe to Mara was commenced in September, 1914, and was open to traffic between Kijabe and Narok in January, 1916. The cost of work was met from the proceeds of the II Meridian Public Menace fine. (Vide Chapter VII., Incident 16), while the work was undertaken by the Administration. In 1917, work was continued on the road west of Narok and bridges were constructed over the Ol Olari, Engare Ngaare, Pori Lekwayi, Siyabei and Kabidaba Rivers. By March, 1917, the road was suitable for motor traffic from Kijabe to Mara.

Later in the year, an attempt was made to construct a new road from the foot of Kijabe Hill, by passing to the north of Longonot spur, but the alignment was found to be impracticable and the work was abandoned. In September and October, a new road was made, passing to the south of Longonot spur. This alignment proved satisfactory, and the road is extensively used by wagon and motor transport. The Masai Suspense Account has been debited with the cost of the upkeep.

A branch of this road runs from Narok to Naroosura and is fit for motor traffic.

Lemek-Naik.

A new road, from the Lemek Valley to the bridge over the Mara River on the Naik border, was commenced in January, 1917, and a cribbe bridge on the crib pattern was erected on the Engare Sogoin, some three and a half miles from the Naik border. Funds for this work were found from the proceeds of the II Meridian fine.

Ngong-Kedong.

In 1918, £200 from the Masai Suspense Account was set aside for the purpose of constructing a road from Ngong to the Kedong Valley to join up with the Kijabe-Mara Road.

Naimbi-Longido.

The road from Naimbi to Longido, by way of Kajiado, was constructed by the military authorities in 1914-1915. Having served its purpose, that part of the road lying between Kajiado and Longido has largely fallen into disuse, but the road from Naimbi to Kajiado is still in fair order.

(c) Bridges.

Mara River.

A bridge was built over the Mara River, about six miles below the Government Station, in 1913-1914.

In 1916, a crib bridge was erected across the river near the station by the District Commissioner. This bridge cost rather more than £100 and has a span of 120 feet. The Masai contributed the whole of the cost.

Uaso Nyiro.

A bridge was constructed over the Uaso Nyiro River, near Mr. Aggett's store, in 1913-1914.

Sir Henry Belfield, on his tour in the Masai Reserve, considered it essential that a bridge should be erected over the river in the neighbourhood of Van de Weyer's Drift. The construction of such a bridge was approved by the Secretary of State in December, 1913, but Mr. Hemsted suggested that work should be deferred until a final decision should have been arrived at, as to the best alignment for the Kijabe-Mara road. The Governor agreed to this, and no work has as yet been undertaken on it.

Series 4.—ADMINISTRATIVE.

[illegible]

An attempt to utilize the fighting qualities of the Maori Horse and to provide an idea of series with congenial employment, was made in the early days of the Protectorate, by the formation of a Maori Company in the 3rd Battalion of the King's African Rifles. This company did not prove entirely satisfactory, and it was disbanded in 1897, but it appears that the men were mainly drawn from the Kapsiki Maori, who are to a large extent half-breed Arabs.

With a view to giving the Maori another chance, Mr. Hemsted suggested in April, 1916, that a form of conscription should be introduced, compelling the enrolment of the Horse in the King's African Rifles or in the Police. He thought that the formation of a Maori Company might appeal to their sense of tribal pride, while sympathetic treatment in preserving discipline, at first by methods understood by the men, and in providing the tribal diet of milk and meat, would tend to reconcile the Horse to their employment.

The Officer Commanding the 3rd Battalion King's African Rifles expressed his sympathy with Mr. Hemsted's proposals, but was not prepared to recruit the Maori as a tribe, in view of the failure which had attended the experiment in 1897, and the Heavy Bulldoh considered that an attempt to force conscription would probably result in complications with the Maori, which would seriously embarrass the administration of the tribe. The existence of a body of idle, rich Horse was undoubtedly an undesirable feature of the tribal constitution, but he did not think that it was likely to develop into a disturbing feature, as every year would make them less inclined to warlike enterprise, of which few Maori, even then, had much personal experience.

An attempt to secure recruits from among the Maori was made by Captain Gore-Browne in July, 1916. He interviewed some of the principal Maori, who explained to him that it was impossible for any of them to enlist, owing to the approach of the E-Unete ceremony, at which they must be present, and after which they would cease to be Maori. They suggested, instead, the enrolment of a number of L-Ayok (who would become Maori after the next circumcision ceremony), but they were unable to carry out an undertaking which they made to produce a number of these youths. The attempt, therefore, ended in failure, and the King's African Rifles authorities considered that this experiment had at least served the purpose of showing the uselessness of the Maori from a military point of view.

In April, 1918, Mr. Hemsted again raised the question, having the renewal of his representations on the national recognition of the principle of compulsory service. At the meeting of the Maori Council, in April, 1918, it had been agreed that a proportion of the Maori Horse should go out as levies or as subsists, but at the same time it had been admitted that this could not be done without compulsion. In view of Mr. Hemsted's representations regarding the idleness of the Maori Horse, the Commandant of the King's African Rifles considered it would be advantageous if a further experiment were made in the enlistment of Maori, and he was prepared to take two hundred and fifty of them if their conscription were sanctioned. He proposed that their training ground should be situated at some place distant from, and not easily accessible to the Reserve, and he named Dabida, on the western shores of Victoria Nyanza, as a suitable

[illegible]

[illegible] The Commissioner of Police mentioned that his previous efforts to recruit Boers for that force had been unsuccessful, the men detailed having proved to be passive resisters, who had generally been discharged, after months of training, as unfitted to become efficient policemen. He mentioned that it was useless to attempt to make a success of an unwilling recruit, but, as he understood the proposal to recruit Boers presented the support of the Elders of the tribe, he was prepared to accept fifty recruits in the hope that public opinion among the Boers would tally to decrease the previous attitude of passive resistance.

Proposed Regiment

The procedure suggested was that five hundred Boers should be collected by an administrative officer at Punch, and that, after medical examination, such of these Boers as might be declared suitable for service should be taken to Kijabe, there to be fitted out with equipment before proceeding to the place of training, recruits for the police would be obtained from them by calling for volunteers.

Mr. Walker's Mission

Mr. Dunsford proceeded on leave in June, 1919, and Mr. Wacks, who succeeded him as Officer-in-Charge of the Boer Reserve, wrote on the 14th of July, indicating the attempt that was at last being made to find a use for the martial class of the Boer tribe. The compulsory enlistment of Boers in the King's African Rifles was, of course, a new departure, which might have far-reaching effects, but it offered hope of a solution of the problem of finding employment for this idle class of men, which would remove the Boers from their life of idle and idleness, which must otherwise end in a disaster of some kind. The political circumstances was necessary to refer to make the scheme a success, and he suggested various measures which might tend to reconcile the Boers to their lot. At the same time, the Commissioner found it possible to offer the services of Mr. E. E. Walker for a few months, to assist the King's African Rifles Recruiting Staff.

Comments of the King's African Rifles Officer

The King's African Rifles authorities agreed with Mr. Wacks that both Ryang and Punch might advantageously be used as concentration centres, but they could not guarantee that the unwilling Boers would receive their special diet of meat and milk, owing to the general shortage of food, as compared with the demand, and they mentioned that no training ground should near the Boer Reserve would be at all satisfactory, owing to the probable frequency of desertions. As the experiment was being conducted when native soldiers were badly needed, and in spite of previous disappointing experiences of Boers in the King's African Rifles, they proposed to continue the selection of men at once.

Recruiting Staff Offer for Boers

Lieut. Carlos accordingly proceeded to Punch early in August, and instructions to collect Boers at Punch and at Ryang were sent to the Officer-in-Charge, by the Chief Secretary, on the 6th of that month. On August 19th, the Officer-in-Charge telegraphed that measures were being taken to recruit at Ryang and Punch, and asked if the Boers should be prosecuted against under the Compulsory Service Ordinance, in the event of their refusal to come in.

Boer Attitude

On August 26th, information was received from Punch that the Boers were displaying a defiant attitude. Only a very small percentage was supporting the Elders and Ajemmah, and a request was made that a half company of King's African Rifles, with machine guns, might be sent immediately, in order to enable the Government to be in a position to deliver an ultimatum. Mr. Walker added that, even if recruits were forthcoming, a period would be necessary for disciplinary measures, and to enforce the production of the ringleaders, who had been responsible for the defiance of Government orders, which had then lasted for a week.

Conference at Kisumu

On receipt of this information, the Acting Governor called a conference at Government House, at which the Acting Chief Secretary, the Assistant Commissioner, King's African Rifles, and the Officer-in-Charge of the Boer Reserve, were present, to discuss the situation which had " arisen in the Boer Reserve, owing to the apparently defiant attitude of the mass of the Punch section, as regards the proposals for recruiting Boys for the King's African Rifles." The meeting was held on August 28th, and the following memorandum was recorded, giving the decisions arrived at:—

"It was agreed that it was of urgent importance that the authority of the Government should be maintained, and that, in order to support the civil authorities in carrying out the procedure prescribed for the recruitment of natives for military service, a full company of King's African Rifles should be despatched without delay to Dutch Harbour. Colonel Phillips stated that he proposed to send a company of the 1st King's African Rifles, with two machine guns, under the command of Major Dickinson, who has had considerable service with the King's African Rifles.

"It was agreed that the Officer-in-Charge of the Hunt Reserve should return at once to Dutch.

"It was agreed that definite orders should now be issued under the Compulsory Service Amendment Ordinance, 1917, and that these orders should be delivered by the civil authorities.

"The military force should be placed at the disposal of the Officer-in-Charge, to be used by him in case of emergency at his discretion.

"It was agreed that Mr. Walley should be attached to the force as political officer.

"It was agreed that, in the event of the recruits being sent forthwith, as a result of the display of force, the Officer-in-Charge of the Hunt Reserve should make recommendations to Government as to what action should be taken against the natives as punishment for the failure attitude previously displayed by them.

"It was further agreed that rules should be issued under the Compulsory Service Amendment Ordinance, 1917, defining the procedure to be followed in the recruitment of Hunt for the King's African Rifles, such procedure being on the lines of sections 3 and 4 of the Native Followers Recruitment Ordinance, 1915, a suitable penalty clause being added.

"It was recommended that regulations be issued under the Defence of the Native Order-in-Council, to deal with cases such as the attitude adopted by the Hunt natives as a whole to make recruitment."

The Rules issued under the Compulsory Amendment Ordinance, 1917, were signed on the 27th of August, and read as follows:— Rules under the Compulsory Service Amendment Ordinance.

THE COMPULSORY SERVICE AMENDMENT ORDINANCE, 1917.

RULES.

In Exercise of the powers conferred upon the Governor by the Compulsory Service Amendment Ordinance, 1917, Section 9 (2), His Excellency, the Acting Governor, has been pleased to make the following rules:—

1. These rules may be cited as "The Native Compulsory Service Rules, 1916." Short title.

2. In these rules:—"Headman" means the chief or other native in Council, of Elders, appointed under the provisions of the Native Authority Ordinance, 1912, to be an Official Headman, or to be Collective Headmen, as the case may be. "District Commissioner" shall include an Assistant District Commissioner. Interpretation.

3. The Governor may, by notice in the "Official Gazette," apply these rules to any province, district or reserve within the Protectorate. Application of Rules.

4. A District Commissioner may instruct any Liwali, Assistant Liwali, Mudir or Headman in his district to recruit in the area to which the Liwali, Assistant Liwali, Mudir or Headman has been appointed, such number of natives as the District Commissioner may deem fit, having regard to all the circumstances for military service in the King's African Rifles. Power of District Commissioner.

5. On the receipt of instructions, as in the preceding rule provided, any Liwali, Assistant Liwali, Mudir or Headman may direct that any able bodied adult male native apparently below the age of 30, residing in the area of which he is Liwali, Assistant Liwali, Mudir or Headman, shall serve as a soldier or follower in the King's African Rifles. Power of Headman.

*648 Terms of service and pay.

6. The terms of service and pay of a soldier or follower shall be those prescribed by the King's African Rifles Ordinance, 1912.

Powers of District Commissioner where no Headman.

7. In any area to which no Official Headman has, or Collective Headmen have been appointed, it shall be lawful for the District Commissioner of the district to exercise the powers of a Headman prescribed by Rule 5.

Penalty.

8. (1) Any native who, having been directed under Rules 5 or 7 to serve in the King's African Rifles as aforesaid, fails to obey such direction, shall be deemed guilty of an offence, and shall be liable on conviction to imprisonment of either description not exceeding two months, or to a fine not exceeding Rs. 300, or to both.

(2) Any Headman who refuses or neglects to obey any instructions given to him by a District Commissioner under Rule 4 shall be guilty of an offence, and shall be liable on conviction to imprisonment of either description not exceeding six months or to a fine not exceeding Rs. 3,000, or to both.

(3) All or any of the members of a Native Council appointed to be the Collective Headman of any area may be proceeded against either jointly or separately for any act or default punishable under these Rules, and on proof of the facts constituting an offence by such Council each such member shall individually be liable to the penalties under Rule 8 (2), unless he shall satisfy the Magistrate that he was in no way responsible for or a party to such act or default.

Length of service.

9. Every native recruited under these Rules shall serve for a period terminating at the end of six months after the cessation of hostilities in the present war.

By command of His Excellency the Acting Governor.

J. W. BARTH,
Acting Chief Secretary.

NAIROBI,
The 28th day of August, 1918.

THE NATIVE COMPULSORY SERVICE RULES, 1918.

NOTICE.

IN EXERCISE of the powers conferred upon him by the Native Compulsory Service Rules, 1918, His Excellency, the Acting Governor, has applied the aforesaid Rules to the Masai Reserve.

J. W. BARTH,
Acting Chief Secretary.

NAIROBI,
August 28th, 1918.

Arrival of the K.A.R. detachment.

On August 27th, Major Dickinson was sent to Narok with one Company of the 1/6th King's African Rifles and two machine guns, and accompanied by Mr. Weeks. The party arrived at Kijabe on the evening of that day and reached Narok on the 31st of August. On arrival, Mr. Weeks sent out the Elders and the head Muran once more to interview the rebellious sections at Melelo. On September 3rd, they returned and reported that all their efforts had been in vain. On the 4th, therefore, accompanied by Mr. Welby, Major Dickinson and the greater part of the detachment, Mr. Weeks left Narok and proceeded to Melelo, arriving on the 6th. At this place he finally succeeded in getting seven of the Muran to come into camp and discuss matters.

Arrival at Melelo.

Meeting with Muran.

In spite of the show of force, these men refused most emphatically to agree to the recruitment of Muran for the King's African Rifles or for any work which would take them away from their own reserve or its immediate vicinity. Mr. Weeks asked these seven Muran to bring in more of their companions the following day, but only thirteen then came in and no further progress was made. They refused to listen to any arguments and said that they had left their villages, dismissed their Elders and head Murán and had decided to live in the forest, where they would rather die than be taken for the King's African Rifles. They were then allowed to go.

648*

Attempt to arrest some Muran.

While at Melelo on September the 8th, Mr. Weeks received information that a number of Muran who were required as recruits were going to sleep at their village a few miles from his camp, instead of in the forest and he decided to attempt to arrest them. With Mr. Welby, Major Dickinson and a number of Askaris he arrived at the village at dawn on September the 9th. The Askaris surrounded the village and were given instructions that they were to use no force of any kind except in the case of an attack by the Muran. Mr. Weeks then entered the village and found only a few women and some cattle. While he was still in the village, firing broke out and continued for some minutes. It appears that an Askari fired a shot without orders and that others followed his lead, but the regrettable result was that two women were killed, and two women and an old man wounded, while ten head of cattle were killed and two head maimed.

Attack on Ol Alunga Camp.

On September 10th, the party was encamped at Ol Alunga Trading Centre, 18 miles north-west of Narok. At dawn on the 11th, the camp was suddenly attacked by a considerable force of Masai Muran who were beaten off in a few minutes and retired leaving fourteen dead behind them. All the wounded, with one exception, were taken away. Amongst the dead were several of the men who had been chiefly responsible for the present troubles. After the fight, the Muran dispersed instead of returning to the forest and Mr. Weeks and his party consequently returned to Narok, arriving on the 12th, and there recommenced negotiations.

Mr. Weeks' comments.

In reporting these incidents, Mr. Weeks much regretted that such a conflict should have occurred but feared that it had been inevitable. Every chance had been given to the Muran to come into line but they had apparently made up their minds to resist recruitment. Mr. Weeks was satisfied that certain members of the Laibon family had instigated this course, and expressed a hope that these would, in due course, have to pay the penalty.

Attitude of the Kakonyukye.

Another reason for the withdrawal to Narok was to make arrangements for the security of the station and the road from there to Kijabe. The country on each side of the road was occupied by the Kakonyukye division and their attitude was uncertain, though they were reported to have stated that they would not fight unless attacked. About this time, telegraphic communication between Narok and Elmenteita was interrupted, the line being cut and a considerable length of wire removed. This was probably due to Masai action but very little evidence on the matter was forthcoming.

Representations by Lord Delamere.

On September 9th, Lord Delamere telegraphed to the Commandant King's African Rifles, as follows :—

"Hope you will protest (against) needless use (of) King's African Rifles (to) conscript people by force (who would be) useless when got. No precedent forcible conscription in face of opinion (of) whole people. Left matter after Government moved without (the) knowledge (of) anyone in (the) hopes (that) collision might be avoided by Masai climbing down but now position clearly indicates (they) will not be conscripted although (they) wish (to) avoid hostilities. Cannot believe wanton attack on whole people to get useless conscripts (is) justified (. . . .). Suggest their part of doing their bit should be supplying cattle as before."

To this telegram the Commandant of the King's African Rifles replied that he regretted he could not see his way to make such a protest as he considered that all possible sources must be exploited for the military needs of the campaign, and as experience had shown that some Masai made good askaris.

On September 10th, Lord Delamere addressed the following telegram to the Chief Secretary :—

"Consider conscription (of) Purko Moran bad policy, except with (their) consent, or by ordinary Government pressure, and should have supposed (they were) useless to military. Understand Masai say (they) do not want (to) fight, but will not be conscripted. Situation now means (that) Government have to either order attack or hope for collision to simplify position, or withdraw.

*648

Consider strong Government should withdraw troops to border for fear (of) collision and then appoint military civil board with some knowledge (of) people to go into question with (the) heads (of the) Moran. Very willing to serve if any use."

The Chief Secretary replied that the Government was most anxious to avoid a conflict with the Masai, and would be grateful if Lord Delamere would come to Nairobi to discuss the position and proposals as soon as possible.

Lord Delamere visits the Masai Reserve.

As a result of this discussion, Lord Delamere volunteered to visit the Masai Reserve, and left for Narok on September 15th. Instructions were issued that hostilities should, if possible, be avoided from the time of his arrival until he stated that he was unable to negotiate. The results of Lord Delamere's visit will be alluded to later, and it may now be convenient to record the position in the various parts of the reserve.

The Purko division.

The Muran of the Purko division, who were alone responsible for the incidents previously described in the matter of resistance to recruitment, dispersed in various directions after the fight at Ol Alunga on September 11th. Many of them were subsequently located in the Mara district where the District Commissioner succeeded in getting into touch with them, and interviewed representative Muran of two of the Purko Sirits. These stated that the Muran were to meet all their Elders to talk things over. Mr. Weeks wrote on September 23th that as the Muran now seemed to be most anxious to discuss matters with their Elders, which had not been the case before, and as they had had a sharp lesson and seemed disinclined for further fighting, it was possible that in the course of a week or two the recruits that had been awaited so long might be forthcoming.

Looting of shops.

Some not too definite information was received of the looting of two Indian shops three miles south of Likia, on the night of September 17th. It seems possible that the persons concerned were 'L'Ayok, and not Muran, and a telegram dated September 23rd, from Lieutenant Chaplin, stated that he had arrested four principal ringleaders who looted the Likia stores. The full catalogue of the outrages that may have been committed by the Purko division when the excitement was at its height may not yet have been received, but generally these acts of pillage were not of a very serious or frequent nature.*

Kakonyukye division.

The uncertain attitude adopted by the Kakonyukye division has already been mentioned. On September 15th, a telegram was received from Lieutenant Chaplin that the Kakonyukye 'L-Ayok were out of hand at Il Melili, and that they were threatening traders. On the 16th of September, the Aigwenak of the Kakonyukye Muran arrived at Narok and reported that their Muran were willing to be recruited. Nothing further has been reported regarding this division.

Police measures on Kenyan frontier.

Early in September, it was decided as a precautionary measure to warn settlements bordering on the Masai Reserve that the Masai were taking up an uncompromising attitude with regard to recruitment, and that resistance to a King's African Rifles patrol that was in their country might be offered. The despatch of troops was promised in the event of the position becoming serious to protect the country lying between the farms and the reserve. An Inspector of Police visited the farms near Naivasha, and explained the position, while a patrol of King's African Rifles proceeded round the lake, following the line of farms along the border to the Mau. On September 10th, applications were received from some of the settlers near Elmenteita and Naivasha for protection, on account of the threatening attitude of the Masai, of which greatly exaggerated rumours had been spread by itinerant Kikuyu, with a result that native labourers showed a tendency to desert. A small police post was placed in the neighbourhood to restore confidence, while the Superintendent of Police and the Assistant District Commissioner, Nakuru, visited the farms without finding any basis for the rumours of the presence of armed Muran in those areas.

---

* *Subsequent Note.*—At the time of the attack on the King's African Rifles' Camp, at Ol-Alunga, over fifty shops and stores in the Narok and Mara districts were pillaged and burnt. In most cases, but not all, the Purko Moran were responsible. The damages were assessed by a Committee of Inquiry, appointed for the purpose, at approximately Rs. 300,000. This sum the Purko Moran agreed to pay. Several murders took place in the Mara district at the same time, but could not be definitely traced to the Masai.

648*

On September 12th, a system of mounted patrols was commenced, operating between Mr. Powys Cobb's farms on the west and Mr. Hockley's on the east, while on the 13th, twenty-five men were sent from Njoro to Likia, in response to representations from Lieutenant Chaplin that certain members of the Kakonyukye division were out of hand at Il Melili.

Several stores in the reserve belonging to Europeans were pillaged and burnt.

Removal of Somali traders.

On the 14th of September, the Officer-in-Charge recommended that, owing to the condition of affairs in the reserve, all Somali traders and their sheep should leave the reserve at once. The Chief Veterinary Officer was consulted, and as a result, the Veterinary Officer in the Masai Reserve was instructed to proceed with all Somali sheep to Major Riddell's farm on the Lower Kedong, where arrangements were made for their retention.

Affairs on the Sotik border.

On September 6th, an enquiry was addressed to the Provincial Commissioner, Kisumu, asking whether it was considered necessary to establish a small military post at or near Sotik for the protection of the Sotik farms, in view of the situation in the Masai Reserve. The matter was referred to the District Commissioner, Kericho, who replied that such a patrol was unnecessary as the Sotik were quite capable of dealing with the Masai themselves, and would, in fact, be only too glad of the opportunity to do so.

Recruitment in the Ngong District.

No movement of resistance to recruitment similar to that shown by the Purko division was encountered in the Ngong district, but in view of the uncertainty of the behaviour of the Purko, it was decided not to press unduly the provision of Muran from the east of the reserve. Mr. Deck interviewed the representatives of the Matapatu Muran on September 12th, and found the general impression to be that the Matapatu and Kaputiei divisions were too weak to resist the order and that they would therefore have to produce the men. The position was carefully explained to them, while Mr. Percival, the Acting Game Warden, also explained matters to a number of Kaputiei whom he met at Kiu. The number required from the Ngong district was 75 for the King's African Rifles, and 50 for the Police, these latter to be obtained from the Sighirari division. The District Commissioner has wired that the 75 Muran for the King's African Rifles will be ready by the end of October, and these are then to be medically examined.

Masai crossing into German East Africa.

At the commencement of the recruiting campaign, reports were received from the Political Officer at Arusha that many Masai of the Loita division had crossed over into German East Africa at the instigation of Sendeu, to escape the authority of the Government of the East Africa Protectorate. The Administrator, Wilhelmstal, thought that, as the Masai across the border were hostile to Sendeu on account of his past acts of aggression, it was possible that they might attack these Loita, unless steps were taken to return them. It was not found practicable to detail a police force from the East Africa Protectorate for this purpose, and the Administration in conquered territory therefore undertook this work. Further information was received on the 23rd of September, to the effect that the Merisho Sirit of the Purko Muran had crossed the border about the 11th, and had proceeded in the direction of Kitalo.

Lord Delamere's visit to the Masai Reserve.

Lord Delamere arrived at Narok to find that the majority of the Purko Muran had gone to the Mara district, and as he found it difficult to get into touch with them from Narok, he left for Mara River on September 22nd. From Mara River he sent in a report on the 5th of October in response to a telegram from the Chief Secretary asking for details of the attitude of the Purko and what prospect there was of the Government being speedily in possession of sufficient facts to enable a decision to be arrived at on what action was desirable.

Lord Delamere's report.

Lord Delamere insisted as a preliminary point that the Purko should be given time to discuss the situation from every aspect. It was difficult to concentrate them and it was essential that, when concentrated, they should know exactly how matters stood. "Since coming here," he wrote, "and going into everything, I see that the only way to do the Masai a good turn themselves (apart altogether from the desirability of adding to the numbers of the King's African Rifles), is to make every effort to get them to agree voluntarily (more or less), to

*648

going out as soldiers. It makes the whole thing easier if they go with the consent and under the control of their Sirits, as it should be possible to arrange (if the Sirits agree to the Muran going) that they should tell their people who go that they are not to run aw[illegible] etc."

Delegates of the Kisaruni and 'L-Aimer Sirits came in on October the 4th, and Lord Delamere reported that they were then no longer in the excited state which had existed after the incident at Ol Alunga and they said that they had never intended to fight the Government until the killing of their women made them temporarily lose control. These delegates stated that they desired to remain on friendly terms with the Government as previously.

Lord Delamere continued, "I told them that our people were in the middle of the greatest war we had ever known and were inclined to look on those who did not actively help as almost enemies, that Government has said three things, (1) that they must produce the men for soldiers; (2) that they must pay for the damage done to shops, etc.; (3) that Government was considering what should be done to the Muran for having refused orders. I said I was sure that Government would enforce the two first, but I said that I hoped that prompt acceptance of these and the explanation of the causes, etc., of the trouble *might* induce Government to forego the third as they were still considering it. I told them that I would say no more until the other Muran came representing the other Sirits, but I impressed on them that it was no good expecting time as the Government was not inclined to wait indefinitely and advised them to make up their own minds that they would voluntarily give the men and to influence the other delegates accordingly when they arrived."

In course of discussion the Masai said that the recruitment had been hurried and that the affair had come to a head unexpectedly owing to the shooting of their women and cattle. Legalishu, with whom Lord Delamere was in touch, expressed his opinion that things were going very well. Lord Delamere added, "May I say that I believe that if this matter is quietly and seriously settled now it will not make things more difficult in the future but will clear the air and make anything of the sort impossible in future."

Report to the Secretary of State.

On receipt of Lord Delamere's report, the circumstances attending the conscription of certain members of the Masai tribe for military service with the King's African Rifles were reported to the Secretary of State in a despatch dated the 15th of October, 1918.

Lord Delamere's proposals discussed.

On October 18th, the Chief Secretary met the Officer-in-Charge of the Masai Reserve, and Messrs. Deck, Welby and Gurdon to discuss Lord Delamere's proposals, while on the 19th a telegram was received from Lord Delamere, dated the 18th of October, to the following effect:—

"Representative meeting (of) Purko Muran agreed (to) find men for King's African Rifles, Merisho not so well represented as others but consider that owing to Sendeu wishing to arrange for them direct after other Sirits now agreed. Came Narok to ask Captain Welby come out satisfy himself genuine. They wish (to) cut out men themselves replacing rejects. Luckman satisfied genuine. Satisfied myself but consider Welby should be given sufficient time (to) carry out. Should suggest Welby coming out with me (to) see (the) meeting of Muran I have left at Mara. Consider no fear any more serious trouble but matter must be conducted reasonably. Payment for Dukas explained and possibility other steps. Strongly urge all past matters washed out. Surrender of men unconditionally, but Muran asks that Muran going to King's African Rifles should not have cattle commandeered for military during period (of) service because (they are) unable to look after them while away. Think if that (is) answered (in the) affirmative (it) would ease matters and hope you will reply to this. Merisho Lygwenak and two others came with me here to-day to explain facts."

Decision arrived at.

On October 19th, the Acting Governor discussed the proposed terms of settlement for the Masai incident with the Acting Chief Secretary, Mr. Weeks and Mr. Welby, and the conclusions then arrived at were considered in Executive

Council on the same day after which they received the approval of His Excellency. The decision was as follows :— 648*

"Firstly, production of the number of men required by the King's African Rifles,* it being understood that only genuine Muran and not Liones will be accepted. Selection of the Muran can be left to the various Sirits themselves subject to approval by the Recruiting and District Officers. This proviso is considered necessary in order that genuine Masai Muran of proper standing may be produced.

"Secondly, full monetary compensation will be exacted for all damage done to property during the looting which recently took place. This damage will be assessed by a specially constituted Board of Investigation. Any rifles looted will have to be returned. Blood money will be exacted for any murders that have been committed.

"Thirdly, in view of the great provocation caused by the unfortunate action by certain of the King's African Rifles in opening fire without orders, no punishment will be imposed for the subsequent attack on the King's African Rifles by the Muran.

"Fourthly, the cattle of any Muran joining up will be immune from commandeering for military purposes, provided that a proper system of identification of the cattle can be arranged to the satisfaction of the District Officers.

"Fifthly, Government proposes to investigate the attitude of the Laibons and Elders of the Masai which may have encouraged the Muran in their rebellious attitude, and will take such steps as it considers necessary for punishing any who are found guilty. This will, however, not entail any further punishment of the Muran themselves."†

SECTION 7.—SUSPENSE ACCOUNT.

Contribution from the Kakonyukye—Rents of plots—Collective Fines—Utilization of Funds—Expenditure controlled—Rents—Collective Fines—Secretary of State's decision—Abstract. 000

In April, 1915, the Masai of the Kakonyukye division contributed a sum of Rs. 10,450 towards the improvement of the water supply in their country. It was stated that further sums might be forthcoming, and the matter was referred to the Secretary of State, who agreed that a Suspense Account should be opened to which these and other contributions made by the Masai for the benefit of their reserve might be placed. Contribution from the Kakonyukye. 648* 652

As has been seen, the reservation to the tribe by the Agreement of 1911 of a definite area within the Protectorate for their exclusive use had rendered it necessary to obtain the consent of the "paramount chief and representatives" of the Masai to the alienation of any land within the reserve which had been selected as suitable for trading centres. Consent to the opening of certain centres had been obtained in July, 1914, and the Secretary of State also agreed that the money which might be derived from the auction and leasing of land and trade plots within the reserve should be placed to the credit of the Suspense Account and utilized for the benefit of the Masai themselves. Similar sanction was given in the case of the land alienated for the use of the Magadi Soda Company. Rents of plots.

A third means by which funds were added to this Suspense Account was by crediting thereto in specific instances the proceeds of fines collected under the Collective Punishments Ordinance. A record of such cases is given in Chapter VII. Collective fines.

From the opening of the Suspense Account until April, 1917, the manner in which the funds were utilized was left to the discretion of the Officer-in-Charge of the reserve, who obtained sanction from the Government before incurring the expenditure, and who acted with the advice of the Government's advisers on all technical matters. Money was found from these funds for the construction of a bridge over the Mara River, for a large part of the waterworks undertaken by Mr. Watts, for the repairing of the dams in the Lemek Valley, for the dematca- Utilization of funds.

* 280 Muran were required for the K.A.R., of which 175 were to be drawn from the Narok and Mara Districts and 75 from the Ngong District. The Sighiroi division were to be called on to produce the 30 recruits required for the police.

† *Subsequent Note.*—The Purko Masai failed to produce any recruits and the rank and file of the Muran continued a policy of passive resistance, avoiding all intercourse with Government officers. Later, they perpetrated a number of raids in the occupied territory of German East Africa. No part of the compensation money was paid.

*648
652

tion of trading centres, for the construction of a road from Ngong to Kedong and for other similar undertakings.

Expenditure controlled.

In April, 1917, the Acting Governor took into consideration the propriety of arranging for this account to be administered in closer accordance with correct financial procedure, and he referred the matter to the Secretary of State in a despatch, dated September 17th, 1917. An examination of the account showed that the last contribution that had been made by the Masai had been in March, 1916. Such contributions had been given mainly for the purpose of improving the water supply in the reserve, and ceased on the completion of the dams. Mr. Bowring considered that any contributions which might be forthcoming in the future should be placed to the credit of the account. As regards the moneys accruing from the rent and auction of trade plots, he was inclined to think that these should be credited to general revenue, as was done in the case of other native districts, rather than to a suspense account. Though it was true that, in the case of the Masai, the land which they occupied had been formally handed over to them by agreement, rendering the consent of the tribal representatives necessary before alienation, still it might be argued that the land in other native districts was equally the heritage of the tribes, though no such solemn dedication had been made, and he was uncertain whether the difference in the conditions of land tenure in the Masai Reserve was sufficiently great to warrant such a distinction in dealing with the receipts derived from alienated areas. Under any circumstances, he thought that it would be preferable if revenue accruing from the above three sources were to be included in the annual estimates of the Protectorate, and if the estimated expenditure from the funds thus available were also to be shown.

Rents.

Collective fines.

In regard to the application of the proceeds of fines to the suspense account, Mr. Bowring did not consider that the tribe so punished should benefit from the money collected unless in exceptional cases, and he thought that even then the sanction of the Secretary of State should be obtained in each instance. He could not regard the principle as a sound one for the reason that an officer might be tempted to recommend unnecessarily heavy imposts, if he were aware that the proceeds of any fines which might be imposed would be available for improvements in his district, and would thus benefit directly the individuals or sections punished. Moreover, the fact that this system was in force in the case of the Masai alone was liable to give rise to the feeling that that tribe had been granted preferential treatment. He therefore proposed that in future, the proceeds of fines should not be credited to the suspense account unless, in each instance, the approval of the Secretary of State had been first obtained.

Secretary of State's decision.

In his reply, dated the 10th of January, 1918, the Secretary of State ruled that the amounts then standing in the account should remain credited to it. He considered that sums derived from contributions from the Masai, and rent and auction of trade plots should be placed to the credit of the account, but that the proceeds of fines should be paid into general revenue. He did not think it necessary for the receipts and payments under the account to be included in the annual estimates of the Protectorate, but he asked that an annual statement of such transactions should be included in the Treasurer's financial report on each year.

Abstract.

An abstract of the receipts and payments under the Masai Suspense Account is to be found in Appendix 5. 7 A

650

SECTION 8.—TAXATION.

Mr. Lane, 30th June, 1911—Mr. McClellan, 4th April, 1912—Mr. Ainsworth, 16th April, 1912—Mr. Tate, 9th May, 1912—Mr. Hollis, 19th July, 1912—Mr. Hemsted, 28th February, 1913—Mr. Ainsworth, 28th March, 1913—Mr. McClellan, 16th April, 1913—Mr. Hobley, 13th May, 1913—Sir Henry Belfield, 30th October, 1913—The Secretary of State, 3rd December, 1913—Sir Henry Belfield, 9th March, 1914—Sir Henry Belfield, 29th July, 1914—Mr. Ainsworth, 29th April, 1915—Mr. Bowring, 6th May, 1915—Chief Justice Hamilton, 9th May, 1915—Sir Henry Belfield, 18th May, 1915—The Secretary of State, 10th August, 1915—Mr. Hemsted, 3rd July, 1916—Reconsideration—The Postponement of the Introduction of the Tax.

*648
[651]

Hut tax at the rate of Rs. 3 per hut was first levied on the Masai, in common with other natives resident in Naivasha Province, in the year 1903-04, by Proclamation in the "Official Gazette" dated the 31st of August, 1903.

7 [See p. 229 -- Analysis]

648*

In June, 1911, the Provincial Commissioner, Naivasha (Mr. Lane), remarked that no tribes in the Naivasha Province with the exception of the Masai and the Uasin Gishu Masai were in a position to pay an increased hut tax. Mr. Lane would very much like to see a cattle tax imposed on the Masai instead of a hut tax. Mr. Lane, 20th June 1911.

On the 21st of March, 1912, a circular was addressed to Provincial Commissioners asking for their views on the possibility of increasing the direct taxation of natives in any part of the Protectorate.

Mr. McCellan, then Provincial Commissioner, Naivasha, replied that the Masai were becoming rapidly richer owing to the enormous increase in their stock, which increase was largely due to veterinary advice coupled with the privilege of free trade. He stated that the increase per annum in Masai calves was now 50 per cent. greater than in years past. The Masai could certainly stand a large increase in their taxes, and he advocated the imposition of a heavier tax as being only a fair demand in return for the immense assistance they had received from the scientific knowledge placed at their disposal by the Government. Mr. McCellan, 4th April, 1912. [231] 232

Mr. Ainsworth considered that pastoral tribes in reserves should be subject to either a cattle tax, or a grazing tax, or a cattle boma tax. If a cattle tax, he suggested collection at the rate of one rupee per cow per annum, fifty cents per bull or ox, and six cents per sheep or goat; if a grazing tax, one rupee per five acres; and, if a cattle boma tax, eighty cents per head of full grown stock per annum (sheep and goats not being taxed), together with a tax of Rs. 3 on each Muran living in huts over and above an allowance of two Muran per 50 head of stock. He quoted the case of the Uasin Gishu Masai who had about 20,000 head of big stock in North Kavirondo district, whose population was about 3,000 souls and who paid taxes in all amounting to Rs. 2,400 only. He considered the Masai in the Masai Reserve to be a glaring instance of the necessity of a revised form of taxation in connection with pastoral tribes. Mr. Ainsworth, 10th April, 1912.

Mr. Tate considered that a native livestock tax was justifiable because (1) the enormous herds in the hands of pastoralists was largely the result of the Pax Britannica, brought about by the expenditure of money on the part of the Home Government; and (2) costly experiments had been and were still being made for the benefit of stockowners in the Protectorate, part of the cost of which it was only fair to ask the native stockowners to reimburse since they profited enormously by the results of these experiments. He considered that a tax of one per cent. per annum on all stock was the simplest and would be readily understood by the natives. Mr. Tate, 9th May, 1912.

Mr. Hollis was in favour of the imposition of a stock tax on the Masai. He mentioned that there was nothing in the system of taxation then in force which affected the stockowners, who were the wealthiest natives in the Protectorate. There were numbers of persons belonging to the pastoral tribes on whom the incidence of the hut tax did not fall fairly, for, though they often possessed many thousands of pounds worth of cattle and occupied vast areas of grazing land, they inhabited only one or two huts and paid accordingly. Mr. Hollis, 19th July, 1912.

In February, 1913, Mr. Hemsted represented that the present form of taxation on the Masai was unsatisfactory and inadequate but he put forward certain objections to the imposition of a cattle tax. Such a tax would be difficult to assess, as the same owners usually kept their cattle in different villages; it would create a great deal of dissatisfaction, as all natives disliked having their cattle counted; the revenue accruing would be subject to large fluctuations; and it seemed hardly fair to impose such a tax only on the Masai. Mr. Hemsted, 28th February, 1913.

He would prefer to see the introduction of a poll tax of Rs. 15 on each adult male, together with a further tax of Rs. 15 to be utilised in improvements directly benefiting the Masai. Such a tax would be easier to collect and would tend to check the unauthorized movement of Muran. It would bring in some £6,000 or £7,000 annually.

*G48

But if the imposition of a cattle tax was introduced he suggested that a certain sum be collected per head of stock irrespective of age or sex, so as to make the assessment as simple as possible. The Masai stock numbered between three and four hundred thousand and he suggested the annual collection of 1 per cent. or 1½ per cent. of the whole.

Mr. Ainsworth, 20th March, 1913.

Mr. Ainsworth considered that the difficulties of assessment of stock applied in some measure also to the assessment of polls and suggested the imposition of a grazing tax as an alternative. He did not, however, anticipate that revenue accruing from a cattle tax would be subject to great fluctuations, and thought that if disease killed off large numbers of Masai stock it was possible that the status of the tribe might alter. Their present importance was due to their wealth, not to their numbers, and he pointed out that the average density of population was approximately 120 acres per head. A comparison between the wealthy and indolent Masai with the poorer and more industrious and productive natives convinced him of the equity of treating the former in some special manner as regards taxation. Hut tax on agricultural tribes was as much an income tax as a cattle tax on pastoral tribes; the Masai were certainly singular as regards their requirements and as regards the administrative effort being made on their behalf.

Mr. McClellan, 10th April, 1913.

Mr. McClellan agreed that the imposition of a stock tax of one rupee per annum on stock over one or two years old was advisable. Such a tax might realise £43,000, or about the same as the amount paid by tribes in the Kenya Province who paid tax at the rate of Rs. 3 per hut. The tax would, however, be difficult to collect, and it should remain optional with the District Commissioner whether he took a cow or Rs. 100 in cash, or a bullock or Rs. 50 in cash. Donkeys should not be taxed as it was desirable to encourage breeding.

Mr. Hobley, 12th May, 1913.

Mr. Hobley was of opinion that the imposition of a tax upon the individual wealth of each cattle owner was the most equitable form of tax that could be devised and that this advantage would apply equally to the Muran cattle which were more or less communally owned. The difficulties of collection would be considerable during the first year but the difficulty would decrease annually.

Given freedom from cattle disease, the herds of Masai cattle would double in three or four years, as they did in the Laikipia Reserve, where the Masai were, in fact, on two successive occasions allowed extensions of the boundaries of their reserve to accommodate their surplus stock. No such additional land could be granted to them outside the confines of the Southern Reserve and the same situation would, in all probability, arise with the result that overcrowding was bound to occur. The imposition of a cattle tax would necessitate the collection in kind in the majority of cases, but it would be preferable to introduce gradually to the Masai the idea of selling their cattle. If the Masai did not adopt the principle of sale of cattle, Mr. Hobley considered them to be a doomed people: either they must break the boundaries of their reserve in a few years or else their herds would become so vast that the congestion would produce an epidemic which might reduce the tribe to starvation.

Sir Henry Belfield, 20th October, 1913.

On the completion of his tour in the Masai Reserve, in October, 1913, Sir Henry Belfield reported to the Secretary of State that there was ample pasturage for the stock then owned by the tribe. It was inevitable, however, that the space at their disposal would become insufficient if the natural increase of the stock continued unimpeded by any outbreak of disease and if the Masai were not persuaded to reduce the numbers by sale. He considered that it was desirable to discourage by all legitimate methods the pastoral proclivities of the tribe and to lead them gradually to agricultural and industrial enterprise. It would be possible to damp their ambition to increase their herds and to press them to put a portion of their stock on the market, by exacting from them a contribution in respect of their cattle. He, therefore, thought that when the present uncertainty as to their final destination had been removed and they had settled down in the Southern Reserve, an annual tax should be levied on all cattle over and above a certain number per head and exclusive of cattle used for industrial purposes.

648*

In his reply, dated the 3rd of December, 1913, the Secretary of State observed that in his opinion the time had not yet arrived when it was either necessary or desirable to impose a cattle tax on the Masai which might be thought by them to be the object or a consequence of the Masai move. The Secretary of State, 3rd December, 1913.

In a despatch to the Secretary of State, dated the 9th of March, 1914, the Governor remarked that a review of the present system of native taxation would no doubt be necessary in the near future, but he considered that this was not a matter of urgency and might preferably be held over until the reorganization of native administration had been effected. The Secretary of State agreed that the question might well be deferred. Sir Henry Belfield, 9th March, 1914.

On the 29th of July, 1914, Sir Henry Belfield wrote that he considered the time had come when a tax should be imposed on the cattle belonging to the pastoral tribes on the ground that the precautions taken by Government to prevent the spread of disease had enabled them to largely increase the number of their herds. He desired that the incidence of taxation should be such as to encourage agricultural industry and discourage pastoral proclivities. He therefore appointed a Committee, consisting of Messrs. Ainsworth (Chairman), McClellan, R. W. Hemsted and Northcote, to consider the subject. Owing, however, to the outbreak of war, the sittings of this Committee were delayed and were in fact never held. Sir Henry Belfield, 29th July, 1914.

Mr. Ainsworth considered the question in December, 1914, and the first three months of 1915, and submitted a report on the general question of native taxation on the 29th of April, 1915. In that part of his report which dealt with the Masai Reserve, he remarked that the Masai in the Masai Reserve presented, as regards assessment and taxation, a totally different problem from that encountered in considering the case among agricultural tribes in the Protectorate. The Masai were pastoralists, whose mode of life, customs and requirements differed from those of agricultural natives. They required much more land than agriculturists, and had many fewer inhabitants to the square mile. Mr. Ainsworth, 29th April, 1915.

Statistics of the Masai Reserve estimated the population at 32,000 souls, the number of horned stock at 550,000 head, and of sheep and goats at 2,500,000 head, while the area of the reserve was approximately 9,000,000 acres. The annual taxes paid by the Masai amounted to Rs. 30,000 only. Mr. Ainsworth quoted, in comparison, the case of three agricultural districts, whose total area was 2,168,000 acres, whose population was 669,805 souls, and which paid Rs. 692,751 in hut and poll tax. [161] [231] [65] [131]

The capitalised value of Masai stock was so large as to make the natives worth about Rs. 937 per man, woman and child, and, supposing that this capital account turned over but 5 per cent. per annum, the annual earnings of the tribe would be worth Rs. 47 per head. The total personal wants were very small, while they paid less than one rupee each in annual taxes. It was therefore evident that the Masai did not contribute their fair share to the Protectorate revenue, and that some readjustment was necessary in their case. [434]

In regard to the manner in which the Masai should be taxed, Mr. Ainsworth observed that their nomadic habits and mode of building huts rendered the method of collecting revenue under a hut assessment a far more difficult matter than it was in the case of agricultural tribes. He also considered that any system of poll tax on able-bodied males would be equally unsatisfactory. He therefore proposed a scheme which had been put forward by Mr. Hemsted and which he outlined as follows :—

In order to find out the approximate taxable value of the Masai, the tax should be worked out on a percentage, based on the assessed unimproved value of the land. The amount due would be collected in the form of a cattle tax (ignoring sheep and goats). The acreage of the reserve being nine million acres, the unimproved value being assumed to be Rs. 3 per acre, a tax of 1 per cent. on the unimproved value would produce a revenue of Rs. 270,000. This amount would be divided amongst the total number of cattle estimated, and would amount to 54 cents. per head on half a million head of cattle. Mr. Ainsworth considered that there would be considerable difficulty in counting the cattle, and suggested

*648

that assessment should take place every three years, instead of annually. He enquired whether it was to be definitely laid down that the reserve consisted of 9,000,000 acres, and whether Rs. 3 per acre was reasonable as the average unimproved value of the land.

If any unsurmountable objections were foreseen to the introduction of a native cattle tax or property tax, a graduated hut or poll tax might be applied, based on a system of a tax on the unimproved value of land, the tax so due to be spread over the huts or polls, with a proviso for a maximum tax per hut or poll.

Mr. Bowring, 6th May, 1918.

As the whole position of the Masai, whose reserve bordered on German East Africa for a distance of 236 miles, would have to be reconsidered at the end of the war, Mr. Bowring recommended that this tribe be left out of account for the present, but he saw no objection to discussing the form which such additional taxation would eventually take. On general principles, he favoured the idea of a special tax on cattle or other moveable property, but saw no necessity for introducing anything in the form of an unimproved land value tax. The only really satisfactory way of taxing the Masai was to tax their cattle, and he believed that the difficulty of counting their stock would be overcome. The system of a land value tax would mean that, the greater the number of the cattle, the smaller would be the incidence of the tax. He recommended that the principle of a stock tax at so much per head of horned stock and sheep be adopted for the Masai.

Chief Justice Hamilton, 9th May, 1918.

Chief Justice (now Sir Robert) Hamilton represented that the boundaries of the reserve would, in all probability, require rectification and alteration from time to time, and that this would alter the incidence of the tax, and would be a disturbing factor in a matter which should be as simple and as little open to disturbance as possible.

Sir Henry Belfield, 10th May, 1918.

Sir Henry Belfield was convinced that the proper method of dealing with the Masai was by imposing a tax on stock, and did not view with favour the suggestion of a land tax, which would probably be uncertain, and possibly oppressive, in its incidence, and which would not be understood by the natives. A stock tax would be quite within their comprehension, and would not, he thought, be seriously opposed by the Masai if it were made clear that it was collected in return for the benefits which administration had conferred on them, their land, and their stock.

He therefore recommended to the Secretary of State the imposition of such a tax on the Masai for consideration when the condition of the people had been adjusted at the end of the war, on the grounds that they paid little or nothing in return for what was being done for them, and that the time was at hand when the differentiation which had hitherto existed in the treatment meted out to them and to the other tribes should be reduced to comparative uniformity. The tax could be fixed without much difficulty upon the basis of a triennial count of stock.

The Secretary of State, 10th August, 1918.

The Secretary of State concurred in the view that the Masai should be left out of account for the present as regards additional taxation, and was disposed to agree that the imposition of a stock tax would be the best way of dealing with the tribe. The matter could, however, be considered further after the conclusion of the war.

[651]

By Proclamation in the "Official Gazette" of April 8th, 1918, hut and poll tax in the Naivasha Province was increased to Rs. 5, except in the case of certain areas. Inadvertently, the Masai Reserve was not originally excluded, but, though it was admitted that the Masai could easily afford to pay the enhanced rate, it was decided that, until the general question had been considered, tax in the reserve should be collected at the rate of Rs. 3 as formerly. A Proclamation to this effect was signed on the 24th of July, 1918.

*648 231

Mr. Hemsted, 3rd July, 1918.

On the 3rd of July, 1918, Mr. Hemsted submitted a memorandum containing his proposals for the taxation of the Masai. In this memorandum he represented that the Masai Reserve was already stocked to its fullest capacity, and that, without the aid of improvements in the water supply, etc., no further appreciable

increase was possible. It followed therefore that enormous numbers of cattle and sheep must perish every dry season from lack of sufficient grazing and water, and that no benefit would be derived from the natural increase. 648* 231

He argued that the stock breeder was fully as valuable an asset to the Empire as was the agriculturist, and that the former occupation was as profitable and useful and required as much skill and knowledge as the latter. The problem of the world's meat supply was becoming serious, and he considered that, in view of the potential supply of meat in the Masai Reserve and the increasing demand therefor, it would be a matter of regret if the pastoral proclivities of the Masai were checked and if they became a race of agriculturists. In the latter eventuality, their produce would be negligible, and the greater part of the reserve was not particularly suitable for cultivation. He was very strongly of opinion that it should be the aim of the Government to develop the Masai as stock breeders only.

As the reserve would hold no more stock, he considered that the administration would be justified in taking steps to compel the Masai to dispose of their surplus stock. Their wants were few, and they had little use for cash; consequently some form of taxation was the only means whereby this object could be attained. A direct tax upon cattle would be just and equitable, and such a tax should be large enough to prevent the sheep and cattle from increasing out of all proportion to the carrying capacity of the country, but not so large as to prohibit such a reasonable increase as the country could carry with the aid of improvements.

The natural increase was at least 15 per cent. per annum, which meant that some 90,000 calves would be born during twelve months. A similar number would succumb, during the same period, owing to the increased struggle for existence. He thought that taxation should be large enough to compel the sale of at least 50,000 cattle per annum. The remainder could probably be accommodated in the reserve, if suitable improvements were carried out. The Masai would only dispose of their male cattle and barren cows, and the value of each beast would be about Rs. 40. They would thus be contributing Rs. 2,000,000 per annum by disposing of stock which would otherwise die of starvation.

Mr. Hemsted estimated that two per cent. on the value of the land in the reserve was Rs. 540,000, and considered that the Masai should be called upon to pay this amount to the State in direct taxation. From the total amount collected there would therefore be a balance of Rs. 1,300,000 annually. The cattle tax he proposed would be collected for a triple purpose:— 648*

(a) To secure a fixed revenue for the State based upon a certain percentage of the unimproved value of their land;

(b) To compel the Masai to put their surplus stock on the market instead of allowing it to die of starvation; and

(c) To provide funds for developments and improvements in the reserve.

In order to meet these requirements it would be necessary to fix the cattle rate at not less than Rs. 3 per head.

Mr. Hemsted did not think it possible to take sheep into consideration. The counting of the cattle would be difficult but the inclusion of two million sheep would make the assessment impossible. Nor did he consider it feasible to put the tax only on cattle over and above such a number per head of population as was sufficient for the owner's food supply. It was impossible to estimate the number of cattle required by a Masai for the wants of his family and himself. Milk was the staple diet of the Masai and the yield per cow was so small in the dry season that a thousand head might not be sufficient for the support of one family. Secondly, if, say, 200 head for each elder and Muran were exempt, it would probably be found, at the time of the assessment, that each owner had come to possess just that number. If a cattle tax was to be introduced, it should be on all cattle, irrespective of age or sex, with the exclusion only of sucking calves.

*G48

As the amount contributed by the Masai under this system would be greatly in excess of the amount due on land values, Mr. Hemsted proposed that this excess should be used on improvements and developments in the reserve, which might be done in the form of the provision of medical, veterinary and educational facilities, and by the improvement of the water supply.

The Governor and the Chief Secretary discussed the proposals contained in this memorandum and on the 19th of July, 1916, Mr. Hemsted was informed that the matter was receiving the consideration of Government.

Reconsideration.

The question was brought up again on December 8th, 1917, when it was decided by the Acting Governor in Executive Council to ask the Secretary of State if his previous decision could be reconsidered so as to allow the introduction of a stock tax on the Masai from the 1st of April, 1918.

A telegram to this effect was accordingly despatched on the 11th December stating that a portion of the additional revenue so acquired would be devoted to the development of the reserve, while the balance would enable proposals to be put forward for more extended veterinary research both in the field and in the laboratory.

In his reply, dated the 18th of December, the Secretary of State approved the proposal to consider the stock tax on the Masai in connection with the Estimates for the year 1918 on the conditions :—

(1) That the administrative officers should be consulted as to the probable effect of such a tax ;

(2) That the Government was satisfied that the increased taxation would not give rise to unrest among the natives affected and that the utmost care would be taken both to explain the proposed increase fully to the natives and to see that the reasons for it and the objects to which it was generally proposed to devote the money were clearly comprehended ; and

(3) That a full report would be sent before a final decision was given.

The terms of this telegram were discussed in Executive Council on the 20th of December when the Officer-in-Charge, being satisfied that no active opposition to a stock tax need be anticipated, it was decided that the reasons for the imposition of the tax and the methods in which the revenue so accruing would be utilised should be fully explained to the tribe. A tax of two rupees per head of cattle was to be imposed and it was suggested that, from the resultant revenue, a sum of £50,000 should be allotted for additional expenditure in the reserve.

The postponement of the introduction of the Tax.

The Officer-in-Charge was accordingly instructed to prepare estimates for the disposal of this money and generally to arrange for the preliminaries necessary to the collection of the tax. From representations made by him it soon became apparent that the tax could not be collected unless certain essential conditions could be insured. In order to pay such a tax, the Masai would be compelled to place a considerable portion of their surplus stock upon the market, and it appeared difficult to obtain a market for twenty or thirty thousand head of cattle of whom a large number would be of an inferior quality, not commanding a ready sale. Further, owing to the prevalence of pleuro-pneumonia and other diseases in the Reserve, veterinary restrictions would prohibit the removal of cattle from the Reserve for several years to come and no considerable quantity could be disposed of within the Reserve. Mr. Hemsted suggested that this difficulty might be met by the establishment of a canning factory, but as the preliminary arrangements for such an enterprise would take some time, this could not be regarded as an immediate solution of the problem. Secondly, the collection of the tax would necessitate the appointment of several additional administrative officers whose services were not then obtainable, and it was further considered impossible, owing to general shortage of staff, to carry out the long list of improvements to the Reserve which would be provided for by the allocation of £50,000 to this end. The matter was, therefore, again discussed in Executive Council on the 12th of

January, 1918, when it was decided that the introduction of the tax should be postponed and Mr. Bowring recorded his opinion that it would not be convenient again to consider the matter until after the war, or, at least, until it became possible considerably to increase the number of administrative officers in the Masai Reserve. 648*

SECTION 9.—TRADE.

The Growth of the Cattle Trade—Trade in Imported Goods—Somali Cattle Trade in the Southern Masai Reserve—Report by Mr. Bowring, Mr. McMillan and Lord Delamere, December, 1913—Restrictions on the entry of Cattle into the Masai Reserve—Itinerant Native Traders in the Masai Reserve—Temporary Occupation Licences—Mr. Hemsted's views; Establishment of Trading Centres: April, 1914—Mr. Sheely's views—Establishment of Trading Centres: July, 1914—Cost of erection of dips—Mr. Hemsted's proposals approved—Military requirements—The closing of the Masai Reserve to trade—Military restrictions removed—"Gazette" Notice re trading centres in the Masai Reserve—Plot holders permitted to sell cattle for cash in the Masai Reserve—Itinerant trading—Mr. Hemsted's views—Mr. Ainsworth's suggestions—Mr. Hemsted's comments—Further trade centres granted—No modifications made—Mr. Hemsted's suggestions for granting townships—Further trading centres granted. 000

The growth of the cattle trade 648* 439

As might be expected in the case of a pastoral and conservative tribe, such as the Masai, the years following the establishment of an administration sufficiently powerful to prevent recourse being had to raids as a successful means of augmenting their flocks and herds were employed in cattle trading on a large scale in both the Northern and Southern Reserves allotted to them. Cattle trade in the Southern Reserve was mainly in the hands of individual Somalis in small numbers, but the Northern Reserve formed one of the main markets in the Protectorate for all classes of Somalis who, bringing Somali and Boran cattle from the north, visited that territory on their way south and generally succeeded in advantageously disposing of all they took with them.

Trade in imported goods

European and Indian traders do not appear to have made any efforts to establish a trade on Laikipia, but a number of shops were opened by such traders in the Southern Reserve, on the Uaso Nyiro and at Ngong, during 1909 and the following years, and by the end of 1911 a flourishing but somewhat loosely controlled trade had sprung up, the Masai showing an increasing tendency to purchase imported articles and farinaceous foodstuffs.

In the extended Southern Masai Reserve a check occurred in the increase of trade during the course of the Masai move in 1912, and it was decided that no more permits to erect shops in that area should be issued until the move had been completed.

Somali cattle trade in the Southern Masai Reserve.

The advisability of allowing Somalis to carry on an unrestricted cattle trade in the Masai Reserves first engaged the attention of the Government early in the year 1912, when it was pointed out by the Provincial Commissioner, Naivasha, that by the importation of new stock, the already well-stocked grazing grounds were tending to become inadequate for the needs of the tribe, and also that by the provision of facilities for the exchange of sheep for breeding cattle, the encouragement that was being given to the Masai to sell their surplus stock was largely discounted. It was reported that from the Kitui and Machakos districts alone some 3,000 breeding cows had been exported to the Southern Reserve in the last quarter of 1911. As against these figures Mr. Hollis mentioned that, whereas one head of cattle consumed as much grazing as seven sheep, the Masai were willing to exchange thirty sheep for one heifer and that, in consequence, there was a considerable saving in grazing ground on such an exchange. This trade also was largely instrumental in ensuring a regular supply of mutton in the Protectorate and it was therefore decided in March, 1912, that no restrictions should be placed on cattle trading in the Southern Masai Reserve. Three months later this decision was temporarily modified by forbidding the issue of permits to trade in livestock in the Masai Reserves near the routes by which the Masai were travelling, while the move was in progress, but no restrictions were placed on the trade in the Ngong district. On the 1st of September, 1912, the Northern Masai Reserve was closed

* 648
439

to cattle trading on account of outbreaks of rinderpest and pleuro-pneumonia and it was decided that this trade should not be reopened until after the Masai had settled down in the Southern Reserve.

In November, 1912, Sir Henry Belfield raised the question for further consideration, it having been represented to him that the unrestricted touring of native reserves by itinerant Somali cattle dealers and the bartering by them of female stock for ozen was likely to be detrimental to the future of the tribes, more particularly the Masai, as tending to encourage their already too prevalent inclinations to increase the numbers of their herds and thereby placing a serious obstacle in the way of efforts to induce them to engage in trade and agriculture. It was his impression that it would be good policy to prohibit these traders from entering the reserves and to compel them to effect sales of stock, as opposed to barter, only at recognised trading centres. It would be impolitic to prevent the members of a tribe from purchasing in such markets, but they would not be encouraged to do so and there would be less inclination on their part to buy than was the case when the cattle were brought to their doors.

Report by Mr. Hemsley, Mr. Ainsworth, and Lord Delamere, December, 1912.

The Chief Secretary discussed the matter with the Provincial Commissioner, Naivasha, and later with Lord Delamere, and a joint report was submitted on the 23rd of December, 1912. The argument put forward was that the procedure of allowing Somalis and other traders to enter the reserve with cattle for trading purposes would hasten the day when the reserve would no longer be able to accommodate the cattle, and that this procedure kept up the price of cattle to such a figure that it was unremunerative for European farmers to purchase them. Even if no more cattle were allowed to enter the reserve, it would not be long before it became over-crowded, but it was desirable for political reasons to postpone that day as long as possible. In their report they recommended that the Masai should be encouraged to purchase cattle and sheep for cash, but added that there seemed to be no objection to livestock being obtained from the tribe in exchange for trade goods. They were opposed to livestock being allowed to enter the reserve for trade purposes and recommended prohibition of such importation. They saw no reason why the Masai residing within the reserve should be allowed to leave the reserve for the purpose of acquiring more livestock and they considered that any Masai who left his reserve to work and who expended his earnings in purchasing cattle or sheep should be allowed to take them back to the reserve with him. The desire to possess livestock being the only incentive for the members of this tribe to work for wages, they feared that unless the workers were allowed to spend their wages in the purchase of livestock, they would not go out of the reserves, with the result that there would be a dearth of reliable herds. In addition, they suggested that the Masai could well afford to pay a tax on their livestock and considered that such tax should be collected in cash, thus necessitating the sale of stock in order to obtain rupees. The Masai Reserve would thus become a source of supply for the settled areas of the Protectorate.

In short, they recommended that cattle and sheep should be allowed to leave the reserve freely (subject to any veterinary regulations) but that none should be allowed to enter the reserve except on certificate from an European employer to the effect that the individual importing them had earned the wages with which he purchased them.

Restrictions on the entry of cattle into the Masai Reserve.

Sir Henry Belfield expressed himself generally as in agreement with these views, but decided to postpone consideration of the proposals for the imposition of a cattle tax until the Masai had settled down. After consideration in Executive Council, he directed that passes to leave the reserve should only be issued to those whose intention it was to look for work, and that the certificate recommended as a condition under which cattle and sheep could be taken into the reserve should not be insisted on. Rules were accordingly issued under the Outlying Districts Ordinance, 1902, to the effect that no licence would be granted to any persons to enter the Masai Reserve, except subject to the condition that the licensee would not take or allow to be taken into the reserve any cattle or sheep and that such condition should be endorsed upon every licence granted in respect of the Masai reserve.

This notice was subsequently cancelled (*vide* p. 95).

648*
439

In May, 1913, it was decided to enforce the stipulation that no Masai be permitted to take stock into the reserve unless that stock had been purchased with wages earned and that no permit be issued in respect of such stock unless the stock were the property of the applicant.

Itinerant Native traders in the Masai Reserve.

In October, 1912, certain European plot-holders in the Masai Reserve complained of the itinerant trade carried on by the Kikuyu with the Masai. Four isolated shops, three European* and one Indian, existed in the South Masai Reserve, but these catered only to a limited extent and in certain limited areas for the wants of the Masai, and there was therefore scope for the itinerant native trader who would supply the goods required by the Masai at a less exorbitant price in exchange for sheep and skins. As it was part of the general policy to encourage the demand for trade goods on the part of the Masai, the Provincial Commissioner recommended that itinerant trading of cash or trade goods against sheep or cattle be permitted without restriction but that no cattle be allowed to enter the reserve for trade purposes. After a trial extending over a period of five months, he found himself unable to recommend the continuance of the system, which was creating a lazy type of Kikuyu who would buy sheep in large numbers in exchange for tobacco. In September, 1913, Mr. Hemsted represented that such trade supplied a much-felt want by enabling the Kikuyu to purchase sheep from the Masai and tending to make the former more industrious. Further, under the terms of the agreement of 1911 between the Masai and the Government, the latter had undertaken not to permit any person other than a member of the tribe to occupy land within the reserve, except with the consent of the Masai and as the "Masai case" was then before the Courts, Mr. Hemsted found it impossible to open trade centres as Legalishu, contending that this agreement was invalid, refused to sign any document in respect of the leasing of areas in the reserve, fearing that such a step might be construed as an acknowledgment of the existence of the treaty and might jeopardise his claim to Laikipia.

Under these circumstances, therefore, the Governor saw no reason to suppose that this trading was likely to be productive of anything but benefit to both parties. At the same time, he asked the Officer-in-Charge what was the extent of the legitimate requirements of the Masai and whether it would not be advisable to limit the number of trading licences in proportion to those requirements. To this Mr. Hemsted replied that there was no limit to the amount of the flour, tobacco and trade goods which the Masai could absorb, and as the established merchants at the time were incapable of coping with the demand, he proposed to place no restrictions on the number of natives entering the reserve for the purpose of such trade. These proposals were approved in October, 1913.

Temporary occupation licences.

In that month, owing to the refusal of certain Masai to attach their signature to agreements in respect of trading plots, the temporary occupation licences of two of the plot-holders had to be cancelled at three months' notice. The Masai were somewhat nervous that the conditions of the treaty would not be strictly adhered to and feared that they might be deprived of certain grazing lands. The action of one of the plot-holders in utilising a considerable area of land round his store as grazing ground for his own herds did not tend to lessen their anxiety in this connection.

With the Masai adopting this attitude, the Governor thought that it would be unwise to recognise any agreement with the chiefs until the litigation in respect of Laikipia had been concluded. While, therefore, he considered that the business carried on by these traders was advantageous to the Masai and should not be disturbed without strong reason, he was of the opinion that no document of any description should be given them in respect of their temporary occupation, but that they should be permitted to occupy such small areas as might be necessary for their trade, on the understanding that they had no rights in those areas and were liable to removal at any time.

*648
439

In May, 1914, Mr. Hemsted represented that the practice of allowing traders to squat at various places in the Reserve or to travel at will therein was far from satisfactory. It rendered the enforcement of veterinary regulations difficult and was deprecated by the better class traders themselves as rendering the erection of permanent stores and dwelling houses an unprofitable proceeding. The Masai, he said, could never be developed on civilised lines if a measure adopted for their own good fell through owing to their inability to understand the nature of an agreement or because of their intense conservatism. He therefore asked for permission to gazette certain trading centres without having a formal agreement in writing, except as regards the Ngong District. His proposals were, however, regarded as premature pending the conclusion of the litigation.

Mr. Hemsted's views—Restriction of trading centres—April, 1914.

On the 10th of April, 1914, Mr. Hemsted advocated the adoption of a far greater measure of control over stock trading in the reserve. The arrangement of allowing itinerant traders rendered difficult the enforcement of veterinary regulations and several cases had recently occurred in the neighbourhood of Naivasha where the farmers' flocks had been infected with scab caught from sheep passing from the Masai Reserve. It was impossible thoroughly to inspect the tens of thousands of sheep that passed out. The Chief Veterinary Officer had advocated the erection of dips at the main trade exits, where all stock destined for other parts of the Protectorate might undergo a period of dipping, but Mr. Hemsted considered that the consequent delay, the necessity for providing superintending veterinary officers, difficulties in obtaining food, the erection of accommodation and the hindrance to trade caused by limiting the number of exits would make the system so inconvenient as to stifle business.

In place of this system he suggested the entire prohibition of itinerant trading, both white and black, the establishment of trading stations at various parts of the reserve, the erection of a dip at each trading station and the compulsory dipping of all animals intended for removal outside the reserve. Owners of plots were to have the monopoly of exporting stock. The advantages of this system were that trade would be restricted to well-known and probably substantial merchants who would be unwilling to run the risk of evading the regulations. They would be able to carry out the necessary dipping with a minimum of inconvenience in the vicinity of their own stores and the sheep would be in a better condition for the market. Resident storekeepers would be able to remove their stock by any route open to them without risk of carrying infection, and the dips would also be available for the Masai if they cared to use them or if dipping were made compulsory. The sheep trade with the Masai was, he said, capable of great expansion.

Mr. Stordy's views, June, 1914.

The Chief Veterinary Officer discussed the matter with certain administrative officers at Naivasha and his views were embodied in a letter dated the 11th of June, 1914. The regulation published in February, 1913, forbidding trade in livestock in the Masai Reserve and restricting the entry of cattle was open to abuse and was, in itself, a dead letter, as it was not possible to prevent such trading and the surreptitious movement of stock. The regulations had been of an administrative nature, as no veterinary objections existed to the trade and there were considerable differences of opinion regarding the best policy to pursue in the matter. Apart from the question of the development of the Masai, the interests of European cattle owners and sheepmasters were involved. The former would urge that if trading of cattle in the Masai Reserve were allowed it was impossible for them to obtain stock, as cattle in the open market would rise to a prohibitive figure, it being a more remunerative business to exchange cattle for sheep and goats with the Masai. On the other hand, the sheepmaster had need of native ewes, of which the Masai possessed some two millions and the supply of which was cut off if the Masai Reserve were closed to the entry of cattle, as it was only by such barter of stock that the Masai could be induced to part with their sheep in any numbers. Further, such sheep had proved to possess valuable qualities as resisters of both external and internal parasites and to be a cheap and accessible foundation for sheep flocks of both woolled and mutton types. Mr. Stordy pointed out that cattle were required by the great majority of farmers, whereas the settled areas suitable for sheep were practically confined to the Rift Valley

where the land had been subjected to many years of close grazing by Masai cattle. Nevertheless, he recommended the legalization of this trade as being preferable to the system of smuggling then obtaining and proposed that this should be effected by gazetting ports through which livestock could be taken from and into the reserve. Weikei, Ngong, Kiserian and Saukutiek were suggested as suitable places for the establishment of trading centres. 648* 439

The question of the advisability of opening up the Masai Reserve for trading purposes was referred by Government to the various Farmers' Associations in June, 1914, but, owing no doubt to the dislocation of business caused by the war, no replies were received.

Establishment of trading centres, July, 1914. 648* 439 36

In July, 1914, Mr. Hemsted reported that he was obtaining the signatures of the Masai representatives to the 1911 Treaty to the agreements which were a necessary prelude to the opening of trading centres in the reserve. He found the Masai generally to be quite willing to set apart the requisite land for the purpose and proposed that each trading centre should embrace 100 acres of two-acre plots, with the stipulation that the Masai were not to be deprived of any grazing ground except such as was included in the actual plots. The Masai had not asked for any compensation in respect of the land to be granted for these trading centres, but Mr. Hemsted suggested that it would be equitable to apply the rent charged for the leasing of the plot for the benefit of the Masai themselves. He proposed a rental of twelve rupees a month per plot which would, he thought, be sufficiently high to discourage the petty indigent Swahili without deterring the better class trader. He proposed to restrict trade to the resident store-keepers, thus giving owners of plots the monopoly, and to forbid itinerant trading; and, in view of the recommendations of the Chief Veterinary Officer, he suggested the erection of dips at these trading centres which were to be the main points of exit from the reserve in order that all animals intended for removal therefrom might undergo a course of dipping. The requirements of the Kikuyu and Lumbwa peoples could be met by the establishment of markets at various points outside the Reserve, which would be preferable to allowing the continuance of the system of itinerant trading by these natives.

In a supplementary letter, Mr. Hemsted named twenty-six localities at which he suggested the establishment of trading centres. These were:—Narok, Ngong, Mara River (Engirenyie), L'aitokitok, Kanamu (near Kiu), Kelong, Ndubie (on the Narok-Kijabe cart road), Uaso Nyiro (near Aggett's store), Naroaura River (near Van de Weyer's store), Endaragya (in the Leita Hills), Siaona, Ol Alungu (fifteen miles above Aggett's), Lemek, Mara Bridge, Ol Joro le Ngutuny (in Ol-Oyokuti country), Gelegele (on the Kisii road), Barlomat (twenty miles south-east of Engirenyie), Man (near Likia on the Nakuru track), Kandia (on the Mbagathi River), Weikei River (on the Narok-Kijabe road), Saukutiek River on the Man (on the Naivasha track). The exits from the reserve would be at Ngong, Kandia, Weikei and Saukutiek and the erection of dips was recommended at these four exits. Later in the year he suggested the addition to this list of Ol Jorolwa and Metiguju trading centres, for which the exits would be Kandia, Ngong or Tsavo.

Cost of erection of dips.

The Chief Veterinary Officer had suggested that the Masai might be asked to defray the cost of erection of these dips, but the Officer-in-Charge gave his opinion that, as the dips were to be constructed primarily in the interests of veterinary requirements outside the reserve in order to prevent the spread of disease, it would be inequitable to request the Masai to pay for their erection even though the natives might make use of them.

Mr. Hemsted's proposals approved.

The Governor remarked that the selected sites and exits appeared to be well chosen and in September, 1914, agreed to all Mr. Hemsted's proposals, including his recommendations about the cost of the dips.

Military requirements.

At the commencement of the war, the Intelligence Department expressed the desire that all Indian, Somali, and native traders be removed from the reserve, but it was subsequently arranged that they should be allowed to carry on their business at the trade centres and as it became necessary to exploit the Masai

+GA8
A39
366

Reserve to ensure supplies of beef and mutton for the troops, arrangements were made in September, 1914, for trustworthy Somalis to exchange, on permit, cows and heifers for sheep and bullocks in the reserve, subject to restrictions limiting the number of cows imported to thirty-five head per journey and regulations necessitating the sale to Government of the stock so obtained at Ngong station. The price for sale to the Military Authorities was fixed at Rs. 4–5 per sheep and Rs. 30–50 per bullock for a beast of about 350 lbs. killing weight.

The Closing of the Masai Reserve to trade.

In August, 1915, instructions emanated from the Secretariat prohibiting until further orders the issue of permits to enter the Masai Reserve, while all Somalis then in the reserve were to be removed before the end of September. Such a step was necessitated by the military situation and the food requirements of the troops were met by authority to commandeer stock from the Masai for cash.

In October, 1915, it became necessary for the General Staff to order the closing down of all trading centres situated within twenty miles of the Anglo-German border, while at the same time all traders were prohibited from entering that area. In January, 1916, further restrictions were enforced and traders were excluded from the district east of the Mara River which had not previously been closed. This order was subsequently modified to permit trading in established centres north of the Kijabe-Mara cart road, but with a total prohibition on itinerant trading.

Military restrictions removed.

The trading centres which were thus closed to Indians, Somalis and Swahilis comprised Mara Bridge, Siamna, Narosura, Enkasgren, Gelegele, Mogor, Bardamat and Ol-Orokuti, all of which were within forty miles of the boundary, but in response to Mr. Hemsted's representations, the Military Authorities permitted the opening of these stations in July, 1916, on the understanding that no undesirable person should obtain a plot and that the prohibition on itinerant trading should remain in force.

"Gazette" notice re trading centres in the Masai Reserve.

On the 8th of December, 1915, a schedule of trading centres was published in the "Official Gazette." The Notice read as follows:—

"The Government of the East Africa Protectorate with the consent of Segi, Engatuya, Naburi, Marmori, Langiri, Agali, Ole Yeli, Ole Naigiss, Ole Gaikayan, Ole Matipo, Ole Nakola, Ole Kotikosh, Ole Batiet, Ole Tuwes, Ole Mashonti, Ole Gelisho, Ole Malit, Ole Tanyai, on behalf of the Paramount Chief and the representatives of the Masai tribe is prepared to grant occupation rights within the outlying district known as the Masai Reserve in centres the names situation and areas whereof are specified in the Schedule annexed hereto on the terms and conditions following:—

"1. Plots of 2 acres approximately.

"2. Rental per plot per mensem Rs. 12.

"3. Separate plots for Europeans, Asiatics and Natives.

"4. Plots will be let under annual occupation licences.

In view of the fact that cattle were being commandeered from the Masai and bought for cash, the question of the advisability of permitting the Masai to purchase stock with cash so obtained was brought forward by Mr. Hemsted in February, 1916. He represented that new blood would be beneficial and that the small numbers of cattle so purchased would not materially affect the situation and therefore he recommended that established traders be permitted to bring cattle to their stores for sale to the Masai for cash. The Governor approved this measure but considered that it would be a good thing if it could be arranged that the opportunities given to the Masai for purchase should be limited to higher grade cattle to the exclusion of native stock. The Rule under the Outlying Districts Ordinance, dated the 4th of February, 1913 (*vide* p. 91), was therefore cancelled by Rule in the "Official Gazette" of the 1st of March, 1916.

Plus bullocks purchased for 48 cattle for cash in the Masai Reserve.

In October, 1916, Mr. Hemsted submitted a comprehensive memorandum on the policy which should be pursued in regard to itinerant trade in the Masai Reserve. He deprecated any policy of throwing open the reserve to unrestricted itinerant trading. A large business had been built up by the better class of merchant at the trading centres, by which the requirements of the Masai had been greatly augmented and had to a very considerable extent been met. Itinerant trading would force these men to adopt similar methods and would lead to the discontinuation of trade centres. The Masai would be content if articles were brought to their doors and would never visit the centres, thus losing touch with outside influences and with the benefits accruing from competition between merchants. The question also affected the labour market, as thousands of Kikuyu would prefer making a livelihood by barter with the Masai to working for wages. The system of trading centres had proved both beneficial and acceptable to the Masai who appreciated the cheaper rate at which they could obtain goods, while they had found from experience that the system of itinerant trading led to many cases of theft or alleged theft.

Itinerant trading. Mr. Hemsted's views.

The result of the establishment of trading centres and of the exclusion of the itinerant trader had been the establishment of shops by more than one hundred and twenty merchants in the Narok and Mara districts alone and the Masai had asked for eight more centres in these districts. Trade had been almost at a standstill in the Ngong districts, where there were only three trade centres, but the opening of

*646
439
366

twelve more had recently been asked for and Mr. Hemsted anticipated that there would shortly be from 250-300 plot-holders in the reserve if the present system was adhered to. Masai funds would therefore benefit to the extent of two or three thousand pounds a year from rent of plots.

Mr. Ainsworth's suggestions.

Mr. Ainsworth, to whom the memorandum was referred, considered that a system of monopoly would not achieve progress and that the confinement of trade to plot-holders was undoubtedly such a system. The conservative ideas of the Masai would, he thought, be more rapidly changed by encouraging the greater freedom of trade. Plot-holders would benefit by any increase in the cattle trade on a cash basis, particularly if the itinerant cattle trader was confined to making purchases for cash. Mr. Ainsworth accordingly suggested, for adoption as Government policy, the commencement as soon as possible of a property tax on the Masai, the prohibition of barter of stock except as between Masai and Masai, the encouragement of the erection of permanent houses by the chiefs and principal elders, restrictions on the importation of cattle into the reserve, the establishment of stock markets at trade centres at which cash sales should be enforced and the confining of itinerant traders to the various markets. Itinerant traders should only be permitted to enter the reserve on passes from District Commissioners and natives of other tribes should only be allowed in the Masai Reserve for limited periods unless properly employed by non-natives. Finally, he recommended that a schedule be drawn up of improvements necessary or desirable in the interests of the Masai and that the Masai be invited to associate themselves with such improvements and make an annual contribution towards their being undertaken.

Mr. Hemsted's comment.

Mr. Hemsted, in commenting on Mr. Ainsworth's suggestions, remarked that it appeared improbable that the Masai would ever develop into porters or agricultural labourers and that the only feasible policy appeared to be to develop them as stock breeders, in which capacity they would be a far greater asset to the country. Their ideas were already changing. About 20,000 bullocks and 150,000 sheep had been provided for the military authorities and forty-four trading centres had been set apart, wherein some two hundred plots had been leased on temporary occupation licences. Trade in the Masai Reserve was greater in proportion to population than in any other part of the Protectorate. He recommended that the introduction of cattle into the reserve should be unrestricted. The natural increase of the Masai herds approximated 90,000 per annum and the number introduced from outside would be negligible in comparison. Moreover, new blood was beneficial and the Masai stock was deteriorating owing to in-breeding. The necessity for supervision would render difficult and expensive any system whereby itinerant traders, as opposed to plot-holders, were permitted to sell in open market even at trade centres, and he hardly thought the policy of compelling traders to sell for cash to be practicable.

Further trade centres gazetted.

Two notices published in the "Official Gazette" of November 22nd, 1916, indicated the opening of twenty more trade centres in the Masai Reserve. The Notices read as follows:—

"The Government of the East Africa Protectorate with the consent of Segi, Engaroya and Ole Galishu, on behalf of the Paramount Chief and the representatives of the Masai tribe is prepared to grant occupation rights within the outlying district known as the Masai Reserve in centres the names, situation and areas whereof are specified in the Schedule annexed hereto on the terms and conditions following:

"1. Plots of two acres approximately.

No modification made, February, 1917.

The question of the advisability of once more allowing free entry of cattle into the reserve was discussed in Executive Council, on the 20th of February, 1917, when it was decided that no interference with, or modification of, the existing arrangements was desirable.

Mr. Hemsted's suggestions for gazetting townships.

In October, 1917, Mr. Hemsted made proposals with a view to the regulation of trade in the reserve, and to the granting of facilities to persons, other than the licensed plot-holders. He suggested that all trade centres be declared townships, with markets declared therein and rules applied, and he proposed that no trading should be permitted except at the gazetted trade centres. He contended that the bringing of the Masai into touch with outside influences, the benefits of competition, the encouragement induced to place trade on a cash basis, and the assistance which would thereby be given to the native labour supply, were advantages which might be claimed for this system, while it would also be more practicable to enforce the veterinary regulations. The Masai, as well as all traders, except some Somalis, were in favour of confining trade to the trade centres. No fees would be charged to persons buying in the centres for cash only, but a schedule of fees for licences and of market fees was suggested.

The question was considered in Executive Council, of the 12th of January, 1918, when the consensus of opinion was that matters should remain as they were. The Officer-in-Charge, who was present during the discussion, did not wish to press his recommendations.

Further trading centres gazetted.

Five additional trading centres were opened by notice in the "Official Gazette," of January 30th, 1918. The notice read as follows:—

"The Government of the East Africa Protectorate, with the consent of the Paramount Chief, and the representatives of the Masai tribe, is prepared to grant occupation rights within the outlying district known as the Masai Reserve, in centres, the names, situations and areas whereof are specified in the Schedule annexed hereto, on the terms and conditions following:—

000

Towards the end of the year 1908, a tour of inspection was made by Mr. McClure, the Acting District Commissioner, Ngong, and Captain Monckton, the Assistant District Commissioner, Sotik, in the country lying west of the Southern Uaso Nyiro, more especially of the areas known as Osero and the Loita Plains and Hills. This inspection was conducted with a view to ascertaining the potential value of the area as a place for European settlement. The opinion of these officers was that the land near Sotik was, on the whole, unsuited to such settlement, because, although portions of the land could be converted into farms, the holdings would be so disconnected by reason of lack of permanent water, that proper supervision of the area would be impracticable. The permanent streams were so far apart as to preclude any possibility of allotting land on a systematic plan, but they suggested that it was admirably suited to a nomadic and pastoral tribe, such as the Masai. Tour by Mr. McClure and Captain Monckton. 648* 312

A portion of the west bank of the Uaso Nyiro, and the Lemek Valley, had already been allotted to Europeans, but some 2,300* square miles of land were left available for European or native settlement. Of this area, 1,300* square miles might be described as waterless, *i.e.*, without permanent water of any description. After a moderately rainy season there would be sufficient water for such a tribe as the Masai. The year 1908 had been unusually dry, but a fair amount of standing water was found in dry river beds.

Large numbers of Purko Masai had recently migrated from Ngatet to Osero, the Rotuaik and Morijo Plains, their numbers being estimated at 2,270 men, women, and children, with 20,000 head of cattle, and the grazing grounds in Osero were said by the Masai to be exceptionally good. The value of the magnificent grazing in the Loita Plains was greatly reduced by the absence of springs or other permanent water, but this country had previously been occupied by three clans of Masai—the Loita, L'Otayok, and Damat. 166 311 312

These officers estimated that the area could easily provide dry and wet weather grazing for 100,000 head of cattle, provided the water difficulty was overcome, and reported that the ravages of fly were confined to the country near the Anglo-German border.

The country was next visited by Messrs. Bagge and Hollis, who toured, from the 10th of March until the 20th of April, 1909, the area lying between the Uaso Nyiro and the Mara River with a view to ascertaining the value of the region for occupation by the Masai then located in Laikipia, paying special attention to the water proposition. They reported that the two large rivers, the Uaso Nyiro and Mara, were 35 miles apart at their nearest points, that there were several minor rivers of no great length, and that water was obtainable by digging at various points. Some of the best water on the Uaso Nyiro was already in the occupation of white colonists, and a considerable portion on Il Melili was also marked off for alienation. Under the observed conditions, Mr. Bagge was unable to recommend the removal of the Northern Masai into the region, and he suggested the investigation of the potentialities of the Mau uplands. Tour by Messrs. Bagge and Hollis. 648* 312

* It is possible that these areas were over-estimated owing to the absence of an accurate survey.

*G48
312

Mr. Hollis was of opinion that half of the area of 2,300 square miles was useless for cattle during the greater part of the year, owing to scarcity of water, while in one-eighth a fly was found (a species of tabanus) which caused great irritation to cattle. He was, however, convinced that, if it were possible to irrigate the waterless parts or to dam up some of the springs and make furrows, the greater part of the Loita country would become an excellent grazing area. He suggested that a sum of £1,000 be set aside for the purpose of watering the country, and that an engineer be detailed to inspect and report on the area. At the same time, he pointed out that money spent on such inspection would not be thrown away, even if the Masai were not moved from Laikipia, as any improvement of the area in question would mean that more land became available for white settlement.

Tour by Mr. Watts.

The district was accordingly visited by Mr. G. K. Watts, Commissioner of Public Works, who left Nairobi on June 28th, 1909, and spent a month investigating the possibility of providing a sufficient water supply for the stock which might be transferred from the Northern Reserve. From an examination of the geological properties of the area, Mr. Watts concluded that the conditions obtaining therein, except in the country between Lake Naivasha and the Engare Nguaur, were similar to those previously dealt with by him in India, and he therefore considered that similar methods could be used. These were :-

(1) The sinking of wells ;

(2) The damming of rivers by permanent earthen, masonry, or concrete dams, and providing a waste weir round the dams, fixing sluices in the dams themselves ;

(3) Making small masonry dams across rivers and allowing the flood water to flow over them ; and

(4) The construction of small dams with trees, boulders, and clay, and allowing water to percolate through in ordinary times and to flow over the top in the floods.

He considered that no improvements were necessary on the Mara River, or between Lake Naivasha and the left bank of the Uaso Nyiro over the Mau, and by way of Saukutiek, as the country was already well watered, and he recommended the following constructions :-

(a) For the northern portion of the Loita Plains, two canals 15 miles apart and 15 miles long, and carrying 225,000 gallons per hour.

(b) For the southern portion of the Loita Plains, a dam composed of trees, boulders, and clay in the hills above the Olodari River, and a furrow 15 miles long.

(c) For the Loita Hills, dams to form artificial reservoirs ; these would be simple of construction, as gneiss and mica schist rocks of good cleavage were found in the hills.

(d) From these hills to the German boundary, and in Osero, a combination of the well and dam system.

In the plain below Naitong spring and in the Lemek Valley more investigation was necessary.

He considered that a sum of £5,280 would have to be expended on these works before the whole area could be utilised for grazing purposes, and he asked that provision to the extent of £2,000 be made in the estimates for 1910-1911 to make a commencement. This sum was inserted in the Estimates but was disallowed by the Secretary of State.

Government liability to improve water supply.

During the negotiations which preceded the Masai move, Sir Percy Girouard informed the Masai Chiefs that he would be willing to assist the tribe in digging wells and improving the water supply if it were found that the water in the extended Southern Reserve were insufficient for their requirements. No steps were taken, however, until the removal of the Masai to the Southern Reserve had received the approval of the Secretary of State on the 29th of May, 1911.

648*
312

In August, 1911, Mr. Catchpole was sent to construct canals as proposed by Mr. Watts from the Uaso Nyiro to the Loita Plains. £400 was available for this work and a sum of £2,000 had been sanctioned for the improvement of the water supply in the extended Southern Reserve. The project seemed to be one which would involve greater expenditure than that originally anticipated, owing to the configuration of the country; the construction was therefore delayed, while the best means of improving the water supply were re-considered and Mr. Catchpole recalled.

Meeting at Nakuru.

A meeting was held at Nakuru on the 12th of September between the Provincial Commissioner (Mr. Ainsworth), the Director of Public Works (Mr. McGregor Ross), and Executive Engineer (Mr. G. H. Creswell). In addition to the unexpected difficulty and cost of construction of the canals, it appeared doubtful if the water from the Uaso Nyiro was sufficient to provide water for any extended scheme of distribution on the Loita Plains. The configuration of the country was unsuitable and the water difficult of access. It was therefore urged that further investigation should be made before the Masai (whose southward movement had received a check) were finally moved into the area.

The Trans-Mara area.

On the 24th of October a report was received from Messrs. MacDonald and Atkinson in respect of the Ol-Orokuti country, from which they had just returned. The area was said to contain one million acres of the finest grazing land in the Protectorate and to be well watered. Some investigation was, however, necessary in order to locate all the available sources.

'L-Engutoto area.

On the 14th of November, Mr. E. D. Browne reported that the south end of 'L-Engutoto, extending into the Osobugo Oirobi, was well watered by permanent streams and could hold more stock if necessary.

Sir Percy Girouard's proposal.

Before he went on leave in February, 1912, Sir Percy Girouard suggested that water might be supplied from the Uaso Nyiro by ram for distribution in the country within seven miles of the river. Conditions of site might be found which would allow of water being lifted for a portion of this distance by ram and delivered for the remainder by gravitation.

The banks of the Uaso Nyiro were examined by Mr. Creswell in July, 1912. He found no suitable place for the installation, but several places were located on the Loita Plains which could be turned into lakes by means of inexpensive dams. In particular he mentioned the valley of the River Sosian as being eminently suitable. No provision was made for the installation of rams.

Mr. Catchpole's work.

It had originally been thought that the provision of facilities for watering cattle in the Trans-Mara district would be the most urgent work required in the extended Southern Masai Reserve, but it was soon found that other districts demanded prior attention. In the first place, it was evident that, owing to the very large herds of cattle using the roads from the Mau towards the Mara River, it was necessary to protect the water holes en route, particularly in the Lemek Valley.

On July 29th the Provincial Commissioner, Naivasha, had asked for sanction to employ a European overseer, then working on the cattle route through the Mau Forest, in constructing dams first on the Marmonet and then on the River Sosian or other stream beds in the Loita Plains. Sanction had been given and Mr. Catchpole reached the Lemek Valley at the end of August. As the work in this valley was more urgent, he attempted to dam some small streams on the North side of the valley but found the ground to be exceedingly porous. There were five well defined springs in the neighbourhood but their capacity was small. He eventually proceeded to work at dams on the Loita Plains.

Mr. Blain's proposals.

On the 31st December, 1912, Executive Engineer Mr. Blain submitted a scheme for storing water in iron tanks in order to provide water facilities for cattle on the Loita Plains. He was of opinion that the volcanic nature of the soil and the faults in the underlying strata made the success of earthen dams very uncertain. The high rate of evaporation—about six inches per month in the dry season—would cause a serious loss of water in the case of earth dams with a large exposed surface and he suggested covered concrete reservoirs or iron tanks as an alternative.

648
312

Iron tanks were preferable on account of the lower initial cost and the practicability of moving them to the most suitable places as they became known by experience. The cost of a unit of 9,000 gallons per month, which would be sufficient for 100 head of cattle, was estimated at Rs. 1,208. It was suggested that 50 such units should be provided as an experiment, and funds amounting to £4,360 were asked for for this purpose. Certain springs in the Kedong Valley were suggested for treatment by this method, but information was lacking as to the permanency of the various sources and the number of cattle which would be placed in the neighbourhood if the water were made available by this method. No action was therefore taken on this suggestion.

At the beginning of the year 1913, £200 had been spent by the Provincial Commissioner, Naivasha, in making small dams in various parts of the extended Southern Reserve, but the £2,000 sanctioned in September, 1911, for use on this work had been practically untouched.

The engagement of Mr. Watts.

In January, 1913, the Chief Secretary recommended the engagement of a competent engineer to make careful surveys of the area between the Uaso Nyiro and the Mara River, to take observations and to superintend the works decided on. The draft Estimates for 1913–14 contained provision for £8,335 to be expended on buildings and works in the Southern Masai Reserve and it was considered inadvisable to divide this sum under specific sub-heads until the requirements of the water supply were better known. The Governor considered that it was of the utmost importance that the reserve should be ready for occupation by the time the Masai move (then in progress) was completed, and gave orders that steps be taken without delay to effect further progress with the works. The dams already constructed had not been favourably reported on and he considered that the work could not be delayed until the money set aside for the project in 1913–14 became available. He proposed to engage the services of Mr. Watts, formerly Commissioner of Public Works, and obtained the Secretary of State's approval to this appointment on the 30th of January.

Necessary improvements.

The Masai moved from Laikipia had expressed a preference for the country east of the Mara River, and few had crossed the river. The dams constructed by Mr. Catchpole had sufficed for the existing requirements of the Masai near the Lemek Valley, but more extensive works would be necessary in the future and it was suggested that Mr. Watts should examine this part of the district immediately with a view to commencing waterworks on a larger and more permanent scale.

The rains had been so abundant since July, 1912, that the grazing in the trans-Mara country was all that could be desired and greatly in excess of the actual momentary requirements. The Provincial Commissioner, Naivasha, suggested that examination of that area be postponed until March, 1913, which would be the first occasion on which it might be inspected in a period of drought.

The construction of the Lemek Dam

Mr. Watts toured the Cis- and Trans-Mara areas in March, 1913, and left Nairobi on the 17th of April to improve and enlarge one of the dams constructed by Mr. Catchpole in the Lemek Valley.

Recommendations by Messrs. Watts and Hemsted.

On the occasion of Sir Henry Belfield's tour in the Masai Reserve in July, 1913, Mr. Watts submitted an interim report on the work he was doing in the Lemek Valley. His general project was the damming of a stream which had been left untouched by Mr. Catchpole, and raising and improving of Mr. Catchpole's dams, which had been practically destroyed by the herds of cattle in May, and the construction of a dam below those made by Mr. Catchpole and on the same stream. The first dam was to be forty feet high, and built in a narrow deep ravine in a stream above the other two dams. A drain was to be cut which would act as a feeder from this large dam to the smaller dams down the valley. Mr. Watts anticipated that the seepage through this big dam might, in time, cause the surplus water to flow at the surface of the valley below, and so form a permanent stream, thus tending to keep the lower dams full throughout the year.

648*
312

By the 23rd of July, the big dam was 28 feet high, with 25 feet of water behind it. The lake would eventually be 450 feet long and 150 feet wide, and would contain 600,000 cubic feet of water. A waste trench was provided to remove surplus water in the rains. The dam was being composed of stone and earth, and the estimated cost was £500.

The two lower dams were to cost £250 each, and were constructed each to contain 800,000 cubic feet of water. They were situated so as to be fed throughout the year by one small stream.

Mr. Watts estimated that the water in the dams would suffice for stock grazing over an area of 100 square miles near the site, and hoped to complete the works during October, 1912.

In September, Mr. Watts discussed the general question of the water supply with Mr. Hemsted, and joint recommendations were submitted by these officers in October. The report stated that the whole country from the Uaso Nyiro and its tributaries to the Mara River was closely grazed wherever water was available, and that in the area between the Uaso Nyiro and Kijabe the country near water was grazed and the remainder devastated by grass fires. The only good grazing remaining was to be found on the slopes of the Mau, on the hills near Narosura towards the Anglo-German border, and in parts of the trans-Mara country. It was necessary, therefore, to improve the supply between Ngong and the Uaso Nyiro and on the plateau above the Isuria Escarpment in the Trans-Mara. Such improvements would render a vast area, which could only be utilised for a few weeks during each monsoon, available for grazing all the year round.

Mr. Watts explained that the estimate of £5,280, made in 1909 was made on account of 80,000 head of cattle only, and that the question of water supply had been considerably enlarged by the revised estimate that 300,000 head of cattle were to be provided for. Little difficulty had been experienced during the year 1912, as the rainfall had been above the normal, and many of the natural sources of water had held out longer than usual.

As a major scheme, Mr. Hemsted suggested that the water should be brought in a canal or pipes from the River Nivabei on to the top of the Mau spurs and into the valley below Mount Suswa. Mr. Watts estimated the cost of this project at £15,000 or £20,000, and, in the event of this work being considered too expensive, he suggested that this area might be improved by the construction of dams at eight places where water in holes was known to exist.

In the Trans-Mara area three or four dams were necessary on the plateau.

Mr. Watts asked for the insertion of £7,500 in the draft estimates for 1914-15, which sum would go far towards the construction of the dams at the suggested places. Work on the grazing areas in the mountains situated between the hot springs at Oljoro Oirosa and the German boundary might be deferred until the year 1915-16. Those areas were not being used for lack of water, and the country was being devastated by grass fires.

The completion of the Lemek Valley Dams.

Work on the Lemek Valley dams was completed in October, 1913. The big dam was 42 feet high in the highest part and 178 feet long at the top. More than 10,000 head of cattle watered at it. The smaller dams were dry until early in November, when, as a result of heavy rain, water accumulated in them, but it was not until the end of December that they were filled to sill level.

The Bardamat Dam.

On completion of his work in the Lemek Valley, Mr. Watts proceeded to Bardamat, situated 10 or 12 miles to the south-east on the edge of the Loita Plains, and started work in the middle of November. There were only three or four small springs at Bardamat, so trampled in by stock as to be almost lost. A dam 600 feet long and 17 feet high in the highest part was commenced, the dam being faced in front with stone pitching, carefully handpacked. By the middle of December it was high enough to store 2,000,000 gallons of water, and a temporary waste weir was made to carry off the water.

Water collected in the dam in December and continued in it during the three following months though some 10,000 head of cattle watered there daily.

*648
312

During the year 1913-14, £3,200 was spent in making these dams in Lemek Valley and Bardamat, and during the 13 months beginning on the 1st of March, 1913, Mr. Watts spent eight months in construction work.

Further proposals by Messrs. Watts and Hemsted.

In January, 1914, Messrs. Watts and Hemsted submitted proposals for the continuation of work on the improvement of the water supply of the reserve. They recommended

(1) The completion of the Bardamat dam.

(2) The provision of steel drinking troughs at the Koiyaki spring a permanent spring, situated some 12 miles south of Mara Post (Engirende).

(3) The construction of one or more dams in the Trans-Mara country between the Mara and Mogor River.

(4) The construction of a dam in the Kedong Valley.

(5) The provision of pumps and drinking troughs at all dams and the erection of fences to protect the sources behind them.

(6) The investigation of a project for diverting the Siyabei River in its upper courses to supplement the flow of the Olodari and Penyin Rivers, and thereafter for watering the country west of Mount Suswa, known as Lelesbwa; and

(7) The construction of a dam in the Lailela Plains in the upper Loita country.

The Loita Plains were described as one of the least valuable areas in the reserve, considered as a region for the permanent support of large numbers of live-stock; the grazing in the plains was frequently exhausted before the natural supplies of water failed. It was therefore thought that the completion of the first, second, and last of the projects recommended would suffice as development in that area.

[65] Liability of the Masai to provide funds.

In June, 1913, Sir Henry Belfield had explained to the Masai that, when the Government had afforded certain practical examples of the benefits which would accrue from the conservation and distribution of water, the tribe would be expected themselves to defray the cost of such additional works as they might require. He therefore considered that it was open to question whether all the proposed works should be undertaken at Government expense, and that it would be sufficient to proceed with them as far as the provision for 1914-15 became available. When these funds had been utilised, he advocated further consideration of what additional works should be taken in hand and of the method of meeting the cost.

The Ngori Gori Dams.

After touring the Trans-Mara area with Mr. Hemsted in March, Mr. Watts returned to Bardamat and continued the construction of the dam. Early in April he visited Ngori Gori, on the border of the Loita Plain and close to a branch of the Chepalungu Forest. En route he repaired one of Mr. Catchpole's dams near Lone Hill. From the 8th to the 24th of April he worked at two dams at Ngori Gori, completing them for a cost of £247. One dam was 325 feet long and 9 feet high; the other was 400 feet long and 20 feet high.

On April 25th he reached the Penyin River and laid out work for a new dam at Ndulele. He estimated that the dams he had already constructed would protect 225 square miles of country and provide drinking water all the year round for 34,125 head of cattle or some 150,000 sheep. The works were much appreciated by the Masai in the neighbourhood, who had thrown out suggestions for further improvements required.

Work in the Kedong Valley.

On June 12th, 1914, Mr. Watts left the Penyin dam uncompleted and proceeded to the Kedong Valley to investigate the possibility of constructing a dam on the Kedong River for the use of the Masai.

The Kedong River is one of uncertain flow. In May, 1909 and March, 1911, the Greater Kedong was not even flowing as far as its junction with the lower Kedong. In January, 1913, the combined stream disappeared a quarter of a mile below the house belonging to Marquis Hornyold and Captain Riddell, and

648 *
312

it was unusual for the water to reach that house after August in any year. A site for a dam was chosen which was believed to be in the Masai Reserve, but was, after the work had been started, found to be on Marquis Hornyold's land. Mr. Watts then suggested the completion of his dam at this place and the conduction of water pipes from the reservoir to the Masai Reserve. This proposal would entail the acquisition from Marquis Hornyold of the land used for the dam spread, pipe line and inspection path, but was, he considered, the only method by which water could be supplied to the Masai in the Kedong Valley. This course was, however, open to certain objections and Mr. Watts was instructed to discontinue his work there, and employ all his labour in draining swamps on Mr. Bowker's land in the Kedong Valley. The Governor was not prepared to consider the question of the expropriation of land from Marquis Hornyold until it had been demonstrated that the use of the area for the purpose proposed was essential and not merely desirable.

In the event of proposals for the acquisition of this land falling through, Mr. Watts suggested that water might be provided by the construction of a smaller temporary dam at this spot while a permanent dam was constructed lower down the Valley in the Masai Reserve.

From July to November, 1914, Mr. Watts worked on a drainage scheme on European farms in the Kedong Valley. Water was unobtainable at these places in the Masai Reserve where the construction of the most urgent works was contemplated, and he was unable to work on them. His expenses during this period were not charged against the Masai Water Supply Vote.

In July Messrs. Webb and Morgan continued work at the Penyin dam under instructions from Mr. Watts, but left the work unfinished owing to the commandeering of their oxen at the outbreak of war.

On the 20th of November, Mr. Watts left the Kedong for the Weikei River and commenced building a dam on the 22nd. The site of the dam was on the eastern slopes of the Mau Escarpment, south of Lake Naivasha and west of Mount Suswa. The dam was made 300 feet long and 30 feet high and contained 1,220,000 cubic feet of water. This dam was finished on the 8th of April, 1915. The Weikei Dam.

Work was resumed on the Penyin dam in April, 1915, and the dam was completed on the 21st of May. This dam was situated in a valley at the top of the Mau Range on the west side of the junction of Il Melili and Leleshwa at an altitude of 6,900 feet. It was 462 feet long and 16 feet high and contained 660,000 cubic feet of water. The Penyin Dam.

Mr. Watts then constructed a dam on the east side of Ileleshwa facing Mount Suswa at Ol Motiyo and afterwards one at Marmonet. Ol Motiyo and Marmonet Dams.

In March, 1915, the Masai of the Kakonyukye division contributed a sum of Rs. 10,450 to be utilised in improving the water supply of their country and the total contributions from the Masai amounted to Rs. 14,450 in June. Contributions by the Masai.

A certain amount of damage had been caused to the dams at Lemek and Ngori Gori by the rains in April, 1915, and Mr. Watts proposed to repair them in August. For military reasons his visit had to be postponed and he proceeded to the Saukutiek on the 9th of August to improve the springs on the top of the Mau and to clean out the bed of the Weikei River. During September he was working on the Il Melili section of the Mau Range. Damage to dams at Lemek and Ngori Gori.

Funds for the improvement of the Masai water supply ran out in September, but the Governor approved the utilization of money accruing from rents on trading sites in the Masai Reserve in order that the necessary repairs to the Lemek and Ngori Gori dams might be carried out. A certain amount of money was also transferred from the Masai Suspense Account for the completion of these dams. With such funds it was proposed to complete the dams at Ngori Gori, the repairs at Lemek, and the opening up of springs at the sources of the Saukutiek, Weikei and Penyin streams. After these works had been completed it was decided that the continuation of Mr. Watts' services depended on whether the Masai subscribed further funds for additional works of construction. Shortage of funds.

*648
312

The completion of the Ngeri Gori Dams.

During November and the first half of December, Mr. Watts completed the dams at Ngeri Gori. The incomplete dams had been greatly damaged by cattle in June and a large amount of reconstruction was necessary. In addition, there were two bad washaways owing to heavy rains on the first two days of December and the work was therefore unduly retarded and expensive, the total cost of completion amounting to £448.

Repairs to Lemek Dams.

Temporary repairs costing £20 had been done on the Lemek dams by a gang of porters in May and June, 1915, but in revisiting the site in November, Mr. Watts found that the lowest dam had been badly trodden in and that the second dam had suffered similarly but to a less extent. These, together with some repairs to the upper dam, were attended to at a cost of £246, and Mr. Watts left Lemek on the 6th of January, 1916.

Mr. Watts' final report.

Before leaving Nairobi on March 18th, 1916, Mr. Watts submitted a final report on the work which had been accomplished on the improvement of the water supply in the Masai Reserve. The works included :—

1. Three dams in the Lemek Valley.
2. Two dams at Ngeri Gori.
3. One dam at Bardamat.
4. One dam at Ndulele on the Penyin River.
5. One dam at the River Weikei.
6. One dam at Ol Motiyo le Kanuaion.
7. One dam on River Marmonet.
8. The cleaning of a portion of the River Sankutiek and its tributaries.

Sufficient water had been stored for the supply of stock grazing on eight different areas of one hundred square miles each and this area could support 64,000 head of cattle.

In every case, except at the Weikei, the water had out-lasted the grazing available.

Mr. Henstel's proposals.

In March, 1916, Mr. Henstel reported that some £10,000 might soon be available for works in the Masai Reserve for the benefit of the tribe, and suggested that part of this sum might be expended in the conservation and distribution of water for livestock. He advocated the necessity of a preliminary survey of the area, which should be undertaken with the object of investigating the possibility of :—

(1) Providing troughs or stone pitched watering places at perennial springs.
(2) Opening up old springs which had been trampled in by cattle.
(3) Distributing water by means of pipe-lines from the large rivers.
(4) Constructing dams in places where water was entirely absent or to which it was impossible to conduct pipes.
(5) Sinking wells and pumping water into troughs by windmills.
(6) Constructing irrigating furrows.

He remarked that unusually dry conditions had prevailed during the time when Mr. Watts had been in the reserve, and considered that the annual cost of repairing washaways, which were bound to occur in some of the dams in wet seasons,* would be so large, that it was inadvisable to undertake dam works of this description. He preferred the preparation of a larger number of smaller watering places, where water could be conducted into drinking troughs from springs, which should be regularly cleaned and carefully fenced. Numerous springs existed, having a daily discharge of from ten to twenty thousand gallons, which would, if properly treated, suffice for the stock able to use the pasturage available in the vicinity.

* The dams at Weikei, Ol Motiyo le Kanuaion and the Marmonet River were all destroyed during the 1918 rains.

G48 312

In January, 1917, the Governor considered that it was necessary to take other measures for the supply of water to the unwatered districts of the Masai Reserve. Efforts had been made to institute a search for underground water by means of boring in the Rift Valley, but these had fallen through owing to lack of machinery. He, therefore, recommended to the Secretary of State the measures proposed by Mr. Hemsted, and received approval to his proposals in March.

In that month he approved the proposal to effect repairs to dams built by Mr. Watts, when and as repairs were required. The cost of each repairs was not expected to exceed a few hundred rupees annually.

On the 18th of December, 1917, the Director of Public Works, the Officer-in-Charge, and the Chief Veterinary Officer, met to consider the question of the improvement of water facilities in the Masai Reserve. The enormous areas of low-lying land extending down to altitudes greatly lower than those of some of the more copious springs and areas supplied to them to offer ready facilities for the distribution of a water supply by means of piping. The engineering operations involved in such distribution of water over many hundreds of square miles of country, which were unusable for stock during drought conditions, were of a simple nature, and a brief and inexpensive consideration would result in the mapping out of one or two projects which would suffice for all requirements for the next year or two, while continuous travel by engineers would result in the gradual improvement of small supplies by very inexpensive works, such as boring off springs and draining swamps. The general idea of the pipe-lines was to locate iron troughs, roughly at intervals of ten miles, and it appeared that the diversion of one source of water would probably suffice for a fully stocked area of some six hundred square miles. The cost of imported piping was, however, considered at this time to be prohibitive, and it was decided that such an important undertaking should await a settlement of the question of the imposition of a cattle tax on the Masai.

Apart from this major scheme, the Committee drew attention to the possibilities of extracting water from deep or inaccessible water holes, by means of bullock-driven pumps, such as that about to be installed at Ele-kokiri. They also suggested that the afforestation of some of the higher areas of the reserve, not suitable or required for grazing purposes, could be relied on to improve the yield of the neighbouring springs.

In January, 1918, the Acting Governor sanctioned the expenditure of £300 from the Masai Suspense Account upon drainage of some swamps in the upper course of the Weikai River. In dry weather the whole of the water of this river is lost in the extensive swamps and reedy stretches of the river bed, and it was with a view to conserving this water supply in dry periods that the work of drainage was to be undertaken. The Secretary of State conveyed his approval to this expenditure.

In September, 1918, the Director of Public Works drew attention to the extreme interest that would attend the excavation of deep bores in the Rift Valley, where it forms a portion of the Masai Reserve. Having recently visited the Ele-kokiri water hole, some sixteen miles west of Ngong mountains, with a view to investigating the possibilities of installing windmill-driven pumps at that place, he came to the conclusion that this water might be a re-emergence of the Kedong River. The region was manned by numerous vertical fault planes which provided opportunities for running water to leave the surface and go underground. The Rift Valley tended to lower and lower elevations in a series of gigantic steps as one proceeded southwards, and dominating this descent there existed a lake of unknown depth and of eighty square miles expanse at Naivasha, a lake which remained fresh although it had no surface outlet, and although its banks, and probably its bed, were impregnated with alkali. Mr. Bellinger Ross considered the evidence of a subterranean outlet from Lake Naivasha to be almost conclusive, and stated that it could be absolutely established within a period of twelve months, by an extension of the evaporation observations, which had for the past eight years been carried out at Naivasha. It was, he said, an interesting subject

* 649
312

for speculation as to whether the existence of the deposits at Lake Magadi might not be attributed to the emergence of underground flows from Lake Naivasha and other surface waters of the Rift Valley, which had become heavily charged with alkali, in a long and slow passage underground.

Economic areas of the Masai Reserve, where theoretical considerations led him to believe that underground water existed, were practically useless on account of the absence of water, and he recommended that an attempt should be made to procure the services of one of the boring parties, who were being employed in connection with the military operations, to perform a series of borings which should be carried to a depth of at least two thousand feet, unless fresh water was encountered at shallower depths. The localities he suggested for these experiments in the first instance were in the Ewaso Nyiro Valley and at Olkeju Nyiro, two months south of that place, where there was plain evidence of the action of copious surface water in recent times.

It was, however, found to be impossible to obtain the services of the personnel of a Water Supply Corps, although correspondence to this end was undertaken, both with the military authorities and with the Union of South Africa.

The Director of Public Works' letter, which had been forwarded to the Colonial Office in October, 1916, was referred by the Secretary of State to Dr. Strahan, the Director of Geological Survey, who remarked that recent volcanic rocks, which formed the greater part of the region in which it was proposed to bore, were usually traversed by fissures and caves, and that the disappearance of rivers might be due in part at least to their finding underground channels of this description. It seemed highly improbable that the future deposits of alkali at Lake Magadi would be appreciably affected by the proposed bore-holes. He agreed that the suggestion that the freshness of Lake Naivasha was due to a circulation arising from the existence of underground outflows was a possible one, but mentioned that no re-emergence of the water had been found and that there was no clue as to the direction taken by the supposed outflows. The chances of striking them in a bore-hole appeared to be remote. Having regard to the character of the region, he considered that the quality of the deep-seated water, which it was hoped to obtain by boring, would be doubtful. The Secretary of State was, therefore, of the opinion that the project should be further considered before any action was taken which would commit the Masai to expense in the matter.

The Commissioner of Mines, in the middle of 1917, placed such evidence as was available before Professor J. W. Gregory, who expressed himself deeply interested in the proposals and considered that the chances of success in bores placed at suitable positions in the Rift Valley to the south of Lake Naivasha in the Kedong Valley and south of Mount Suswa were sufficiently good to justify the risk. Mr. Bowring therefore suggested to the Secretary of State that Professor Gregory should be asked if he could arrange to visit the Protectorate and make a short personal examination of the area in question. This has been arranged for, but Professor Gregory has not yet been able to absent himself from India for the purpose.

PARTS II.—POTENTIALITIES OF THE MASAI RESERVE.

CCD Population—Conservation—Employment for the Masai—Stockmen—Or Surveyors—Investment for such labour—Employment in the E.A.R. or Police—General employment of Masai—Masai stock—Veterinary work—Masai conservation—Water supply—Improvement in water supply—Improvement in the breeds of Masai cattle—Taxation—Policing of locations—Masai as an asset to the Protectorate—Masai residing in the reserve—Future of the Masai.

In dealing with the potentialities of the Masai Reserve, it is possible to treat separately the two branches into which the question is divisible, namely, the potentialities of the Masai people and those of their possessions; and it is necessary in either case to consider the characteristics and attributes of each such division in connection with statistics.

[illegible]

With regard to the potentialities of the Masai as a tribe, it must be borne in mind that the total population of the Masai in the Masai Reserve numbers no more than 42,000. Of these, it may be assumed that about 20,000 are males of all ages, while some 4,000 are Moran. Taking the proportion normally maintained among other native tribes, for which more accurate statistics are obtainable, it is found that approximately 10,000 males are boys under the age of the Moran class while the remaining 5,000 are elders. It will thus be seen that the fighting contribution is relatively small in regard to population, and that, therefore, consideration will be necessary if the attitude of the tribe are to be utilized to their fullest capacity. Population 162

Sufficient has already been said of the conservatism and stubbornness which are the dominating characteristics of the Masai. The state of illness in which both young and old live has proved a barrier to progress which has resisted all efforts made in the past to introduce development on civilized lines. The only reasons which has attained to any degree of success in the establishment of trading centres, where a carefully controlled trade has opened the eyes of the Masai to a small extent to the advantages of imported articles, and has created some desire on their part to invest a proportion of their enormous capital in trade goods. Even so, it appears that they have not been induced to desire anything more progressive than flour, sugar, and honey in the way of food, and such imported articles as umbrellas, blankets, cotton clothing, knives, axes, and cooking pots. They are still in a most primitive state. Conservatism 181

The semi-military organization which has been handed down by their ancestors is still preserved, and continues to act as a deterrent to any innovation. Now that raids are ended, the Moran have nothing to occupy their attention, and it is this fact that has rendered it necessary to consider the possibilities of developing them into useful citizens along a definite line of policy, rather than to adopt merely normal administrative measures, which has been so successful among the other tribes of the Protectorate. Of their own free will, the Masai will do nothing except fight with the weapons they know, and the young men of between sixteen and twenty-five years of age have now no occupation of any description. It is on behalf of these youths, the Moran, that the first steps in the necessary policy must be taken. Development for the Masai 178 464 561

It is known that, by their training from their earliest years, the Moran are experts in the handling of stock. Each boy has been accustomed to herd hundreds of head of cattle since the days when he started to walk, and there is probably no other nation in the world that can boast such a measure of success in this branch of knowledge. But, after circumcision and the assumption of the status of warrior, the youth leaves the care of stock to younger boys, and his ability in this direction is thereby wasted. Herdsmen 464 561

It is said that about fifteen per cent. of the Masai of the Moran class are employed by various farmers in herding cattle, but, even to this extent, the value of their services is largely discounted by the aversion which they show to the performance of work which they consider to be derogatory to their dignity, and the limits of what is not undignified are very materially confined. Manual labour of any kind is regarded as objectionable, and the Masai are physically incapable of carrying loads. But, if they are given a wage high enough to satisfy their scruples, if they are considerately treated, and if they regard the climate of their employer's land as suitable, they cannot be improved upon as cattle herds. The Moran class [461] [147]

In normal times, the number of settlers in the Protectorate who would make use of this class of labour is not large, and the demand for public purposes is smaller still, while the utility of the Masai as a whole in this connection is greatly diminished by their dislike of working for a European whom they do not know, and by the weakness of their constitution, which renders them suitable for work in a restricted area only. In order to make the Masai suitable for general employment even as cattle herds, therefore, it is necessary either to allow their consumption of their dignity so as to make their services of more general application, or else to insist on their performing for a smaller remuneration the work that they will consent to do. Demand for such labour.

464
561

It seems doubtful if either of these courses can be pursued without exercising stronger measures than persuasion, for this latter has not been lacking in the past. The numbers of the tribe being so small, it would certainly appear to be inadvisable to compel the Masai to undertake agricultural labour for work outside the reserve, as such a step would be sure to cause active discontent without adequate results, but there also seems to be no reason why these expert herdsmen should not be made to exercise their talent to the exclusion of the inferior material obtainable from other tribes. Herdsmen are of essential service to many farmers, and from among the Masai can be drawn some of the best herdsmen in the world.

Employment in K.A.R. or Police.

The reputation for cunning, organization, and militarism which the Masai have enjoyed in the past has also led to consideration of the possibility of utilizing these powers under modern conditions, by enrolling a number of Muran in the King's African Rifles and Police. Experiments have been tried in this connection for more than fifteen years, but, save for some individual exceptions, they have proved unsuccessful. One or two Masai who have succeeded in passing the necessary tests have developed into reliable and efficient soldiers and policemen, but, in spite of repeated trials, the vast majority, discharged as unlikely so to develop, have been turned back to the reserve and represent so much time, labour and money wasted. Such soldiering and discipline appears to the Muran to be too nearly akin to work to be acceptable to them, and they adopt from the first an attitude of passive resistance and listlessness, the exact opposite to that keenness which is essential to successful development. So much has been learnt from past experience, and the compulsory recruiting scheme which is now being acted on, apparently with the consent and approval of the elders of the tribe, has not yet shown signs of any improvement in this attitude. It remains to be seen, however, whether this renewed attempt to break down the barrier of conservatism and sloth will be such as to induce the Muran to take part, as a matter of pride in their ability to do so, in a branch of utility for which their traditional training would appear admirably to suit them.

General employment of Morans.

The employment of the Masai Muran as herdsmen, or as askaris, seems to be the only obvious method by which they can be called on to demonstrate their position as an asset to the state outside their own reserve, and, provided that sufficient development can be procured inside the reserve, it would possibly be bad policy to insist on outside labour by any of the other classes of Masai males. It remains to consider what may be the best means of utilizing their services within the confines of the reserve, and this question is closely connected with the potentialities of the Masai possessions.

*648
23
[454]

Masai stock.

The wealth of the Masai is entirely invested in stock, and is said to amount to the colossal figures of 715,000 head of cattle, more than 2,000,000 sheep and goats, and 10,000 donkeys. This stock is concentrated in a reserve of some 14,800 square miles in extent, of which part is waterless and unfit for stock, and of which part is regarded by the Masai as unsuitable for cattle owing to a suspicion of disease. These two actual and problematical disabilities combine to make the stock-carrying capacity of the reserve but little in excess of what it carries at present, and it is maintained that, without the provision of veterinary facilities, and without the undertaking of public works towards the better distribution of the water, the reserve is now so full that the annual death-rate cannot be less than the annual increase, or in other words, that the amount of stock owned by the Masai is now stationary.

Veterinary work.

As may readily be imagined, the problem of providing veterinary facilities for these vast herds presents such difficulties on account of its magnitude that very considerable increases would be necessary in the Veterinary Field Staff before anything but isolated attempts could be undertaken. This has been the main difficulty in the past, and must remain so at any rate until the cessation of war conditions enables the Government to augment its Veterinary Department by the addition of other qualified officers. Money has been voted in the Estimates for the financial year 1918-1919 for a commencement to a comprehensive scheme of veterinary research in the Protectorate, and these proposed activities affect the Masai Reserve in many ways. A dipping scheme is to be introduced which will,

it is hoped, in time, so alter the conditions in the Masai Reserve as to render their cattle immune to East Coast fever, and steps are now being taken to establish a branch veterinary laboratory at Narok where a more thorough investigation will be made into the characteristics and peculiarities of the diseases to which Masai cattle are subject. 648* 231

One of the difficulties which will have to be met, after the requisite staff has been obtained, is, again, the conservatism of the Masai. They consider the stock they now possess to be better suited to the reserve than any other, and they prefer to breed immunity to disease by letting a disease run its course rather than by procuring immunity through treatment or the application of veterinary science. It will require perpetual perseverance to ensure the performance of a continuous treatment of cattle such as dipping, the Masai themselves being too lazy and lethargic to possess the keenness necessary to help themselves in the matter, and an attitude of passive resistance is all that, from past experience, can be expected of them. In spite of such difficulties, however, it is possible to hope for an improvement in the stock conditions of the reserve which will eventually enable not only certain infected areas to be utilized, but will also render the Masai reserve less of a danger to the stock industry of the Protectorate. Masai conservatism. 648* 18 23 [232]

A great deal can still be done in improving the watering and grazing properties of the area. The reserve is on the whole by no means badly supplied with springs and rivers, but many of these are practically useless for watering large herds of cattle owing to their inaccessibility or to the unsatisfactory nature of the approaches to them. Streams frequently rush down a hill-side to disappear into the ground within a few yards of the foot of the hill, and small springs become so trampled that it is impossible for cattle to drink at them. The ground becomes swampy, the supply of water gradually decreases, and at times the spring becomes extinct. Water supply. 312

A peculiar feature of the Masai Reserve is that the large rivers flow within a few miles of each other, frequently through dense bush or forest country where there is no grass suitable for cattle and their usefulness is thus materially impaired. The Uaso Nyiro, Uaso Narok, Siyabei and other considerable streams rise close together on the Mau and flow through forest glades practically parallel to each other until they eventually meet and thence flow through a deep gorge. But the western portion of the reserve possesses this advantage: all the large rivers have their sources at a considerable altitude of from seven to nine thousand feet, and it would be an engineering feat of no great difficulty to conduct water from these rivers into the low-lying grazing areas at the foot of the hills, some two thousand feet below. This project has been much under discussion and may be expected to eventuate, in common with other development schemes, when funds and staff are available. The dams which have been erected across certain of the streams have not proved the success it was hoped, as they are liable to damage by floods and are constantly requiring labour and expenditure for repairs, but the provision of pipe-lines and troughs seems to offer every prospect of a solution of the difficult problem of rendering the enormous grazing areas in the Loita Plains capable of being utilized at all times of the year to carry as much stock as their acreage will hold. There is no doubt that when these water-works have been constructed any shortage of grazing for the amount of stock now in the reserve will have ceased to exist. Improvement in water supply.

As a direct result of these disabilities of disease and shortage of water and grazing the Masai have maintained that the kind of cattle they possess is better suited to the conditions encountered in the reserve than any imported grade-stock. In this matter also their conservatism comes into play, but it is probable that, in this case, their contention is supported by fact. A pure-bred bull was recently purchased for use with the Masai cows in an attempt to procure a better and more marketable kind of stock, but this animal died before sufficient evidence had been obtained to prove or disprove the Masai contentions, and the problem has still to be dealt with. The Masai cattle are undersized and in-bred, and present in their existing state no prospect of becoming of value to the outside market. The potential asset to the Protectorate represented by a capital of 715,000 head of cattle, with an annual increase of about 90,000 head, is thus wasted, and the most Improvement in the grade of Masai cattle. 648* 231 [232]

*648
231

essential problem before the Government at the present time in dealing with the Masai is how to turn this annual increase into a realizable asset. The proposals for imposing upon the Masai a tax of two rupees per head of cattle per annum, approved by the Governor in January, 1918, fell through mainly owing to the impossibility of procuring a market for the quantities of almost worthless stock that would have been produced in payment, and it is difficult to see how this objection is to be overcome unless some much more marketable commodity is produced. Purchase by local residents and firms of the kind of Masai stock that would come in as a result of the imposition of such a tax would in all probability be very limited in extent, and no business firm has yet come forward with proposals for taking over such stock for canning or export by other means. It has not yet been proved or disproved that such Masai stock is marketable for the purposes of human consumption, but it is a fact that much of the stock from the Masai Reserve produced for slaughter by the military authorities was returned as unsuitable, and while it is extremely improbable that the Masai would be able to pay their tax in cash, it is only reasonable to expect that the worst stock would be paid in in lieu of cash where that was unobtainable.

Taxation.

Problem of taxation.

The problem, therefore, appears to be as follows. If the necessary staff is provided, a tax can be collected from the Masai at the rate approved which will bring in stock assessed at £100,000 annually. Of the money realized, £50,000 is to be devoted to works in the Masai Reserve which will so improve the conditions therein as will not only render it capable of maintaining a larger number of stock, but will also so alter the conditions as to make it probable that a higher grade of cattle could be supported in the reserve. When this last step has become effective, it may reasonably be assumed that a market will be forthcoming for the cattle paid in as a tax, but it is not yet proved that it will be possible to realize the value of the stock collected in the earlier years. A trial alone can demonstrate this.

*648

Masai as an asset to the Protectorate.

Enough may now have been said on the subject of the potentialities of the reserve, but it must also be borne in mind that, of the proposed cattle tax, one half of the proceeds are to be paid into the general revenue of the Protectorate, and that it is a matter of concern not only to the reserve, but to the Protectorate as a whole, that the proceeds of the tax should be forthcoming in the shape of a realized asset as soon as opportunity occurs. The Masai have hitherto paid a hut tax at the rate of three rupees per hut, which sum, amounting to less than £3,000 per annum, has not covered the cost of their administration, but the proposed tax will not only cover the cost of the administration of the reserve, but will leave a considerable balance for the general development of the Protectorate, while the needs of the Masai Reserve can be attended to to the fullest extent of which the staff is capable.

[551]

461
464

Masai residing in the reserve.

Of the Masai residing within the reserve, the most that can be expected of those who are not tending cattle is that they will help in the performance of the public works which are destined to be undertaken therein. Hitherto they have not been employed on such works, as manual labour does not appeal to them, and it is indeed doubtful if such a change will be brought about in their temperament as to induce them to perform this. That the position may not be hopeless is perhaps suggested by the fact that certain sections of the Somali tribe who had until recently maintained an attitude similar to that adopted by the Masai, commenced manual labour last year, and a corresponding change for the better may still occur among the Masai.

177
[591]

Future of the Masai.

Conditions have so greatly altered in the Masai Reserve during the last few years that the power of the medicine-men as a class has greatly decreased. The insistence on education for the Masai may further enlighten them, may undermine their conservatism, and may encourage them to discard their prejudices. An organized movement to show the Masai the development that is going on around them and to drive home to them the fact that unless they progress they are bound to disappear in the circumstances attendant on the introduction of civilization may have its effect in eventually bringing them to a conception of their duty. The Masai problem has not yet been tackled, but the prospect of rendering them useful citizens of the Empire is not entirely without hope.

Chapter VII.

MISCELLANEOUS HISTORICAL INCIDENTS.

INDEX.

000

1. Murder in West Kenya, March, 1912.
2. Turkana raid on Masai, June, 1912.
3. Raids on Samburu, June and October, 1912.
4. Forcible removal of Masai into German territory, July, 1912.
5. Raids on Meru and Kikuyu in the Nyeri District, August and September, 1912.
6. Murder of two Kikuyu, September, 1912.
7. Friction with Latuhwa, October, 1912.
8. Raids and murders towards the end of 1912.
9. Raid into German territory, December, 1912.
10. Murders near Rimoruti, January, 1913.
11. Iron bolts on Mpagli Railway, January, 1913.
12. Murder of Lambwa and Kavirondo, January, 1913.
13. Raid on the Moschi District, February, 1913.
14. Masai raid on Suk, February, 1913.
15. Reserve boundaries broken, April, 1913.
16. Cattle thefts on Laikipia, April, 1913.
17. Sir Henry Belfield's tour in the reserve, June and July, 1913.
18. Cattle dip at Ngong.
19. Ngong Savings Bank.
20. Narok Station.
21. Raid by German police on a Loita village, October, 1913.
22. Raid by Wachagga, January, 1914.
23. Definition of the Anglo-German boundary.
24. Raid on Athi River store, February, 1914.
25. Additional police post in Gilgil area, April, 1914.
26. Raid on a Moschi farm, April, 1914.
27. Permission to kill game, August, 1914.
28. Tendency to move northwards, August and September, 1914.
29. Grazing concession to the Masai, January, 1915.
30. Raid into German territory.
31. Raid into German territory, February, 1915.
32. Raid on the Ngoroimi, April, 1915.
33. German raid south of Lake Magadi, June, 1915.
34. Proposed trough construction along the Magadi Railway.
35. Attempt to return to Laikipia, June, 1915.
36. Raid into German territory, July, 1915.
37. Attack on Uregi, August, 1915.
38. German raid, September, 1915.
39. German raid, December, 1915.
40. Raid into German territory.
41. Grazing concession, December, 1915.
42. Kakenyukye raid into German territory, January, 1916.
43. Elmentrita-Narok telegraph line, January, 1916.
44. Fine imposed on Sighirari Masai, January, 1916.
45. Application for a collective fine on the L'Otayok division, March, 1916.
46. Raid into German territory, April, 1916.
47. Immigration of Salei Masai, May, 1916.
48. Cattle theft by the Masai from the Kikuyu.
49. Murders on the Kisii Road, July, 1916.
50. Raids by Wandorobo.
51. Murder of two natives near Narok, November, 1916.
52. Permission to shoot lions, December, 1916.
53. Move of the Kakenyukye division to the Ngong Hills, December, 1916.
54. Murders near Dagoretti, March, 1917.
55. Murder of two Kikuyu boys, May, 1917.
56. Unrest among the Purko Murran, June, 1917.
57. Mr. Morrison's case, August, 1917.

1. In March, 1912, a Kikuyu boy was murdered by two Masai on a farm belonging to Mr. Cole in West Kenya. The murderers were arrested, and, one turning King's evidence, the other was convicted and hung. Murder in West Kenya, March, 1912. 648*

*648 Turkana raid on Masai, June, 1912.

2. A large party of Turkana raided Kune, about forty miles north of Rumuruti, in June, 1912, and carried off cattle estimated by the District Commissioner to number 158 head. One Masai elder was killed. Fifty-eight of the cattle were recovered by the District Commissioner, Turkana. A patrol which toured Turkana at the beginning of 1913 captured from them a number of cattle, and one hundred head of the captured stock was reserved as compensation for the Masai. Owing, however, to an outbreak of disease, it became necessary to sell the remainder, and eventually, at the end of 1915, Rs. 2,621 were paid to the Masai, a further Rs. 1,500 being subsequently added in compensation for loss and as blood money.

*648 579 721 Raids on Samburu, June, 1912, October, 1912.

3. In June, 1912, the Samburu of the Embarta plains were raided by a small party of Masai. On the 28th of October, the Samburu in the same place were again raided by similar people. No trace of the stolen cattle was found, though it was reported on reliable information that they had been taken into the Southern Masai Reserve.

*648 563 Forcible removal of Masai into German territory, July, 1912.

4. In July, 1912, a number of Masai Wandorobo living near the border were raided by German patrols and were forcibly removed with their stock across the border into German territory. A meeting was arranged between Herr Altmann, Imperial Secretary of Schirati District, and the District Commissioner, South Kavirondo District, when the affair was investigated on the spot where the outrage was supposed to have been committed, but with no good results.

Further enquiries were made and the assistance of the German Governor was solicited, but the evidence obtained was inconclusive, and as it was stated that the Wandorobo in question had, until shortly before the incident, lived in German territory the matter was allowed to drop.

*648 579 [721] Raids on Meru and Kikuyu in Nyeri District, August and September, 1912.

5. On August 1st, 1912, the sub-district of Sigania in the Nyeri District was raided, five men were killed and ninety head of cattle taken.

On September 5th, a trading party of Kikuyu were attacked at the Siki River on the Nyeri-Meru road. One Kikuyu youth was killed.

On September 20th and 22nd raids were attempted on Kikuyu kraals close to Nyeri.

Murder of two Kikuyu, September, 1912.

6. In September, 1912, two Kikuyu natives were murdered by the Masai near Lenana's old kraal some fifteen miles from Nairobi. Two Masai were arrested, convicted, and hung for the offence.

Friction with the Lumbwa, October, 1912.

7. In October, 1912, while the Masai move was in progress, a certain amount of friction was noticeable between the Masai and the natives from Lumbwa and Sotik and raids were reported from Ol-Orokuti and Norgunono. A patrol under Captain W. B. Brook operated in Sotik country along the Mara River to keep such raids in check.

Raids and murders towards the end of 1912.

8. Several isolated raids and murders which took place during the last few months of 1912 were traced to parties of unidentified warriors, believed to belong to the Purko and Loita divisions of the Masai who were then settled on the western boundary of the Southern Masai Reserve. Five such incidents were reported, namely :—

(1) The murder of two Lumbwa men and one woman on the south side of the Mara River close to Lemek Valley.

[721] (2) An attempted theft, on the 16th of December, of forty head of cattle from Mr. Johnson's farm, during which attempt three Lumbwa were killed.

(3) An attempted theft in Uregi, a location in the South Kavirondo District, in the course of which one native of that location was killed. One of the natives implicated in this affair was a Purko, who alleged he had been accompanied by a Loita.

[721] (4) A raid into German territory among natives known as Ngoroimi, in the course of which fifty head of cattle were stolen and a woman and child were killed.

(5) An alleged theft of ten head of cattle from natives in German territory. This was probably the work of some other tribe.

698*
579

As it proved impossible to discover the identity of the offenders in these cases, the probability of the guilt of the Muran of the Purko and Loita divisions, enhanced by their refusal to render assistance in locating the criminals, was considered sufficient to warrant the imposition of a fine under the Collective Punishments Ordinance, 1909, and the Secretary of State approved the collection of a fine of one hundred head of cattle on each village of the two sections. There were, in all, one Loita and four Purko villages,* and after the payment of compensatory blood money to the relatives of the deceased, it was decided to devote the remainder of the fine collected to the undertaking of works for the improvement of the reserve. [628]

The imposition of this fine served largely as an object lesson to the Masai indicating that raids must cease. A military patrol then operating in the Sotik and Masai country and in the Chepalungu Forest was detained in the area with a view to ensuring the collection of the fine. Some slight trouble was caused by the younger Muran, but the full number of cattle was obtained by the end of February, 1913, and about one hundred head were disposed of as blood money. This is the first occasion on which a fine under the Collective Punishments Ordinance was imposed on the Masai.

9. In December, 1912, a raid was made into German territory by some Masai, in the course of which 62 head of cattle and three donkeys belonging to a German planter named Koenig were stolen and an Arab and two Wasukuma were killed. Very little evidence in connection with the matter was adduced by the German Authorities, and it was not until February, 1914, that any witnesses were forthcoming who could identify the stolen stock. The Masai chiefs and elders took no steps to discover the identity of the perpetrators of the raid, and there was no direct evidence to connect any individuals with the offences committed. Fines were therefore inflicted in May, 1914, to the extent of 150 head of cattle on the Salei division; 50 head of cattle on the L'Otayok Muran; 50 head of cattle on the Kisaruni "Sirit" of the Purko Muran. [121]

Raid into German territory, December, 1912.

Herr Koenig was to be awarded the sum of Rs. 2,500 as compensation from the proceeds of the sale of the cattle, but the outbreak of hostilities prevented this payment and the money so reserved was devoted to the reimbursement of certain Masai for loss incurred at the hands of German natives, *vide* Incident No. 21. The balance of the fine was utilised in the demarcation of the reserve and in the irrigation of Narok Station.

10. Two porters belonging to a shooting party were murdered on the Gilgil-Rumuruti road about four miles from Rumuruti on the 1st of January, 1913, by Muran from the extended Southern Reserve who had returned to Laikipia to assist their relatives with the movement of cattle. The murderers in this case were captured and convicted, but, in order to prevent further similar outrages, steps were taken to restrict the movement of Masai from the Southern Reserve.

Murders near Rumuruti, January, 1912.

11. Complaints made by the Railway Magistrate, Magadi Railway, that on five occasions iron bolts and similar heavy pieces of metal had been placed on the rails led to suspicion falling on the neighbouring Masai who were thought to have wished to flatten the bolts for spear heads and knife blades. One slight accident was caused, and as the practice continued, two Masai villages near the Railway were removed.

Iron bolts on Magadi Railway, January, 1912.

12. About January, 1913, two murders were committed on different dates but in the same locality. The victims were a Lumbwa and a Kavirondo respectively who were returning to their homes by a track passing through a portion of the Masai Reserve. About this time, considerable ill-feeling and mutual suspicion existed between the Masai and Lumbwa tribes, more especially among the Muran, and the Masai are known to have been responsible for the murders of some six Lumbwa between August and December, 1912. (*Vide* Incident No. 8).

Murder of Lumbwa and Kavirondo January, 1913

No great hostility existed between the Kavirondo and the Masai, but the desire of the Muran of the latter tribe to blood their spears is so keen that they would have no scruples on that account.

* Loita village called Kisaruni. Purko villages called Njiroi, Kisaruni, Il Keriebo and Il Kipulyani. [103]

*648
579

The only natives of the warrior class who lived within thirty miles of the locality where the murders were committed were the Muran of the Kisaruni "Sirit" of the Purko division and the officer-in-charge of the Masai Reserve was convinced that the outrages in question had been perpetrated by this division, that the murderers were perfectly well-known to the Masai in general and, in fact, that they openly boasted of their prowess. All attempts to identify the culprits were, however, unavailing.

A fine of 150 heifers under the Collective Punishments Ordinance was accordingly inflicted on the Muran of that "Sirit," who numbered about four hundred and fifty souls. Fifty head of cattle from the proceeds of the fine were utilised in the construction of a road from Mara Bridge to Gelegele Hill, connection being thus effected between the Mara River and Kisii Stations.

[721] Raid on the Moshi District, February, 1913.

13. Two members of the Laitokitok division were suspected of being the perpetrators of a raid on the farm of a Boer named Malan, residing on the Engare Nairobi in the Moshi district, which was carried out on the 10th of February, 1913. Fourteen head of cattle stolen from the farm were traced into British territory near Longido, but no evidence was adduced and the cattle were not identified.

Raid on Suk, February, 1913.

14. A series of thefts occurred in the neighbourhood of Laikipia towards the end of 1912 and in the early part of 1913, and an unsuccessful raid on the Suk was carried out at a place eight miles from Baringo on the 16th of February, 1913. Seven Muran took part, one of whom was killed, and although no definite evidence was forthcoming, it was thought that the culprits belonged to the Laikipia Masai Wandorobo. Arrangements were made for a military patrol to drive the bush country near Lake Hannington. (*Vide* Incident No. 16).

Reserve boundaries broken, April, 1913.

15. In spite of police efforts to prevent such a movement, certain Masai owners of Manyattas broke back on lands adjacent to farms in the vicinity of Elmenteita and Nakuru in April, 1913. In several cases such Masai were convicted, and in particular, sixteen Elders and ten Muran were fined five bullocks each for each of two offences, namely, the contravention of the Native Passes Regulations as applied to the Masai Reserve and of the Diseases of Animals Ordinance, 1906.

Cattle thefts on Laikipia, April, 1913.

16. A large number of undetected cattle thefts occured on Laikipia during the first half of the year 1913, while the exodus to the Southern Reserve was in progress and at a time when the Masai were moving freely between the reserves. Details of each case are not obtainable but the following particulars have been recorded :—

On April 17th, eighty-three trade oxen were stolen from near Rumuruti by a band of fifteen natives suspected of being Masai or Masai Wandorobo from a Manyatta some twenty miles north-east of Baringo. Of the four Somalis herding the cattle, two were injured.

Twenty-six cows were stolen from a herd of seventy-seven belonging to Murray Brothers which was under the supervision of the veterinary authorities at Rumuruti. In this case the raiders were said to be Masai living near Archer's Post.

Sixty-nine head of cattle were stolen in broad daylight on the 24th of April. The thieves were said to be Manyi Masai from near Meru, and the tracks of the stolen cattle were traced to the junction of the Northern Uaso Narok and Uaso Nyiro.

Seventy-nine head of cattle were driven off from near Rumuruti when in charge of a Somali named Ali Hassan.

Three similar incidents occurred in May when one hundred and thirty-four head were looted.

Laikipia patrol, June, 1913.

In May, 1913, a patrol of the King's African Rifles, which had been operating in Marakwet country, was relieved by police and was recalled to Gilgil. Immediately on arrival, the Officer in Command, Lieutenant E. A. B. Orr, was instructed to tour the Laikipia country with the object of recovering the cattle that had been stolen—which amounted in all to some two hundred and ninety head—and of removing from the area any Wandorobo who might be found on Laikipia.

Mr. Popplewell accompanied the patrol, which left Rumuruti on June 15th, and moved west and north-west of that place. A few old and deserted kraals were found, but there was no trace of the raiders, and the patrol returned to Rumuruti on June 22nd. Information was then received of the presence of mobs of cattle forty miles west of Archer's Post, and the patrol proceeded towards the Loroghi Mountains on June 26th. Travelling by the Sugota Marmor and Lake Kisima, the patrol entered the Samburu country at the beginning of July, having found only one village of Masai, which was taken to Rumuruti for transfer to the Southern Masai Reserve. Proceeding along the Uaso Nyiro and then in a southerly direction, the patrol reached Meru without further incident on the 18th of July, and thence returned by way of the Loldaika Hills to Rumuruti, arriving eight days later. All cattle belonging to the Samburu living on the Uaso Nyiro, as well as those of the Momonyat Masai, were examined without result. 648* 579 921

Sufficient information was forthcoming, however, to establish the fact that the Masai were the real perpetrators of the thefts, and that the stolen cattle had been taken to the Southern Reserve, and certain animals, identified as having been among those stolen at various times, were subsequently recovered from that reserve. The evidence was not sufficient to warrant the conviction of any individuals, but served to prove the complicity of the Il Merisho Sirit of the Purko Muran, who withheld all information which might have incriminated the guilty parties, and offered no help in the tracing of the offenders. On this consideration, and also in view of their having made no effort to assist in the recapture of certain thieves who had escaped from custody into their country, a fine of one thousand head of cattle was, in January, 1914, imposed on that Sirit, under the Collective Punishments Ordinance. This fine had been collected in full by June, 1914, and, compensation having been paid in respect of claims for stolen stock, the remainder of the proceeds were devoted to the construction of a wagon road from Kijabe to Mara Bridge, to join up with the road in process of construction from Mara to Kisii.

Sir Henry Belfield's tour in the reserve, June–July, 1913. 648*

17. In June and July, 1913, His Excellency, Sir Henry Belfield, made an extended tour through the western half of the Masai Reserve, accompanied by the Provincial Commissioner, Naivasha, the Game Warden and Dr. J. Owen-Prichard. Starting from Nairobi on June 27th, he held a meeting at Ngong on June 28th, when local affairs were discussed with the Laibon, Seggi, and the principal local Elders. Leaving Ngong on June 29th, His Excellency travelled via Kolong to the Uaso Nyiro, which he crossed at Van de Weyer's Drift, and thence southward to the Narosura. He left that camp on July 8th, entered the Loita Plains at Engare Ento, and proceeded northwards to select a site for the administrative centre of the reserve. (*Vide* Incident No. 20). From Narok he moved west across the northern portion of the Loita Plains, and reached Kaitong on July 24th. There he met Mr. G. K. Watts, who was carrying out a scheme of water conservation in the Lemek Valley, and on the next day he proceeded to the Mara River Post. On July 30th, he held a meeting at Mara Bridge with the Masai chiefs from the western part of the reserve, among whom was Legalishu. The "Masai Case" was at that time before the Courts and Legalishu proved somewhat truculent, but he appeared to have only a small following among the other chiefs in his attitude of passive resistance. Leaving the Mara River, Sir Henry Belfield skirted the southern edge of the Chepalungu Forest, and reached the boundary of the reserve at Gelegele on August 1st.

Cattle dip at Ngong. 648* 231

18. In the course of his meeting with the Masai Elders at Ngong, on the 28th of June, the Governor was approached with a request that a cattle dip might be provided at that place for the use of the Masai cattle. His Excellency replied that he was disposed to approve the construction of such a dip, but he made it clear to the Masai that, although the Government was prepared to bear the cost of certain works of improvement in order to render the reserve suitable to their needs, they were not to expect that such work would always be carried out free of cost to the people. The cattle dip, constructed in response to this request, was opened at Ngong in April, 1914, by the Chief Veterinary Officer, who explained the process to Seggi, Ngaroya and a number of Masai who were present. One hundred and fifty cattle were dipped that day. The construction of the dip,

*648 231

however, was found to be faulty, and it was not until July that it was really fit for use. For a month or two the Masai dipped their cattle spasmodically but, as it was impossible to exercise adequate supervision, they failed to appreciate the advantages of the treatment and, finding that their cattle continued to die of East Coast fever, they ceased to use it.

A military Live Stock Depot was formed at Ngong shortly afterwards, and the dip was taken over by the Veterinary Department. Owing to the presence of large numbers of military cattle, the majority of Masai cattle left the neighbourhood.

In June, 1916, the dip was again available for the Masai, and four villages were reported to make regular use of it.

*648 The Ngong Savings Bank.

19. While at Ngong, on June 28th, 1913, the Governor was asked that arrangements might be made for the opening of a branch of the Government Savings Bank at that place. Such a branch was established on September 29th, nineteen accounts being opened on that day, and a total amount of Rs. 263 being deposited.

Narok Station.

20. The selection of the site for the headquarters of the administration of the Masai Reserve was made by Sir Henry Belfield, in July, 1913, during his tour through the Masai Reserve. The site is on the Narok River, at an altitude of 5,900 feet above sea level, and consists of an extensive elevated plateau, the edge of which is some fifty feet immediately above the stream. Final decision as to the permanent occupation of the site was deferred until sufficient time had elapsed to prove its suitability from all points of view, but temporary buildings were at once erected for the occupation of the administrative staff, and Mr. Hemsted took up residence there in October, 1913.

Raid by German police on a Loita village, October, 1913.

21. In October, 1913, a party of armed men from German East Africa raided a village of the Loita Masai, in a locality known as Ol Keju Arus, killing one Elder and removing a quantity of live-stock. The village in question was situated near the Anglo-German boundary, and the armed men were presumed to be German police. Representations were accordingly made to the German Government, who deputed Lieutenant von Chappris to meet Mr. Hemsted and discuss the incident. The meeting took place at Boundary Post No. 32, on the 28th of February, 1914, when Lieutenant von Chappris admitted that the raiders were German police, but contended that the Masai village was situated in German territory. As the method of demarcating the boundary between Lake Natron and the Mara River was merely by cairns, situated several miles apart, the exact position of the boundary was a matter of doubt, and these two officers accordingly agreed to share the work of more definite demarcation by cutting a road ten feet broad over this part. At the same time, representations were made to the German authorities that the presence on the border of uncontrolled armed native police constituted a danger to peace and good order, and was likely to lead to trouble. In regard to the incident in question, both Governments agreed that the removal of all the stock in the village appeared to be a severe punishment for the infringement of boundary regulations, and the German Government promised to return to the owners the proceeds of the sale of the impounded stock. This amounted to Rs. 1,718.85, after defraying expenses, but war broke out before payment had been made, and on August 28th, 1915, the Governor-in-Council decided that this amount should be paid to the Masai, as a set-off against the Rs. 2,500, which was being reserved as compensation for Planter Koenig. (*Vide* Incident No. 9).

Raid by Wachagga, January, 1914.

22. On January 22nd, 1914, about 150 head of cattle, sheep and goats were brought from the location of the Chagga Chief, Satema, to a salt-lick on the British side of the border where they were discovered by four Muran of the Masai headman Metiake, who collected them with the avowed intention of handing them over to the Government. In consequence of this act, large numbers of armed Wachagga, accompanied by two German police askaris crossed the border in pursuit of the stock and visited the village of a Masai Elder situated close to the salt-lick. The Elder had fled on hearing of their approach but he was pursued and three of his party were killed, three women seriously injured, and stock numbering 642 head of cattle and 2,960 sheep and goats were driven off into

648*

German territory. Investigations were instituted by the District Commissioners of Voi and Moschi and these officers agreed that the stock taken on each side should be returned with the exception of a number of cattle belonging to the Wachagga which were to be retained as blood money. Representations were made to the German Government who took steps to punish the raiders.

23. As a result of the affair described in Incident No. 22, the German Governor suggested, in May, 1914, that the Anglo-German boundary should be more clearly defined from the Usseri-Gasseni District to Lake Chala. The matter was discussed by Mr. Hobley with Herr Lorr, the Imperial German District Commissioner of Moschi, at Taveta in that month, and these two officers proceeded along the border visiting the salt-licks which had been the source of the dispute. An arrangement was reached whereby the Warombo, a German tribe, would be permitted to use under supervision, a salt-lick situated half a mile within British territory, on one day in each month. It was also decided that the unmarked stretch of fifteen miles from Lake Chala to the source of the Rombo River should be defined by prominent marks. Definition of the Anglo-German boundary.

Captain Kraut, a German surveyor, visited Lake Natron towards the end of July and was there met by Mr. Hemsted. These officers decided that the best method of defining the boundary between beacons 18 and 33 would be by means of a trench and by the erection of additional beacons at prominent points. The German Government agreed to undertake the work between beacons 18 and 27, but the outbreak of war prevented the performance of this undertaking.

24. On the night of the 15th of February, 1914, a raid took place on an Indian store at the Athi River. One Indian was killed, his son and an Indian signalman were seriously wounded, and another young Indian received a slight wound. This raid was at first thought to be the work of four Masai. Mr. Beech, the Acting District Commissioner, Ngong, proceeded to investigate, in company with the Regent, Ngaroya and examined without satisfactory result all the young men of the Kaputiei division who occupy the neighbouring district. Finally the Regent imposed a fine of seventy head of cattle on this division which would be returned if the culprits were handed in. No further evidence was forthcoming, and as it could not be proved that this division was in any way concerned with the raid the cattle were returned to their owners in April, 1914. Raid on Athi River store, February, 1914.

25. In April, 1914, an application was received from farmers living near Gilgil that their boys and servants might be permitted to carry firearms. Their request was based on the frequency of raids on their farms by the Masai and other tribes and they cited five instances in the previous three years in which cattle had been stolen and the thieves undetected. The Government was unable to accede to their request but an additional police post was established among the northern Gilgil farms. Additional police post in Gilgil area, April, 1914. [579]

26. Five Muran of the L'Otayok division living in the Ememparasha Hills unsuccessfully raided a German farm near Moschi in April, 1914. They were fired on by the owner, leaving one dead, and were subsequently apprehended with their property. Raid on a Moschi farm, April, 1914. [579]

27. In August, 1914, the Governor approved a recommendation made by the Officer-in-Charge that the Masai Wandorobo and other natives in the reserve who were accustomed to live by hunting, might be permitted to kill zebra, haartebeest and wildebeest provided that no hunting took place within the Game Reserve. Conditions were imposed that the Wandorobo should not be allowed to sell the skins or trophies of any of these animals, and they were forbidden to kill any other more valuable species, particularly rhinoceros. Permission to kill game, August, 1914.

28. A tendency on the part of the Masai to drift northwards was noticed in August, 1914, and a detachment under Mr. Hodge was despatched in September to patrol the farm borders from Naivasha towards Njoro with a view to causing all Masai found out of their reserve to be returned thereto. Tendency to move northwards August and September 1914. [166]

29. On the outbreak of hostilities a military camp was established at Kajiado on the Magadi Railway, and in order that they might not impede active operations the Masai were instructed to move all their cattle from the grazing grounds lying Grazing concession to the Masai January, 1916.

*648

within five miles on either side of the Kajiado-Longido road, and thus make way for the military transport animals. The Masai had taken no steps to comply with these instructions by the middle of January and the Officer-in-Charge of the Transport asked that they might be enforced. The rendering of this large area unavailable for the Masai occurred inopportunely as, owing to the fact that the long rains of 1914 had terminated unusually early while the small rains had failed completely, a serious drought took place during the early part of 1915, and the grazing throughout the reserve became inadequate. Application was accordingly made for permission for the Masai to graze their herds on alienated farms near the railway, on the Kenani Fibre Estates, by payment of rent and on certain Crown lands. This permission was granted in March, 1915, and the Masai were also allowed access to an area on the Mau Narok as well as to the Kedong River by arrangement with the Manager of the Kedong Valley Syndicate. These concessions remained in force until February, 1916, when the grazing in the reserve was considered sufficient to support the Masai herds.

*648 599 721

Raid into German territory.

30. The Laitokitok Masai, some of whom were armed with rifles, made a raid into German territory during the time their country was in the occupation of the military forces and are reported to have looted a number of cattle some of which were the property of certain Greeks. It is possible that the raid may have been carried out as a retaliatory measure for the raid made on them by the Germans and Wachagga. (*Vide* Incident No. 22.)

Raid into German territory, February, 1915.

31. In February, 1915, a party of five Muran of whom three were from German and two of the L'Odo Kilani division from British territory, raided a cattle boma belonging to a German planter at Ngotiek on the Osobugo L'ool Tatua. Fifty-five head of cattle were captured and it is believed that one German and several natives were killed. The cattle were taken to the head Muran of the L'Odo Kilani division who delivered them over to the Government. They were eventually confiscated and the proceeds of sale were credited to Miscellaneous Revenue.

Raid on the Ngoroimi, April, 1915.

32. Early in April, 1915, some two hundred Muran of the Pelyani section of the Purko Muran crossed the border on a raiding expedition against the Ngoroimi of German East Africa. They succeeded in capturing about one hundred head of cattle, but lost eighteen killed and fifteen wounded at the hands of two German askaris. Though all Masai Muran had been constantly warned against making raids on their own account, and though it had been explained to them that the Germans would probably retaliate, it appears that the prospect of military glory and of looting cattle was irresistible. In this case the offence of these Muran was aggravated by their adoption of a most hostile attitude towards the individual who reported the raid, and it was the firm opinion of Legalishu and Masikondi that a caution would not be sufficient deterrent from similar action in future. A fine of 150 bullocks was accordingly imposed upon the Pelyani section this being estimated to represent approximately the value of the cattle looted.

*648

German raid south of Lake Magadi, June, 1915.

33. About the beginning of June, 1915, the Germans carried out a raid on the Masai residing near Ol Shombole and the German boundary south of Lake Magadi. Nine mounted Europeans took part guided by an Arusha native; two Masai kraals were attacked and about five hundred head of cattle were taken. An attempt was made by the Muran to recover the cattle, but this resulted in four Masai being killed and two wounded. It is possible that this raid may have been undertaken in retaliation for raids by the British Masai into German territory. The counter-raid which was organized by the Masai forms the subject of Incident No. 46.

Proposed trough construction along the Magadi Railway.

34. As a result of the German raid described in Incident No. 33, the Masai living in the vicinity of Ol Shombole, who were mostly of the Salei division, moved northwards towards the Magadi Railway and it became necessary to make arrangements for the provision of an adequate supply of water for them. A few Masai camped near Lake Magadi and obtained water from the Magadi Soda Company for which they paid five rupees daily. Mr. E. D. Browne, the Political Officer at Kajiado, approached the Company with a view to the provision of water troughs at suitable points along the Magadi Water Supply Line from the Ngong Hills, and in September the erection of certain water troughs was sanctioned the work to be

undertaken by the Company. An agreement was signed on November 3rd, 1915, providing for the erection of four troughs at various points of the Magadi Railway at which the Masai were to be allowed to water their herds on payment of five rupees per thousand head per day. By December nothing had been done and the country became very dry; by January the short rains having failed, the water supply was regarded as insufficient to support the maintenance of troughs and the work was held over.

648*

Attempt to return to Laikipia, June, 1915.

35. Early in June, 1915, a determined attempt was made by some of the Purko Muran to return to Laikipia with their stock in defiance of Government orders. Mr. Hemsted threatened to take active measures to stop the movement if persisted in, and with the help of Legalishu, Masikondi and some of the principal Muran, he persuaded them to abandon their intention before they had arrived within thirty miles of the boundary.

Rumours to the effect that such a movement was projected reached Nairobi on June 17th, and steps were immediately taken to garrison the railway line. A double company of 2nd Kashmiri Rifles was despatched to Gilgil on June 21st, and Mr. E. D. Browne accompanied them as Political Officer. As no renewed attempt appeared probable, orders for the return of these troops were given on the 1st of July.

Raid into German territory, July, 1915.

648* 579 [92]

36. In July, 1915, the Purko Muran of the Il Merisho, L'Aimer, Kisaruni and Mejuali sections and some Muran of the Kakonyukye division made an incursion into German East Africa and captured from seven hundred to one thousand head of cattle and a number of sheep from the neighbouring tribes. They lost about 120 men killed.

This raid was undertaken as a reprisal for a raid made by a German party in the previous month in the course of which some 500 head of cattle were looted and six Muran of the Damat division killed.

Some of the Purko and Loita Muran were called in by the Intelligence Officer-in-Charge of that part of the border with the object of recovering the cattle raided by the enemy. These were joined by the rest of the Purko and some of the Kakonyukye. They entered German territory with the ostensible purpose of recovering their stock but actually to raid when favourable opportunities offered. In view of the provocation received, His Excellency decided that no action should be taken against the Muran concerned.

Attack on Uregi, August, 1915.

37. In August, 1915, some Masai Muran who were searching the country in the neighbourhood of the Isuria Escarpment in an endeavour to trace the origin of some Germans recently found near Sotik, attacked the Uregi location of the South Kavirondo district. One Masai was killed

German raid, September, 1915.

38. In September, 1915, a party of about two hundred mounted men including fifty Europeans crossed the border from German East Africa near Lemisigio and penetrated northwards as far as Narosura. They remained in the Loita country for a week and then returned towards Karongoro. They committed no acts of aggression and it would appear that the object of their visit was a political one.

German raid, December, 1915.

39. In December, 1915, a party of Germans with a large number of native levies raided the villages of Ole Pere (Purko) and Ole Lombaga (Damat) near Ol Keju Talek. They killed three Masai and wounded one, and captured about 6,000 sheep and 200 head of cattle. On their return from the raid they fell in with Mr. Hemsted's safari and captured most of his loads, killing a tribal retainer. They were fired upon and retired hastily abandoning about half the stock they had captured.

Raid into German territory.

40. Towards the end of 1915, four Kakonyukye and three Kaputiei Masai, armed with rifles conducted a raid against German natives and looted some 500 head of cattle. The culprits were tried at Ngong in January, 1917, and a fine of Rs. 175,000 was imposed upon them under the Stock and Produce Theft Ordinance, but the case was quashed by the High Court.

*648 Grazing concession, December, 1915.

41. In December, 1915, the Masai reported that their grazing in the reserve between Magadi Junction and Ulu Station was finished and that their cattle were dying from want of grass. The areas round Kiu and Kajiado were required for military purposes and permission was accordingly given to the Masai to graze their cattle across the Uganda Railway between these two stations on unoccupied Government ground on condition that the cattle watered and lived in the reserve.

*648 579 721 Kakonyukye raid into German territory, January, 1916.

42. In January, 1916, the Kakonyukye Muran of the Il Mejuali "Sirita," some of whom are said to have carried rifles, without provocation, crossed the Anglo-German border with the object of raiding the Nyamongo natives of German East Africa living to the north of the Mara River. They killed about fourteen of the Nyamongo, mostly women and children, and captured a considerable quantity of livestock. The Nyamongo had previously been of great assistance to Intelligence Officers posted to the Eastern Lake Area and this raid had a bad effect on their attitude towards the British. The Officer-in-Charge reported this matter to the Governor and recommended a fine of not less than 2,000 head of cattle for the reasons that the Muran had been repeatedly warned against taking such action on their own account, and that the section in question had always been troublesome and was practically the only one that had failed to give any assistance in guarding the border. As the Masai Reserve was at that time a military area the facts of the case were reported to the military authorities who approved the imposition of a fine of 2,000 head of cattle with a further 1,000 head if a number of rifles which had been handed to members of the tribe by an Intelligence Officer were not returned by the end of February. The Governor subsequently discussed the matter with the military authorities, and the fine was reduced to 1,000 head of cattle plus 500 head in respect of the rifles which had not been returned within the specified time. An attempt to collect the fine was only successful in obtaining payment of a small portion and by June 15th some 680 cattle and 500 sheep had been brought in. The fine had been paid in full before the end of 1916, and it was decided that compensation to the extent of 500 head of cattle and 600 sheep should be paid to the Nyamongo on account of the damage they had suffered. All the rifles were eventually returned and the cattle seized in respect thereof were handed back to their owners. The proceeds of the fine in this case were credited to Masai funds.

*648 Elmenteita-Narok telegraph line, January, 1916.

43. In January, 1916, a telegraph line was erected by the military authorities between Narok and Elmenteita station to assist in the rapid transmission of intelligence reports. In June, 1917, the military authorities having expressed their desire to remove the line, the Governor-in-Council decided that it should be maintained as far as possible as a civil line by the Officer-in-Charge of the reserve.

Fine imposed on Sighirari Muran, January, 1916.

44. In January, 1916, the Sighirari Muran were fined three hundred bullocks by the military authorities for failing to report the presence of an enemy bombing party near their village.

Application for a collective fine on the L'Otayok Division, March, 1916.

45. In March, 1916, a recommendation was made that a fine should be levied under the Collective Punishments Ordinance on the members of the L'Otayok division on the grounds that they had harboured a criminal. No fine was imposed owing to the lack of definite evidence.

*648 579 721 Raid into German territory, April, 1916.

46. Early in 1916 a joint raid instigated by the Salei division was carried out against the Soit Poos in German East Africa by Muran from the Sighirari, Salei, Il Dala Lekutuk and Matapatu divisions. Some ninety-nine of the Muran were armed with rifles and in the course of the raid thirteen were killed and eighteen wounded. This raid was instigated partly as a reprisal for the German raid described in Incident No. 33, the cattle taken on that raid being supposed to be at Soit Poos. Between three hundred and three hundred and fifty head of cattle were recovered. The Officer-in-Charge applied for a fine to be imposed on these divisions to the extent of Rs. 25,000, but the Governor-in-Council ruled that, in view of the gross provocation suffered by these divisions no action should be taken until their future behaviour had been observed.

Invasion of Salei Masai, May, 1916.

47. In April and May, 1916, about one hundred Masai of the Salei division, moved from the farm of a German named Seidentopf, in the neighbourhood of Korongoro, in German East Africa, and took up their residence in Loita country

M 648* 579 721

under the aegis of the medicine-man Sendeu, with their stock, numbering some 2,000 head of cattle, and ten to twelve thousand sheep. These Masai were subsequently found to be in the possession of seven rifles, the property of Herr Seidentopf, which were recovered and destroyed by the Assistant District Commissioner, Narok.

Cattle thefts by the Masai from the Kikuyu.

48. In June, 1916, a series of eleven cattle thefts from the Kikuyu were reported as having taken place, presumably by Masai, between June, 1915, and April, 1916. In three of these instances, the persons implicated were arrested and convicted, but, in the majority, the looted stock was traced to the Masai Reserve and not recovered. Sixty-nine head of cattle had been taken altogether, but only six head had been returned, and the Provincial Commissioner of the Ukambe Province considered that compensation should be paid to the Kikuyu in consideration of their losses. As the information respecting these alleged thefts was too scanty to admit of any fine being imposed on the Masai without further investigation, Mr. Hobley was instructed to hold an enquiry into the circumstances of each case. As a result of his investigations, he considered the case against the Masai to be strong enough to warrant the imposition of a fine under the Collective Punishments Ordinance, and in this opinion the Attorney-General concurred, adding that, in view of the large number of stock stolen from the Kikuyu, the fine might be of an exemplary character. He suggested that the amount and the incidence of the fine might be decided after consultation with the Officer-in-Charge.

Mr. Hemsted, however, thought that insufficient evidence had been forthcoming to prove the complicity of the Masai tribe as a whole, and recommended that a fine of Rs. 1,000 be imposed on the village of Kithendu, and of Rs. 500 on the village of Lokorio, to which villages, situated in the Kedong Valley, stolen cattle had actually been traced. He also suggested that the proceeds should be distributed to the Kikuyu in compensation for lost cattle. This course received the support and approval of the Governor-in-Council on the 11th of September, 1916.

Murders on the Kisii road, July, 1916.

49. Two porters were killed on a road between Kisii and the Masai Reserve, in July, 1916, and some rupees were stolen. An application for the imposition of a collective fine on the Kisaruni "Sirit" of the Purko Muran, based on the ground that these Muran were the only warriors near the scene of the outrage, was disallowed on account of the fact that the road in question was much frequented, and that there was nothing to show that any members of the Masai tribe were responsible for the murders.

D 648 579

Raids by Wandorobo.

50. In September, 1916, it was ascertained that the Wandorobo had committed a number of stock thefts in the Ikoma district, after the Intelligence Officers had left the border. Several Wandorobo were killed in one attempted raid. The Wandorobo concerned were arrested and punished by the District Commissioner, Mara.

M 648* 579

Murder of two natives near Narok, November, 1916.

51. On the 19th of November, 1916, two Indian traders, travelling on the main road some seven miles from Narok, found two bodies of Kikuyu natives lying near the road. These Kikuyu had been murdered and were quite dead when found. They had several wounds on their persons, evidently inflicted by spears and knives. One of the murdered Kikuyu was recognized immediately as the servant of an Indian trader, at Narok, and both had been carrying loads when they met their death. Investigations were immediately instituted by the District Commissioner, Narok, but nothing definite was discovered. In February, 1917, evidence was brought against two Muran, who had been wandering in the vicinity at the time of the crime, but this was insufficient to justify further proceedings being taken against them.

At the end of April, the headmen of the Muran living in the neighbourhood were called on to explain what steps they had taken to find the murderers. The scene of the murder was greatly frequented by the Muran of the three Purko "Sirita," named Kisaruni, L'Aimer and Mejuali, and, as no evidence was brought by any members of these "Sirita," respecting the murders, the District Commissioner recommended the imposition of a fine under the Collective Punishments Ordinance on all three companies.

*648
579

The matter was discussed in Executive Council on the 21st of June, 1917, when Mr. Hemsted, who was present, stated that there could be no doubt that the members of those "Sirita" were well aware of the identity of the murderers and were deliberately shielding them from justice. Several murders of Kikuyu had recently occurred in or near the Masai Reserve, and an exemplary punishment was considered necessary. A fine of Rs. 20,000 was accordingly imposed on each of the three "Sirita," the total fine amounting to Rs. 60,000. The Secretary of State conveyed his sanction by despatch, on the 23rd of August, 1917. Some seventeen hundred head of cattle were seized in August as security for the payment of the fine, but, by October, no portion of the fine had been paid in cash. Instructions were, therefore, issued for the fine to be recovered by distress, by the sale of the cattle to realize the amount of the fine imposed. This sale was postponed owing to an outbreak of lung-disease among the herds.

*648 Permission to shoot lions, December, 1916.

52. Owing to complaints by the Masai of the damage done to their stock by lions, and on account of several incidents where natives had been killed by these beasts, permission was granted in December, 1916, to District Officers working in the Masai Reserve, to shoot lions in the Southern Game Reserve, in cases where there was good reason to believe that the animals were dangerous.

Move of the Kakonyukye Division to Ngong Hills, December, 1916.

53. Owing to the constant trespassing by the Kakonyukye Masai on the farms in the Kedong Valley, that division was moved in December, 1916, and was located in the vicinity of the Ngong Hills, an area which had, for some time past, been practically unused.

[231]

As the Kakonyukye cattle were highly susceptible to East Coast fever, it became necessary to erect a cattle dip for them, the dip already in existence at Ngong being insufficient for their requirements. The site selected for the new cattle dip was near the Kiserian Stream, ten miles south of Ngong, and its construction was approved on the 9th of January, 1917.

*648
579 Murders near Dagoretti, March, 1917.

54. In March, 1917, a young man and three boys were brutally murdered within a short distance of the Masai border, near Dagoretti. The circumstances of the crime pointed strongly to the fact that the Masai must have been the offenders, but there was no evidence of their complicity and no punishment was inflicted.

Murder of two Kikuyu boys, May, 1917.

55. In May, 1917, some Kikuyu were attacked while grazing their cattle in their reserve within one mile of the Masai boundary, and two boys were killed with spears. A witness, who saw the whole incident, escaped with his life, and subsequently gave evidence to the effect that the murderers were a band of Masai. In the judicial proceedings which ensued, the absence of any motive for such a deed on the part of the neighbouring Kikuyu was clearly established, while a motive was present in regard to the youths of the Masai tribe, as it was by native custom necessary in certain circumstances for such youths to have blooded their spears before admission to the forthcoming E-Unoto ceremony. It proved impossible to trace any of the individual criminals, but it was considered that sufficient grounds existed for holding five divisions of the Masai tribe, resident in the neighbourhood, responsible for the outrage. The perpetration of a number of murders of the same nature and in the same area a short time previous to this crime, in no one of which had sufficient evidence been obtainable to warrant the imposition of a collective punishment, influenced the Governor in determining the severity of the penalty to be inflicted in this case and, as it appeared that the belief was growing among the Masai that they would escape punishment for such deeds if they were performed outside the limits of their own reserve, he determined to make the punishment an exemplary one, and a fine of Rs. 20,000 was imposed under the Collective Punishments Ordinance on each of the Masai divisions implicated, namely, the Sighirari, L'Odo Kilani, Matapatu, Kaputiei and Il Dala Lokutuk divisions. It was decided that, from the proceeds of the fine, blood money should be paid to the relatives of the two Kikuyu victims.

628 Unrest among the Purko Masai, June, 1917.

56. Early in June, 1917, unrest was reported among the Murran of the Purko and Loita tribes. On the evening of June 2nd, the Purko commenced operations for an attack on the Loita, and the District Commissioner, Narok, who followed

them as far as Narosura on the following day, failed to get in touch with them, they having proceeded to Loita country. On the evening of the 4th of June, the Purko returned below the Osobugo, and on the night of the 5th proceeded to Endasegera, having refused to listen to the advice of certain eklers who went to restrain them. On the 8th of June, the Purko returned home. No fight occurred, the intervention of certain Muran of the Il Merisho Sirit having prevented bloodshed, and the influence of the eklers being then sufficient to turn the Muran back. Throughout the disturbance, the medicine-man, Sendeu, was protected by the Muran of the Il Merisho Sirit. 648* 561 578 628

In spite of the fact that this incident resulted in no serious trouble, recent events sufficiently indicated that the Purko Muran were a little out of hand, both as regards the Government and their own chiefs and headmen. Additional police were, therefore, procured for temporary duty in the Masai Reserve. The measures adopted to bring them under better administrative control included a visit by the District Commissioners of Narok and Mara to each of the Purko Muran villages, where all Muran from each village were interviewed. Legalishu, Masikondi, Ole Kotekosh, and the principal Aigwenak of the eklers and Muran were present, and Seggi joined the party later. The ringleaders were arrested, all outstanding fines from the Muran were collected, and a number of bullocks and donkeys were procured for the Military Supply Corps. These measures were completed before the end of August. No opposition or obstruction to Government orders had been offered by the Muran, and although the relations between the Purko and Loita divisions continued to be somewhat strained, it appeared that they were convinced that Government would not tolerate a breach of the peace and, as Mr. Hemsted reported that he saw no reason to fear any recrudescence of the trouble, the additional police were withdrawn.

Mr. Morrison's case, August, 1917. 648*

87. In August, 1917, Mr. A. Morrison, the lawyer who had been appointed counsel for the Masai in the "Masai Case," brought a civil claim for some Rs. 26,000 against the chiefs and eklers concerned in that case. The case was heard in the High Court, Nairobi, in January, 1918, and the action was dismissed with costs.

CHAPTER VIII.

THE MASAI IN CONNECTION WITH THE WAR.

000

Attitude of the Masai—The first three months of the war—Supply of livestock—Gifts to the troops—Intelligence work—Distribution of rifles—Supplies—Naumann's force—Raids across the Anglo-German boundary—Services rendered by the Masai—Masai for active service and other war work—Donkey boys—Recognition of war services rendered by Masai headmen.

*648 Attitude of the Masai.
